MICHIGAN STATE SPORTSMEN'S CONVENTION.—The annual meeting of the Michigan sportsmen was held at Grand Rapids, May 8th, five clubs only being represented. President Holmes' address was an able one. He said that the efforts to procure the enactment of a more efficient game and fish law had so far failed; still prospects were good for the passage of more stringent laws. The necessity of making the whole people interested in the preserving of game and fish was urged upon all sportsmen. He hoped efforts would be made to organize local clubs in every section of the State. E. C. Nichols, delegate to the National Sportsmen's Convention, made his report, which was full of interest. W. C. Colburn, of Detroit, was quite caustic in his denunciation of the National Association, declaring it inefficient and worthless, and that he was in favor of withdrawing the State Association from its support. This created considerable discussion. It was resolved to continue the membership of the State in the National Association. The Treasurer reported the society financially sound. The next meeting will be held at Battle Creek the first Tuesday in February next.

ROVER.

ILLINOIS.—A correspondent writes from this State as follows: "Our wise Solons in legislature assembled failed to see the necessity of passing a stringent law for the protection of fish in our waters, and the bill has been defeated, causing much disappointment to the friends of this much-needed measure. Most of the fish at present exposed for sale in our markets are unfit for food, being filled with eggs—their destruction being the destruction of thousands of fish. Many of our streams are fast becoming depopulated, and something must be done to stop this wholesale destruction of the finny tribe. ROVER."

A brilliant farmer has petitioned the Legislature for a bill to protect song birds, and such a bill has passed the Senate, but the joke is he has named the quail as a song bird. The whistle of bob-white is music to a sportsman's ear, but we don't want them protected quite so closely.

—A Texan writes in sorrow that they have no game law there, and that his fellow citizens shoot most of their game "on the ground and in any season."

GEORGIA GAME ASSOCIATION.—We have received the handsomely printed constitution and by-laws of the Georgia Game Association, enclosing a copy of the game law of the State, and judge from the tenor of the society's platform that they are in earnest in their resolution to prosecute all violators of the law, which is none too stringent. An annual athletic festival and game supper are provided for in the constitution, so that the association will not have been organized for naught, if no rascals are to be caught poaching.

LONGWOOD, Fla., April 25, 1877.

EDITOR FOREST AND STREAM.

Florida has at last a semblance of a game law; but it is only the ghost of a thing. However, it will do, I suppose, for a beginning—a sort of A B C. I am well pleased to see many of our citizens (denominated "crackers") taking an interest in the law, and expressing a determination to live up to all there is of it, with the hope of a more perfect one in the near future; on the other hand, I am sorry to see some who style themselves "sportsmen" (visitors all) taking advantage of every occasion to violate it, by obtaining permission to hunt on the lands of some newcomers, Western men. I shall shortly reënter the newspaper business, and when I get my lines well in hand, shall do all in my power to stop this sort of thing, and do a little—all I can—to help along the glorious work of my favorite journal, the FOREST AND STREAM. FRED. L. ROBERTSON.

TENNESSEE.—A codification and rearrangement of the Tennessee Game and Fish laws are much needed, and our State Association should take up the matter at once, and bring order out of chaos. Heretofore the different counties have each acted for themselves, and in many cases without much judgment; so that one might be well versed in sporting legalities in one part of the State, but if he should presume upon his partial acquirements and jump the county line, he might soon discover that a little learning is a dangerous thing. To be safe, he must carry on his head at least half a dozen "legal caps."

For this County (Montgomery) and several adjoining ones, some tinker had so fixed it that we could not shoot a bird after February 1st. The consequence was that we were deprived the pleasure of snipe and plover shooting entirely, for these make their appearance here only between February 20th and May 1st. Nor is there any reason why we should stop shooting partridges (quail) before March 1st. They do not pair off here before May 1st, and the weather frequently prevents us from shooting them to any extent all through December and January; hence we should be allowed one more month for the sport.

Under this detestable state of the game laws we took it upon our individual self last winter to make the laws conform more closely to the "eternal fitness of things," and in accordance with our suggestion, Judge Chas. G. Smith, our gentlemanly representative, introduced the necessary changes, and the law stands as follows for this portion of the State:

Partridges (quail), ruffed grouse (pheasants), snipe, plover, etc., all game birds, may be shot between October 1st and March 1st; and snipe and plover until May 1st.

Doves are not included in the law, but I see no good reason why they should not be protected also. They are a delightful bird for the table when young, and afford very pretty sport in August and September when it is too hot for active exercise. The following is our mode of shooting them: In the early morning and latter part of the afternoon the gunners take positions under certain trees or near wheat stacks, which the birds have been observed to frequent, and a boy on horseback rides around the corn and wheat fields and keeps them on the wing. They fly invariably to the same trees and afford fine wing shots. They also frequent certain ponds in the evening to drink before going to roost.

Our fish law, according to the interpretation of our County Court, is briefly as follows: Persons are not allowed to fish in any running stream in any manner except with hook and line or trot line, provided that in navigable streams below the point of navigation fishing with seine or net may be practised, except in the months of March, April, and May, and provided the seine or net is not at or near the mouth of any stream emptying into the navigable stream. This refers to the whole State.

Another matter deserves the attention of our State Association. The owners of valuable dogs are entirely at the mercy of every vagabond who sees fit to throw poison around loosely. The only resort afforded by the law is to bring an action for damages, while no damages can be extracted from these impecunious wretches.

I would suggest that every one who has a valuable dog be allowed to register it and pay a reasonable tax. In return for this the law should protect it, and the killing or injury of such animals should be made a misdemeanor with fine and imprisonment. Impecuniosity would not then prove such a blessing.

The need for some such provision has lately been shown in this place. Mr. W. H. Drane's Field Trial setter bitch, Belle, was poisoned by his cook, because she (the dog) barked at the Romeos (colored) who paid moonlight attentions to her colored highness. And yet Mr. D. restrained himself so wonderfully as not to afford a case of "bull dozing" for the investigation of an immaculate Congressional Committee.

Accept congratulations upon the consolidation of *Rod and Gun* with FOREST AND STREAM. The combined force should be able to afford the best results in the way of a journal for sportsmen (please do not allow your correspondents to degrade the name to "sports"), and we are benefited by receiving in small compass the cream at a smaller price.

EDISTO.

PORTABLE HOUSES.—Gentlemen contemplating a protracted sojourn in the country this summer will do well to refer to the advertisement in our columns of O'Brien's Portable Houses. A comfortable shooting-box can be had for $135, and a charming cottage for double that sum, either for mountain or seaside. We shall print some pretty designs soon.

—There were 599 bears killed in Maine during the year 1876, as follows: Aroostook county, 99; Franklin, 11; Hancock, 12; Oxford, 16; Piscataquis, 70; Penobscot, 157; Somerset, 22; Washington, 212, on which a bounty of $2,995 was made.

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grilse and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from $15 to $150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining, to imitate the genuine article, without letting our customers know just what they are getting.

SHAKESPEARE slanders life when he makes Macbeth stigmatize it as a tale

"Told by an idiot, full of sound and fury,
Signifying nothing."

Life is pleasant, used properly. But be careful to use B. T. Babbitt's Toilet Soap, for it is the pleasantest and purest of things for the toilet and bath. If you don't believe it, try it.—*Adv.*

CAMP LIFE IN THE TROPICS.

FROM OUR OWN CORRESPONDENT.

First Letter.

THIS bright March morning, as I throw open the shutters of my shanty and let in the light of early day, I look out upon a scene of loveliness that it were worth many a day's journey to enjoy.

From beyond the mountains behind me, east, the sun has climbed a little way until he peers through a defile in the mountains, and a rift in the cloud masses and floods only a narrow pathway down the surrounding hills, their northern slopes, a bit of the gloomy valley miles below me, and bursts upon the calm Caribbean Sea with concentrated glory. A sail, floating on that sea, drifted hither and thither by strange mysterious currents (which has come, perchance, from Martinique or Barbadoes to the south, or from Guadeloupe or Montserwat to the north), is ablaze with light which gives it the appearance of being on fire. No sound comes up from the valley below nor from the surrounding mountain sides; even the rain frogs and the nocturnal *cicadæ* have closed their concerts and have left it to the birds to usher in the matin hour; and they are singing in low, sweet strains far down in the gloomy ravines below, and in the thickets bordering distant glades.

My first duty is to examine my thermometer. It registers 68 deg. That recorded, I step into outer air and refresh myself with such ablution as can be enjoyed from a small calabash of rain water. Soon a little colored maiden appears bearing a tray with my coffee, with perhaps a cup of milk—oftener without. A cup of coffee and a slice of bread, or couple of crackers, is my only refreshment until noon, when I return from my tramp in the forest. When I first came to this mountain valley I brought with me a bright colored boy as aid, fondly hoping he would be of much assistance in preparing my birds, as well as in the culinary line. But, alas! in either profession he was singularly deficient, and save in the preservation of cooked provisions—in other words, "to keep food from spoiling," he was of no use whatever. After three days passed in his society we parted. There was also a question of abstraction between him and Jean Baptiste (the proprietor of my humble cot), relating to a few small articles that one night disappeared. Now, J. B.—short for Jean Baptiste—was highly incensed that such a thing should happen within the limits of his jurisdiction, and made such a row about it that I concluded that it were best that "sonny" and I should part, with no regrets on my part, none expressed on his—for the laboring class of the West Indies, as a class, accept stoically whatever fate drops to them as their share. The salary I was paying him was princely, being sixpence a day (twelve cents) and "found," while the usual remuneration for such service as he afforded me was *three pence*, and if "found" it was usually after long search. J. B. accepted the expression of confidence that this act of mine implied, and took me at once under his protection and care; hence it is that the little maiden aforesaid appears in the morning with my coffee, at noon, when I return weary from the hunt, with a dish of eggs fried in oil and "*yam sauvage*," and at dusk with the same, varied with a plate of mountain cabbage, or salad from the little wattle-enclosed garden on the hillside. The cabin of J. B. is not far from mine, and my wants are early supplied when the hour arrives for meals, even almost anticipated. But there are many things connected with the attendance of my little cook and waiter that in the light of my early education in New England seem, to say the least, queer. For instance, when the knives and forks require cleaning, their surplus coating is removed by being brought in close contact with the skirts of her garment. I say *garment*, and use the word in the singular advisedly. The spoons also are cleaned in the same way, and were it not that my eyes had beheld the process of polishing, I should not believe, as they nestled innocently together on the rough table, but that they had been subjected to the treatment customary in more civilized communities. My tin camp cup, which has accompanied me in all my camp life, is often the object of her attention, and at that time it is doubtful to me whether she is washing the cup with her fingers or rinsing her fingers in the cup. At any rate, it shows a laudable desire to have my table furniture in good order, and I do not murmur; but there is a cake of soap and a towel that I keep concealed from her sharp eyes, that, when not observed, I bring into frequent use on those same objects of her devotion. One day I was incautious enough to peer into the culinary department—a palm-thatched structure, black and grimy with smoke, which escaped from the fire on the ground as best it could through the roof. Only once; I did not wish again to view those ancient pots and kettles, the refuse of preceding feasts, nor to fight my way through the drove of hogs that trooped about the open door.

Occasionally the thought obtrudes itself, "they do not have things like this in the States." This often makes me sad, but I raise my eyes, perhaps, and look out over the green slope, down upon the valley bursting with palms, and beyond the hills to the peaceful sea smiling in sunshine; and I exult in the thought that these enjoyments far outweigh the little annoyances that I have described. And I take down the thermometer and find that it records, if morning, 68–70 deg., if noon, 76 deg., if evening, 70 deg. again. And I again reflect, "they can't show all these in the States—in March."

But to effectually escape the train of thought that these observations might give rise to, I take my gun, ammunition, game basket and note-book, and plunge into one of the lateral ravines that feed the huge gorge below. It is morning. The breadfruit, mango and limes that thickly stud the slope above are glistening with dew, and the low shrubs that line the ravine, as well as the taller trees that darken its recesses, are dropping copious showers of heavy drops. I am following the dry bed of a stream that shows, by hugh rocks dislodged and excavated banks, what must have been its size and force in the rainy season. Ferns, lycopodiums and matted and tangled roots conceal the earth and make every footstep a doubtful one, and the loose stones and rocks, with dark holes beneath and beside them, suggest most forcibly the possibility of the presence of snakes. But I am looking for birds (and snakes, also, if they come in my way), and do not give them the attention that once I thought I should, when hearing tales of their abundance and venomous character in these islands. As this is a search for birds, the snakes shall be left for some future chapter.

It is well known that each species of bird has its own peculiar haunt, where it feeds, sings and sports itself. It has, also, a different haunt for different portions of the day, and the birds of the morning which we find in the ravine may be in the evening feeding or singing on the borders of open glades, or higher up the mountain sides. At mid-day you will find all under cover of the densest shade, and silent. It is in the morning that they may be found in localities characteristic of them. The first bird that greets me on the edge of the ravine is the humming bird, as he dashes here and there, from flower to flower, scattering the dew drops in tiny showers, and reflecting almost prismatic hues from breast and back. There are three kinds here in this mountain valley, the smallest of which has a lovely crest of metallic green; the largest, with a length of five inches and stretch of wing of seven and a half, has a gorgeous crimson throat, purple velvet back and wings, and tail of metallic green, reflecting most delightful hues. The prevailing hue of the other species is green, with a throat sometimes green, sometimes blue, varying, I think, with sex and age. The names of species of these birds, as well as of all others that come within my reach, will be determined by our learned friend, G. N. Lawrence, of New York, who has named so many birds, written so many books, and whose fund of ornithological lore is inexhaustible.

I leave the humming birds for my little *chasseurs*, who catch me all I want with bird lime. Of them more anon; let us plunge into the ravine. A movement in the branches of a tall, slender tree claims attention. I look up; see nothing. The broad, glossy leaves vibrate again, and I discern above the lower branches a bird the size and shape of our brown thrush; he has a long, stout beak, a yellow eye and a glossy brown coat. He hops from twig to twig, feeding upon the coffee-like berries of this strange tree, silent, engaged in the gleaning of his morning meal. But, however intent upon securing those white berries, the husks of which he drops almost upon my head, he does not forget to stop every few seconds and shake his wings and jerk his tail in a most comical manner. A hop, a quiver of wings and tail; a skip, with accompanying shaking all over; a jump, with a convulsive shake, quivering and spasmodic twitching of head, wings and tail. His movements are as interesting to watch as those of our American blue jay, which latter bird I used to think the handsomest, most interesting and liveliest of birds; that was when I was a youngster and first handled a gun. As I watch this interesting bird I am conscious of the presence of another, and of several others also, which, when they meet, go through the most laughable of series of bows, quivering of wings and caudatory vibrations. Well has this bird earned the title (universal, I believe, throughout the West Indies) of "*Trembleur*."

And now, the trembleurs having been attended to, I push on till I reach the brink of a precipice. A little stream that falls musically over the rocks and stones suddenly loses itself over the brow of this wall of green on the summit of which I stand. Cautiously clinging to the trunk of a tree, I look down into the valley. The sight nearly makes me dizzy, for there, 500 feet beneath me, I see tall trees as little shrubs, bananas and plantains as small plants, and huge boulders as pebbles. The roots I am standing on overhang the precipice, and the tree shoots out far over the dizzy height. Above the sighing of the wind in the tree tops, and the music of the birds, and the creaking of branches, is a roaring of water falling from immense height—a roar that drowns every other noise and deafens the ear to every other sensation. Wending my way along the brink, clinging to roots and trees, I soon reach a point where I can see, half way down the perpendicular cliff, a sheet of foam; a hundred yards further another, falling from a lesser height, yet neither less than one hundred and fifty feet—the higher over two hundred. They are lost in a sea of green, reappearing further on as a united stream, which rushes and roars over rocks, through gorges and at the base of mountains, through gardens of figs and plantains, beneath towering, feathery palms, through green fields of cane, at last to reach the sea.

It is while carefully balancing myself on my shaking support of matted roots that a sound comes to my ear through the roar of a waterfall—a sound strangely sweet, solemn and impressive; a mellow, organ-like note, clearer than any flute tone, more thrilling than the solemn chant of sacred song in groined cathedral. It was repeated. I stood entranced, listening to melody that had never fallen on my ears before! The cause I could not at first ascertain, for the notes seemed ventriloquial; and indeed they were so, for I searched high and low, the leafy branches above my head, the densely clustered ferns at my feet, and the shrubs at my back, for many minutes before I found the source of this mysterious music. Balancing airily on a lance-like bamboo, that shot out twenty feet beyond the brink of the cliff, poised in mid-air, with half a thousand feet of space between him and solid earth, was a daintily-shaped bird, clad, save a dash of rouge beneath his throat, and of white here and there, in sober drab. Unconscious of surrounding things, animate

and inanimate, he was devoting his powers to the production of that wonderful music. In the short space I here allot myself I cannot describe the different notes, and must leave that for some other time. To say that they were flute-like would be to slander the bird, for surely no flute ever produced such mellow, liquid tones. It was music of unearthly sweetness, that once heard never would be forgotten — between the notes a long pause, that made them most impressive, and created a desire to hear the continuation of the melody. It was not a song (though I discovered later that the little bird had a song), but simply the utterance of a few notes. Soon it ceased, and the bird flew into the near forest, where I soon discovered it busily feeding upon the berries of a tall shrub, to the pendant branches of which it was clinging, now and then dashing at a fugitive bunch, apparently as intent upon this occupation as in his melodious lay of a few minutes before. Soon he ceased feeding, and commenced preening himself upon a naked limb; then, after smoothing himself out as it were, and drawing in and stretching out his neck—probably to accumulate "power"—he suddenly dashed at a single berry, swallowed it to clear his throat, and recommenced to trill. He had uttered but a few bars when he silently flew to a dead branch; a few more, and he winged his way to a swinging "liane," where he hung suspended above a little ravine, in which is sunk a tiny stream, whose tinkling waters made music, though not so sweet and liquid as his. Then he disappeared in the dark recesses of the forest, where it would be useless to follow him, but whence came at intervals the ventriloquial music that seemed to float over my head and around me, though the bird was afar. This bird is called by my mountaineer friends, who have a name, and an applicable one, for everything in the forest, the "Sifflicur Montagne" or "Mountain Whistler." I afterward had one in captivity for several weeks, and the notes for his behavior, song and food would fill a column of type that my readers might think could be put to better use, but which would be valuable to the ornithologist as the first records, I think, of an intimate acquaintance with this species. But let us go on. I will leave the deep valley behind me, with the roar of the waterfall gradually falling, first to a monotonous hum, then ceasing entirely, and climb the bed of another water-course, now dry, waiting for the summer rains. Soon I emerge into a glassy glade, surrounded by mango, coffee-trees, and trees resembling the live oak. The mangos are bristling with spikes of blossoms—white with them—but not a bird nor a butterfly is hovering above them, though the surrounding trees and shrubs are alive with them. This is a fact I have long noticed, that the mango is ever deserted, though adjacent trees may be vocal with bird music. Whatever the reason, I leave for others to ascertain, though I may be able to declare it later in the season. But, flitting across this green glade, now bright under the rays of an ever-brightening sun, are many birds; that is, many for this island, for it is not abundant in species nor in numbers either, save of the humming-bird.

There is a tree full of warblers of strange species—of *Sucrier* or sugar-birds—a bird resembling our yellow warbler, several of the more strictly fly-catching birds, and a few sparrows, grosbecs and blackbirds. The three species of humming-birds are well represented, and dash hither and thither seeking their favorite food, indulging in mimic battles and amorous caresses. I push on, after an hour's stop, perhaps, over a rugged trail made by the half-wild cattle as they travel from glade to glade, and crossing another stream, climbing a hill, and descending into a ravine, I climb the steep slope of the hill on which my cabin is perched. Everything is as I left it five hours before. The door, which is merely kept from blowing open by a stick braced against it, has not been opened; but I find on the floor a cluster of oranges, a branch of fragrant lime flowers for my humming-birds, and a tastefully arranged bunch of roses from one of the girls. While I am putting the finishing touches to my bird notes the girl comes in with my lunch, and my little *chasseurs* arrive with their collection of humming-birds. They only hunt at certain times of the day, when I can be near to attend to the little captives, according to my instructions, for they have a cruel way of tying them together if they keep them long. Each boy is in himself a study, had I time now to give him attention. He is clad simply in a shirt, ragged and rent, and if his picture were taken it would not be necessary to write beneath it, as we read is necessary in some old painting, "This is a boy." They are finding some new things every day, and as they have got the idea that I am collecting everything in shape of bird, beast, insect and reptile, they bring me the results of each day's "find." Sometimes it is a snail, a fat caterpillar, hideous in its slimy skin, a butterfly, a beetle, or a spider. At one time, from an incautious remark that I made, to the effect that I would like a specimen of the curious land-crab which abounds in the ravines and rivulet banks, they conceived the idea of supplying me with the crustacean just mentioned. Each boy and girl on the place resolved to be the first to furnish me with the coveted crab. The consequence was that my place was soon overrun with shell-fish—ugly red and yellow crabs—as large as a man's hand, and from that to the most diminutive. One of the girls in a mischievous mood brought in a crab with a family of little ones—over a hundred—just large enough to be seen, and let them loose on the floor. Through some open window while I was absent some giant crab would be dropped on the floor to await my arrival. This was not done in a spirit of mischief, but from an earnest desire to aid me in my labors.

For a week after I could not stir without coming in contact with a shelly monster. I could not put my foot out of bed without a shudder of apprehension. Of nights I would be awakened by a rattling of ale bottles, and arising would discover that some crab had got thirsty during the night, and had inserted a claw which had caught in the neck of a bottle. Or, as one other night, when my slumbers were broken by a mysterious rattling, and I awoke thinking that, as J. B. had prophesied, the "jumbies" had come for me (as they come for everybody who sleeps alone in a strange house), to find another crab vexing his soul in vain endeavors to shin the broom handle. It may be surmised that I soon informed my corps of naturalists that I could dispense with their services, and now I am again a lone investigator, dependent upon his sole endeavors. In the afternoon I sit down by the loop-hole that serves as window (where, by raising my eyes, I can at any time look off upon the peaceful Carribbean Sea), gather my birds about me, and after noting their measurements and other data necessary to aid in their identification, proceed to skin and preserve them preparatory to their long journey to the "States." It is near sunset when this is finished, and after supper I climb into my hammock, or sit on my threshold, watching the sun go down behind the mountains. If I were a little further to the north I could see him down clear to the sea; and, in fact, I often climb a spur of a near hill, where are buried the ancestors of the present residents of Landat, and watch the sun as he dips below the sea, just gilding with his parting rays the rude crosses that mark the last resting-place of those buried beneath them.

But what I have been most disappointed in as the sun sets, is the absence of that prolonged twilight of evening which makes our evenings of early summer in the North so delightful; when, after the sun goes down, there remains that blissful lingering of day with night, when the softened light fades so gradually away that we cannot tell at what precise moment or how it left us, and when the song of the robin fills the air with melody, that many other of our birds keep up in the fields and orchards till late at night. There is none of that here. More than once I have said to myself, as the sun hid his face behind the dark ridge of mountain, leaving the trees sharply outlined against the clear sky—more than once I have repeated: "Now I will take my pipe and sit in the doorway and enjoy the twilight." But I had scarcely found and filled my pipe, and settled myself comfortably in doorway or hammock when twilight was gone, and the fast gathering darkness had hid the valleys, and was climbing the western slopes of the mountains. The stars were already out, shining with a liquid brilliancy that causes you to forget the absence of dusk, and you give yourself up to the contemplation of the lighted heavens, losing yourself in thought, wandering perhaps in meditation back to the land you have left, over which the same sky stretches and stars gleam, but not with the clearness of the one, nor the soft brilliancy of the other, at least not at this present season. There is none of that vesper song with which our Northern birds hail the evening to be heard here. The few birds in the thickets sing or chirp a little, but with no song peculiarly characteristic of evening. The only sounds that come to my ear are the cries of frogs and grasshoppers from the borders of the forest. There is a frog here that ever repeats in his cry the word "Charaib! Charaib!" as if lamenting the departure of the Carib from this place, his once peaceful abode. Like the cry of one in distress, that plaintiff wail breaks the stillness of night from dusk till daybreak.

And, speaking of Caribs, this brings me to say that my next move is into the fastnesses of the mountains of the Atlantic side of the island, where exist the last remnant of that once-powerful people. They live secluded from the world, holding no intercourse with other people; naked, they wander at will, without houses; they sleep on the ground, on a bed of leaves; if a stranger appear in their country they fly still further into the forest, and return only when he has departed. Such are the stories told me, and my curiosity has been excited to such a degree that I start for their stronghold next week. This, therefore, will be the last opportunity for writing for at least two months. The pictures that I now have of the magnificent scenery of this island will, I hope, be supplemented by those of the Caribs, such as have never been yet obtained. I shall be much disappointed if my researches do not prove valuable to both Professors Henry and Baird—in ethnology as well as ornithology; the field certainly is new.

In reading over this letter, it occurs to me that my readers will be much disappointed that there are no perilous adventures; no encounters with wild beasts, or even descriptions of a day's sport with game birds. But, while I assure them that my life alone in this tropical forest has not been devoid of stirring incident; that I have climbed mountains, scaled precipices; have in my collection serpents, centipedes, scorpions, wild-cats—in fact, a goodly list of foes to man—at the same time I would remind them that my object was to detail only a day's duties in the every-day run of camp life as I have commenced it. I have in my journal already accumulated much material for letters that may seem to them the narration of unreal or fictitious events, but that are merely the frequent experience of a sojourner in these wilds. To plunge at once into jungle and unknown forest before I have obtained a knowledge of the mode of life best suited, or have become in any way acclimated, would be a folly that experience I hope will prevent. To attempt to describe the beauty, grandeur, and overpowering luxuriance of these mountain forests in a single letter would be absurd. "Therefore," as the good old country deacon generally sums up, pardon me that I have not made my letter more abounding in exciting events. If my next are not perfect *chevaux-de-frisé* ("so to speak") of hair-breadth escapes, terrible encounters, etc., etc., the blame must attach to the country, the climate, but not to me. But a glance at the thermometer shows me it is time to retire; that is, about nine o'clock, for it graduates just 70 degrees. I close the door, fasten it with a stick, extinguish the candle, and tumble into my hammock, surrounded by solitude and darkness, which sometimes—I say sometimes—make a fellow think of a home.

FRED BEVERLY.

The Kennel.

THE NEW YORK BENCH SHOW.

TO say that the dog show held in this city last week was a success would but poorly convey an idea of what the result really was. It was a magnificent triumph for the dogs and for the projectors of the show. We question if on any previous occasion has there ever assembled in this city such a number of people at one time, and representing so much of the culture, wealth and fashion of the town. That such a collection of dogs was ever gotten together before in any country we very much doubt, for, although they may have beaten us in point of numbers at one time in London, yet in quality our show was far ahead, for the reason that in the sporting classes our entries far outnumbered those of any other show. The actual entries, including the specials, numbered 1,195, and allowing for puppies and collections covered by single entries, there were probably 1,200 animals on exhibition. In our account of the show we must ask the indulgence of our readers, from the fact, as is well known, that Mr. Tileston, our general editor, was a member of the Committee of the Westminster Kennel Club, and having direction of the details of the show was unable to give the necessary time to studying the dogs. Hence our report will lack that criticism which it is our custom to provide. There were so many "lions" and so many good dogs in the show, that it is difficult to tell where to begin. Probably nothing was more interesting than one of the earliest events of the show; that is, the appearance in the judging ring of the respective kennels of Messrs. Theo. Morford of Newton, N. J., and L. H. Smith of Strathroy, Canada, to decide the bet of one hundred dollars for beauty. The fiat of the judge was against Mr. Morford, and we certainly did not envy the former his task. Ten handsomer setters were probably never in the ring together, and in addition to their beauty, it is well known that both kennels turn out as good field dogs as any in the country. The champion classes did not fill quite as well as we had expected, and Pride of the Border being absent, the contest in Class I was narrowed down to Mr. Smith's Leicester and Mr. Macdona's Ranger II., the former winning. In the bitch class Mr. Smith was again successful, taking first with Dart, the other two entries being highly commended. In the champion Irish class, Plunket having been withdrawn from competition, the prize lay between Mr. Burges' Rufus and Mr. Jarvis' Elcho, the former winning; a judgment in which we do not concur. Both dogs were in splendid condition, Elcho particularly so, and in coat and color as near the highest standard as it is possible for a dog to be. The class was pronounced a good one. In the bitch class Lou II. had almost a walk over. The decision of the judges in the champion Gordon class surprised many, as Rupert, although a fine dog, has not the quality of either Grouse or Shot. Mr. Copeland had a walk over with Norah, as Lou was not entered for competition; and Di, although an excellent brood bitch, was scarcely up to Bench Show form in that company.

The champion pointers were a splendid lot, and although we by no means concurred in Mr. Macdona's decision at first, we are fain to admit, that on looking carefully over the dog afterward he was not far wrong in placing Snapshot first. The dog was shown under every disadvantage. He had landed from the steamer but the day previous, his color is an unfortunate one, and being ticked with lemon he had the appearance of suffering with the mange, which he was not. His head, chest and stern are perfect; his legs are rather light, and he is short, although very muscular, in the quarters. We predict that if he stays in this country, as we trust he will, that his progeny will be found among the winners both on the show bench and in the field, although he is eight years old and his days of usefulness almost over. Sensation was decidedly the best of the lot, barring perhaps Snapshot. Little Flake was looking as handsome as a picture, and it is unfortunate that there was not a class for small-sized champions, when he would have swept the board, as he did at Baltimore. The bitches were, as compared with the dogs, not a remarkable class, the Columbus Kennel Club winning with Belle, a handsome liver and white.

The demand upon our space compels us to postpone a review of the open classes until next week, when, as our paper is to be enlarged to 24 pages, we can give the subject more attention.

There have been many lessons learned by this first New York Show, among them the necessity for a better marking of the dogs when they are received. To accomplish this, next year ear seals will be clamped on the collars with metal checks to correspond. It is also to be hoped that a better staff of attendants will be provided on the next occasion. As it was, however, with the limited time at his control, Mr. Lincoln did remarkably well, and has received the approval of the club.

The following is a list of awards which were not completed up to the time of our going to press last week, and were omitted in that issue:

Class 1.—Champion English Setter Dogs.—1. Leister, lemon and white, 5 years, by Llewellin's Dam, out of his Bill H.; L. H. Smith, Strathroy, Canada. V. H. C.: Ranger II., white and lemon, 3 years, by Macdona's Champion Ranger, out of Wonder; G. de Landre Macdona, Hilbre House, West Kirby, Cheshire, England.

Class 2.—Champion English Setter Bitches.—1. Dart, blue belton, 5 years, by Llewellin's Prince, out of Dora; L. H. Smith, Strathroy, Canada. V. H. C.: May, orange and white, 3 years, by Joe, out of Nelly; Theodore Morford, Newton, N. J. H. C.: Magnet, black and white ticked, 2 years, by Victor, out of Daisy; C. S. Wescott, West Philadelphia.

Class 3.—Champion Irish Setter Dogs.—1. Rufus, deep red, 5 years, by Trench's Shot, out of Trench's Lindy; Arnold Burgess, Hildedale, Mich. V. H. C.: Elcho, by Chaulic, out of Nell; Dr. William Jarvis, Clermont, N. H. H. C.: Jack (formerly known as Joe), red, 2½ years, by Milo, out of Mollie; J. F. Rathven, Port Richmond, Staten Island. C.: Duke, red, 4 years; Campbell Stewart, No. 152 Fifth Avenue.

Class 2.—Champion Irish Setter Bitches.—1. Lou II., light red and white, by Glendennane's Grouse, out of Nuttall's Maybe; St. Louis Kennel

Club, St. Louis, Mo. V. H. C.: Carrie, red, 6 years; W. J. Farrar, Toledo, Ohio. H. C.: Maggie, red, by Jack, out of Leska; S. Nelson, Flatbush, Long Island. C.: Juno, light red, 3 years and 11 months; by Plunkett, out of Juno; Thomas Adcock, Valley Mills, Providence, R. I.

Class 5.—*English Setter Dog Puppies.*—1. Safe, white and lemon, 10 months and 5 days, by noyal, out of Nina; D. T. Charles, Albany. V. H. C.: Sam. Tilden, lemon and white 10 months, by Rock, out of Kirby; J. W. Foster, Leesburg, Va. H. C.: Blaze, white and black, same age, pedigree and owner as Safe.

C.: Juno, F. A. Watson, Westchester, N. Y. C.: Rose, red and white, 2 years and 3 months, by Pam, out of Nell; J. E. Develin, New York City.

Class 7.—*Imperial Irish Setter Dog Puppies.*—1. Guy, red, 9 months, by Plunkett, out of Carrie; Harry Le Grand Cannon. V. H. C.: Berkley, red, by Elcho, out of Loo I.; St. Louis Kennel Club, St. Louis, Mo.

Class 7.—*Imperial Irish Bitch Puppies.*—1. Kathleen Mavourneen, by Plunkett, out of Moya; H. R. Bishop, Irvington on the Hudson. V. H. C.: Biddy, by Erin, out of Whitford's Erin; St. Louis Kennel Club; Rover, by Rover, out of Maude; Alexander Mackie, Albany.

Class 8.—*Native Irish Setter Dogs.*—1. Duke, Jr., red, 3 years, by Duke, out of Belle; B. Batchelier, Vallsburg, N. J. 2. Snipe, red, by Colt's Game, out of his Nellie; J. A. Barnes, Hartford, Conn. V. H. C.: Fritz; D. T. Charles, Albany, N. Y.; Pilot, by Don, out of E. Lewis's Juno, R. Lawrence, Flushing, L. I.; Count of Orange, red, 6 years, by Dash, out of Fanny, H. S. Mudge, Scout, 2 years and 8 months, by Kenneth White's Tom, out of his Lady, W. B. Lawrence, Flushing, L. I.; Teddy, deep red, by Jaffrey's Ned, J. E. J. Grainger; Rump, same color, age, pedigree, and owner; Jeff, red and white, 5 years, by Imported Bang, out of Gem, Kennel Club, St. Louis, Mo.; and Pat, red and white, Oscar Remmey, Jersey City; Boss, red, 1 year and 2 months, by Dan, out of Ruby, W. R. Hobart, Newark, N. J.; Pat, red, by Duke, out of Rose; J. B. Bergen, Red Bank, N. J.; and Humps, red and white, 3 years, by Frank, out of Nell, F. H. Cozzens. Tom, red, 3 years, by Arnold's Hooker, out of his Juno, R. G. White, College Point, L. I.

Class 8.—*Native Irish Setter Bitches.*—1. Kate, red and white, 3 years, by Frank, out of Neil; F. H. Cozzens. 2. Jule, 6 years, by Rodman's Dash, out of Rodman's Emma; C. E. Miles, Brooklyn. V. H. C.: Lady II, red, 2 yrs. and 6 months, by Tom, out of Lady, R. G. White, College Point, L. I.; Rosey, red, 3 yrs., out of Maggie, by Rufus, Heywood & Creed, Jamaica, L. I.; Fan, red, by Mead's Nelson, out of Jaffray's Minx, A. Taylor, Jr.; Bess, red, 2 years and 1 month, by Tom, out of Bess, W. B. Bryant, Hempstead, L. I.; Countess, red, 1 year and 6 months, by Duke, out of Belle, T. Newbolds, and Peg, red, by Tom, out of Lady, J. Lambert, St. Nicholas Avenue.

Class 8.—*Native Irish Setter Dog Puppies.*—1. Preston, red, 6 months, by Tar, out of Gypsey, W. F. Asten. V. H. C.: Brit, red, 9 months, by Tom, out of Lady, K. G White, Jr., College Point, L. I.; Begorrah, red, born May, 1876, by Plunkett, out of Diffendorfer's Bess, F. Noel, New York; Dash, red, 6 months, by Tar, out of Gipsey, G. W. Bassford, New York; Count, red, 7 months, by Derrick, and Cale, red, 5 months, by Guy, out of Cora II, Everett Smith, Portland, Me. H. C.; Baron, red, 3 months, by Tar, out of Gipsy, W. F. Asten.

Class 8.—*Native Irish Setter Bitch Puppies.*—1. Gipsey, red, 6 months, by Tar, out of Gipsey, G. W. Bassford, New York. V. H. C.: Rose, red and white, 4½ months, by Colburn's Dash, out of Ward's Fannie, F. H. Morris, Round Rouge, red and white, 5 months, by Guy, out of Cora II, Everett Smith, Portland, Me. C.: Carrie, red, 2½ months, by Stoddard's Marr, out of his Duchess, Jesse Sherwood, Edina, Mo.

Class 11.—*Pointer Dogs under 50 Pounds' Weight.*—1. Rush, lemon and white, 1 year, by Steele's Fake, out of Lillie; E. Orgill, Brooklyn. 2. Snipe, liver and white, by Whitney's Pete, out of Fuller's Queen, D. B. Fuller, Boonton, N. J. V. H. C.: Ranger, liver and white, 15 months, H. E. Jones. H. C.: Racket, liver and white, 13 months, by Racket I., out of Beauty I.; G. S. Floyd Jones, South Oyster Bay, L. I. C.: Pan, black, 3 years and 7 months, by Jet II., out of Juno; Rufus Prime.

A number of dogs of this class were ruled off for showing over weight.

Class 11.—*Pointer Bitches under 50 Pounds' Weight.*—1. Daisy, lemon and white, 1 year, by Flake, out of Lill; A. H. Strachan, M. D. 2. Rose, lemon and white, 1 year, by Steele's Flake, out of Lillie; E. Orgill, Brooklyn. V. H. C.: Nell, orange and white, 5 years; Theodore Krauss, Brooklyn; and Pan, black, 15 months; G. A. Strong, West Meriden, Conn. H. C.: Minnie, liver and white, 14 months, by Shot, out of Countess; S. B. Dilley, Lake City, Minn.; Dream III., orange and white, 2 years and 10 months, by Phil, out of Dream; Drake & Anderson, Newton, N. J.

Class 12.—*Pointer Dog Puppies under* 12 *months.*—1. Sancho, Jr., liver and white, 6 months, by Sherwood's Sancho, out of his Queen; Jesse Sherwood, Edina, Mo. V. H. C.: Sailor Boy, black, 10 months, by Pete, out of Whisky; R. M. Lindsay, Scranton, Pa.

Class 12.—*Pointer Bitch Puppies under* 12 *months.*—1. Fleet, white, liver and ticked, 7 months, by Ranger, out of Fan; S. B. Dilley, Lake City, Minn.

We do not print the awards in the remaining classes this week for the reason that the Westminster Kennel Club are having the Judges' books carefully copied, and propose publishing them in pamphlet form.

The following is a list of awards of special premiums:

No. 1 For the best setter, of any breed, dog or bitch, in the show. A silver cup, presented and manufactured by Messrs. Tiffany & Co.; L. H. Smith, Paris.

No. 2. For the best pointer, of any weight, dog or bitch, in the show. A double-barrelled, breech loading, central-fire shot gun; presented by H. C. Squires, No. 1 Courtland Street, New York; S. B. Dilley, Royal Fan.

No. 3. For the best brace of setters, of any breed, dogs or bitches, or dog and bitch, to be owned and exhibited by one person; a silver cup, presented by members of the N. Y. City Association for the Protection of Game; Mrs. R. A. McCurdy, No. 81 Park.

No. 4. For the best brace of pointers, dogs or bitches, or dog and bitch; to be owned and exhibited by one person; fly rod, presented by Frederick Shuchardt, Esq., value $50, Edmund Orgill, Rose and Rush.

No. 5. For the best collection of sporting dogs, of any kind, breech-loading shot gun, presented by Messrs. Nichols and Lefever, of Syracuse, N. Y.; Jesse Sherwood, with collection.

No. 6. For the best English setter stud dog, either native or imported, to be shown with not less than two of his get; Fox patent, shot gun, presented by the American Arms Co., No. 103 Mink Street, Boston; L. H. Smith, Leicester.

No. 7. For the best red Irish setter stud dog, either native or imported, to be shown with not less than two of his get; silver cup, presented by the FOREST AND STREAM Publishing Co.; Arnold Burges, Rufus.

No. 8. For the best black and tan, or black tan and white setter stud dog, either native or imported, to be shown with not less than two of his get; Newport bass rod and reel, presented by Messrs. J. P. Crook & Co., No. 50 Fulton Street, N. Y.; Geo. C. Colburn, Dash and his get.

No. 9. For the best pointer stud dog, over 50 pounds weight, either native or imported, to be shown with not less than two of his get; shot gun, presented by Messrs. E. Remington & Sons, N. Y.; Jesse Sherwood, Sancho.

No. 10. For the best pointer stud dog, under 50 pounds weight, either native or imported, to be shown with not less than two of his get; a set (3 of the new patent traps and 500 glass balls, presented by Capt. A. H. Bogardus of Elkhart, Ill.; W. F. Steele, Flake.

No. 11. For the best English setter brood bitch, either native or imported, to be shown with not less than two of her progeny; English sole leather sportsman's traveling trunk, presented by Messrs. Thomson & Son, 301 Broadway; L. H. Smith, Dart.

No. 12. For the best red Irish setter brood bitch, either native or imported, to be shown with not less than two of her progeny; fly book, presented by Wakeman Holbertson, Esq.; John E. Develin, Moya brood.

No. 13. For the best black and tan, or black, tan and white setter bitch, either native or imported, to be shown with not less than two of her progeny; fly-rod, presented by Messrs. Conroy, Bissett & Malleson, No. 65 Fulton street, N. Y.; A. F. Copeland, Norah.

No. 14. For the best pointer brood bitch, of any weight, to be shown with not less than two of her progeny; silver cup, presented by Col. Le Grand B. Cannon; J. Addison Smith, Lillie.

No. 15. For the best English setter, dog or bitch, native bred, out of a native bitch and by an imported dog; silver cup, presented by Dudley Olcott, Esq.; Mrs. R. A. McCurdy, Tuck.

No. 16. For the best native English setter, dog or bitch, owned in the States of New York and New Jersey; a case of stuffed North American game birds, presented by Justus Von Lengerke, Esq.; Theo. Morford, May.

No. 17. For the best setter, dog or bitch, of any strain, bred in the United States; black bass rod, presented by Messrs. Abbey & Imbrie, No. 18 Maiden Lane; Dudley Olcott, Wamsutta.

No. 18. For the best native setter puppy, either dog or bitch; either English, Irish, or black and tan, or black, tan and white; revolver, presented by Messrs. Barton & Co., No. 337 Broadway; Theo. Morford, Grouse.

No. 19. For the best Irish setter puppy, either dog or bitch; opera glass, presented by Messrs. T. Steele & Son of Hartford, Conn.; H. LeGrand Cannon, Guy.

No. 20. For the best pointer puppy, either dog or bitch; revolver, presented by the Westminster Kennel Club; Jesse Sherwood, Sancho, Jr.

No. 21. For the best native English setter puppy, dog or bitch, under 12 months of age; case of gun cleaning implements; Capt. J. W. Foster, Sam. Tilden.

No. 22. For the best display of fox hounds; cup, presented by the Westminster Kennel Club; Drake and Anderson.

No. 23. For the best cocker spaniel, dog or bitch; gun case, presented by Erdmann A. Herzberg, Esq., T. H. Hoe, Witch.

No. 24. For the best skye terrier, dog or bitch; silver collar, presented by Mrs. Gen. Alex. S. Webb; Deolitle, Punch.

No. 25. Special prize for the best pug dog or bitch; handsome silver collar; Miss Bessie R. Webb, Rex.

No. 26. For the best Gordon setter puppy; revolver, presented by C. E. Buzmann, Broadway. For the second silver dog collar, also presented by Mr. Buzmann. 1st. M. Grinnel, Rex. 2d. Dr. S. Fleet Speir, Romeo.

THE SYRACUSE BENCH SHOW.—A dog show will be held in the Armory at Syracuse in connection with the annual convention of the State Sportsmen's Association, on the 5th, 6th, 7th and 8th of June, providing it is not found expedient to change the date. There is no reason to anticipate a repetition of last year's fiasco at Geneseo, and we expect to see a fine collection of dogs. The Westminster Kennel Club give two cups, and will send Sensation and a number of their other pointers. Messrs. Wagstaff, Granger, Tileston and other gentlemen of this city will send their kennels, and Mr. Charles Lincoln will ably fill the office of Superintendent. With some omissions and a variation in amounts, the prize list will be modeled very closely after that of the late New York show. There will be four champion classes, for English, Irish and Gordon setters and pointers, with a prize of $50, divided between dogs and bitches, in each. There will also be the following open classes: For imported English setters or their progeny of the first generation, with $20 each for dogs and bitches, and $10 each for puppies; for native English, imported red or red and white; native red or cross-bred, native or imported Gordons, and light and heavy pointers, each with an equal amount of money in prizes. There are also classes for retrieving and cocker spaniels, fox hounds and fox terriers among sporting dogs, each with $15 and $10 prizes. Among the non-sporting dogs there are classes for mastiffs, St. Bernards, Newfoundlands, coach dogs, collies, pugs, black and tan terriers and skye terriers, each with $10 and $5 prizes. The premium lists and entry blanks are now being prepared, and can be had by addressing Charles Lincoln, Superintendent, Syracuse, N. Y.

RANGER'S VICTORY.—By the kind permission of Mr. Macdona, we print below the letter from his broker, Elias Bishop, who is also a prince among brokers, describing in his quaint way Ranger's great victory at Shrewsbury:

NEEDLESS HALL, West Brackley.

REVEREND SIR:

You will have heard by cable from Mr. Lort the result of Shrewsbury; Danger, H. R. P. Sohns, granddaughter of the champion, won 2d (£20) in fine style, winning all her heats; 16 ran. The champion Ranger went down first with Lord Down's Dan, winner of the Derby last year, and beat him three very fine points to nothing; next heat John Armstrong's Young Sam, winner of the Setter Puppy Stake last year, and beat him also two points to nothing; next Mr. Brewis' Dash II., winner last year in a very short trial, could not run with the champion. Ranger also got the prize for condition.

Ranger I., £40; Young Sam, 2d, £20; Dash II., 3d, £10.

In the champion plate, Ranger beat Maud without giving her a change, pointing birds and hares in grand style; second heat Ranger beat Lord Down's Bang; Ranger then beat Llewellin's Nora, by Dan, four grand points to nothing, never giving her the slightest chance in any way. Won the plate. Nora was worked by Buckell.

I was congratulated on my success by all. Lord Hill and Mr. Corkwright were the judges. Lord Hill judged the champion plate for Lord Combermere, who judged the other two dogs. I am off to Linton to-morrow morning with the champion of champions, who is now on the carpet at my feet, and Rory, who is doing very well indeed. ELIAS BISHOP.

SPLIT BAMBOO RODS.

To our customers and the public:—In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

CONROY, BISSETT & MALLESON,
Manufacturers, 65 Fulton Street N. Y.

Sea and River Fishing.

FISH IN SEASON IN MAY

Trout, *Salmo fontinalis*. Salmon Trout, *Salmo confluus*.
Salmon, *Salmo salar*. Shad, *Alosa sapidissima*.
Land-locked Salmon, *Salmo sebago*.

***For trout flies in season in May see our issue of April 26th.

FISH IN MARKET.—Our quotations for the past week are as follows: Striped bass, 18 to 20 cents per pound; salmon (frozen), 50 cents; green, do. 50 cents; California, 45 cents; mackerel, 8 to 12½ cents each; shad, native, 30 cents; Connecticut River, 50 cents; white perch, 15 cents per pound; Spanish mackerel, 75 cents; green turtle, 18 cents; terrapin, $15 per dozen; frostfish, 8 cents per pound; halibut, 5 cents; haddock, 7 cents; codfish, 10 cents; blackfish, 15 cents; herrings, 5 cents; flounders, 8 to 10 cents; sea bass, 20 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 25 cents; scallops, $1 50 per gallon; whitefish, 15 cents per pound; pickerel, 15 cents; salmon trout, 15 cents; Long Island trout, $1; Canada do., 50 cents; hard shell crabs, $4 per 100; soft crabs, $2.50 per dozen; red snappers, 18 cents; weakfish, 18 cents; pompano, 75 cents.

NEW JERSEY.—*Kinsey's Ashley House, Barnegat, May 10th.*—May is off month for game and fish, and consequently nothing of interest to record in that line, except probabilities for approaching season. Bluefish last year made their appearance May 26th, one week later than the year previous. Some herring and bunkers, which had been found last week on the beach, had evidently been roughly handled by bluefish. The first sheepshead was taken last year, June 10th; in 1875, June 12th. The best fishing recorded was during the third week in June; first black bass May 1st; sea bass May 4th; weakfish late, about July 28th, and scarce. Mr. W. W. Scott, formerly of Pemberton, N. Y., has purchased and refitted the well-known Mullen House at Barnegat. Mr. George Pitman has leased the Clarence House. Mr. Cook has rented the Hopkins House at Waretown, and our genial little Tommy Taylor, formerly of the Mule House, Jersey City, has the cozy Centennial. Sheriff Parker and Brooks are at Forked River, while Kinsey remains at the Ashley House, on the fishing grounds, Barnegat Inlet; Uncle Charley Martin at the Cedars, and Ridgman at the Club House.

AQUIA.

MASSACHUSETTS.—*New Bedford, May 12th.*—The month of May is eminently the month for trout, and our amateur fishermen are improving it to the full extent. Last week, on visiting some of our most famous brooks, I found them literally sentinced from rise to mouth. Among those to show fine baskets was the veteran fisherman, Waterman; also Messrs. Hathaway and Lucas, the latter showing one to turn the scales at 1¼ pounds. Our markets are glutted with marine fish of many kinds, and at extremely low prices.

CONCHA.

THE ADIRONDACKS.—After an intermission of several years, the Adirondack fever is likely to break out afresh the coming summer. Everywhere we hear of preparations among sportsmen to spend their vacations in the North Woods. Rev. Mr. Murray has written another book on the wilderness, and the perusal of that will of itself give a renewed impetus to the movement in that direction. After all, there are no places that we wot of that combine so much that is aboriginal and primitive with so much that is luxurious and modern, giving purest air, choicest sport, and rejuvenating exercise and health:

LAKE PLEASANT, May 9.

Two weeks ahead of the usual time, but not much ahead of the fishing, I arrived here safely by the aid of Reub Willard's comfortable stage last evening, and have reveled in trout and Bermuda onions. It's well I have them to fall back on to-day, for winter has changed its mind and is giving us one more little snap; and to-day we sit by Steve Andrews' big fireplace and imitate Ik Marvel and Parson Murray reveries and big fish stories.

The "lakers" are not yet rising to the spoon, nor the fontenales to the fly, but No. 6 Kinseys, well baited at the anchors, have seduced a fine lot of the former from the depths of the lake, and a goodly number of quarter and half pound brook trout have yielded to the worm. After this cold snap is over I guess the fun will begin.

As the extent of my fishing so far has been but the capture of about fifty small trout in a brook near Welles, while waiting for the stage, I will only tell you this time a little story of a bear—a story which upset some of my preconceived ideas as to the natural history of said brutes, and one which is fully confirmed. I believe that there is a disputed point as to whether bears hypernate in winter, living by the absorption of their fat, or, as some say, sucking their own feet (I never did quite take that in), or remain lively. One bear that I know of did neither.

Last August Mr. Daniel Cochrane of Welles captured in a tree a cub, which was kept chained and got quite tame. In November the cub, then very fat, refused food. The owner dug a trench three feet deep, eight long and two wide; covered it with boards and two feet of soil, and led the bear to the entrance, and the latter willingly entered and refused to come out. A quantity of hay had been placed in the den; the next day this was found outside in several small bundles. Two days after, however, the cub had changed its mind and carried it all in again. The cub remained in the den until a week ago. During the winter he was visited frequently and never found to be asleep. The slightest pull on his chain would be met by a pull back; he was always lying on his side awake. At one time a heavy snow and cold spell formed a solid ice cover over the entrance. This was not at first noticed, and when it was it

was presumed that the bear was dead, but after three weeks of this shutting off of fresh air, he was dug for and found to be as lively as ever. When taken out this spring he was fed some tamarack bark, of which he ate about two pounds, and then refused food for four days, after which his appetite generally returned.

During this long rest *this* bear, whatever others may do, had not absorbed his fat, for he was fat when he went in, and equally so when he came out.

I made a mistake in a letter I wrote you last week as to the days upon which the stage leaves Northville. I put it as the post-office guide had it, Mondays and Wednesdays. I find that the true dates of departure are Wednesdays and Saturdays, 9 A. M. PISECO.

TASMANIAN TROUT.—The following is an item of February fly-fishing in Tasmania: "Mr. E. M. James, who has been spending a holiday in Tasmania, returned to Melbourne in the steamer Mangana yesterday, bringing with him one of the finest specimens of the English brown trout yet seen in Australia. This very handsome fish was caught by Mr. James in the river Derwent, opposite Charlie's Hope, the residence of Mr. Thompson, about four miles from the salmon ponds. The fish measured 2ft. 7¼in. in length, was 19in. in the girth, and weighed exactly 16lb. Spinning bait was used, with the native fish called 'jolly tails,' about the size of the whitebait. The tackle was an ordinary salmon rod, used with a silk salmon line. Mr. James had tried the Derwent, the Clyde, and Shannon for several days with very indifferent success, owing to the stormy state of the weather and the rivers being flooded with snow water. The fish was hooked late in the evening, it being the last trial of the day. At first from the weight of the fish Mr. James thought he had hooked a salmon. The trout made a gallant fight of it, but after three-quarters of an hour's play he was secured with the gaff. The capture of such a splendid fish created great excitement among the fishermen in Hobart Town. On the same afternoon, Mr. W. G. Weaver caught a fine grilse in the same water, which, when cooked, had all the appearance and flavor of true salmon. The trout, after being cleaned and the inside filled with charcoal, was packed in snow and brought to Melbourne."

MAINE.—Rangeley Lakes and Moosehead Lake are very likely to divide with the Adirondacks a portion of the summer travel this year. Sebec Lake also offers new attractions. Greatly improved hotel accommodations and road facilities have been added since last season, while for fishing there are no opportunities better anywhere. There is a water system in the interior of Maine greater than that of the Adirondacks, which can be traversed continuously by canoes with but few portages. One can enter Maine by the Penobscot, and pushing northward, strike the upper St. John River, and following it down reach the Atlantic again at the Bay of Fundy, making a trip of many hundred miles or less, at option, taking to regular lines of travel at a score of different points *en route*, if the voyager should tire of his canoe journey.

By the bye, we have been unwittingly directing our friends to a Boston printer, who published a Moosehead Guide and Map two years ago, but does not now, it seems. What trouble we have made for them we can only estimate; but here is what the Boston man has to remark by way of complaint:

BOSTON, May 4, 1877.

EDITOR FOREST AND STREAM.

I have been considerably annoyed by applications for guide and maps to Moosehead Lake, owing to some representation in your paper that I could furnish same. It is a mistake; I have neither maps or guide. If you will please so state in your columns, it will greatly oblige.

T. W. RIPLEY.

We are happy to state, notwithstanding, that Mr. Charles A. J. Farrar, who last year published the very complete Rangeley Lake guide, has now in press a map of Maine, which will be issued, he hopes, within a week. Our friends will be notified by his advertisement.

—S. Kneeland, Jr., formerly with D. T. Curtis & Co. of Boston, is now located at North Cohasset, where he is prepared to entertain sportsmen on short notice. This is one of the best points in the State for tautog, cod and smelt fishing, and coots are plenty.

—A correspondent writes that sturgeons are frequently caught at Kingston Point, in the Hudson River, in the shad nets, although some persons have been deploring their "entire" absence from the river. The fishermen call the young sturgeon "sharpnoses," and take them in large numbers.

—Our New York State exchanges contain notices of sporting parties in all parts of the State preparing to go into the north woods as soon as the weather permits.

—Trout are so scarce in the vicinity of Bridgeport, Conn., that a local newspaper is moved to say that there haven't been enough caught "to found a decent lie on!"

SOUTH CAROLINA.—*Graniteville, May 8th.*—Black bass fishing is now excellent, the average weight running from four to six pounds. Wild turkeys can be found within a short distance from Union. Our correspondent pleasantly adds, the country is now in full summer dress of green. For the past month we have had green peas and now are having delicious strawberries and new potatoes, all from our own garden, too.

TO OUR CUSTOMERS AND THE PUBLIC.

The great reduction we have made this season in the prices of our Split Bamboo Rods has occasioned many inquiries to be addressed us, of which we may mention the following: "Are those rods of the same quality as those you sold us last year?" "How is it that when we last purchased you charged us $40 for a fly-trout rod, and now advertise them for $25?" etc., etc. Lacking time to reply to these individuals, we seek the aid of the press to make our explanations.

Those who are acquainted with the reputation our house has always enjoyed of furnishing first-class goods, an answer to the first query we have named would be superfluous, were it not that reports have been circulated by dealers, *not manufacturers*, who are not in a position to meet our prices from the fact that they *are* dealers and not manufacturers, that these rods are of inferior quality; that the enamel has been sacrificed to reduce cost of making, etc.

To this we most emphatically reply, that the rods we are now offering are of the very same quality, or better if possible than before; that bamboo itself is the best we have had for many years. They are made by the very same workmen; the mountings are German silver of best quality (not "brass, nickel-plated," as reported), and the fittings are perfect in every respect. In short, we will guarantee them fully equal, if not superior, to any maker. Without any exception in the matter, we challenge comparison in every particular. That this comparison may be exhaustively made, we have at our store for inspection of all who may be interested, first, the sections of bamboo in its rough state; then the strips as they are prepared ready fitted for glueing; then the joints after being glued, and finally the completed rod.

This we consider will cover all the points as to "quality," and we think even the most skeptical will be satisfied when they have examined into the matter, that our rods are as perfect as hands can make them. With respect to the second query, as to the great difference in price—of $40 last season, but $25 now—the answer is simple. We are *now manufacturers;* we pay no manufacturer's profit. All those rods are made in our shop, under the personal supervision of the firm. Dealers who charge the old high prices are obliged to do so because paying a manufacturer's profit. Their cost is more than the price we are selling at. These rods are not reduced in price, and sold at or under cost—as a "leader," as sometimes is done—to influence orders for other goods; they are sold at what we consider a fair profit, and we are satisfied with the percentage they pay us.

Of course we do not make as many dollars and cents on a rod as formerly, but our orders so far this year are ahead of our whole sales of last season. We have no reason to regret fixing the price at a figure that will place these rods in the hands of the majority of fly-fishermen. The annexed list will show the reductions we have made. We quote:

Fly-rods, 6 strip, 2 tips; now $35, formerly $40.

Fly-rods, 6 strip, 3¾ and duplicate joint; now $35, formerly $55.

Black bass rods, 6 strip, 2 tips; now $30, formerly $50.

Black bass rods, 6 strip, 3 tips and duplicate joints; now $40, formerly $65.

Salmon rods, 6 strip, 2 tips; now $50, formerly $80.

These rods are in all their parts wholly made by hand. Positively no machinery is used in any part of their construction. Send for circular.

Conroy, Bissett & Malleson, 65 Fulton street, N. Y.—*Adv.*

Yachting and Boating.

HIGH WATER FOR THE WEEK.

Date.	Boston.	New York.	Charleston.

HARVARD SCRATCH RACES.—The Harvard College scratch races came off on Saturday on the Charles River, the Holyoke crews winning both the four and six-oar races. Goddard, of the class of '79, won the single scull race.

EAST BOSTON YACHT CLUB.—At the regular meeting of this club, held May 4th at their club house, it was decided to weed out all the useless members and commence anew. On motion of Capt. W. S. Nickerson, a committee of seven gentlemen was chosen to procure a charter, and have the club act this year as an incorporated body.

The representation of yachts in this club is very good, and for uniformity in size, rig, and models are unequaled by those of any club this side of New York.

There are about thirty yachts enrolled this year, and a list of forty-one members; thus the members that belong to this club are actively all yachtsmen and owners. The following list will give some idea of the size and rig:

Napoleon	sloop, 37 ft.	center board.
Tony	sloop, 28 ft.	keel.
Violet	sloop, 30 ft.	center board.
Actress		
Sea Snipe		
Josie	schooner, 25 ft.	keel.
Fagin the Jew	sloop, 25 ft.	center board.
Gael	sloop, 30 ft.	keel.
Emily	sloop, 30 ft.	keel.
Alice	sloop, 25 ft.	keel.
Lena	sloop, 32ft	center board.
Favorite	cat, 25 ft.	center board.
Ivy	sloop, 25 ft.	keel.
Lida	sloop, 26 ft.	keel.
Eugenia	cat, 25 ft.	center board.
May	sloop, 23 ft.	keel.
Lillian		
Sunbeam	sloop, 26-7 ft.	keel.
Willie	schooner, 22 ft.	keel.
Quimper	sloop, 30 ft.	keel.
W. B. Ford	sloop, 35 ft.	keel.
Bessie		
Lottie	sloop, 29 ft.	keel.
Vision	sloop, 28 ft.	keel.
O. K.	schooner, 30 ft.	keel.

There are several others that could not be obtained that will be given in a general revision of the clubs at a later day.

KEDGE.

AMATEUR CRUISING.

[*Continued from last issue.*]

BOSTON, May 5.

EDITOR FOREST AND STREAM.

All night we pitched and tossed off Commercial wharf, Provincetown harbor, and suffered all the nausea of seasickness. The night seemed terribly long to those that could not sleep. As soon as the first streaks of dawn appeared in the East we got up into the dock, where we would ground at low tide, thus getting good protection from wind and wave. Considering the stirring up we all had to undergo we took breakfast at the hotel, a rather plain, home-like building. There we discovered John on 6th, taking it easy and looking jolly. After a hearty hand-shake all around, and many inquiries, we found John had been waiting just one day for us, and that was the day that we were weather-bound at Scituate.

Were you ever in Provincetown—that little crooked place that lies on the crooked arm of Cape Cod? All you can see is sand. Sand here, and sand there—heaps of sand—hills and valleys of sand. The people of this place claim historically the first landing of the Pilgrim Fathers, and the town-hall is erected (if I remember correctly) to commemorate the spot. When those venerable men climbed the hill where this building is located, and looked around on the desolation, stretching as far as the eye could reach, I do not wonder at their wanting to get where they could see a little loam for a change. In the words of the Scripture, "It is better to found your house upon a rock than on the sand." It proved so to them. Thus, Plymouth Rock is doubly commemorated. The streets in Provincetown are very narrow; for instance, if a wagon or cart should happen to be on the same street with you, you would be compelled to get into some one's front garden or doorway to allow it to pass. The first thing that claimed my attention was an original sign, planted in the front garden of one of the little cottages on the main street (I should say lane). It read thus:

"PROF. FLUKER.
Saw Dentist.
Teeth Set
and
Filed.

This part of the Cape is very good ground for shooting sand-birds, plover, etc., and in the fall many coot, ducks, and geese are killed. The harbor is a winter rendezvous for the fishing fleet. Two years ago this last winter many vessels were frozen in and badly damaged. After seeing all the sights and wandering around to our hearts content, we sauntered back to the hotel, and enjoyed the cool shade of its protecting piazza. The wind had gradually died away, and at noon the weather was hot and sultry. A few thunder caps could be seen in the West, and every one expected a shower. The sand absorbed the moisture so quickly that after a heavy shower you would hardly believe any rain had fallen. From the position of our little yacht we felt no uneasiness about her. Towards 1 (one) P. M. the squall broke in all its fury, lashing the sea into foam, and blowing the sand in clouds. After it was over we found the dishes covered, and the forecastle and companion-way littered up with the loose material. We did not like the way the weather cleared up, as it showed very poor signs of settling, and our fears were realized before the next morning. The wind shifted round to the northeast and blowed a living gale. Vessels lying under the lees (offered in the harbor) dragged their anchors, and were compelled to get out double riding-lines. We suffered no inconvenience (being made fast to the wharf), except from the dirt and sand that blew off the pier down upon us. We retired early, but I could not sleep much from the howling of the wind through the rigging, and the rat-tat-tat of the halyards on the mast. I have often crawled out of a warm berth to hunt for the line in the dark that is making the infernal noise. The tiller, too, is very musical on such occasions, and we have to tie that up to give us a rest.

Daylight again, but no signs of the storm abating. After breakfast we all proposed going up into the cupola of the town-hall to get a view of the ocean on the back-side of the Cape. Such a gorgeous view we found! but we did not stop to admire long; the thing rocked and shook so much that we had to retreat for fear of our lives. But the little we saw gave us an idea of the fury of the storm. The Atlantic was white with crested waves, and only here and there a vessel to be seen, scudding under close reefs. We got back to the boat all safe, only to find a new trouble awaiting us. The warm day had driven a number of the younger portion of the population out of doors, and of course they were attracted by the sight of strangers roaming round, and when their curiosity found out we were from Boston, they of course wanted to know how we came to the Cape. It did not take them long to find our yacht, and the way they hung to us put you in mind of the little fly that buzzes around your head but never bites. They congregated so thickly (and they were mostly girls), that out of patience I threatened to douse them with hot water if they did not cease their questions and bothering. Their ages varied from ten to seventeen and eighteen years, and they would sit on the cap of the wharf with their feet hanging over like school-girls, and chatter like a parcel of monkeys. If I did not feel inclined to answer their questions, a handful of gravel would suddenly bring me to a recollection of the duty due them. If they had been boys I should have been tempted to push them into the dock and thus cool their ardor, but, to the contrary, they were women. Take heed! never get on the wrong side of the milder sex, unless you want to come to grief.

Just as I had a nice dish of stewed tomatoes in my hand, a cupful of gravel came down through the fore-hatch and spoiled the whole thing, and a shout went up from those Amazons that would have answered for a rebel yell. Out of sheer desperation I was compelled to go inside my shell and pull the hatch cover over. The boys made a sally out of the companion-way with buckets of water, and a lively race ensued to get at a safe distance. They saw we meant business, and gave it up. We partook of our dinner in peace and quietness. John took hold and helped me clean up, the first one that offered, and I made up my mind that the other should assist before we got to Buzzard's Bay. We swept up two or three scoopfuls of sand, and still we felt gritty. The boat was sifted full of shifting ballast, but not in the shape we wanted it. KEDGE.

Tiffany & Co., Silversmiths, Jewelers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their timing watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. Tiffany & Co., are also the agents in America for Messrs. Patek, Philippe & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Bronzes and Artistic Pottery is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Union Square, New York.

Manager,
Alexandria Bay, N. Y.

SEA-SHORE HOME BOARDING HOUSE, by O. F. HOTCHKISS, at Short Beach, Branford, Conn. Sea food, comfortable house and beautiful view of the sea. Three stages to and from New Haven daily after June 15. Previous arrangements necessary. House strictly temperate. Address as above by mail.

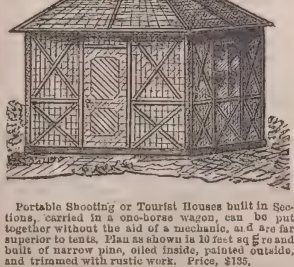
CROSSMON HOUSE.
ALEXANDRIA BAY, JEFF. CO., N. Y., C. CROSSMON & SON, Proprietors.

THIS HOUSE, RECENTLY REBUILT and elegantly FURNISHED, is now open for visitors. It is located in one of the most delightful places in the Thousand Islands region, commanding an extensive view of the St. Lawrence and the Islands, and offers every facility for the comfort and enjoyment of guests. Outfits for boating, hunting and fishing parties. Steamers for the bay connect at Clayton with the Utica and Black River Railroad, and at Cape Vincent with the Rome, Watertown and Ogdensburg Railroad. apl2-6m

SEA CLIFF HOUSE, SEA CLIFF, L. I., OPENS for the season 1877 on May 1, at rates to suit the times. Special arrangements for families.
May 17-tf E. RICKCORDS.

Metropolitan Hotel,
WASHINGTON, D. C.

Carrollton Hotel,
BALTIMORE, MD.



R. B. Coleman & Co., proprietors of these famous hotels, are well known to the old patrons of the ASTOR HOUSE, N. Y., and ST. NICHOLAS, N. Y.

THE METROPOLITAN

is midway between the Capitol and the White House, and the most convenient location in the city. It has been re-fitted and re-furnished throughout. The *cuisine* is perfect; the service regular, and charges moderate.

R. B. COLEMAN & CO.

PORTABLE SHOOTING BOXES.

Portable Shooting or Tourist Houses built in Sections, carried in a one-horse wagon, can be put together without the aid of a mechanic, and are far superior to tents. Plan as shown is 10 feet sq are and built of narrow pine, oiled inside, painted outside, and trimmed with rustic work. Price, $135.

Wainscoted 3 feet high, inside, $150.

Each house contains a stowaway or open attic for holding sporting equipments, &c. Plans for Seaside Cottages; also, all kinds of Rustic Work.

These houses can be built more extensively and elaborately if required.

O'BRIEN BROS., Yonkers, N. Y.

Sportsmen's Routes.

TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMP'Y

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of

The Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to KANE, RENOVA, BRADFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting,

Also, to

TUCKERTON, BEECH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

D. M. BOYD, Jr., Gen'l Pass. Agent.
FRANK THOMPSON, Gen'l Manager. feb17 tf

Sportsmen's Routes.

THE "FISHING LINE."
Brook Trout, Grayling, and Black Bass Fisheries
OF NORTHERN MICHIGAN, VIA
Grand Rapids and Indiana Railroad.
(Mackinaw, Grand Rapids & Cincinnati Short Line.)

Sportsmen who have cast a fly or trolled a spoon in the waters of the **Grand Traverse Region** will come again without solicitation. All other lovers of the Rod are invited to try these waters, wherein

The fish named above, as also **Muscalonge, Pike,** and **Pickerel,** abound.

In no other streams east of the Rocky Mountains is the famous **American Grayling** found in such numbers.

Brook Trout Season opens May 1st.
Grayling Season opens June 1st.

The sportsman can readily send trophies of his skill to his friends or "Club" at home, as **ice for packing fish** can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st **Round Trip Excursion Tickets** sold to **Points in Grand Traverse Region,** and attractive train facilities offered to tourists and sportsmen; also, on and after July 1st, **Mackinaw and Lake Superior** Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk,

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, send to FOREST AND STREAM office, or address

J. H. PAGE, G. P. & T. A., Grand Rapids, Mich.
A. HOPPE, Eastern Passenger Agent,

Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) 3 (coarse). In 1 lb. canisters and ¾ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office

88 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The *strongest* and *cleanest* Powder made. Nos. 3 to 7, packed *only* in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6¼ lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes FG, FFG, FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6¼ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less recoil than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER Co.,

TRIPLEX.

First Prize Medal and Diploma awarded Centennial Exhibition, for excellence of workmanship and material in their **Premier Quality** and medium grades. Their **New Patent Triplex** Lever Grip Action and **Compensating Lump.** The attention of sportsmen is requested to the above new action. Its superior strength and solidity impart greatly improved shooting powers. Hard hitting, being the desideratum required, is obtained by this powerful gun. Prices of the New Triplex Lever Grip, $175, $225 to $400. Marked the Triplex 10-bores extra. Our highest grade is as usual marked the PREMIER QUALITY.

Extract from FOREST AND STREAM, *New York, December 26, 1876, Contributed by one of the Judges of Awards of Guns at the Centennial:*

This action (The Triplex Lever Grip) combines in the highest degree strength and simplicity, and must rapidly secure the favor of all who test its merits.

COMPENSATING LUMP. Strongly recommended. It is invaluable, and should be ordered on every gun. Costs about $10 extra. Choke-bores, medium or full. Our guns to be had of the principal dealers in the trade only.

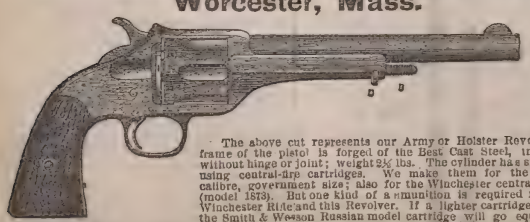
Peabody-Martini Breech-Loading Rifle s

Military, Target, and Sporting.

CREEDMOOR PATTERN.



2,000,000 service charges fired from 400,000 of these rifles at our works without accident. 20,000 rounds fired from a single gun without injury to the mechanism, or in the least impairing the accuracy of its shooting. Centennial Commission Report on Awards—Peabody-Martini Rifles: "As a military arm combining strength, simplicity, high quality of workmanship, ease of manipulation, with accuracy and rapidity of fire; using a central fire metallic cartridge, and ejecting the discharged shell unfailingly."

The Peabody-Martini Mid-Range Rifles, victorious at the Centennial Short-Range Match, at Creedmoor, Sept. 12, 1876, distance 200 yards, off-hand; 120 competitors. Members of the American and all the foreign teams participating. Only two Peabody-Martini Rifles entered, winning first prize, $100 cash and gold medal; and 4th prize, $25 cash and gold medal. Send for illustrated catalogue and price-list.

PROVIDENCE TOOL CO., PROVIDENCE, R. I., U. S. A.

FOREHAND & WADSWORTH,

Worcester, Mass.

The above cut represents our Army or Holster Revolver. The frame of the pistol is forged of the Best Cast Steel, in one piece, without hinge or joint; weight 2¼ lbs. The cylinder has six chambers using central-fire cartridges. We make them for the Colt 45-100 calibre, government size; also for the Winchester central-fire, 44-100 (model 1873). But one kind of ammunition is required for both the Winchester Rifle and this Revolver. If a lighter cartridge is desired, the Smith & Wesson Russian model cartridge will go equally as well as the Winchester, as the calibre of the chamber is suitable for each. The material in this Pistol is of the best quality, and the workmanship and finish is not surpassed by any maker. It is the most simple in construction, least complicated, and less liable to get out of order than any Holster Pistol made in the country. They are only to be compared with other arms to confirm what we say. We also make POCKET REVOLVERS DOUBLE ACTION, and the famous "TERROR," "BULL DOG" and "SWAMP ANGEL" revolvers, all of the Frames being forged from CAST STEEL.

SEND FOR PRICE LIST AND CIRCULAR.

BERDAN'S PATENT SOLID ANVIL

Paper and Metallic Shells

FOR

Breech Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

STURTEVANT'S PATENT MOVABLE ANVIL

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers. dec23 tf

Hart's Sportsman's Favorite Metallic Shells,

FOR BREECH-LOADING SHOT-GUN

These shells are easily loaded, and the caps easily extracted from inside. Head solid and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing miss-fires. The Cone is made of nickel, and fastened solid in its place. Neither rusts nor corrodes fast, like movable anvil made from steel. The Nickel Cone also prevents miss-fire when a cap has been left on shell for a few days, which is liable to occur either in steel or iron. These shells are finely finished, and made any length ordered, from 2½ to 3¼ inches.

Shells and Loaders and Descriptive Price-Lists can be obtained from all the leading Sportsmen's Houses throughout the country.

GEORGE E. HART & CO., Newark, N. J.

From Captain Bogardus, Champion Wing Shot of America.

MESSRS. GEORGE E. HART & CO.: Gentlemen—The fifty shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly,

A. H. BOGARDUS.

"ST. LOUIS CONICAL BASE PAPER SHELL."

Having made important improvements in our Shell, we can safely recommend them as equal, if not superior, in quality to any Paper Shell manufactured in this country or in Europe.

Among the advantages claimed for these Shells, are: A saving of 25 per cent. in the use of powder; also the great decrease in recoil. The sizes made are No. 10—2½, 2¾, and 3 inches; No. 12—2½, 2¾, and 2⅝ inches. Longer Shells will be made at extra cost. They are not mailable. Sample, 100, sent by express on receipt of $1.15 for No. 12; $1.30 for No. 10.

Factory and office, No. 2,230 De Kalb Street, St. Louis, Mo.

COMPLETE REVOLUTION

IN

SPORTING GUNS.

W. W. GREENER'S CHOKE-BORE GUNS have been proved by overwhelming evidence to be vastly superior to cylinder bores for all kinds of shooting, from snipe to duck. (See the **Letters from Sportsmen** in the London *Field*, dating from November, 1876, to March, 1877.) Dec. 9 a letter appears from F. Milbank, Esq., M. P., the finest game shot in Europe. This gentleman has killed on his own moor 760 grouse in one day. He says:

"We went out partridge shooting the last week in November. Birds are wild as hawks at this season of the year. Accompanying me were two gentlemen, both first-rate shots. All three of us had equal chances throughout the day. At the end of it one of my friends had seven brace, the other six brace, but the choke had 16½ brace. *I advisedly say the choke,* for I am convinced that the gun alone was the cause of my overtopping my friends by so large a number. I measured that day three successive shots, 65, 71, and 62 yards, and I have decided to use nothing but the choke-bore for the future, for I consider the choke-boring to be one of the greatest improvements made on the sporting gun in modern times."

The Champion Triple-Wedge Fast Gun has made the best shooting at game ever known. It will stand 10 drachms of powder in the paper shell, and can be obtained in the States at from $150 to $250.

W. W. GREENER,
St. Mary's Works, Birmingham.

OPTIMUS!

DE-CAP-PER.  RE-CAP-PER,

FRIENDSHIP.

DEDICATED TO HIS FRIEND ROBERT GRAHAM, ESQ., BY GEO. BOUDWIN.

WHEN, at the fall of Adam's race,
Our God withdrew His light divine,
One ray he spared this hapless sphere,
One Heavenly beam vouchsafed to shine
That, in the deluge of our woe,
A Bow of Promise might appear,
He left dear Friendship here on earth,
Our sinking hearts to warm and cheer

Around the world the Eternal spark
Its destined course, like lightning, ran,
Kindling a flame in every heart,
Binding more close each man to man;
The glow that owned a living fire,
All creatures hailed its sweet caress—
The Joy that gilded happier hours,
Their Hope and Solace in distress.

Celestial light by Angels shared—
A warm, a pure, unselfish love,
That calms the angry lion's wrath,
And leaves him harmless as the dove;
The bond of Peace!—the golden link—
The brother's right—the stranger's claim;
Forever welcome be the hand
That clasps our own, in Friendship's name.

Philadelphia, April 22, 1877.

Lake Superior in 1860.

(Continued from our last issue.)

MARQUETTE, LAKE SUPERIOR, Feb. 28, 1861.

ON seeing my effusion of the 22d of Dec. in print, I am suddenly recalled to the urgent duty of saving myself from premature death. I see that ever since writing that letter I have left myself standing in the cold some five miles from town. On reading I became sensible of my long exposure, and shall take myself home as quickly as possible. * * * * Having overtaken my "*Gothic*" steed, which some one had stopped and tied by the roadside, I drove home and thawed out. Thanks to the preservative powers of frost, I have not yet suffered from decomposition. As I thaw, however, I am of course covered with moisture like a beard, and as the liquid oozes out it drips from the point of the pen, making the black marks you see as I travel along. This zigzag, scribbling trail is the track of my thought as I come back to real life once more. Did you ever think of so slight a thing as thought making an impress on matter as it flits along; that it can be traced, like a deer, by its footprints? Is not the writing of man the track of his thought and the mould of his mind? How can we doubt the ability of a person who, with a little better perception than we enjoy looks back to our earlier lives and calls up those footprints of mind from all the parts of matter which have received and retained them? How can we doubt his ability to tell our lives and actions as if they were before him in pictures? Not to see and know in such a case would be a greater wonder than to see.

The duty on iron having been increased by a late act of Congress, or rather the *ad valorem* duty has been superseded by a specific one which is so large that but little English iron will be imported. As far as this locality is concerned the change is very desirable. They, the residents, will reap the benefits lost by the agricultural and commercial interest. This consideration and conviction that, "Whatever *is*, is right" will compose my nerves. Here they are peculiarly interested in the development of home manufactures, and invest their all in the enterprise. They do it with a will, too, for in the two articles of home production which we furnish to themselves and others, we consider Marquette unrivalled. They challenge any other place on the continent to compete with them in the amount and toughness of the iron, and the news which are here produced. In the latter article the manufacturers followed their predecessors in the iron business; they, the latter, sought to make the toughest iron as being the most desirable; but the succeeding manufacturers have failed somewhat in combining those two qualities in the new(s) material. They find that, though toughness in iron is an index of durability, in news, the principle only applies where there is a large margin. They endeavor, however, to make up in quantity what is lacking in quality.

Now we turn to some of the news which, like the Connaughtman's brogue, has "never been made but brought in the open market."

While I was frozen up one night the mercury fell to thirty degrees below zero, and the following night dropped three degrees lower. At the mines, where the temperature is usually eight or ten degrees lower than here, we suppose the mercury to have frozen; but unfortunately no one there observed the thermometer.

We had about five feet of snow on a level; then we had a fall of two feet more. Next came two days' thaw, which reduced the depth a little, and then another snow storm, which gave us an additional twenty-six inches. Every one who can purchase, wears snow shoes; even merchants wear them on the streets in going to and from their business, as the wind fills up the track so quickly that the paths are seldom less than ankle deep. Where they shovel the snow off the walk, and tramp it down, the piles of snow are in some cases as high as the eaves of the houses, so that from the windows the streets are completely shut out. On the roads the snow is so deep that when teams meet it is frequently necessary to unhitch and separate the horses of one team, unload the sleigh and lift it out to one side, then shovel away a place to lead the horses into, off the road, and thus allow the other to pass by. Almost every team carries one or two shovels for this purpose. To turn out and give part of the road is dangerous, for the horses flounder and fall in the snow, almost invariably so injuring or straining themselves, that it is necessary in a day or two to shoot them. It is too costly here to keep a horse that is ill, hay now being eighty dollars a ton, and scarce at that, as it is all brought from the Lower Peninsula. At Portage, hay is said to be even higher than here, commanding one hundred dollars per ton. No less than nine valuable horses have been lost in this vicinity up to date. In addition to this catalogue of accidents, three persons have been frozen to death, while five more were so badly frost-bitten that death supervened in a few days thereafter. Such a mortality in a population of three thousand speaks of *cold*. The bay has thrice been frozen over, and twice divested of its covering by the wind. During the stay of the ice each time, and as I now write, the bay is dotted with merry parties of citizens, young and old, of both sexes, who are delighted with the opportunity to use their skates, oft times to the detriment of their already bruised craniums, resulting from the action of a much neglected law laid down by Newton; and I might add, with the addition of numerous stellular systems presumably unknown to that philosopher. The attraction of glaring ice for the human occiput has been much enhanced by the invention of skates. I have been making observations, and intended issuing a volume on this interesting exercise; but I have given it up, that is as far as the public is concerned. Since that desire took possession of my mind I have been down to a lonely spot near the docks, and investigated not only the subject, but all its literature. I found many volumes had already been issued, but the subject will bear many more, to none of which could I do justice. Whenever a man's noddle—in accordance with the law before observed—is gently caressed by the congealed slipperosity with which he is trying to come to an understanding, he forthwith gathers his wits—if any remain—and his limbs, and proceeds to issue a new volume, "Imp. 4to." I might transcribe, but that in writing and printing such things it is customary to use so many dashes between the first and last letters of words, I am constrained merely to say it was all d—ash. Truth requires that I should add that there was frequently a good deal more than "dash" in the expression. I am also pleased in being able to subjoin this evidence of the candor of the people. Whenever they spoke thus they seemed to be most unmistakably in earnest. "In emphatic language they spoke their feelings." There is an ice-boat on the bay also, and last week we enjoyed some pleasant and exciting sailing.

Money matters are much tighter here than when I last wrote. As it is impossible to obtain exchange, debtors have been obliged to send currency to meet their obligations, hence money has become scarce. This scarcity will increase till the opening of navigation, when an improvement is anticipated, even if civil war should overtake us. All drafts being refused, able as well as speculative operaters are unable to give more than promises to pay. This state of things has realized the idea of certain politicians—the draft of Lazarus being as good as that of Dives. Viewing the case in this light has led a great many to turn it to account, and, accordingly, the banker has been supplanted by the saloon-keeper. The latter is now daily and hourly drawing draughts which should be at a premium, as they are drawn at *sight* and *cashed on presentation*, irrespective of indorsers. What a glorious approximation to the millennium. We surely live in "those latter days!" Whoever before could write that drafts were cashed at sight! One great reason of this cash advancement is owing to a principle inaugurated by the members of the *bar* and *brokers* of *exchange*, viz.: that in all measurements, solid, liquid, concentrated, etc., they would adopt as a universal unit the dollar. Now all things come to this for a test of merit, as worshipers to the shrine of Mahomet or Confucius. Notwithstanding all these advantages, the citizens of Marquette are now anxiously looking for spring with a feeling akin to that of our juvenile dread of a school examination—we wished it past, but did not want it to come. If it must come, however, we want it to come more quickly than of late, and not be forever "coming to come," like Punch's mother.

I have visited each of the churches, and am pleased with the apparent earnestness of the people who attend. Most of them seem to go for the sake of individual benefit, and not for example, as I have heard many people assert as their reason for such attendance. Such examples are of questionable utility, for, though there are instances of attendance at church they are likewise examples of deception. Were I a clergyman, I would invite such standing examples of sanctimonious hypocrisy to stay away. The church which needs such questionable assistance must be poorly off indeed.

Within the last month a reduction has been made in the force employed in the railway shops and foundry, amounting to one half. The greatest want here next summer will be facilities for shipping ore, there being yet such a quantity of grain in Chicago and the West that all the vessels of the lakes will be employed, and consequently ore will have to pay a higher freight, and even then will not all be shipped. The three mines employ at present upwards of two hundred miners, besides a number of teamsters, laborers, etc. The smelting interest is on the increase. Two new furnaces are expected to open in the spring, also two new saw mills. There are already four mills in the settlement.

I do not think the people here have felt the hard times as much as those of the Lower Peninsula, and if the political difficulties are solved by the time of the opening of navigation they may escape the panic uninjured. Even should the troubles continue, the people of the Upper Peninsula will not feel the effects so severely as their brethren of Southern Michigan, as the increased duty on iron must give them an advantage.

During the winter many fishing excursions to the small lakes in the mountains, and those between here and Bay de Noguet, have been made by parties of gentlemen who, for pleasure and health, club together and go out for a week, ten days, or more, at a time. They go to the lakes on snow shoes, accompanied by dog trains, and camp out; sometimes in the snow sometimes, in deserted camps. I have already participated in one such excursion, and the, to me, new experience of snow-shoeing I found to be but a few degrees apart from the miseries of an introduction into the art of skating. If, with my present experience, I were forced to do one of three things, viz.: to learn to skate, flounder through the mysteries of snow-shoeing, or break a vicious colt to the saddle, my candid opinion is, that I would wrestle with the latter as the least of the three pleasurable (?) evils. This Indian way of rusticating, however, is found to be very healthful and invigorating. The fish caught are speckled trout, which are captured through holes in the ice. Did you ever hear of a pole being used in such cases? Well, it is done here to considerable extent, and I assure you demands no little skill to manipulate successfully. Although the trout were abundant, I am told they are not as abundant as in former years; but the reason is unknown.

The general health has not been as good this winter as in former years, owing to the prevalence of diptheria, which made its first appearance in the Upper Lake Region last autumn. During the whole winter this fell disease has continued to occur sporadically, as also has erysipelas, and fre-

quently in connection with it. It has taken this terrible scourge—diptheria—two years to reach here from the Lower Peninsula. It is about four years since its invasion of the Eastern States, so it has traveled but slowly. Is it not strange that though the government derives millions of dollars of revenue from luxuries which foment disease and subsequent death, they never think of appropriating a few thousands toward the investigation and prevention of this or similar ravaging diseases?*

Commerce and manufacturing, money and minting, are each protected by the United States, but the lives and happiness of its citizens are not worth a bare thousand dollars. The government has been censured for recognizing property in men. Do we not see that in so doing it cares more for them than as citizens? Now, government spends almost unlimited money in investigating the causes, prevention and treatment of diseases in cattle, though it leaves its exposed to diseases in their most obscure and unmanageable forms. Would the thousands of parents, now clad in mourning throughout the country, rather have hearty sheep and oxen than have their lost loved ones yet preserved to them? But enough; this letter is already too long.

May 10, 1861.

P. S.—Yesterday the ice broke up and drifted out of the bay, as if to leave room for a boat, but the latter failing to put in an appearance, the ice is returning to-day. The winter is slowly retiring, and for the first time in over five months leaving her footprints in sand and mud. What a relief it is to see the bare ground once more, as it shows itself in spots, dissipating our fears that the world has been snowed under, and lost forever. We once more greet our mother earth, and realize the affectionate attachment she retains for us. She clings to our very feet, and they to her; nay, she even envelops us to our knees, and thus holds us to her bosom with a motherly fondness, which we would willingly dispense with.

To-day we have had the first cars on the railroad from the mountains. They will not run regularly, however, for a week or more. It is anticipated here that the shipments of ore will be confined to the months of July and August on account of the scarcity of vessels. There is also a mail-boat to run between here and Portage during the summer, a small tug having been engaged for the purpose. Another boat is to ply between here and the Chokolay, four miles down the bay. Several new buildings are in course of erection, but times are dull, and money has become very tight, there being nothing but Western bills in circulation now.

May 22, 1861.

P. P. S.—Night before last, just after midnight, I was wakened by the firing of a gun, at the same time my ears were saluted with the most infernal din ever concocted by mortals. The yelling and screaching was so terrific I hustled on my clothes and rushed from the house. Boat! Boat! Boat! B-o-o-o-o-a-t!!! B-o-o-o-o-o-o-o-o-o-o-A-T!!!! Ji—O—O—O—O—O—O—O—O—O—O—O—A—T!!!!!! in all keys and voices; treble, soprano, alto, contralto, countra-bass, double bass, tenor, and shrill falsetto, were to be heard from as many varieties of throats. I assure you I was relieved to find it was only the long expected boat. From the noise and trampling of feet I thought Gabriel must have put in an unexpected appearance. But it was only a boat, and her red and green and white lights were seen twinkling down the bay. By daylight she had made her way through the ice, and tied to the wharf, allowing the distracted community to retire to their homes and finish the slumbers which had been so summarily disturbed. After discharging enormous quantities of freight, the Planet proceeded up the lake; but this morning found her back again, being unable to get through the ice. She is now discharging her upper lake load for the next line boat to take, as she returns this afternoon. I have packed my traps, and propose to make my appearance among the "world's" people once more, and with renewed health, my winter's sojourn proving far more beneficial than I had dared hope. Take it all in all, the winter has been a pleasant one, and I bid farewell to the Upper Peninsula and its inhabitants with regret. "*Quarum pars magna fui.*" Ahem.

ARCHER.

* I insert this as showing the feeling of the people at the time. Then diptheria was a fearful disease, whose name alone people feared to utter, except under their breath, baffling physicians of high and low degree, foreign and native, the educated and the charlatan alike; the very name diptheria was a synonym of the death which so frequently supervened, for there was no literature upon the subject; all alike were in profound ignorance of either its pathology or treatment. But government could publish, at an expense of thousands of dollars, elaborate works on the diseases of cattle, which, like all government publications were, then as now, huddled into the cellars and outhouses of M. C.'s to decay; for these honorable gentlemen are too lazy to clear away what to them is rubbish, by the mere act of addressing to those who would appreciate, or their pockets be replenished through the purveyors of junk shops by their sale as waste paper.

For Forest and Stream and Rod and Gun.

LASSOING A GRIZZLY.

THERE were four of us, well mounted on horses that savvied a rope as well as any vaquero that ever straddide a saddle or threw a *riata*. We left the ranch house about an hour before day, and riding through the Arroyo Hondo, reached the big mesa, at the foot of Rattlesnake Hill, when the morning star was brightest.

Two nights before a big grizzly had killed a cow in a little canon opening into the arroyo at the foot of the mesa, and the day before we had dragged what was left of the carcass about half a mile out into the mesa with our riatas. A *riata* is a plaited rope made generally of four, sometimes of six, strands of raw-hide, with a hard rawhide head, or loop, at one end for the rope to play through when used to catch anything. These ropes become very pliable with use, are kept carefully greased with tallow, and out of the wet and reach of rats and coyotes. Ours were the best kind; six strands and sixty feet long; when the noose is fast on an animal, or anything to be dragged, the other end of the rope is retained in the hand, and a turn is taken in the horn of the saddle.

We had left Chapo, an Indian vaquero, hid in a cotton-wood, to watch the place from which we had dragged our bait. He reported that early in the night, the big grizzly had come down the mountain and followed the drag, and that he had heard another cross the arroyo some distance below him within half an hour. We waited for daylight, smoking cigarritos, eating *tomales*, and telling whoppers of bear stories in Spanish whispers, with many a *carajo valgame dios* thrown in as wadding for want of aguadiente. We were Felipe, Juan de Dios Valiente and I, sometimes called El Guero, and old Chapo, who took a horse and riata we brought him. All had riatas, knives and pistols, and Chapo had an old English musket half full of powder and bullets. When the first streaks of light colored the gray of the morning, and the quail commenced calling, we tightened our cinches, and deploying along the mesa at intervals of about forty paces, advanced abreast, riatas in hand, towards the carcass. We were between our bait and the mountains, and hoped to drive the bear into attempting to cross a wide open, free from bushes, on the other side of which was thick monte. We rode first at a walk, then *sobre paso*, a pace between a walk and a trot, peculiar to Spanish horses. As we reached the short sage brush, we put our horses on the lope; then on the run. Daylight came quick over the mountains. I had just passed the bait when I saw the bear straight before us, going at a shambling lope, and apparently not much in a hurry. Felipe yelled at him; he stopped and reared up, my horse sheered off to the left; I passed him, and in a breathing we were all four around him, circling, turning and twisting; every horse on the keen jump, all of us ready to take the first chance to get a rope on a hind leg (hind leg's the best hold). He looked awful ugly, and was too full of fight to run, but stood doubled up, or reared up, making short lunges at our horses as we dashed in to try and start him. Nobody wanted a foreleg hold, and it wasn't very easy to get, for he flung his arms about like a boxer, and it took the spurs to get a horse to run close by him. Pretty soon he got so he'd chase the horses twenty or thirty yards at a stretch; he was clean crazy with anger, and at last as I dashed my old buckskin by him, started in for a race in good earnest. We fairly burnt the wind; the mesa was almost bare, but he held his own—almost was gaining, when the boys reached him. Felipe made the first throw, went for a forefoot, but was hot and excited, caught head and leg together in the loop, which pulled tight across the neck, chest and under a foreshoulder. No horse could hold such a hold, and Felipe dropped the riata. Valiente tried for a hind leg, and missed it. Juan de Dios caught both hind feet and stopped him. As he doubled back and grabbed for the riata, I dropped my rope on a forefoot, and stretched it with all the force my horse could put on the riata. Lord! how I would like to have seen old Chapo and his musket for a minute. I knew that with bear's head and one foreleg free he'd soon get my tightly stretched rope in his mouth. Then good-by riata.

There was some tall twisting and struggling.

Juan held on as coolly as if it were only a bullock lassoed for the butcher. Felipe, reaching down from his saddle, picked up his riata, but the way it held could help but little. I was thinking of slacking my riata, and taking chances for both forefeet. Loosened it would slip from the forefoot I had, and with both in my rope I thought Juan and I might hold him, when all at once his loose foot struck Felipe's rope, dragged it up to his mouth, and, like a flash, it was in two pieces!

Just then Valiente got the loose leg. His rope caught near the shoulder; under the strain and it slipped gradually down to the ancle and held. He was a thoroughbred grizzly, but we had him. Lord I didn't he hate us, and show it. He looked murdering crazy, and tried very earnestly to get his mouth on the riatas with which we stretched his forelegs as far apart as we could get them.

Juan kept both hind legs stretched straight out from the moment his rope tightened. About this time Chapo rode up, riata in hand, with the old musket tied on behind his saddle, and told us he had had a sharp race after another bear, but was afraid to tackle him single handed. We wanted our bear for a bull and bear fight, and with the help of Chapo's riata, started to drag him backwards across the mesa; but he was so heavy and savage, and made so much trouble that we held a pow-wow, and determined to kill him. Chapo was detailed for this purpose. Untying his old Queen Bess, and carefully shaking in a panful of fresh priming, he left his horse standing, with the riata taut on the horn of the saddle, and walked around toward the head of the bear. Chapo is a little pot-bellied, bandy-legged fellow (he doesn't read English) and was awfully anxious to massacre a bear. In the midst of a shower of cautious not to shoot a horse or cut a riata, he held the old cannon about a yard from the bear's head (I declare I felt sorry for the bear), and pulled it off.

There was a puff of white smoke from the pan. After waiting, it seemed to me a full minute, Chapo moved to reprime. The butt of the gun had scarcely left his shoulder, when there was a roar like a caisson explosion; the gun flew up in the air, and Chapo, doubled up in a triangle, rolled under my horse's feet. Not a shot (and Valiente swore there were two handfuls of pistol bullets in the gun) had touched the bear. We had braced ourselves for a possible struggle, and it came. Frothing and foaming at the mouth, grinding his teeth, and howling with rage, there was something awfully like a raving human maniac about that bear. Our blood was up. We were all excited, and we remarked in most emphatic Castillian, that we would take that bear to the mission if it took all day. After about an hour's hot work, with the help of a hide which Chapo got from a near-by *jacal*, we got him to a clump of oak near the arroyo, and spread-eagled him out between some of the largest trees. He was, apparently, stronger and fiercer than ever, whilst both ourselves and horses were beginning to tire. Fastening the riatas securely by winding around the trees and tying, we sent Chapo to the house for an ox-cart, chains and some aguadiente. Juan and I rode down to the water to drink. I had stooped for my first mouthful, when Felipe called loudly for us to come—"Pronto! Pronto!" Thinking a rope had failed, we went on the keen run. We had left the bear on his back, legs extended, head free, and there he lay as we left him, but stone dead—dead of rage, not an uncommon occurrence with lassoed bears, but, in this case, somewhat disappointing.

EL CAZADOR.

For Forest and Stream and Rod and Gun.

TROUT FISHING IN MAINE.

I OFTEN see an inquiry in your valuable paper from some sportsman, asking where good trout fishing can be had, easy of access, and propose giving you the benefit of a trip I took in the fall of 1874, and from which I derived more pleasure than any previous search after the speckled beauties, although I had previously visited the Middle Dam, Richardson Lakes, Moose River, from Holden towards the Canada line, and several times to the Pleasant Ridge Ponds—my experience, as you see, having all been in Maine.

In the early part of September of 1874 my friend B—— (an ardent lover of "chucking the bug") and wife, and self and wife, left the Hub in the morning train, ticketed for Mount Kineo and return, but not quite sure where we should stop, as our "objective point" might be changed if sufficient inducement should offer.

We thought seriously of making a short stop at Monson, Maine, when we started, but our hopes were almost dashed when we were approaching Portland, and had just lighted our pipes in the smoking car, to be informed by a gentleman who was enjoying the same luxury, who was visiting Maine for the same purpose as ourselves, that 1st, there were no trout in Monson, and 2d, that they were not good for anything if there were; and 3d, that they could not be taken with a fly, all of which tended to make us think our original informant (who fishes entirely with a gun) must have been mistaken.

After parting with our friend (on short acquaintance) we concluded to "stick" to our original plan of campaign, no matter what stories we might hear. Our conclusion was sadly shaken many times before we reached our destination, and we came to the wise conclusion that the waters of Maine had a varied reputation, even with the residents and lovers of sport with a 10-ounce rod.

We spent the first night out at the "Exchange," in Bangor, and after a good night's rest, breakfast, etc., proceeded to the depot of the Bangor and Piscataquis RR., and were shown to a car attached to a baggage train, which gave promise of a long and tedious ride.

In answer to our inquiry of the conductor about the time required to make the trip, he informed us that "When he went, he went," and we fully agreed with him before our arrival at the end of the road.

At that time the employés of the road (so we were informed) sold peanuts along the line, and would stop any time to sell a pint, and it seemed to us that the story was true; but they do much better now, as a strictly passenger train runs over the road in the sporting season.

We arrived at Monson in time for dinner, after a pleasant ride of fifteen miles in the stage from Guilford, and devoted the first hours of the afternoon in getting our rooms at the hotel in order, so that our ladies could be comfortable in our absence, and make us comfortable when we returned. About four P. M. the male portion of our party started out to deliver our letters of introduction to a gentleman who could "tell us all about it," and were sadly taken aback when he informed us he had not caught a fish for twenty years; but before we had quite recovered from the shock, he informed us that he would introduce us to the postmaster, who was the "boss" fisherman of the place.

On our way to the post-office he informed us that "Ed." could catch them anywhere, and if he couldn't assist us we might as well move on.

We found Mr. Haynes a very pleasant gentleman, and kindly disposed to render us any assistance we might require, but checked our enthusiasm by informing us that trout could not be taken with a fly in the waters of that vicinity, as it had been tried over and over again without success, except in the case of one little fellow about four inches long, and he was thought to be too small to know any better. We, however, decided to give them a chance to refuse us at once, and proceeding to the hotel, strung our rods, and at just five P. M. were in a boat on the lower part of Hebron Pond, just opposite the hotel, say ten rods away. My friend insisted upon taking the paddle, and my string of flies were soon in the water, without much thought of striking a fish in the lower end used as a mill pond, as we were told there were none there, and my companion was using his paddle freely, forcing the boat rapidly through the water, when a fine fish rose at my fly, which I failed to strike, and before I could cast again the boat was upon him, and I was unable to raise him again.

This gave promise of adding something to the little fellow before mentioned, and our spirits were raised several degrees in a few moments after. Again starting for the pond proper, I struck a fish, and after a few minutes sharp play landed a beauty, "tipping the beam" at 1¼ pounds. During the handling of this fish, we shot into the pond proper, and the wind being off shore, we put our boat broadside to, and both commenced work in earnest. In a moment another greedy fellow had my fly, and after a contest of about ten minutes my second fish was in the boat, weighing 1¾ pounds, and we were obliged to "pull for the shore," as it had commenced raining, and at just six P. M. we landed with enough for supper, having demonstrated that the trout would rise to a fly, and about seven o'clock we sat down to our frugal meal of fried trout, baked potatoes, etc., giving us a foretaste of what was to come.

We made up our minds not to work too hard, and to take things just as easy as possible, so the next morning we did not get on to the pond until about nine o'clock, and having made a few inquiries of the postmaster, thought we could find where the trout were, and were not disappointed, as when the horn tooted at twelve M. for dinner, we had twelve trout, running from 1¾ pounds to 2 pounds 9½ ounces, almost filling my landing net. And we settled one thing very satisfactorily, viz., that they would only take a very large and bright red fly, as B. insisted upon using such as he had used at the Richardson Lakes, and for a large portion of the forenoon would not accept any from my book, but he soon came to it, and made good use of them the balance of the time.

The people of the town were rather astonished, the postmaster with the rest, and he went out in the afternoon, as did our ladies, to see how it was done, and had a chance to be satisfied, as we added nine to our catch, all of good size.

We spent three weeks at this place fishing every day the weather would allow, except Sundays, and our smallest catch for any day was twelve. Some days when we visited a pond where they were small, running from a quarter to a pound and quarter, we would catch at least a hundred.

Every day we had many things to remember, and which would doubtless prove interesting, but I will only relate one more day's experience, and then begin where I started, by giving you the information indicated.

We had become quite intimate with "Ed.," whom we found one of the jolliest fellows we ever met, and one morning he started for Monson Pond to show us where the fish could be found. The fish not being in the right mood, he suggested we should go through the woods about a mile, to No. 18, a small pond rarely visited, and where he very much doubted if a fly had ever been cast. We had been at work there an hour at least without a sign, when I saw a break close to my raft, and proceeded to put my flies "where they would do the most good," for me at least, as I thought; but in an instant my

I let it have a rest, and moved the second joint back in the middle fungs. From the sharpest strike it has ever been my lot to receive, although my score shows one of eight pounds. However, I saved my fish, after a very long and hard fight, but somewhat surprised me by only weighing two pounds.

Shortly after B. had a rise near him, and at once put his flies over the fish, and with a rush and a splash his rod was in the same condition as mine. He also saved his fish, which weighed 2½ pounds.

Our spare rods being at Monson Pond, there was nothing for us to do but to return. After returning we strung new rods, and insisted that Ed. should commence using the fly, and finally prevailed upon him to do so, although we thought he only did so to keep us from teasing him. Everything being ready, we shoved from the shore, and commenced our sport, the wind, to our ideas, being just right. When perhaps an eighth of a mile from shore the wind ceased instantly, and we decided to start for home at once, when the air seemed full of flies, which settled upon the surface of the water. Almost instantly the pond seemed full of fish, jumping out in all directions, and such a sight I never expect to see again.

We struck them right and left, and landed them as fast as possible, and the mouth of every fish was full of these black flies, about the size of our common house-fly. Our guide caught his first fish, and he will never catch one that will give him more play, and tax his skill more than that one did. After the fish was netted, he carefully laid the rod down with the remark that, "He would paddle us just where we wanted, as he had had fun enough for one day, and more than in all the fish he had ever caught with bait." He has made two fine "hornbeam fly rods," and can now hold his own with any one.

Within a radius of seventeen miles there are thirty two ponds all full of fish; and right here I wish to say that the trout from Monson Pond are finer than any I have ever seen. The names of the ponds are: Hebron, Monson, Spectacle, Doughty (2), Bunker (2), Bog Stream, Bell (2), McLan, North Moors, Bear, South Senior, South Junior, Meadow, Meadow Stream, No. 18, Grindstone, Buttermilk, Benson, Ship, Greenwoods (3), Long Hedgehog, Big Indian, Little Indian, Herring and Greenleaf. The country is mountainous, affording some of the finest views possible, and any one loving nature cannot help being pleased by a visit to that section, especially if combined with the above is a love of fishing.

I am informed from perfectly reliable authority that Ship Pond contains land-locked salmon in abundance, but cannot speak from my own knowledge; am reserving that pleasure for my next visit.

The greatest drawback at Monson is the lack of suitable boats, which difficulty can be readily overcome, and I would recommend any one going there to obtain a birch or a light boat, which can be had at or near Bangor, or at Moosehead Lake.

Any one calling upon E. R. Haynes, postmaster, will derive what information they may require, and make the acquaintance of one of the best fellows to be found, ready to meet a brother sportsman, and assist him on almost every occasion.

NEDLAM.

BOSTON, March 17, 1877.

For Forest and Stream and Rod and Gun.

ACROSS COUNTRY IN FLORIDA.

MANDARIN, April 27, 1877.

I SAW Farmer T. ahead in the wood, with a greeting extending around both flanks of his bronzed face, and I reined up for a few minutes' chat.

"T, do you know how the roads are between this and St. Augustine?"

"Going to drive over?"

"Yes."

T.'s countenance assumes an expression of good-natured, friendly interest, and he proceeds:

"Well, the roads are pretty bad, and you'll have to go slow. There has not been much rain lately, and you won't have much trouble at the fords. Better look out for bears, though, and you want to take an axe along with you."

When he said the roads were bad, with a full consciousness of what bad roads are in Florida, I felt a trifle discouraged, for I had a good horse and buggy, and did not want to wear out the one and smash up the other. When he spoke of fords I mentally forded and felt chilly; but when bears were mentioned, it was a question within between intimidation and unbelief, with the chances in favor of the former; for I knew T. was an old stager on the route.

I experienced a partial relief, however, when he advised taking an axe along, and inwardly commended his caution. What else could it be for but to kill the bears? But why not a gun instead of an axe? It would be much more agreeable, as well as more sportsmanlike, to stand off at a convenient distance—say behind a tree—and shoot the bear, than to go up and knock him on the head or chop at him vigorously. But then T was no sportsman. I doubtfully asked at length what the axe was for.

"O, you want it to chop fallen trees out of the road."

"Oh!"

"Do you always take an axe?" I continued.

"Always."

"Ever had occasion to use it?"

"Well, n no; *I* haven't yet, but then *you* may."

"I see."

"You want to start about five in the morning; that's what I do."

"What time do you get there?"

"About six at night."

"How far is it?"

"Thirty-eight miles."

"Why, confound it, that's thirteen hours—only three miles an hour."

I plied my friend with a few more questions, and the next morning, armed with a map of the road, which he kindly furnished, we made a seven o'clock start. For ten miles or more the road runs westerly toward the ocean; the old King's Road between Jacksonville and St. Augustine is then intersected, and hereon the long unused telegraph poles and deeply worn ruts offer an easy guide to the ancient city. The roads in Florida, generally, are born, not made. Human hands have toiled not to smooth their ruggedness or direct their course. In all probability the cattle first surveyed it and lined it out, and somebody's cart wheels followed the narrow path, which thenceforth became a settled road. When any part becomes too miry or rough for the native's cart or some fallen tree blocks the way, a switch-out is made over more advantageous ground, and the switch becomes a permanent section of the road. We leave the prosperous farms and groves of Mandarin, plunge into the ever present pine woods, with the trees stalking about us as if engaged in a huge cotillion. When we slow down to a walk the measure of the dance is slackened; as we bound down a deep gulley they swing and reel violently, and when we stop awhile, to scan the country far and near, the dance is hushed and the trees are solemn and grave as light houses. Now and then we swing down a gentle incline, ford the inevitable "branch" at the foot, rise again to resume the crazy dance with our high friends, and stop to view the land once more when we think they have jigged it long enough.

We pass one farm after another, the distances between gradually increasing, and the rail fences making crazy lines beside us. Often, exiled cattle are staring between the rails with wistful eyes, and undoubtedly empty stomachs, at the improvements going on within, and ere the harvest be gathered some of them will softly lift the rails with their horns, throw them under foot and skip over to sample the crop the farmer so carefully tends. Out then will come the dog, perhaps several of them; angry barks will fill the air; the fight grows hot, but the cattle will find intervals in it for refreshing bites at the vegetation, keeping eyes and horns dogward, and giving frequent fierce lunges at the canines, who speedily retreat under the charge to return again as soon as safety permits. The farmer's form appears upon the scene, and the curtain falls on cattle hastily running for the woods, farmer laying up his fence with that complacency born of long endurance of such intrusions, and discomforted dog, the only angry one in the party, at his master's heels, looking sullenly through the rails towards his retreating foes. Fine orange groves grace many of these farms, and the farmer's humble domicile, with its roof below the glistening tops of his orange trees, stands in the grateful shade. A profusion of rose bushes, flowering pomegranates, oleanders and crepe myrtles are scattered about, mulberry trees are specked red with their ripening berries, and an air of thrifty, contented indolence pervades the whole scene. The dog fiend, invariably present, arouses at our approach and lifts his miserable howl at us without waiting to see that we shall not enter his domain. Long after we are by he keeps up his noisy racket, which each succeeding moment renders fainter as we speed along.

The sun is half way up the sky when we enter a labyrinth of shade, which marks the approach to our first ford. It is also our worst one. Densely shaded, inky water, and a varying bottom, over which great roots are stretched, making the jolting most unpleasant. This is Rooty Ford; probably named after its most obnoxious feature. The waters have laved countless swamp plants into crowded existence by its borders, whose full flowering season has hardly yet arrived. Other eyes than ours must look upon their perfect glory a few weeks hence, when the air becomes less bleak and the waters grow warm. We splash into the ford and bump along over the roots. The present bump is nothing, however; it is the continual expectation of the one to come that awakens our caution and unstrings our nerves—the dread in waiting and not knowing how formidable will be the jolt nor what moment it will arrive. Every moment we brace up our minds for it, but all in vain; we come upon it in an interval of involuntary relaxation, and are bounced over in a demoralized state of mental unfitness.

The deepest part of the ford is suddenly reached by a short, sharp descent, steep enough for the roof of a house in a very rainy country. The horse stops; but, not caring to get out, or to remain long afloat in a craft in which the water comes leaking through the bottom, we spur him along, his head uplifted and the top of our wagon-box within an inch or two of being overflowed.

From out the black waters the arcs of our wheels rise like four red rainbows, with the improvement on nature's of being neatly lined with black paint. Our wagon seems a floating chariot, surrounded with its rainbow superfluities, and with a little more imagination we might fancy our submerged steed a swan. It is only a slight impediment that he is red and has ears. But shall fancy be put to flight by such trifles? Away with a man (or woman) who can't fancy a red swan with ears. Let the mind just grapple first with the *redness* of the swan, and having successfully digested this peculiarity, the ears will come about with less difficulty. Try it.

The passing glance we get about us reveals the embowered stream on either side, stretching away with winding course within its cool retreat, beneath whose vaulted roof of living green the smooth, ebonylike floor moves softly along in never-ending continuation. We know not whence it comes, but whither it goes we know, for its name is Julington, and it joins the St. Johns near Mandarin. Encouraged to leave the scene, our red swan drops the role imposed upon it, develops the quadruped of its nature out of the watery depths, and pricks up his ears with lively satisfaction at land travel again. Thus we pass this modern river of Styx (or roots), and rising a slope, enter a flourishing colored settlement: all South Carolina darkies, who after the war found things so lively at home that they performed this pilgrimage in colony shape, and gained a peaceful abode by the homestead process. Here, unmolested, they can swing their hoes with all the recklessness, if not the grace, a violinist gives his bow, lure the lowly corn to tasseled height, grind its gritty grains to hominy, and then, with nature's grinders, grind again until the whole be bolted.

We are eight miles from home, but yet not in a strange land, for do not these dusky denizens come to us for hire, get up in "de cool" of the morning and do the distance in time to begin the working day for those who hire them; shoes carried under their arms, for economy's sake, or in a handkerchief hung to a stick over their shoulders, and their black skins, hard as a horse's fetlock, going with the action of a locomotive. Here, also, resides the colored preacher, who makes the journey on Sunday to hear the professor preach to the white people, and goes home after a vigorous "cramming" to fill his own pulpit and win marked distinction among his own race. We can imagine the unction with which he must hold forth, and the rays of genius and problems of religious learning, showered too thick and fast, and I fear, also, too tangled up for comprehension, upon his open mouthed, sable congregation.

But we leave the black settlement; it is an appropriate back ground for the black stream on whose bank it stands, and, when a couple of miles away, curve into the old, roughly-worn King's Road. Until late years a stage performed what passenger traffic there was over it between Jacksonville and St. Augustine, and although the journey over its forty miles must have been wearisome, and the jolting something long to be remembered, it was probably as desirable a trip then as the route up the river from Jacksonville, by slow, wheezy boat, to Tocoi, and over the wooden rails on the wretched truck of those days, drawn by mule power. Now, however, the business of the King's highway is gone, and the fast, comfortable river steamers speed the throng of travelers to where the wooden track and all its appurtenances are supplanted by iron rails and the well appointed trains, and where the steed with coat of mail and lungs of fire takes the place of the time-dishonored mule.

From where we strike the King's road there is but one house to be seen throughout the rest of the journey, and that one is but a mile or two away from us. Our map says—Big Davis, Little Davis, Sam Moran. Now, we looked hard to see the habitation or person of both Big Davis and Little Davis, the latter being doubtless the son of the former, but the dwelling of Sam Moran greeted our view without our having seen any sign of the Davises, and we concluded they had moved their houses back from the road and were busy out of our range. We found out afterward, though, that two insignificant brooks were denoted by these names, and regretted that we had already embalmed in our memory the stalwart, venerable Davis, senior, and his more diminutive descendant. Sam Moran, before alluded to, is a colored man, who has whatever pleasure there is in living miles away from any human being. Doubtless he is contented. Whenever he feels a desire to see others he can go to them; and when he wants to be undisturbed and let alone, not a step from home has he to go to secure these important blessings. The woods teem with game, and he is probably not a stranger to the way of obtaining it. For the rest he can look to his field for sweet potatoes and hominy, and an occasional tramp to the store will yield bacon. Enclosing his plantation we see a well-developed earthwork, and are lost for awhile wondering what foe this defence is erected against in a country where peaceful times prevail. Could it be that he has a mother-in-law, from whom he has vainly sought refuge? At length, when we came to where our road is ablaze with burning grass, it dawns upon our understanding that this embankment is to prevent the fires in the woods from making all of Sam's industrious labors end in smoke.

From Sam's house some twenty-three miles of road lay before us, and not a sign of human life did we see in all of it, except an humble pedestrian, who, on being hailed, flew the African flag; was out one day from Jacksonville, bound to St. Augustine; all well, and said nothing about being reported. From a sense of kindness, however, I here report him, and doubt not that at the rate he then carried sail he made a timely arrival.

The country seems higher since leaving Rooty Ford, with occasional flat depressions ending in sluggish streams, which cross our road, a marked example being the watershed to Durbin Creek, a tributary or fork of Julington. Here, for the distance of at least a mile, and a breadth as far as we can see, the land falls at an angle of about fifteen degrees, with the even flatness of a shingled roof, and terminates in the narrow, deep stream, which offers our only remaining ford of consequence. By the roadside on our journey we see heather and blue and pink lubins in bloom; in the low pine lands are the paw-paw and carnivorous pitcher plant (*sarracenia*), and in the swampy glades are beginners straightly climbing the bark of the pine and cypress, yellow jassamines in a tangled snarl among the azaleas, the bright blooms of the dogwood tree, the shining leaves of the magnolia, and low down on the ground the pure white petals of the swamp lily and unopened buds of the calla. The sandy road is full of the footprints of animals, some being of the roving cattle and some of deer, bears and smaller kinds, whose names we are more or less uncertain about, and the wild turkey, with the rest, comes out and puts his foot down in the sand for the interest of the passer by. What they all are doing that they do not show bodily form to us we cannot tell, but are afterwards partly compensated for their inattention by the sight of four dollars' worth of dead turkey hung to the saddle of a butternut hunter, whose face is turned toward the city of antiquity and hotels.

As we near St. Augustine the cattle have a more thrifty look, doubtless in some measure due to the odor of the salt air which the sea breeze wafts to our nostrils. Four miles away groans old ocean; we can hear his muffled roar, and above the sandy ridges soon spy the white shafts of both old and new light houses, whose "pillar of fire by night, of cloud by day" we are right glad to see. Down from the pine woods we turn on San Sebastian's sandy beach, where whole armies of "fiddlers" are scurrying to their holes and marvellously disappear while we are looking at them, vanishing as huge raindrops when they strike the earth. Having only one claw apiece all round, who can blame them for getting away so quickly out of danger.

When we leave the beach it is after passing two or three fine residences and to gain the shell road, where houses are dotted about, and a new palatial structure towers above them all. The voice of the billows on the far beach become more sonorous; ocean's expanse, specked with the sails of tiny craft, stretches beyond the light houses as far as eye can see; Fort Marion's dark outline is on the left, and straight before us stand the isolated coquina gate-posts of the ancient city. Many approach its strange old precincts by rail, some by billowy sea, and but few come down upon it as we did—by the old highway.

C. D. D.

For Forest and Stream and Rod and Gun.

HISTORICAL SCENES AND PLACES AT NIAGARA.

ALL around Niagara are grounds historical, some of which are but seldom visited by the tourist and stranger, and yet which are quaint and beautiful places. The traveler who only looks upon and is absorbed by the mighty falling of the water, and then turns away and retraces his steps homeward, has left many scenes behind which would have charmed him, scenes too, very familiar to every angler in the neighborhood. I intend to show the reader these places and point out favorite spots for angling, well knowing I am guiding only sportsmen, and that they will enjoy the scenery and be thankful for the information.

Coming out from either the Cataract or International Hotel we turn to the right. We keep the margin of the river and beat up against the stream, for our way lies east. We pass the rapids and the head of Goat's Island, leaving the turbulence and noise of the rushing waters behind us. The river ahead of us is running smoothly on. Sail boats are skimming the waters. Not yet a half mile from the hotel, and opposite to us across the river is one of Gen. Scott's battle grounds—Chippewa. Here within ten minutes of the Falls is a favorite fishing place. In May and June black bass and pike are abundant, and standing here on these canal piers the lover of this sport may enjoy himself. This is the "Old French landing." Just above us is a little island called "Grass Island," whose green shows bright in its home of blue.

Still keeping by the margin of the river, about a mile farther on, and we are on the grounds of old Fort Schlosser. Built

by the French at first, the fort was also burnt by them in their retreat from the British in 1759. Two years thereafter it was rebuilt by Capt. Joseph Schlosser, of the British army, who was afterward promoted to Colonel and died here. Some fifty or sixty rods below where we are now standing, rises an old stone chimney, around which the French built their barracks. Near it are a few apple trees, the remains of the pioneer orchard of those now world-famed Niagara County apples.

Opposite to us, and lying near the Canadian shore, is Navy Island, held by the French in 1759, where their reinforcements were landed during the seige of Fort Niagara. Above, and east of this island, lying very closely together, separated only by a small creek, are Grand and Buckhorn Islands. At the mouth of this creek the French burnt the two vessels that brought them reinforcements, and ever since this Creek, or bay, has been known as Burnt Ship Bay. This place in the spring teems with perch, and all around the bars of Navy Island black bass are abundant. These places are the favorite resort of Buffalo people, more so than the Falls themselves. These green isles, sloping to the water, these creeks and bays are indeed beautiful. Here one rests, that constant jarring, roaring, rumbling water is below us, restrained and softened the sound reaches us more like distant music. We are out of the whirlwind and storm, into smooth, calm harbor.

Just above this old fort where we are standing are two other islands, Gill Creek and Stony, beautiful too in their summer foliage of green. We pass on a few rods farther up, and we come to the remains of the old Store-house, once the landing-place of the tourist, before the network of railroads was spread out over the country. Only a few piles now remain, to which little skiffs are fastened, whose occupants are busily enjoying the quick jerk and steady fight of the plucky little rock bass. Another island—Cornor's—in our front, invites our eye with its cooling green and undisturbed quiet. Three miles above us is the village of La Salle. To reach it we pass through one continuous orchard of peach, pear and apple trees. Here was built by La Salle the first vessel that floated on the upper lakes. It is now the latter part of April, and along the banks of this creek that empties its waters into the river are a hundred boys, ragged, rosy-cheeked, happy boys, with large strings of bass, perch and sunfish. One half of the number are true Niagara sportsmen, too young yet to haul seine or shoot game out of season. Here too they have a novel way of taking the black bass. Sailing a boat close to the shores, laying the edge well down to the water, they crowd the fish who, for want of room, turn, leap, and fall victims in the bottom of the boat. Forty odd, I believe, has been one successful evening's sport in this way.

Returning we cross the Suspension Bridge and pass to Chippewa, once a thriving place in the direct line of travel, but now a "deserted village," with fine brick blocks crumbling and wasting away. Nearly every building is a ruin. Boarded up windows, rotten lintels, and fallen stoops give one a subject for thought. How truly the lines of commerce make or unmake us. No wonder we make a manly fight rather than have these lines run around us. This is one of Scott's earliest battle grounds. On the morning of the 4th of July, 1814, General Scott was ordered forward from Fort Erie to attack the British commander at Chippewa. He was followed by Gen. Porter's volunteers and other reinforcements. Only Scott's brigade was actually engaged in the battle, some thirteen hundred men. The British force numbered about three thousand. On the morning of the 6th, about 5 o'clock, the action began. The Americans were attacked by the Canadian militia and Indian allies. A brilliant bayonet charge by Major Jessup in the midst of a destructive fire from the British troops ended the battle, and the victory was with the Americans. The Americans lost in killed, wounded and missing, three hundred and twenty-eight. The result of this battle was very gratifying to the American people.

This is the latter part of May, we spend the afternoon here, and have not done extra well unless we have at least two hundred perch each to show for our sport.

About two miles and a half below this battle ground, and near the Falls is the battle ground called Lundy's Lane. It is more often visited because of its near access to the great hotels, and towers here are erected for the sight-seer. Few look upon it as the scene of a great battle, but think of it as a mere skirmish ground. It was, however, before our great rebellion, the most sternly contested bit of ground in America. It was four o'clock in the afternoon of the 25th of July that Scott led his brigade from camp, and after a march of two miles and a half came up with the enemy posted on this ground. They had a position of great strength, defended with nine pieces of artillery. Around this battery the battle raged. After Col. Miller's "I will try, sir," the battery was captured. The British made three desperate charges afterwards to regain their guns in the darkness. The last struggle for mastery was fearful. Hand to hand, friend and foe intermingled, but the Americans were determined to hold what they had so desperately gained, and the British were again forced to retreat. During the night the Americans were ordered to fall back; they were unable to take the captured cannon with them, and so rolled the smaller pieces down the hill. In the morning the British recovered their guns and claimed the victory.

Seven miles below the Falls is the village of Lewiston, opposite to which stands Queenstown, during the war of 1812 a fortified British post. The ride to Lewiston along the banks of the Niagara is superb. Below you in the deep gorge rolls Niagara; every minute the waters and banks are changing. There is a panorama passing before the eye, and every painting is a picture on a grand scale, and when on the brow of the mountain you pause, what a grand sight breaks on your view! The river like a great serpent in view for seven miles, the lake beyond. At your feet the spires and homes of Lewiston look like minature toys. Rich agricultural lands with their fine orchards and happy farm homes are stretching away for miles. You have been at Niagara and yet not here; perhaps have gone to Europe for such a scene as this, which nowhere in the world is surpassed. During the war of 1812 Lewiston was occupied by the "Army of the Centre" under Gen. Van Rensselaer, and under him on the 13th of October was fought the battle of Queenstown Heights. Capt. Wool, after several desperate charges, succeeded in carrying the heights and driving the British down the hill. Soon after Gen. Brock arrived and attempted to gain the heights again, but his troops were driven back in great disorder, and he fell mortally wounded. Again the British returned to the charge, but again were they driven back; reinforcements having arrived for them in the afternoon they renewed their exertions; the Americans were almost exhausted with fatigue; their ammunition mostly spent, and their reinforcements refused to cross the river to their aid, and a surrender was all that was left to the brave men. The fine monument across the way was reared to the memory of Gen. Brock.

Still farther below us and seven miles from Lewiston, where the river joins with Lake Ontario, is Fort Niagara. The roads are fine, and it is a quiet, pleasant drive. You pass through the village of Lewiston and behold one of those quaint frontier towns of "ye olden time." All the years that have brought us up to our Centennial has the village slept and decayed like Rip Van Winkle's gun. Perhaps there may be another story and a different one to tell when we come to our second Centennial.

Opposite to Fort Niagara, which is now garrisoned by one company of U. S. troops, are Fort Mississauga and the village of Niagara, the latter an older settlement than any on the American side of the river. A newspaper was published here as early as 1795. In 1792 the first session of the Parliament of the Upper Province was held here. It is a beautiful location and quite a summer resort. A mile above is Fort George, now a ruin, at one time during the year 1813 captured by Scott and his followers.

Here are bass and perch in abundance, and also at Lewiston, and when the herring are running there is business for all, they will fight a good battle and must be handled with care on account of their tender mouths. HIRAM E. GRIFFITH.

Fish Culture.

BASS AND SHAD IN THE SUSQUEHANNA.

SOME seven years ago a party of gentlemen interested themselves in the stocking of the Susquehanna River with bass, and by their exertions raised three or four hundred dollars, with which they purchased at the Potomac river, about the same number of black bass, and introduced them into the river at this point. At the same time a law was passed by the legislature prohibiting the catching either of bass or Susquehanna salmon (*Lucioperca americana*) for three years. From the expiration of that time the catch has been abundant, increasing with each year. The bass has become the monarch of the stream, devouring or extirpating most of its finny rivals.

In 1876 the State Game Association presented to the legislature a general game law which was passed, but in the transcribing of it the word "out-line" was inserted, and the bill in this shape was signed by the Governor without this change being discovered. A large number of both bass and salmon has been destroyed by this means. Last year this defect was to be corrected, and other amendments to the general law passed, but the legislature adjourning a month earlier than usual the bill fell for want of time. Next year it will be changed without doubt.

There are several points on the river where bass fishing is better than at others. Clark's Ferry Dam, Dauphin, Cove, Rockrille, Middletown and Conway's Falls are among the best. On a good day from thirty to sixty pounds can be caught by a skillful angler.

Last winter there was an immense ice gorge in the Susquehanna above Columbia, and when the thaw came it forced its way through the dam at that place, on the York County side, making a break at one place of two hundred feet. Through this fishway the shad have passed up the river in large numbers. The water has been too high for successful fishing; but at Newport, on the Juniata, thirty miles above this point, the fish have been arrested by another dam, and have been caught in great quantity.

Newport, at the time when shad fisherics flourished, was one of the most important places on the river. After the fresh shad supplied all the demand they were salted down, and became a valuable article of commerce. The people along the river are greatly interested in the revival of the fisheries, and the catch at Newport this season gives the greatest encouragement. Public opinion on the subject will demand that the obstruction in the river be removed.

A committee of the legislature were in Columbia this week inspecting the fishway that was constructed several years ago by the State. The committee has pretty generally come to the conclusion that the fishway is a failure, it being evident to them that the shad had come through the break made by the ice, but the commissioners will give the fishway another trial. They have appointed efficient water bailiffs to watch the fishermen at Columbia, who have been in the habit of shingling the river below the dam to frighten the shad and drive them back into their own nets. The bailiffs have made a number of arrests, and the offenders will be tried. The break in the dam is the only way for shad that has been successful since it has been constructed, and the test of this is that they are never caught at this point or above it, unless there is a break or freshet. SUSQUEHANNA.

DESTRUCTION OF FISH BY POLLUTED WATERS.—Our correspondent, "T. Filius," of Alleghany City, Pa., writes, under date of May 7th, recording an instance of destruction of fish by polluted water, quite serious in its character and extent. We quote:

"Last week the plug was drawn from a large tank of ammonia water at the gas works at Little Washington; the fluid ran slowly into Catfish Creek, killing quickly countless numbers of fish. One boy discovered thirteen under one board; the largest nine inches in length. As soon as the effect was ascertained, a man was sent to have the water shut off, which was done. Only two feet had been drawn, while six times that amount remained in the tank. It is believed that every fish in Catfish Creek was killed, and all, or nearly all, in Chartier's Creek for half a mile below the mouth of Catfish.

"The same thing was done a number of years ago, when two or three boys lost their lives, it is supposed by swimming in the impregnated water. Suit is to be entered immediately, we understand, by the Fish Commissioner of this city against the gas company. The streams in this country were stocked under his supervision. The gas company plead ignorance of the effects of ammonia water on fish. This may palliate their offense so far as the public sentiment goes, but will be no defense in the eyes of the law."

KENTUCKY SHAD.—Four pound shad have just been sent to Prof. Baird from Louisville, Ky., taken in the Ohio River at that place. We have an interesting letter for next week on this subject from Prof. Baird.

—A fine salmon, weighing 13 pounds, has recently been taken in the Connecticut River by Charles Sills.

EXPERIMENT WITH LOBSTERS.

CHARLESTOWN, N. H., May 15, 1877.

EDITOR FOREST AND STREAM:

On Thursday the 19th of April, 1877, I received from Messrs. Johnson & Young, Boston, thirteen full grown living lobsters in good condition. They were immediately placed in a tank containing thirty gallons of ocean water.

The water in the tank was kept agitated and aerated by a constantly revolving wheel. The object of this experiment was to ascertain whether lobsters could be kept alive long enough in close confinement and away from the ocean to survive the journey to California. The results of the experiment were very gratifying. All the lobsters lived ten days, and six of them lived fifteen days. As the journey to California requires only seven days this leaves a very encouraging margin.

I give below the daily progress of the experiment.

April 19, first day.—Lobsters arrived at noon at the Co'd Spring Trout Ponds, Charlestown, New Hampshire, and were placed in a tank containing thirty gallons of ocean water.

April 20, second day.—Lobsters doing well.

April 21, third day.—No change.

April 22, fourth day.—No change in lobsters. The water has become somewhat discolored. Placed some fish and beef in the tank for the lobsters to feed upon.

April 23, fifth day.—Lobsters appeared a little weaker. The water is a good deal discolored, and has a strong odor of asphaltum, with which the inside of the tank is coated. At noon took out fifteen gallons of the old water from the tank, and replaced it with the same quantity of fresh ocean water. Removed the fish, which I found the lobsters had not touched.

April 24, sixth day.—Lobsters seem stronger and livelier, and even in better condition than when they first arrived.

April 25, seventh, day.—Lobsters stronger than ever. Put in four gallons of fresh ocean water. The lobsters, if taking the actual journey to the Pacific coast, would be due to arrive at San Francisco to-day at 5:30 P. M.

April 26, eighth day.—Water looks quite foul to-day, and has a light, milky tinge. One large lobster climbed over the side of the tank to-day. Returned him to the tank, and added two gallons of fresh ocean water.

April 28, ninth day.—No change.

April 29, tenth day.—Some of the lobsters seem to be weak and failing to-day. Gave them a change of eight gallons of sea water.

April 30, eleventh day.—The lobsters appeared to have been fighting. Six of the larger lobsters were dead, all of which were found to be more or less injured by having been crushed by the claws of the others. Water had a foul odor to-day. Found that they had not eaten any of the beef which had been given them. Removed the beef and gave them eight gallons of sea water.

May 1, twelfth day.—The remaining lobsters are in good condition.

May 2, thirteenth day.—Lobsters weaker.

May 3, fourteenth day.—Lobsters weaker.

May 4, fifteenth day.—Lobsters still failing.

May 5, sixteenth day.—Only one ar two lobsters with any life in them.

May 6, seventeenth day.—Lobsters all dead.

LIVINGSTON STONE.

Natural History.

SOME SOUTHERN WOOD NOTES.

LAWTONVILLE, GA., Feb. 18, 1877.

With a varied and rich fauna there is no part of the United States whose natural history is so little known as that of the South. I impute this to three causes:

I. That our educational system looks alone to the study of the classics and the higher mathematics, without reference to the ultimate end of both—Science. II. That to a singularly acute perception, the Southerner unites feeble powers of accurate and close observation. III. The want of a great journal like the FOREST AND STREAM, which unites the graphic and popular mode of stating facts, with the unerring deductions of positive science.

I must add, also, another reason for this deficiency in recorded facts in natural history in the South. It has been a hard struggle with us all to keep the traditional wolf from the door. Many a fact would have been recorded; many a pleasing "wood-note wild," from accomplished pens, would have enriched the pages of journals like yours, but for the hard toil necessary to procure even the necessaries of life.

Cano aves floresque.

About the time when you of the North Land think of putting on another overcoat; about the time when you heap the glowing grate high with sparkling anthracite; about the time when you draw close about the cheerful blaze and call for that old, old *amphoid;* when the mellow light dances in the darksome halls of the cobwebbed bottles—say about the first of February, some soft, balmy morning—we, of the South Land, are awakened by soft, plaintive notes thrilling upon the lambent air.

These come from the throats of a little lady and gentleman, dressed in the prevailing fashionable color—deep blue and red.

"The blue birds have come, papa!" is the gleeful announcement from several little ladies and gentlemen, who crowd into my bed-room to render me fully certain of a fact of which I have been lazily and dreamily conscious for the last half hour. Yes, the blue birds have come; and with them come blue skies and soft airs, which have stolen their fragrance from isles deep set in far-off seas, whose sweetness the robber—wind—could not all steal. The first business of the blue bird among us is to make himself a special policeman, for he is a pugnacious bird. A certain territory is allotted to each pair, and when they find that bluejays, shrikes and jorces are much too plentiful for safety and comfort, they call in the neighboring pairs, by a process similar—leaving out the blazing cross—to that which they adopt in the Highlands. A messenger is sent, usually a female, to bring in all the old detective birds of a Fouché-like reputation. They come and range themselves along the line of fence inhabited by the felon birds. These, as if aware that they are to be routed in the most ignominious manner, skulk under the bushes; and the chief villain among

them all, the shrike, instead of perching himself on the topmost twig of a wild cherry tree, from whence he can dart upon sparrows, now hides in the tall grass. A grave and solemn old blue bird now makes an animated speech, as long as one of Ben Hill's, and gives the signal of battle. In a few moments a cloud of feathered rascals go wildly careening across the fields, pursued by the blue coats, who, if they cannot kill their adversaries, at least can strike a wholesome awe into the robber crew.

I am sorry to record that the blue bird, usually so tenacious of his own rights, and scrupulously averse to larceny of any kind, yet has his moments of mental aberration, when his notions of *meum et tuum* are sadly mixed.

The house-martin, another pugnacious bird, comes about a month later than our blue-coated friend. A house is usually provided for the martin. Among the well-to-do, this house is painted and furnished altogether for birds, with regal splendor. Among the darkeys, in front of their cabins, large gourds with holes cut in them form the domicile of Mons. le Martin. The blue birds, seeing the martins so happy, sometimes combine together to drive them away and take possession of their homes. The white boys shoot the blue fellows without mercy, but the darkeys roll their white eyes at their little friends, and say, with solemn sententiousness, "Ef you can't fight, Martin, you have to git!"

Another bird, whose time of arrival and departure has been little noted, is the snipe (*Gallinago wilsonii*). You cross, for weeks together, a piece of marshy land on your way to shoot quails, and your dog never shows any sign of a point. Some day, however, when you have reached the high land, you look back and see "Dolly Varden" turned into stone. You retrace your steps, and "Scaipe! scaipe!" the well-known cry salutes your ears, and, as a cloud of feathers floats down the wind, you recognize the fact that the snipe have come.

That the snipe have regular laws governing their migration in the South I do not believe. That they have in the North I feel equally as assured. Du Quoin, Illinois, the very paradise of small game, is in the southern part of that great State. There the climatic conditions are of such a character that *Gallinago* can never make a mistake. He comes with unvarying regularity about the 15th of March, and leaves with the budding flowers of May. Whence he comes is a mystery; whither he goes is not so much in doubt.

Another bird, congener of the last mentioned, a shy, wild bird, is but little known at the South. That the woodcock breeds in the South; that it breeds in some localities in vast numbers, is so well established that it is unnecessary for me to dwell upon it. No longer ago than last summer, while cutting away the vines on the banks of the Ogechee, in order to give me room to fish for bream, I found a nest with six little, wee woodcocks. The mother, with great round, amazed eyes was squatting under a chunk, within three feet of my hand. She happily believed herself hidden, and I did not disturb that belief. I doubt, indeed, if five hundred braces of woodcock are killed one year with another in Georgia. Their habitat is impenetrable swamps, marshy thickets, and the wooded banks of streams. You shoot at the whirr of the wings and the stream of feathers coming back to you is the only indication that your shot has been successful. Shooting entirely at short range, No. 9 shot is the best size. Some use No. 6. No. 6 is duck shot, under fifty yards.

About the 15th of October in our latitude, when some very slight frosts have tinged the trees with gold and red, you wake up some fine sunny morning and determine to have a day with the woodcock. Quail shooting has become monotonous. It does not require any great degree of skill to bring down a lazy bird which flies in a straight line, and which is so fat that he can scarcely fly at all. Ah! what a difference in December! Then, they fly as if possessed by the demon of swiftness, and in all sorts of zigzags and curves! Then if you can bag your double bird after the covey is up, you can shoot!

Well, you wish to have a day with the woodcock. You take the shortest gun that you can find and the lightest. Not less than 12 in the bore, for you wish to shoot 1¼ *oz.* of No. 9 shot. It must be a good gun. A gun that will drive her shot clean through the woodcock, for you rarely, if ever, retrieve the wounded ones.

You use the best powder, Ely's wads and caps. You go into that thicket which skirts the road, and your dog, who looks at you disdainfully, as being out of your mind in coming to such a place for quails, now pauses, as she "snuffs the tainted gale." You walk up to her and give her the word. A vision of an enormously long bill, a large, bright eye, two short, vigorous wings, accompanied by a wild effort to fly over the tops of the bushes in complicated curves, and you pull trigger! *how* it is done you know not, but in less than a minute you have in your hand a cock bird of full weight, pierced, back, brain and heart. You congratulate yourself, for you shoot alone, on being in such good nerve this morning. You go deeper into the thicket, where the dog-rose and the honeysuckle are mingled with the bamboo-brier and the *ti ti* bushes. Ha! the dog is down. You kick the bunch of briers and, as Burns says,

"By the L—d, fire!"

Yes, five full grown woodcock careen wildly towards the skies, and you put in both barrels and never touch a bird! Your dog looks mournfully and reproachfully at you. You feel conscience smitten, and your spirits fall below zero. By way of relief, you kick the dog, and this act of justice having been done, you proceed. With much bad shooting and some exceptionally good, you make up your bag, and by nightfall you have a couple dozen birds, bagged under more difficulties than you can imagine.

Another remarkable feature about our autumn shooting is, that most of the woodcock which we kill are male birds. Whether the females are yet engaged in ministering to the wants of their little ones in the North at this season, or whether they have gone to some other climate, I do not know.

With these three birds I shall close this short paper. I promised, from time to time, to give your readers at the North, full and carefully considered papers anent the fauna of the South. That there are scientific writers who could better give all the measurements necessary and all the attributes that would establish a genus, I most willingly and cheerfully admit; but that there are any who love nature with a deeper and more loving reverence than the humble writer of these papers, without arrogance or boasting, I deny.

I shall give some facts in reference to well known Northern birds that will startle your readers.

J. W. St. Clair.

Arrivals at Garden of the Zoological Society, Fairmount Park, for Week Ending May 16th.—Four rabbits, *Lepus cuniculus*, presented; one great horned owl, *Bubo virginianus*; one short-eared owl, *Brachyotus palustris*, presented; one woodchuck, *Actomys monax*; one English thrush,

Arthur E. Brown, Gen'l Supt.

DWARFED MASKALONGE.

Cleveland, Ohio, May 5, 1877.

Editor Forest and Stream:

I send to you by express a cast in plaster of what appears to be a full grown fish, that weighed 2½ oz. It may be a dwarfed maskalonge (*Esox mobilior*), or pickerel (*E. lucius*), I cannot determine positively which. The colors resemble those of the yearling (or 18 months fry) of both these fishes, but the first was free from any spots or bars common to them, even at this size or age. The cast represents the side of the fish laid open so as to expose the roe and air bladder. The former was fully ripe, and contained about 2,000 eggs, the most of which were readily pressed from the abdomen. With respect to the early development of the roe (first part of April) our fish here resembles very much the pickerel, which deposit their eggs some weeks before the maskalonge, but it is seldom, if ever, these last named fishes are met with under five and twelve pounds weight, containing spawn ripe and ready for the spawning bed.

The specimen was taken in the Maumee river the 6th of April, and sent to me by Judge Potter, of Toledo, who mentioned also that numbers of them had been caught for some time, part by the fishermen in that locality before he was able to procure the one represented. They were noticed swimming in pairs side by side in the shallow water along the river margin, with their snouts cutting the surface after the manner of the maskalonge when approaching their spawning grounds. A single specimen of this pigmy fish might easily have been passed by as something only a little *curious*, but from the fact that so many were seen and caught. While conducting themselves after the manner of aged and respectably grown fishes of their kind, would it not be worth while to give them further attention. While waiting further developments on the Maumee, will some one, believer in the *survival of the fittest*, give his opinion.

Yours truly, Dr. E. Sterling.

Reply.—With all due respect to our learned correspondent, we are compelled to say that we do not recognize the similarity between the two fish which he speaks of. Fortunately for the success of our testimony, we have within ten days had both the maskalonge and several pickerel in our possession, which afforded every opportunity for comparison. We find in the first place that the head of the maskalonge measures about one-fourth of the body; that of Dr. Sterling's plaster cast a greater length of head in proportion. The opercles or gill-covers of the two specimens are of quite different length and shape. The fins are located differently on the bodies. The dorsal fin of the pickerel is subquadrate; of the maskalonge rounded; tail of pickerel deeply forked; maskalonge, lunated, with rounded, lobes. In color the maskalonge is a deepish brown, pale on side, and his characteristics are—numerous rounded distinct pale yellowish or greyish spots which, varying in size, are often confluent, blending into each other. Fins whitish yellow. The pickerel varies much in color, as much as the trout does, some dark green, varying to blackish on back and head; others greyish olive; others golden or yellow olive on the sides; the under fins tinged with red. They are not always reticulated. They vary even in the same waters. We have seen spawners not over six inches long; trout the same, in small brooks, where they seldom attained a maximum weight of a quarter of a pound.

—At Holberton's Sportsmen's Emporium, 102 Nassau street, can be seen a pair of interlocked buck's horns, which are indeed a great curiosity, although the like has been seen before. They came from Colorado, where they were found with the bones of the disjointed skeletons of the combatants lying loose all around.

—Mr. Geo. Bird Grinnell has been appointed assistant in the Department of Osteology at the Yale Peabody Museum, New Haven, Conn.

A WORD ABOUT FLYING SQUIRRELS.

(*Pteromys Volucella and Hudsonius.*)

PERHAPS none of our animals are so little known to people in general as the flying squirrel, since they are for the most part nocturnal in habits; but few know how plenty they are. Where they are found at all they are very abundant, nearly every dead tree having its family of from two to fifteen. They are somewhat local in their distribution; some pieces of woods may contain large numbers, and in others within a mile not one is to be found.

The most common and best known is (*Pteromys volucella*) the common flying squirrel of the Eastern States. It is about nine and a half to ten inches long from tip of nose to tip of tail; color, light yellowish brown above; beneath, creamy white; the hair white to the roots, ears large, eyes black and full, forefeet nearly always white, although in some specimens there is a faint grayish tinge.

This squirrel inhabits hollow trees, deserted woodpeckers' nests, and sometimes constructs a nest of fine bark of the birch and dry grass in a thick spruce or hemlock, though not often. The young are brought forth the last of May, from four to eight at a birth; they are born blind, and with little or no hair. In about two weeks they get so strong as to climb out of the hole, but do not leave it unless disturbed until the next spring. I think but one litter is produced in a year. This squirrel is, I think, in a degree, carnivorous, since I have taken a large number in traps baited with flesh. The best time to observe their habits is just at dark in spring or fall after a warm day. They issue from their holes, and, sweeping down nearly to the ground, suddenly take an upward direction, alight on the trunk of a tree from twenty to thirty yards from their starting point, and, climbing to near the top, the flight is renewed. In this way they will travel nearly as fast as a person can run.

Pteromys hudsonius, northern flying squirrel, or the Severn River flying squirrel of Pennant, is from 11½ to 12 inches in length, and from 8½ to 9 inches in breadth, measured from tip to tip of flying membrane. It is nearly the same color above as the preceding; beneath white, with the roots of the hair plumbous; tail darker than the back at the tip; hair on the feet of nearly the same color as the back instead of white as in *P. volucella*. This species is quite rare in this part of the country. I think that it lives in nests altogether, as I have never seen any in hollow trees. It has more of the habits of other squirrels than the preceding, such as running along limbs and jumping from one to another, in the manner of the common red squirrel. It will also sit on its haunches and curl its tail handsomely over its back; a thing I never saw *P. volucella* do. Of its breeding habits I know nothing. I once captured a specimen of this species that had about an inch of its tail creamy white; probably a freak of nature, as it is the only one I ever saw so marked.

Zenaidura carolinensis. Bonap. Common or Carolina dove. Migratory to Michigan.

SUB ORDER GALLINÆ.
FAMILY MELEAGRIDÆ.
GENUS MELEAGRIS.

Meleagris gallopavo. Linn. Wild turkey.

FAMILY TETRAONIDÆ.
GENUS CANACE.

Canace canadensis. Linn. Canada grouse, spruce partridge, Upper Peninsula and Pine Lands of northern part of Lower Peninsula, as far South as the Sauble.

GENUS PEDIOECETES.

Pediœcetes phasianellus. Ell. Sharp-tailed grouse. An occasional visitor to Lower Michigan; more frequent in the Upper Peninsula.

Pediœcetes columbianus. Baird. Columbia sharp-tailed grouse, confined to the eastern shore of Lake Michigan; even there is extremely rare.

GENUS CUPIDONIA.

Cupidonia cupido. Baird. Prairie chicken or hen. Pinnated grouse. Confined to the two lower tiers of counties from which it is almost exterminated. Formerly a few were seen along the St. Clair River, in St. Clair County—a few may be still left. More rarely it is seen in Genessee and Kent Counties. Seems inclined to follow civilization, as was never seen in any of these latter localities until after clearings were made.

GENUS BONASA.

Bonasa umbellus. Steph. Ruffed grouse.

GENUS LAGOPUS.

Lagopus albus. Aird. Willow grouse, white tarmigan. Is found in limited numbers upon the mountains of Upper Penninsula.

FAMILY PERDICIDÆ.
SUB-FAMILY ORTYGINÆ.
GENUS ORTYX.

Ortyx virginianus. Bonap. Bob White. Quail.

ORDER INSESSORES.
FAMILY TURDIDÆ.
GENUS TURDUS.

Turdus mustelinus. Genel. Wood thrush.

Turdus fuscescens. Steph. Fawny or willow thrush.

Turdus Aliciæ. Baird. Alice's thrush.

Turdus swainsoni. Cab. Olive-backed or Swainson thrush.

Turdus pallasi. Cab. Hermit thrush.

Turdus migratorius. Linn. American robin. Occasionally winters in Michigan, as far North as Saginaw Bay.

GENUS HARPORHYNCHUS.

Harporhynchus rufus, Cab. Brown thrasher.

GENUS MIMUS.

Mimus Polyglottus. Boie. Mocking bird. Very common in southern portions of State. Occasionally seen as far North as Sanilac County.

GENUS GALEOSCOPTES.

Galeoscoptes carolinensis. Cab. Cat bird.

FAMILY SAXICOLIDÆ.
GENUS SAXICOLA.

Saxicola œnanthe. Bech. The wheat ear. An occasional autumnal visitor to Sanilac and St. Clair Counties.

GENUS SIALIA.

Sialia sialis. Baird. Blue bird. Appears in February or early in March in St. Clair and Eaton Counties. In 1871 arrived in latter county January 29.

FAMILY SYLVIDÆ.
SUB FAMILY REGULINÆ.
GENUS REGULUS.

Regulus satiapa. Licht. Golden crowned ringlet or wren.

Regulus calendula. Licht. Ruby crowned ringlet or wren.

GENUS POLIOPTILA.

Polioptila cærulea. Sclat. Blue-gray gnat-catcher.

(*To be continued.*)

BIRDS OF THE COTEAU DES PRAIRIES OF EASTERN DAKOTA.

BY CHARLES E. M'CHESNEY, M. D., U. S. A.

(*Continued.*)

Botaurus minor. American bittern. Is found here from May 1 until October 1. It is not at any time numerous. Breeds here.

Grus americana. White crane. Is seen only during the spring and fall migrations.

Grus canadensis. Brown crane. Is but rarely seen on the Coteau.

Porzana carolina. Carolina rail. Is found here in small numbers from May 15 until October 25.

Fulica americana. American coot. Arrives April 20, and remains until October 31. Is very abundant during all this time. Breeds here.

Cygnus buccinator. Trumpeter swan. Is seen only during the migrations. When passing South in the fall some stop a few days.

Anser hyperboreus. Snow goose. About April 1 this goose commences to pass this region, bound North, and thousands are daily seen during the entire month. A very few remain and breed. About the middle of September it begins to arrive from the North, and by the 1st of Oct. is very abundant. Finally departs Oct. 31.

Anser cæruleseus. Blue goose. Is found here from September 25 until October 30 in considerable numbers, and associated with the last species. None observed passing North during spring migrations.

Branta canadensis. Canada goose. The account of the snow goose will answer in all particulars for this one.

Anas boschas. Mallard duck. This duck appears to enter this region

about April 16, and remains until October 20, breeding sparingly in the sloughs. As fall approaches it becomes quite numerous.

Dafila acuta. Pintail duck. This duck arrives April 8, and remains until October 22. Breeds in small numbers in this region. In the early spring, and also during September and October it is very abundant.

Chaulelasmus streperus. Gadwall duck. Is found here from April 8 until October 22 in large numbers. Breeds here.

Mareca americana. American widgeon. Enters this region April 22, and the greater majority pass in a few days farther North. It is probable a very few remain and breed here. Returns September 10, from which date until October 30it is very abundant.

Querquedula carolinensis. Green winged teal. Arrives April 24 : remains a few days. Returns from the North early in August, and remains until September 30.

Querquedula discors. Blue-winged teal. Arrives May 1, and remains until October 10. Breeds here. Is at all times abundant.

Spatula clypeata. Shoveller. This duck is found here in large numbers from April 18 until October 30. Breeds here.

Aix sponsa. Summer duck. Is an exceedingly rare duck here. Among many thousand ducks killed by the keen sportsmen of Fort Sisseton, I have seen but one of this species.

Fuligula marila. Greater swamp duck. Arrives April 19, rests a few days, and then resumes its long northern flight. Returns about the 1st of October in considerable numbers, and finally disappears October 31.

Fuligula affinis. Lesser swamp duck. Appears here April 19, and follows the same course as the preceding. Is, however, much more numerous during the fall.

Fuligula ferina var. *americana.* Red-head duck. Arrives here April 15, and remains until October 30. Breeds in considerable numbers here. From the middle of September until the end of October is abundant.

(To be continued.)

SALT WATER PIKE.—In the body of an editorial in last week's issue of this journal the statement was made incidentally that many species of fishes will thrive equally well in salt water or fresh, if acclimated. One of these is the pike, which fish are ascertained to be exceedingly abundant in the salt waters of the Chesapeake Bay, although generally regarded as a strictly fresh-water species. Some who have been cognizant of this fish have maintained that it was a distinct variety, but there seems to be no doubt of its identity with the inland pike, and we find it referred to as *Esox reticulatus* (Lesueur, *et al,*) and *E. lucius* (Mitchell), in the Reports of the Maryland Fish Commissioners, the most valuable work of the kind that has yet been issued. Our extended investigations show that these fish spawn in the Patapsco, Magoty, Chester, Sassafras, Choptank and Annapolis Roads. There are few caught below the Choptank, and scarcely any above the Sassafras River. They are taken every day in the year, the largest quantity in extreme cold weather, when they are brought to market by wagon loads. At Norfolk they are not common. Prof. Ellzey, of Blacksburg, Virginia, says that they were very numerous six or seven years ago at West River, Md., where they were caught in seines in February and March, but during the past few seasons only occasional specimens have been taken. He volunteers the opinion that they might be taken with the fly, which was a question asked by a correspondent some weeks ago. Prof. Beal, of the Iowa Agricultural College, says he has known of their being taken through the ice in winter with a hook.

Mr. S. R. Scoggins, a veteran market man, of Baltimore, claims these pike are essentially a salt-water fish, which do not go into fresh water. He says, "I have been among them for thirty years, and never knew one to be caught in fresh water unless it had strayed away from the school and was in sickly condition. Possibly they go into fresh water to spawn. The following letter from Prof. Beal will throw additional light on the subject :

AMES, Ia., May 1, 1877.

MESSRS. EDITORS :

I notice in your issue of April 26 a letter from Mr. Beale, of Baltimore, with regard to the salt water pike or pickerel of Chesapeake Bay. While residing at Annapolis, I had several opportunities for examining this fish when fresh from the water, and should pronounce it identical with the common fresh-water pickerel (*Esox reticulatus*) of the Eastern States. The color and markings upon the sides are the same, as nearly as we can tell, without specimens of each for comparison, and their habits of lying in shallow water near the shore and in bunches of weeds are also similar. It is possible that a specialist in ichthyology might discover differences, but they are not apparent to the eyes of an ordinary student of nature. The water of the creeks and inlets about Chesapeake Bay are but slightly salt, and but little affected by tides, and are lined about the shores with patches of weeds and rushes, forming just the sort of places that the pickerel loves to inhabit. I see no reason for supposing that the pickerel should not live in salt water if the other conditions were suited to its habits, as they so evidently are here. The common eel (*Anguilla bostoniensis*) lives in both salt and fresh water, and in Eastern Massachusetts the brook trout pass down to the sea in winter, and have been caught two miles off shore by persons fishing for cod. I hope that some expert who has made accurate observations upon this fish will give us the result, as it is a point of considerable interest to know if we must class the pickerel as a fish that will live in both salt and fresh water. In conclusion, I will say that the only way that I ever knew of these salt-water pike being taken was by the seine and by fishing through the ice in winter, precisely as is done for pickerel at the North. F. E. L. BEAL.

We are very glad to be able to state that we have been able to carefully examine and compare these fish with our fresh-water species, through the kind considerations of President J. Saurin Norris, of the First National Bank, Baltimore, who sent us five splendid specimens that averaged some 22 inches in length. We took pains to measure each separately, and found but the slightest variations as to finrays and general structure, while the color is identical with that of the inland fish. We give the formula for the two specimens which showed the greatest variation :

Length of body 22½ inches; head 6 inches. Fin system : D. 18; P. 14; V. 10 ; A. 15; C. 20.

Length of body 21 inches; head 5½ inches. Fin system : D. 18; P. 12; V. 9 ; A. 15 ; C. 20.

Color : Back, deep green ; sides, olive yellow ; belly, white; under fins and throat, deep red; upper fins, green; irides, blue with yellow rim; numerous dark streaks on body producing a reticulated appearance.

The fin-ray formula for the inland pike, as given by DeKay and other authorities, is as follows :

D. 18 ; P. 16 ; V. 10 ; A. 14; C. 19½.

Color and description nearly as given above.

ARRIVALS AT CHAS. REICHE & BRO'S., 55 CHATHAM STREET, N. Y., TO MAY 15.—Five full-grown Anubis baboons, *Cynocephalus anubis;* eight Chacma baboons, *Cynocephalus porcarius;* two brown hyænas, *Hyæna brunnea;* two spring-boks, *Gazella euchore;* three Duyker-boks, *Cephalophus mergens;* one bless-bok, *Damalis albifrons;* one pair of Egyptian geese, *Chenalopex ægyptiacus;* two pair of spur-winged geese, *Plectropterus gambensis;* five pair of brant geese, *Bernicla brenta;* five pair of Mandarin ducks, *Aix galericulata;* four pair of red-headed pochards, *Fuligula ferina;* one pair of widgeons, *Mareca penelope;* three pair of gold pheasants, *Thaumalea picta;* three pair of silver pheasants, *Euplocamus nycthemerus;* three Stanley cranes, *Tetrapteryx paradisea;* one wattled crane, *Grus carunculata;* two secretary vultures.

ARRIVALS AT THE NEW YORK AQUARIUM TO MAY 15.—The following fishes of Bermuda have been received through Messrs. Chas. Reiche & Brother.—Angel fish, *Holacanthus tricolor;* cow pilot, *Glyphidodon saxatilis:* squirrel, *Holocentrum sogo;* doctor fish, *Acanthurus chirurgus;* bream, *Sargus variegatus;* hamlet, *Epinephelus striatus;* four-eyed fish, *Sarothrodus bimaculatus ;* clucker or black grunt, *Pareques acuminatus ;* white grunt, *Hæmylum capeuna;* yellow grunt, *Hæmylum xanthopterum ;* hind, *Epinephelus guttatus;* rock fish, *Trisotropis undulosis;* phebe, *Pomacentrus leucostictus;* cow fish, *Ostracium quadricorne;* lobster, *Palinurus americanus;* crawfish, *Scyllarus equinoxialis.*

Woodland, Farm and Garden.

THE ROSE IN THE GARDEN.

THE enthusiastic rosarian, now that his bushes have fairly started growth, strolls among them, looking out for a developing bud on some new rose added to his collection last season, or carefully picking off that little maggot of the rose-fly, which so often blasts his hopes by curling up a leaf against some favorite bud and eating away its centre. He has made notes of the best roses he has seen last year, and resolves, by selecting only the best varieties, to make his collection as good as possible. He, however, is apt to err by selecting those that grow too weakly ever to make good plants, and fine though an occasional flower may be, he is sure to be disappointed. Vigor of habit is more essential to secure a good show, more especially as our rose season is of such short duration. Another very necessary qualification is fragrance. If the roses possess first-rate form, good distinct and pure color, strong growth and erect habit, want of fragrance is often thought of no importance. This is not as it should be; the point should be brought more prominently forward, and it would be well for our horticultural societies to offer premiums at their exhibitions for the most fragrant roses both of the Tea and Hybrid Perpetual varieties. By far the most useful roses in this climate are the Tea roses, blooming as they do all Summer and late into the Fall—indeed, the buds that comes in the cool nights of September and October are much richer and finer than even those of the first crop of June. Probably the most fragrant of these is *Devoniensis,* most lovely light colored rose, and altogether too little grown. *Bon Seline* comes next, then *Mad. Bravy, Catherine Mermet, Mad. Mertot, Duchess of Edinburgh,* etc. *Souvenir de Elize,* the most lovely of all the Teas, has a most distinct and peculiar fragrance like that of fresh tea, and though not so pleasant as the first named, yet is equally sweet scented. *Marechal Nell* and *Triomphe de Rennes* possess a large amount of perfume, while *Mad. Willermoz* reminds one of the most delicious fruit, and though rarely grown in perfection, is for sweetness almost unrivaled. *Cloth of Gold* is also very sweet scented, and *Rubens* and *Souvenir d'un Ami* delight you with their perfume as well as charm you with their form. In fact, all the above named Teas are good in every sense, and rarely, if ever, fail to bloom early and late. Of Hybrid Perpetuals it is difficult to give a list, as the majority of this class possess most exquisite perfume; a few may be named, however, that are remarkably good. *General Jacqueminot,* among the dark roses, is pre-eminent for perfume, and *La France* among the light. *Abel Grand,* too, is a most fragrant rose, and that charming little rose, *Boule de Neige,* has a most sweet and distinct bouquet. *Beauty of Waltham,* among the light crimsons, is very fragrant, and *Comptesse de Chabrillant* among the light pinks. *Madame Furtado* is a weak grower, but celebrated for its perfume, and *Charles Le Febre,* the grandest of dark roses, is also very sweet. This imperfect list is given in the hope that other growers will supplement it, and thus make an opening for another election of roses, viz.: "Those celebrated for their perfume."

THE CHOICEST ROSES FOR CULTIVATION.

JACKSON, Miss., May 15.

EDITOR FOREST AND STREAM AND ROD AND GUN :

Some years ago *Moore's Rural New Yorker* requested twelve floriculturists each to name a list of twelve roses for parties having room for that number only; said list to comprise twelve roses scaled, in regard to color, from white to the darkest, and their blooming capacity through the season. The lists sent in (I quote from memory), comprised sixteen roses, which unanimity is wonderful, taking into consideration the number of roses we have, and the individual taste of twelve men making the selection independently of each other. That list was reduced by the *Rural* to the number proposed, and given thus:

"Perpetual White" Moss	"Gen'l Washington"
"Salet" pink Moss	"Gen'l Jacqueminot"
"La Reine"	"Marechal Neill"
"Baronn Provost"	"Coquette des Alpes"
"John Hopper"	"Victor Verdier"
"Mademoiselle Marguerite Dombrow"	"Anna de Diesbach"

I purchased all the roses on the list I did not have, and after a trial of six seasons, having purchased until now, my list comprises one hundred varieties. If I should have to make a selection of twelve, it would be the above. The list was disseminated by me as much as possible, and I believe it has given a strong impetus here for the cultivation of the "Queen of Flowers."

"Gen'l Washington" and "La Reine" prove intractable al seasons on my grounds; they rot in the bud. My soil is a strong clay, which, with plenty of manure, seems to bring out my flower in all its glory. I believe our little town, given the same variety of roses, could compete successfully with any place in the United States.

For persons wishing to make up a baker's dozen, I would add "Souvenir de Wm. Wood," the darkest rose I know.

If the above is considered of sufficient interest to give it to the readers of FOREST AND STREAM, I may have some more to say about roses and hyacinths. GEO. C. EYRICH.

[Our readers will feel very much indebted to this correspondent, and will hope to be favored again.—ED.]

A BOTANICAL GARDEN FOR NEW YORK.—It seems fitting that after the resuscitation of the Horticultural Society, the project of establishing a botanical garden in connection with the Museum of Natural History at Central Park, should again be warmed into life. The project, at first, met with much opposition, owing to the failure of similar plans in the past, and the expense of such an undertaking. But lately it has been more favorably received. The Legislature, some weeks ago, granted a charter to Samuel B. Ruggles, Robert L. Stuart, and William E. Dodge, and such other persons as they may associate with them, empowering them to establish a botanical garden in this city. The cost of arranging and fully preparing it is estimated at from $300,000 to $350,000, which amount it will be necessary to raise, in a great part, by private subscriptions, and of which, part is already subscribed. The design of the gentlemen to whom the charter has been granted, is to use as much as possible of Manhattan Square, which, with the adjacent unoccupied property that they can secure, will give ample ground for all purposes, and be of easy access from the Central Park.

N. Y. HORTICULTURAL SOCIETY.—Let us again call attention to the contemplated exhibition of plants and flowers to be held by this flourishing society at Gilmore's Garden, Tuesday, Wednesday and Thursday of next week. This meeting promises to be the best ever held by this society, and we cannot do better than to advise all interested in horticultural matters, or who wish to see what the New York florists can do, when competing against one another, to go and see for themselves.

J. H. Patterson.—Your plant is the *Dodecatheon meadea L.,* or American cowslip, a native of rich woods—Pennsylvania and westward. It makes a lovely plant for the mixed border, and the white variety is equally beautiful. It is called Shooting Star in the West.

P. Davis,—St. Louis. The typical *Viola pedata,* or *Bird's-foot Violet* you send specimen of is not at all uncommon, and is a most beautiful spring flower. We have seen a few specimens pure white, but they are rare. Your other plant is the var bicolor, the two upper petals of which are deep violet, and, as it were, velvety like a pansy. We have not seen it in this section.

WHEN TO PRUNE.—On this subject the doctors differ considerably. Lindley, speaking for England, says the best time for pruning is usually winter or mid-summer. Renwich would do heavy pruning between the coming out of frost in spring and the opening of the leaf, moderate pruning in June or July. Downing thinks that, practically, a fortnight before mid-summer is by far the best season, on the whole, for pruning in the Northern or Southern States. Cole gives preference to June, July or August for moderate pruning, and considers the spring as the worst season. Barry says that in Western New York they prune apples and other hardy fruits as soon as the frost is out of the ground at the end of February or beginning of March. Thomas, in the *American Fruit Culturist,* takes almost unqualified ground in favor of winter pruning.

GRASSHOPPERS AND GROUSE.

EDITOR FOREST AND STREAM:

A nonsensical uproar has been raised about the chickens and hoppers, many men of good common sense falling "in line" and asserting that shooting off the birds in the fall saved the hopper plague. Dr. Coues, in Chicago *Field,* helped the matter all he could, and in an article on the subject spoke of the sharp-tailed grouse, *or Western grasshopper bird;* it is a new name; we dwellers in the West have never known of it being called the "Western grasshopper bird." Because a bird will eat hoppers is no reason why it should be called a grasshopper bird, if so, every Western bird is entitled to the name "all the same." The prairie grouse eat a few "hoppers," so do tame fowls around a barn yard, and any one who has observed a well-trained Shanghai or Cochin-China playing circus with a lively hopper, can form an idea how many hoppers a grouse will capture in an hour. Grouse will leave a country that is infested with hoppers, almost entirely. In 1875 we hunted north of Crookston, (on the Red River of the North), grouse were there in myriads, and very few hoppers. Last fall on the same ground, under favorable circumstances, we failed to find birds enough to have any sport, but the hoppers were as plenty as blades of grass. Mr. Jerome Marble and party, of Worcester, Mass., had a like experience on the same ground. T. P. C.

DEPARTMENT OF FISHERIES,
BANGOR, May 15, 1877.

EDITOR FOREST AND STREAM:

I cut the enclosed from a paper this morning:

"The famous race horse Vigil, winner of both the Dixie and Breckinridge stakes at Baltimore last Fall, broke down in training at Jerome Park Sunday."

Does "breaking down" here imply simply letting down of the whole system from overwork, or does it imply also one leg or any other part going wrong? How old is Vigil? What is the sex, mare or stallion? I would like a pet, and one that I can experiment on. Can I procure Vigil? I am severely affected by that most cussed of all diseases, "impecuniosity." I would like to pasture and pet Vigil for a year or two, and then make him or her my favorite saddle-horse.

E. M. STILLWELL.

NEW GROVES OF GIANT TREES.—It has been supposed that the Sierra Sequoias, or big trees of California, are confined to a few small and isolated groves. It was discovered last summer that a body of big-tree timber in Fresno County is not properly a grove, but a forest, extending for not less than seventy miles in a northwest and southeastward direction, with a width in some places of ten miles, and interrupted only by the deep canons which cut across the general course of the forest. Different persons have traced the forest from the basin of the Tule river, in latitude 36 deg. 20 min., across those of the Kaweah and King's, to that of San Joaquin. The elevation has not been carefully measured, but is supposed to vary from 4,000 to 6,000 feet. Unlike the groves further north, this forest consists mainly, and in some places almost exclusively, of the big trees, and there are also a multitude in all ages of growth—some just sprouting, and others saplings only 3 or 3 feet through. The largest standing tree as yet measured is 40 feet in diameter; a charred stump—the tree itself having disappeared—measures 41 feet across. A tree 24 feet in diameter, 4 feet above the ground, is precisely the same thickness 60 feet higher. A fallen trunk is hollow throughout its length, and the hole is large enough to drive a horse and buggy 73 feet in it as in a tunnel. The wood is similar in general character to the Coast Sequoia, or common Redwood, straight in grain, slitting freely, even enough in grain for furniture, and far superior to oak in its keeping qualities in positions exposed to alternations of moisture. The Sierra Sequoia does not throw up sprouts from its stump as does the Redwood, and can, therefore, be felled out more readily. It was wise in Congress to make reservation for pleasure purposes of the Mariposa Grove, which is near Yosemite, small and conveniently accessible to tourists by the present routes of travel; but the Tulare-Fresno forest—it is all in those two counties—cannot be converted into a public reservation. Numerous saw mills will be built on its line, and flumes will carry the lumber down to the consumers.—*San Francisco Alta.*

BULBOUS ROOTS ADAPTING THEMSELVES TO THEIR PROPER DEPTH IN THE EARTH.—My attention was first directed to this some thirty years ago. In a garden at Pontefract, I made several alterations, one effect of which was to disperse and bury, 12 inches under the surface, a bunch of snowdrops. At their usual season several of them duly sent up leaves and flowers. As soon as the foliage began to decay I took them up, with the view of planting them again in a cluster. I was, however, surprised at finding that the old bulb at 12 inches deep in the ground had entirely perished, except the skin and stalk. Upon the latter a new bulb had formed about 4 inches under the surface of the soil. This proved to be the case with all that I dug up. The circumstance had escaped my memory until last year, when (thinking I should leave my present house and garden) I dug up my tulip roots. I found that some of them had been raised above their proper depth in the earth, and that some were upon the surface. The latter showed a skin the size of two wheat corns. A tap-root has struck down, from which, at 4 or 5 inches below the surface of the earth, strong healthy bulbs obey this law.—THOMAS ARNALL, *in the Pharmaceutical Journal.*

LEADING A COLT.—Put on the war-bridle, and place yourself at the point against his hips, but six or eight feet out, and say, "Come here!" so as to be distinctly understood. Give a sharp pull on the off war-bridle, which will cause him to step towards you. Then say, "Whoa!" and caress him, which is the same as saying to him that he did all you desired of him. Change from side to side, repeating the movements until he answers the word of command without the pull on the cord; he will soon learn your desire and act accordingly, and you must be satisfied with even a step towards you, and be sure to pet him every time he answers your call. Repeat this from side to side until he will follow anywhere you desire, punishing his mouth at any time with a light yank of the war-bridle if he stops or refuses to follow you when you start off and say, "Come on, sir!" In this way, if patience, carefulness and perseverance are practiced a colt may be taught to follow anywhere the same as a dog, and to mind your word of command the same as an ox or yoke of oxen.

VALUE OF TREES IN TOWNS.—In the formation of new streets, and on the eve of the contemplated widening and alteration of old ones, it is to be hoped that an effort may be made to provide for the planting and establishment of trees wherever practicable. The pleasing appearance of verdure in summer, and the agreeableness of the shade afforded by the foliage to pedestrians, are benefits to the inhabitants well worth the effort and cost. Whoever has visited the boulevards of continental towns, or even the squares of London, can testify to the advantages of verdure as offering pleasure to the eye and gratification to the mind. Moreover, from a sanitary point of view, the benefits are of incalculable value. It has been asserted that the aggregate surfaces of the leaves of well-grown Elm, Lime, and Sycamore trees, with their six to seven million leaves equal about two hundred thousand square feet, or about five acres; and these are almost constantly absorbing and digesting the carbonic acid and various exhalations given off by the putrefaction of animal and vegetable matter, and, as if grateful for such support, return into the air pure oxygen, which re-invigorates and renews animal life. Trees thus remove poison from our midst, and to be without them is an oversight. Trees can be had which will exist, with suitable attention, in any part of the city. Why not, with all the above facts before us, have them and try them?

Sea and River Fishing.

FISH IN SEASON IN MAY.

Trout, *Salmo fontinalis.* Salmon Trout, *Salmo confinis.*
Salmon, *Salmo salar.* Shad, *Alosa sapidissima.*
Land-locked Salmon, *Salmo sebago.*

*** For trout flies in season in May see our issue of April 26.

FISH IN MARKET.—Our quotations for the past week are as follows: Striped bass, 15 to 18 cents per pound; salmon (frozen), 50 cents; green, do., 60 cents; California, 40 cents; mackerel, 10 to 15 cents each; shad, native, 25 cents; Connecticut River, 40 cents; white perch, 15 cents per pound; Spanish mackerel, 65 cents; green turtle, 16 cents; terrapin, $12 per dozen; frostfish, 8 cents per pound; halibut, 15 cents; haddock, 7 cents; kingfish, 18 cents; codfish, 8 cents; blackfish, 10 cents; herrings, 5 cents; flounders, 8 to 10 cents; porgies, 10 cents; sea bass, 15 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 25 cents; scollops, $1 50 per gallon; whitefish, 15 cents per pound; pickerel, 15 cents; Long Island trout, $1; Canada do., 50 cents; hard shell crabs, $3 50 per 100; soft crabs, $1 75 per dozen; red snapper, 18 cents; weakfish, 18 cents; pompano, 75 cents.

—Salmon fishing with rod is at its height now in Nova Scotia. For New Brunswick, take the 15th of June; for lower St. Lawrence, June 20 to July 1. Our friend, A. G. Wilkinson, Examiner of Patents at Washington, D. C., who wrote so pleasantly of salmon fishing in *Scribner* a few weeks ago, is packing up his split bamboo rod, and proposes to try it again next June. He is going to the Lower St. Lawrence. He says his rod has been in use since 1874, and is just as good as new. Perhaps he will be willing to tell us who the maker is, as there is so much interest felt at present in rods of this material.

—Messrs. Abbey and Imbrie are going to fish the York River next month.

—Holabird, of Indiana, "the Waterproof Man," is going to Michigan up the Jordan for trout. J. L. Stockton is thinking of taking a Lake Superior trip. W. D. Tomlin, of Chicago, is going to the Manistee and Au Sable Rivers during the next month for trout and grayling.

MAINE.—*Bangor*, May 15.—I was at Sebago the 2d May, with my old friend and colleague, Mr. Stanley. We took a boat and fished at the mouth of Songo River. The wind was blowing a gale; weather very cold, obliged to fish with overcoats and mittens. Heavy sea on, and dared not venture outside the piles—serves as a breakwater for the steamers and canal boats entering the river. First fish hooked by Stanley; judged to weigh 12 pounds, or over. In attempting to land him with a net, he was too long, fell out of the net, caught the hook, broke it, and escaped. Next fish by myself, weight 6 pounds; next, ditto 7½ pounds; next a pickerel, 3½ pounds; next, a 5 pound salmon by Stanley; next a 2 pound trout by Stanley, and then we left for fire and food. But Sebago Lake is worthy exploration and investigation by men like Prince. The flavor of those Sebago salmon cannot be equalled by any *Salmo salar* that ever swam. Now is the time to test it. Take the Portland and Ogdensburg R. R. for Sebago at Portland; there take the steamer for Songo Lock. Dillingsborn will furnish you with bed, board, men, and boat. It is some four miles from Dillingham's to the mouth of the river by boat, and about one and a half miles by land, and a very pleasant walk at that. Troll, with a smelt for bait, off the sand bars at the mouths of the river, if the weather will permit. Better chance for fish here than on the Restigouche, and a prize you will remember all your life.

E. M. STILLWELL.

NEW YORK.—*Pisco Lake, May 8th.*—Letters from guides state that the Lake Pisco is now open, the lake and brook trout biting, and the roads free from snow. Pisco is eight miles by good road from Lake Pleasant, which is twenty-eight miles by stage from Northville, which is two hours by railroad from Honda, New York. A stage leaves Northville every Monday and Wednesday, 9 A. M. Leave city by morning express, can reach Pisco that night. Good accommodations; good boats and guides.

May 12th.—Caught 23 pounds of speckled trout, including three of over two pounds in weight, and about 30 pounds of lake trout, since last Wednesday.

May 14th.—The fish are not yet rising to spoon, but biting well at anchor. It is probable that over 400 pounds have been taken.

PISECO.

NEW YORK.—*Eagle's Nest, May 21st.*—I do not wish to see sportsmen wild, but I would like to state, as a slight sign of what may be found in the Adirondacks this year, that I have just received a string of speckled brook trout from Charley Bennett, of Indian Lake, Hamilton County, N. Y., fifteen in number; total weight, thirty-one (31) pounds. The largest weighed four pounds two ounces; was twenty-one inches long and five inches broad forward of back fin. I hope soon to be in those waters, and shall not forget you while there.

"NED BUNTLINE."

NEW YORK, *Kingston, May 19th.*—Chubs are very plenty now in the Esopus stream near Kingston. Fishermen go out in the morning and return about 10 o'clock A. M. with fine messes. Ira Traphegan and Rod Van Luven caught 27 lbs at the fording place in about four hours on Wednesday morning. A sixty-pound striped bass was caught in the Hudson River, off Limestone Rift at Lylewood, near Kingston.

OLD HARRY.

NEW JERSEY.—*Kinsey's Ashley House, Barnegat Inlet, May 20th.*—Blackfish biting good. Cale Parker took 31 on slackwater, running from one-half to two pounds. No sheepshead yet; professionals report plenty of bait for them. Conroy, Bissett & Matleson, 65 Fulton street, have established a bulletin board, where parties can see daily quotations of catches in that vicinity. Capt. Bill Predmore and Mr. T. Taylor, of Waretown, have just taken the first bluefish, by squid. They run about two pounds.

B.

PENNSYLVANIA.—*Albert's Hotel, Canadensis, Monroe Co., May 20th.*—Trout fishing excellent. No forest fires. Party of three left yesterday with 900 fish, five days' fishing. I took ten nice fish last evening. Shall try the Buckhill to-morrow, Broadhead's creek Tuesday, and Little Bushkill Wednesday. Use the fly exclusively.

K.

Alleghany City, May 17, 1877.—The brook trout fishing—which we obtain in our adjacent mountains—was opened this season, with due *eclat*, by two of our prominent lawyers; they were absent about "half a moon," and returned ladened, as it were, with their booty, possessing a string of—two; average weight, ninety-five to the quart.

The other day, a gentleman sent a flutter through our piscatorial circles, by capturing four dog-fish in the Monongahela. Two of the fish were spotted and spiked with acute prongs, presenting an appearance rare even unto our oldest fishermen. The largest specimen caught weighed four pounds.

The fishermen report that they cause great annoyance by cutting off the hooks from their lines, and otherwise mutilating the traps.

Large numbers of black bass are continually being caught in the Alleghany, Monongahela and Ohio rivers; the work of depredation being carried on to within the very walls of the city.

TERRA FILIUS.

Harrisburg, May 10.—There are in this highly cultivated valley a number of streams, which, in my opinion, contain better trout than can be found in the same area anywhere within this State, and with any care and protection on the part of the owners of the land through which these streams flow, could be made to furnish fishing that would satisfy any fisherman. Whether on account of the peculiar property of the water (all limestone), or from other causes I am not able to say, the trout in these streams are much larger and finer than those of our mountain creeks. From Newville east to Derry, we have Big Spring, Letort, Silver Spring, Cedar Run and Spring Creek, all of which (although fished to death) contain trout the size of which will make the angler's heart glad.

SUSQUEHANNA.

WISCONSIN, *Bayfield, May 12th.*—The streams in this section are in better condition for fishing this spring than they have been for a number of years. We have had no heavy rains to wash the banks or clog the streams with brush. The water is clear, bright and sparkling, and from this cause good trout fishing has commenced early in the season.

Messrs. Chapman and Tyler were out trying the streams on the 9th and 10th inst., and met with very fair luck. On the 9th they brought to bag 22½ pounds in two hours, and all of them were perfect beauties, running in weight from one-half to one and a half pounds. On the 10th the same gentlemen excelled their catch of the 9th, fishing four hours and took 33 pounds. This catch did not average so large in size, but a few of them were much larger than those caught the first day. I send herewith a diagram of one that weighs three pounds and two ounces. The trout was laid upon the paper and the pencil run round, so as to give the outline of the fish as he laid upon his side.* Many persons may think that fish of this size are an exception, but it is not the case, as fish from two to three pounds are taken here almost daily. Messrs. Chapman and Tyler report that on the 10th, when they struck this run of large trout, in a short time their hooks were all gone and their tackle a complete wreck, and were forced to leave for the want of hooks to put in the water. These gentlemen are old, experienced brook trout fishermen, and they claim that they never met with such large fish for stream fishing, and never lost so many hooked fish and had their tackle so demoralized as it was on this occasion. I think the secret of these large fish is this: for the last three years, through the efforts of the Sportsman's Club of Buffalo, the netting of trout under the rocks on the lake shore and in the streams has been entirely prohibited, and we are now beginning to reap the benefit of their vigilance.

K.

* [This fish measures 19½ inches. It is really enormous, and one can only judge of what a three-pound trout weighs by taking or seeing his dimensions.—ED.]

—Advices from the Magdalen Islands to the 14th announce 90 British and American vessels engaged in herring fishing. All expect full cargoes. The fish are destined for European markets. The island sealing vessels have not yet arrived from the ice. Fears are entertained that large quantities of drift ice are in the Gulf, north and west of the island.

—We are happy to call the attention of the fraternity to the establishment of James F. Masters, 125 Nassau street, where he has fitted up a fine store, and stocked it with a large assortment of goods appertaining to his line. His long and well known reputation in Brooklyn as a dealer in fishing tackle, and we may say in every other article usually found in a first-class establishment, gives him a strong hold on the public, and we mistake not in bespeaking for him a large share of patronage. He offers the young amateur fishing rod makers every advantage, in supplying goods in every stage of manufacture, whereby the young aspirant for piscatorial honors can take up a rod in the rough, and feel his way to that perfection so often aspired to by the skilful, in knowing how to make their own rods, just to suit.

FISHING FOR DRUM FISH.

WASHINGTON CITY, May 19, 1877.

EDITOR FOREST AND STREAM:

In your "Answers to Correspondents" in your number for May 3, I observe that you cannot say what flies are used in taking the drum fish.

Permit me to say for you that the fish in question is a deep water fish, lies at the bottom in similar rocky places with the sheephead, and the one fish is sometimes taken while fishing for the other.

They are both saltwater fishes, and are abundant in the waters of the Potomac, near Piney Point, St. Clement's Bay, Blackstone's Island, and other localities of that neighborhood. Our market is well supplied with them in the months of July and August, and they are usually fished for by the denizens of the localities adverted to with a "hand-line." Early morning is the time for fishing for them. The bait used is the crab, clams and other crustacea.

The writer has seen them of eighty pounds weight, which it would be difficult to handle with rod and reel; but when of less size, say fifteen to twenty five pounds, they could be as easily managed as any other fish.

They take the name of drum fish from a sound which they make like that of beating a drum.

A. H. G.

We are obliged to our correspondent for his favor. The question he refers to seemed to us so ridiculous that we answered it in a spirit of banter, as we often do absurdities of the sort.

CAPE COD NOTES.

EDITOR FOREST AND STREAM:

On a recent trip to the Cape in search of the sea-fowl, which are known to coast along its shores at this season on their way North, we found that they bed at Hyannis, around Clerk and Bishop's Shoals, during the winter, and about the 12th of May start North. Southwest winds bring them into the shore and give good shooting to the gunners, who string out their boats 100 yards apart in desirable tly-ways. We stopped at Cohasset Narrows on the 7th of May, and went down the Cohasset River into Buzzard's Bay, passing Monument Beach, Toby Island, on which there is the pretty Clubhouse of Mr. Toby's old Shooting Club, and anchored off Pocasset Headland. There was a scattered flying all day, and quite a number of loon passed us, but the wind was not strong enough to rouse the beds, and but a small bag rewarded our labor. Saturday, the 5th, there was a large flight of sea-fowl, owing to a strong west wind, and quite a number of boats were out and large numbers killed. The tautog fishing near the mouth of the river was very fair.

The two interests of the town of Sandwich, of which Cohasset Narrows is a village, are the oyster and herring. The catching of the latter is restricted to the waters of the river four miles above the village of Cohasset Narrows. At town-meeting a catcher is appointed, and every voting citizen is allowed each a barrel of the catch by paying 35 cents, the nominal cost of catching. They begin catching about the 15th of April. The fish are thrown into barrels with a little salt, forming with their own moisture a pickle. After packing they are strung on sticks run through their eyes, and last for a year. The fishing lasts till the 1st of June.

On the 1st of May tautog fishing begins. On the 15th of May the striped bass are caught from the bridges which span the estuaries of the bay, shrimp and minnow being used for bait. By the middle of May also the scup fishing begins. By the first of June the squeteague, so-called, are taken with pole and reel. Blue fish at this time also put in appearance, and are taken with lead and trail from the shore, or after boats.

The boat peculiar to this locality and well adapted to it is known as a flat-iron skiff, and has a flat bottom, which is of the characteristic shape of a flat-iron; has a centre board, is 14½ feet long by 4½ beam; 22-inch side; carries a movable mast with a 16-yard sail; draws 8 inches of water; is very difficult to upset, and floats in any such emergency. For the inland shallows of the estuaries and the stronger seas outside in the bay it serves well, and from its roominess is comfortable for pleasure purposes, and practical and useful when used as an oyster barge. Such a boat can be built by local workmen, complete with sail, for $30.

Almer Ames, a young fisherman of the village, or more especially an oysterman, carried us out in such a craft, and is an excellent sailor. Of the oyster interest he said that every citizen was allowed an acre of the public waters for an oyster bed, and from the restricted waters in which the oyster grows in natural profusion they gather their seed. It requires about 1,000 bushel of seed, or young oysters, to start an acre-bed; three years gives an average good growth. All the oysters of the locality grow a scalloped shell, which is peculiar to this locality, and exists nowhere else. The oysters are celebrated for their flavor; they sell for $2 a barrel in shell, or $2 a gallon solid. The price has not fluctuated for years. From September they are undisturbed, in which time they are in bulk and shooting their spawn. The first appearance of the young oyster is a black spot the size of a pin-head; in nine months they are the size of a ten-cent piece. The interest of these Cape Cod towns and the novelty of their sandy, treeless appearance, make a pleasant change for a few day's diversion.

SPLIT BAMBOO RODS.

To our customers and the public:—In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

CONROY, BISSETT & MALLESON,
Manufacturers, 65 Fulton Street, N. Y.

NOTES FROM THE LAKE REGION.

ANDOVER, Me., May 5, 1877.

EDITOR "GREAT CONSOLIDATED."

The little village where I am now located—Andover—is, as you are probably aware, the nearest town to the two Richardson Lakes, and on the great central route to the Rangeley Lake region, the route via Farmington being the upper one, and that by Bethel the lower. For brook trout fishing, the locality about Andover cannot be beaten, speaking from a personal experience of several years. The brooks are all within easy walking distance of the hotel, the distance to different brooks varying from two to five miles. Black Brook, Sawyer Brook, Old Maid Brook, and Frye's Brook are some of the best, and a day's fishing on either of these streams will furnish from one to five hundred trout for a catch, the fish weighing from one-quarter to a pound each. The greater part of the banks of these streams are favorable for fly fishing.

From Andover to the South Arm of the lower Richardson Lake (Welokenebacook) is twelve miles; the first three miles of the distance it the regular country road; the last nine miles lies through the wilderness, this of itself being a great charm to a stranger. Five years ago this wood road, or lake road, as it is called by the natives, was decidedly rough, but this spring there has been raised by private subscription and the town of Andover $600, which, judiciously expended, will make as good a road as one would care to ride over.

The new and beautiful little steam-yacht Henry B. Simmons, that made her first appearance last summer on the Richardson Lakes, is being put in complete order for the present season's travel, and will commence her regular trips about the last of May between Echo Lake and the South Arm, and the head of the upper Richardson Lake (Molechunkamunk), stopping at the Middle Dam, Metallic Point, Mosquito Brook and Upper Dam. This is the finest boat in the lake region, thoroughly and substantially built, has double engines, steel boiler, nice cabin, large standing room, life preservers, and is fitted up in a superior manner.

Parties who intend visiting Indian Rock this season will find the route by way of Andover preferable, on some accounts, to any other. One can take a parlor car on the Boston and Maine Railroad and ride to Bryant's Pond without change of cars, where connection is made with first-class Concord coaches for Andover, arriving at Andover two or three hours earlier in the evening than they would at Phillips if they went by the Farmington route. No prettier stage ride can be taken in New England than that between Bryant's Pond and Andover, the road running as it does for the entire distance up the valleys of the Androscogein and Ellis Rivers, with fine mountain views all the way. There are no tiresome hills on this route for horses to climb, the road being level as a floor, and the stage ride is in no way fatiguing.

Reaching Andover at eight o'clock in the evening one secures a comfortable night's rest at the Andover House, one of the best hotels in the lake country. The scenery also from Andover to the lakes is very fine, the road passing through the celebrated Black Brook Notch, which furnishes some of the most romantic views to be met with in Maine. At the arm of the lake the traveler embarks on the Henry B. Simmons, and sails across the two Richardson Lakes for nearly their entire length, landing at the Upper Dam. The Richardson Lakes have been called by competent judges the gems of the Rangeley chain, and are considered by many to be equal to any sheet of water in Europe. Crossing a short carry at the Upper Dam, you take the little steam-launch Oquossoc, and sail the entire length of Mooselucmaguntic Lake, and up the river to Indian Rock, arriving there early in the afternoon.

Thus it will be seen that the sportsman or tourist who visits Indian Rock by way of Bryant's Pond and Andover, crosses the three principal lakes of this beautiful chain; besides obtaining the finest combination of lake and mountain scenery in the whole region. By way of Farmington and Phillips you only cross the Rangeley Lake, one of the smallest, and have a two-mile carry to walk between Rangeley outlet and Indian Rock. A pleasant trip, however, for one visiting Indian Rock for the first time, would be to go by way of Bryant's Pond and Andover, and return via Phillips and Farmington. The Middle Dam Camp, situated on the lower Richardson Lake, has changed hands this season, and Mr. Aldemia Brooks has leased it this year instead of H. R. Godwin. Mr. Brooks is well known to the habitues of the "Anglers' Retreat," and will no doubt give general satisfaction in his new position. Mr. Lewis T. Brown, the agent of the Berlin Mills, is having the steamer Diamond, which runs on Lake Umbagog, put in first-rate order for the coming season. The Diamond runs from Upton to Errol, and up the Magalloway, carrying the most of the Parmachenee Lake travel.

Quite a number of private camps have been built about the shores of the lakes the past winter, and several have obtained leases who have not yet built.

The land-locked salmon that were turned into Mooselucmaguntic Lake by the Oquossoc Angling Association have attained quite a fair size, some being taken last year, both in the Mooselucmaguntic and Richardson Lakes, that weighed two pounds or more apiece. As soon as the ice will permit, which will be very soon, I shall visit the Upper Dam, and will send my next letter from that well-known resort.

ATLANTIC YACHT CLUB.—The first yacht race of the season was sailed on Tuesday afternoon by the cat boat class for the challenge pennant held by the Lapwing, over a 15 mile course. The race was a drifting match at the start, a fine breeze at the scratch down the bay, with all the wind the boats could stagger under on the return. Summary:

Name.	Start.	Finish.	Actual.	Corrected.
Nomad	3:20:20	7:35:19	4:14:59	4:14:59
Louise	3:20:30	7:40:58	4:20:28	4:20:28

Lapwing	3:23:47	7:53:55	4:30:08	4:30:08½

NEW YORK YACHT CLUB.—A general meeting of this club was held on Thursday evening, May 17, Commodore Kane in the chair. The minutes of the previous meeting were read and approved. Eleven new members were elected, among them the Messrs. Hitchcock, Igdin and Walter Langdon, representing the steamers Ocean Gem, Runaway and Walter Volante. Mr. Alfred Crovirn, for twenty-seven years a member, was elected an honorary member. A testimonial was voted (and a committee of three appointed in connection therewith) to be presented to Commodore Dickinson, of the Madeleine, in recognition of his signal victory over the Countess of Dufferin in last Summer's races for the American cup, the same to be presented on board the Commodore's flag ship during the Summer's cruise. The yachts will rendezvous on Tuesday, the 7th day of August, probably at Glen Cove. The meeting having adjoined, the members were invited by the Commodore to partake of an elegant colation in the club rooms.

BOSTON, May 17, 1877.—Mr. Gleason's catamaran has been tried, and already proves a source of trouble for those who keep racers. They begin to ask if "that thing will be allowed to sail with respectable boats?"

Why not? If some one should come along with even a lumber raft, and took the conceit out of my racer, I should try and build a raft that would beat his, if I believed in racing only.

We are too apt to take prizes by legislation, rather than by fair competition. When shifting ballast was the rule in these waters, the very yachtsmen that are its most bitter opponents now were its greatest defenders previously. You who are far away may want to know the reason of so sudden a conversion. Messrs. Moody and Sankey have been in Boston for six months, and business prayer-meetings have been held in business circles, and people have found out there is a Golden Rule, or (pardon my skepticism) they take unto themselves another kind of a boat. Lead pushed up to windward has been done principally in open crafts; and the man that was foolish enough to get a comfortable yacht, with cabin and fixings, had to content himself as a fixture in regatta times. Unless he chose to pull his boat all to pieces to compete with the highlyers, he must look at prizes, and not handle.

The Nahassett Yacht Club will hold three regattas the coming season. The first will be held off the North Shore, July 14; the second, August 4, off the South Shore, and the third, August 9, off the North Shore. Five new members and two new yachts have recently been added to its roll-call. There are now in the club forty-eight members and thirty yachts. The club is in a very prosperous condition, being wealthy in the services of a very enterprising secretary.

At a Special Committee meeting of the East Boston Yacht Club, held in their club rooms on Border street, Tuesday evening, May 15, the regular documents were signed for procuring a charter. According to requirements a new election of officers will be held, as there is some dissatisfaction expressed at the present management of the club, and the active members look forward to better times. KEDGE.

YALE REGATTA.—The Yale navy held a most successful regatta on Lake Saltonstall, on Saturday last. There were three races—two barge races and a single-scull race. In the first barge race crews from the Academic Classes of '78, '79 and '80 were entered. The course for this and all the other races was over two miles' distance, one mile and return. About 4 o'clock barges received the signal to go. All started with a spurt. At the mile turning, '79 went around first in 6m. 40s., '78 in 6m. 41s, and '80 in 6m. 45s. Coming down the last half mile the race was intensely exciting. Up to within twenty rods of the finish it was difficult to say whether '79 or '78 would win. '79 made a magnificent spurt, passing the winning-post in the excellent time, unparalleled in several years, of 13m. 03⅘s., closely followed by '78 in 13m. 08⅘s. The time of '80 was 13m. 14s. In the single-scull the contestants were: W. A. Ransom, '78; G. M. Edwards, '79; H. H. Donaldson, '79; W. T. Hart, '78. Going up all save Donaldson kept close to the western bank, while Donaldson hugged the eastern. He was the first to round the turning flag in 8m. Hart got around in 8m. 8⅘s. Ransom, after turning, lost his chances by pulling out of his course. The race was clearly Donaldson's on the last half mile, and he crossed the line in 15m. 29⅘s; Hart second, in 16m. 6⅘s.; Ransom third, in 16m. 39⅘s.; and Edwards last, coming over the line in 16m. 54⅘s. A barge race between the law and medical schools completed the days sport, the former winning in 13m. 54⅘s.

COLUMBIA CLASS RACES.—The rowing season may be said to have been inaugurated on Saturday last by the regatta of the Columbia College Rowing Association. The first race was mile heats, between the Junior, Senior, Sophomore and Freshman Crews. The first named contended in the first heat, the Juniors winning by a length in 6m. 51s. The Freshmen had no difficulty in disposing of the Sophomores in 5m. 49s. and they won also the final heat by any number of lengths in 6m. 14s.

The second event of the day was a four-oared race between graduates and undergraduates. This race was looked upon as a sure thing for the graduates, the crews being made up as follows:

GRADUATES.	UNDERGRADUATES.
Philip Timpson, bow.	E. E. Sage, bow.
G. Griswold, No. 2.	C. S. Boyd, No. 2.
G. P. Seeley, No. 3.	C. Eldridge, No 3.
J. T. Goodwin, stroke.	R. R. Colgate, stroke.

The graduates got the best of the start, jumping away with a good lead. At the half mile, however, the youngsters were fully two lengths ahead, and increasing this steadily, won the race by a dozen lengths in 5m. 59s., the graduates making the mile in 6m. 16s.

FIFTY MILE SCULL RACE AT CHICAGO.

CHICAGO, Illinois, May 14, 1877.

EDITOR FOREST AND STREAM:

A fifty mile rowing match took place on Saturday last on the Calumet river, fifteen miles south of this city, between W. B. Curtis, of this city, and C. A. Barnard, of Niles, Michigan. This being the second match between these two athletes, considerable interest was exhibited in the progress of the match. Barnard is a noted sculler, and is a member of the Chicago Association of Scullers. In his first contest with Curtis, several years ago, at Grand Haven, Michigan, in a two mile race, he won the match. He is a much smaller man and weighs considerably less than his spirited competitor. The match was for no consideration, as Mr. Curtis never rows a match or takes part in athletic sports for money. The weights were as follows: Barnard's own weight, 140½, sculls 8, shell 31½ pounds, the shell being paper, 11½x26 in size. Curtis' own weight, 175, sculls 8½, shell 33½ pounds; boat of paper, 12x30. Capt. A. O. Douns, of the Farragut Boat club, was chosen referee. The first seven miles of the race the men rowed side by side. After that Barnard gained on his competitor. At the end of the first fifteen miles Curtis was compelled to stop, owing to a severe pain in his side, caused by a severe accident arising from an injury received last summer while participating in athletic games, held at the ball grounds. After a rest of fourteen minutes he once more started, but had made only three miles when the intense pain caused him to give up the race. At this time Barnard was a mile and a half ahead. The course was a stretch of the river a mile and a half in length. The following is Mr. Curtis' time:

Distance, Miles.	Time, 1½ miles.	Total.
1½	13:00	13:00
3	12:00	25:00
4½	13:45	38:45
6	12:55	51:40
7½	13:40	1:05:20
9	13:25	1:18:45
10½	14:05	1:32:50
12	13:10	1:46:00
13½	14:30	2:00:00
15	14:30	2:15:00
16½	28:45	2:43:45
18	18:55	3:02:00

On his fifteenth mile stopped fourteen minutes, Barnard continued the race, making a record he can truly be proud of, placing him foremost among scullers. The following is his time:

Distance, Miles.	Time, 1½ miles.	Total
1½	13:00	13:00
3	12:05	25:05
4½	13:10	38:15
6	12:45	51:00
7½	13:30	1:05:00
9	13:35	1:18:35
10½	14:00	1:32:35
12	12:55	1:45:30
13½	13:20	1:58:50
15	14:30	2:13:20
16½	13:30	2:26:50

§ Stopped seven minutes.

It is to be hoped that Mr. Curtis may soon recover his wonted health, for he is well known as a gentleman who takes a deep interest in everything pertaining to the elevation of athletic sports. ROVER.

(*Yachting continued on page 251.*)

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

LEONDE, New York.—Can you tell me when the law is off in this State for black bass? Ans. May 30th.

G. F. L. P., Littlestown.—About what age should a bitch puppy be before she is spayed. Ans. It is before the bitch is ten weeks old.

BLACK BASS, New York.—What is the earliest date at which black bass may be caught at Greenwood Lake, without violating the law, if any? Ans. May 2d.

H.—Is the Westminster Breeding Kennel still in existence, and what would be the price of a black pointer pup? Ans. Yes. Address the Secretary, P. O. box 2,832, this city.

J. N., Syracuse.—How is it that Mr. Arnold Burges's dog Rufus took a first prize when he was not entered for competition? Ans. If you look at the catalogue you will see that Rufus *was* entered for competition.

J. R., N. Y.—Who is "Stonehenge," the English authority on dogs, and whose name I see mentioned in your paper? A friend of mine insists that he is Mr. Macdona. Ans. "Stonehenge" is Mr. Walsh, editor of the London *Field*.

D. R. B., Atchison, Kansas.—The heads you sent were those of *Gallinago wilsonii*, Wilson's snipe, and *Totanus flavipes*, lesser tell-tale. The plovers have shorter, thicker bills, larger, rounder heads, and are otherwise different.

L. R. M., Bethlehem, Pa.—Will you allow me to inquire of your numerous readers, through your columns, whether any of them have ever gone to the Rangeley Lake Region to escape the "Hay Fever?" If so, what has been the result?

F. M. C., Franklin, N. J.—Can you or any of your correspondents tell me where I can buy *Marine Glue*. I have tried several days in New York, but cannot find any for sale. Ans. Will some of our correspondents answer? We cannot devote time to special inquiry.

SUBSCRIBER, Gouverneur, N.Y.—Will you answer in your next paper whether the $10 initiation fee of the State Sportsmans Convention for the admission of clubs is good for one year or longer. Ans. Annual. Apply to John B. Sage, Secretary, Buffalo.

F. W. S., Philadelphia.—I have a setter bitch (spayed) three years old, that never sheds her coat on the back, her sides and head shedding regularly. How can I remedy this? Ans. Give your dog a ball of tar the size of a small hickory nut three times in the course of a week.

G. A.—Will you please inform me whether all kinds of game may be killed in Virginia until July 1 next, as I believe that is the time the new law takes effect? If not all kinds of game, can deer be killed until that time? Ans. We published the whole law in our issue of April 26.

C. S.—Will you tell me what bait is best for pickerel—spoon, imitation minnow, or live minnow. Can any fishing be had off the docks at Harlem at this season of the year? Ans. We regard the baits you mention as equally good. We hear of no fishing at present off the docks at Harlem.

J. C. W., INDIANAPOLIS, Ind.—I have a small black and tan pup, just taken from its mother. What feed is the best to raise it on? Ans. Commence with fresh milk, slightly warm, and afterwards mix with it baked Indian meal, continuing this diet until the dog is old enough to eat the scraps from the table.

O. N. L., New York.—1st. Please tell me where I can get a good muzzle loading gun, cheap. 2d. What is the price of H. Fisher's muzzle loading rifle? Where can I get some good books on shooting? Ans. 1st. From any of the dealers advertising in our columns. 2d. $100. 3d. From this office if you send us their names.

E. L. F., New Orleans.—What other English gunsmiths, besides Dougall, make positive action breech loading shot guns? The addresses of first-class makers only. Ans. Scott, Greener, Pourn, and in fact all the leading makers. The double grip almost universally used is a positive action. For address see our advertising columns.

GROUSE, Duxbury, Mass.—Please send me receipt for worms in dogs. They are about an inch long, and seem to keep the flesh down. The food consists of Spratt's fibrine Ans. Areca nut, powdered, and given in three doses of twenty grains each, two hours apart, and followed by a dose of castor oil four hours after the last dose, will remove them.

S. H. M., Pittsburgh.—Can you give us any information through the columns of your paper concerning the hunting and fishing on the Coulonge river in Canada, or direct us to any party who would answer any inquiries in regard to that territory. Ans. You will find a very complete description of this country in our issue of Jan. 22d, 1874, covering six columns of the paper.

SUBSCRIBER, Boston.—A friend of mine has a shot gun with "W. W. Forsyth, London, fine twist," engraved on barrel. Could you say whether this is a good gun or not? Ans. We have met guns with that name stamped upon them, but could tell nothing about the quality of your friend's gun without seeing it. It is probably a common grade of gun.

W. McC., Erie, Pa.—1st. Where in New York can I have the left barrel of my gun, a Clarbrough, bored so as to shoot close, also the cost? 2d. What would be the probable cost of a week's gunning after bay-birds in the latter part of August, including a boat, men and car fare? Ans. 1st. H. C. Squires, No. 1 Cortlandt street, will choke bore your gun for $5. 2d. About $35, which includes $3 per day for boatmen.

SEC. H. & R. C., CAMBRIDGE.—Can you please inform me, through your correspondence column, whether there is a rifle range at Springfield, Mass.; and, if there is, from whom could I learn if the Harvard and Yale rifle clubs might shoot thereon, or near the day of the boat-race (next June) between these two colleges? Ans. I. Yes. 2. We are authorized to say that the clubs can have the use of the range on the day named.

L. L., Brooklyn.—Please inform me whether there has been a bull-mastiff at the beach show, or whether there have only been mastiffs? A. bets B. that there is no difference between a mastiff and a bull-mastiff? Ans. There was no such dog at the show, and there is no such breed of dogs. A mastiff might be crossed with a bull dog, as a pointer might be crossed with a setter, but the produce would be a mongrel.

W. W., Nyack.—1st. I have a gun made by Robert Gardener, 200 Piccadilly, London; is he a maker of any reputation? 2d. Will you give me the address of F. de B., Ithaca, New York. 3d. What was the entrance fee at the late bench show of dogs? By answering these questions you will oblige. Ans. 1st. We know there is such a maker, but know nothing as to the quality of his guns. 2d. Do not know it. 3d. Two days, $2.

MEDICO, Mayfield.—I have a bitch pup that I wish to spay. Will you do me the favor to describe the manner of operating? Ans. The operation consists in making an incision and removing the ovras, but we could not undertake to describe it so that it could be done with safety. We would rather suggest to you to write to Horace Smith, care of this office, who will put you in communication with a person who makes a business of it.

JOHN, Newark, N. J.—Can you give me the address of the principal man in the N. Y. State Sportsman's Convention, to be held at Syracuse in the early part of June next? I want to write him. Ans. John B. Sage, Secretary, Buffalo; or Green Smith, President, Vanderbilt House, Syracuse.

L. M. S., Baltimore.—I have a fine setter dog with a very stubborn cough. We try to keep him as quiet as possible, as motion seems to aggravate his cough. He expectorates a little. His eye is quite clear. His appetite is good, and his bowels regular and in good order. Ans. We should recommend for your dog a Dover's powder night and morning for two or three days, and twice a day a tablespoonful of cod liver oil. A short time will determine whether the cough is chronic or curable.

S. W. B., Vicksburg, Miss.—I have a new minnow seine, and write to ask you if you can tell me of any preparation that I can use that will make it waterproof or prevent its rotting? Ans. Dissolve paraffin in naphtha or benzine, and soak thoroughly; or take half a pound of sugar of lead and half a pound of powdered alum, dissolve them in a bucket of rain water, and pour off into another vessel and steep your seine in it, letting it soak thoroughly.

C. H. C., Brattleboro, Vt.—1st. What is the best length and weight for a rifle 44 calibre, from 40 to 60 grains of powder, for off hand shooting? 2d. Is the Phœnix rifle, manufactured by the Whitney Arms Co., a reliable gun? Ans. Mr. E. H. Sandford won the "Spirit of the Times" badge last with a 26 inch barrel; from this to 28 inches is a good length, weight 10 lbs. 2d. The Phœnix rifle is a cheap weapon, fair enough for short distances.

M. W., Williamsport.—1st. What gauge would you recommend as the very best for wing shooting of all kinds, trap, ducks, etc.? 2d. Is the Parker breech loader considered good? 3d. Could a good shot make anything shooting game in Iowa, Illinois and other Western States, shooting for the market? Ans. If much trap and duck shooting was to be done, we should recommend a 10 gauge. 2d. Yes. 3d. Rather a precarious way of getting a living, we should say.

J. S. B., Philadelphia.—I am the owner of a Chesapeake Bay dog. He has been complaining with his throat, and has a lump about the size of a walnut on each side of his neck. Can you give me a remedy? Ans. Your dog has an enlargement of the glands of the neck, which are very apt to become inflamed and enlarged after a sore throat or cold. Would not advise any interference at present, unless some iodide of iron. Say the syrup, ten drops three times a day.

J. A. D., Manistee, Michigan.—Having a good bred Irish setter bitch, which will soon come in for first time; a friend of mine has also a good bred pointer, which he is anxious to put to her. Would it be policy to do so, and would it harm her for future breeding? Ans. We should advise you rather to shoot your bitch than to breed her to a pointer; nor would we advise you to breed her to any dog the first time of coming in season. The puppies would probably be valueless.

C. B., Shakopee, Minn.—My red setter bitch has a sore eye, and despite all care it is steadily getting worse. The eye itself is clear and free from discharge, even water. The skin around the eye is very much swollen, hair gone off, and of a mangy and dry appearance; have frequently washed with soap and water. She is otherwise in good condition? Ans. Anoint around the eye with carbolic salve, and keep the dog on a low diet; that is, feed as little meat as possible.

F. G. S., Westfield, Mass.—About six weeks ago I noticed a small bunch on my setter's throat; it was very soft, and did not seem to trouble him, as he was just recovering from the mange, and thought it would go away, but it has kept increasing in size, and is now as large as an egg. It is very soft, and it does not seem to pain him to squeeze it. Will you please advise me what to do? Ans. Leave it alone, and in time the swelling may subside. It is probably an enlarged gland.

READER, Cleveland, Ohio.—Please give me the proper name of a peculiar yellowish fish, called here by the name of "Lawyer." Ans. Probably *Amia calva*, a very ravenous fish, known as lawyer, mud fish, dog fish, etc. Habitat, Vermont to Mississippi river. We have described this fish at some length in this paper. There is also a lawyer in the great lakes (*Lota maculosa*), which swims at great depths, and is taken at forty fathoms and more. See Hallock's forthcoming Sportsman's Gazetteer.

BERESFORD, Volusia Co., Fla.—W here could we obtain some California salmon fry, and at what price, and would they thrive here in our lake? Lake Beresford is, properly speaking, a bay from the St. John's River. The bottom is sandy, and it is a noted place as a spawning ground for all kinds of fish—shad, bass, bream, perch and others. Ans. The State Fish Commissioners, of Pennsylvania, Maryland and New York, can furnish them. Address H. J. Reeder, Harrisburg; T. B. Ferguson, Baltimore, or Seth Green, Rochester.

W. W. W., N. Y.—1st. Be kind enough to give me directions how to go to "Princess Bay." 2d. I have a gun marked "Thos. Phillips, London;" do you know of what repute was he? 3d. Can I get the two first vols. of FOREST AND STREAM not bound, so I can have them bound my own style? Ans. 1st. Go to Vanderbilt Landing and take cars. 2d. We do not know of such a London maker; there was one in New York. 3d. We could give you the first volume, but in the second there would be three numbers missing.

LEWIS, GUS AND LARRY.—There are three of us desiring to go on a hunting and trapping expedition, especially trapping. Could you inform us in what part of the country it would be likely to pay the best? Two of us have been trapping before in the northern part of this State. Ans. Probably the most fur can be found in Arkansas and Mississippi. Several of our readers have been trapping there the past season. We cannot tell how remunerative it would be. There are good mink, otter and beaver regions in Brunswick and Nottoway counties, in Virginia.

J. A. C., Newark, N. J.—1st. I have a setter dog, whose hair comes out continually all the year round. Can you tell me of a remedy? 2d. Is there any way to keep dogs from jumping fences when off the chain? Ans. 1 Give your dog three doses of tar in a ball about the size of a large pea, allowing two days to elapse between the doses. Afterwards give a raw egg night and morning for a few days. If the dog has no skin disease, this will help him. 2d. Not without mechanical appliances, of which we do not approve. Training properly will make him "ware fence" at the word.

G. C. P., Harrison, N. Y.—Please advise me of the largest assortment of flies that I could use to advantage for lake trout fishing this coming autumn in Maine? Ans. Your question is a difficult one to answer, as the lake trout is not really a surface feeder. Only in spring does this trout rise to the surface. They can then be taken with fly, more especially at the outlets of lakes. In the fall they also go into shallow water ormed by the gravely bars at the mouths of inlets to spawn, and they will then often take a fly or troll. They take the same flies that brook trout do.

A. J., Fond du Lac.—I wish to know how to treat a dog with distemper, at least I think distemper is the trouble. It is a case of a pointer pup five months old; the glands on one side of his throat are quite enlarged and seem to be swelling more, the eyes run some. As yet the pup is quite lively, and has a good appetite. I can notice nothing else wrong with him besides the above. Ans. Give your puppy a Davis powder night and morning for two days, placing the powder on the back of the tongue. Give the dog a nourishing diet without too much meat.

W. W. G., Albany, N. Y.—I have a "Lefaucheux" pin cartridge breech loading shot gun, weighs 7 lbs. 5 oz, barrels 28½ inches long. Is it considered a good gun? What are about the correct charges for loading? Where can I procure empty shells? They are not to be found in Albany. What would be about the cost to have it altered to a central fire? Ans. It is rather old fashioned, and we presume the quality varies in guns of that make as well as any other. A proper charge for it would be 3½ oz. powder and 1⅛ oz. shot. You can get shells from any dealer in this city. It would cost $20 to $25 to have it altered.

E. J. R., Wethersfield.—I have a setter dog that had the distemper last winter, and has ever since had sore eyes with little pimples around them, and also has now what look like boils. Do you think of anything that will help him? Ans. Give your dog a tablespoonful of castor oil with fifteen drops of laudanum in it. Be careful with his diet, and give three drops of Fowler's sol. of arsenic three times a day, gradually increasing it to ten, unless it produces a redness of the carnea, or throws him off his food. Give also two grains of quinine and one grain of sulphate of iron made into a pill three times a day. You can get the Fol. Sol. arsenic made up in the same pill.

J. S., Minneapolis, Minnesota.—I have a very valuable Irish setter, imported two years ago. He is affected with sore eyes, which have been so for more than a year. The mucous membrane of the lower eyelid, and at times the eyeballs, are inflamed, and every morning his eyes are full of matter. Have used solutions of sugar of lead, rose water, and other stuff, without effect. His constitution and general health are good. Let me consult you as to what to do for him. Ans. We would suggest your first trying the following lotion, to be applied with a small sponge three or four times a day: Sulph. zinc 12 grs, wine of opium 3 drs., distilled water to make six ounces; mix. Should that not prove successful, take of nitrate of silver 5 grains, distilled water 1 oz., mix, and drop in the eye with a quill. The diet should be simple and rather depleting than otherwise.

J. W. P., Jr., Philadelphia.—I have a setter dog 2 years old that for the last two months has been troubled with some kind of a skin disease. It comes in small blotches, looks very red, but does not spread much. He does not appear to have lost any strength. His eyes are inflamed; skin very warm, and coat looks dead. He does not care to eat anything but meat, which I have stopped. Please give me a remedy. Ans. Feed your dog on boiled rice, milk and bread; give him one U. S. compound cathartic pill every morning until his bowels act freely, then reduce to one every second morning. Give also one of the following pills three times a day: Arsenious acid gr. 1-20, ext. nux vom. gr. 3/5, sulphate quinine, sulphate nerrun *aa* gr. 1. Use your ointment every other morning, the alternate mornings washing the dog with carbolic soap.

ENQUIRER, Cleveland, O.—Believing you to be fully acquainted with Pike County, Pa., I take the liberty to ask you if you will kindly post me up a little. Is it a healthful region, and does it possess SPECIAL advantages for comfort and enjoyment during the hot summer months of July and August. I want to send my family there. Ans. We think you cannot do better than to take your family to the Club House of the Blooming Grove Park Association, which is now open to the public at $1.50 per day. It is a large commodious hotel, with 35 chambers, located on a beautiful lake, abounding in bass, perch and pike. Trout streams in the vicinity, and seven other large lakes within easy access. Country hilly, but not mountainous. Highest knoll, 1700 feet. It is reached by the Erie and Delaware and Lackawanna railroads. It is eight miles from Kimball's station, on the Honesdale branch of the Erie road, and thirteen miles from Lackawaxen.

TROUT, New York.—1st. Is the trout fishing good on Long Island? 2d. Where on Long Island would be the best place to go on the 20th inst. for a day's "trouting?" 3d. What does a "permit" cost, and of whom can I get one? 4th. How can I get there, and where can I stay over night? 5th. What are the best flies to use? 6th. Does the last edition of "Wallace's Guide" contain much more practical information than the former edition? I have the latter. 7th. Would the "Willis," "McDougal," and "Windfall" ponds region be as good a place as any for "sport?" Would it be a good place to camp out for three months? Have been told that "Willis Pond" was too marshy and desolate to camp on. Ans. The best and most convenient place for trout fishing on Long Island is at Ridgewood, about thirty miles from this city, by the South Side Railroad. Think Mr. Edward H. Seaman will board you over night, although not in the habit of taking boarders. He lets fishing privileges in his ponds for $3, limiting the weight or number of fish to be taken. The last edition of Wallace's Guide is the best. We cannot answer as to the Adirondack ponds you speak of.

—Undoubtedly one of the best and cheapest stocks of Carpetings, Oil-cloths, Mattings, etc., to be found in the United States is that of Messrs. JOHN H. PRAY, SONS & CO., Washington street, Boston. I. W. Adams is the sportsman of the firm, and will take special pains to please any of our friends calling upon him, or with any orders sent him. It is a good, reliable house.—*Adv.*

CALENDAR OF EVENTS FOR THE COMING WEEK.

Thursday, May 24.—Racing: Maryland Jockey Club, Baltimore; Louisville, Ky. Trotting: Point Breeze Park, Philadelphia; Poughkeepsie, N. Y. Rifle: first day Spring Meeting, N. R. A., Creedmoor. Shooting Tournament: Plattsburgh, Nebraska. Pigeon Match: Long Island Shooting Club, Dexter Park, L. I. Base Ball: Buckeye vs Hartford, at Columbus; Boston vs Tecumseh, at London, Ont.; Evansville, vs Louisville, at Louisville; star of Syracuse vs Maple Leaf, at Guelph, Can.; Harvard vs Manchester, at Manchester; Orange vs Enterprise, at Centennial Ground; Alaska vs Chelsea, at Union Ground; 25, Athletic vs Allegheny, at Allegheny; 25, Memphis Reds vs Standard, at Wheeling, W. Va.; Keystone vs Defiance, at Twenty-fifth and Jefferson streets; Athletic vs Allegheny, at Allegheny, Pa.

Friday, May 25.—Racing: Maryland Jockey Club, Baltimore; Louisville, Ky. Rifle: second day Spring Meeting, N. R. A., Creedmoor. Base Ball: Live Oak of Lynn vs Tecumseh, at London; Indianapolis vs Chicago, at Indianapolis; Hartford vs Buckeye, at Columbus; Athletic vs Allegheny, at Allegheny, Pa.; Memphis Reds vs Standard, at Wheeling, Va.

Saturday, May 26.—Racing: Louisville, Ky. Rifle: third day Spring Meeting N. R. A., at Creedmoor. Parade of Coaching Club, N. Y. City. Base Ball: Yale vs Harvard, at New Haven; Osceola vs Winona, at Prospect Park; Hoboken vs Enterprise, at Centennial Ground; Germantown vs Beverly, at Germantown; Riverton vs Plainfield, at Plainfield, N. J.; Live Oak of Lynn vs Maple Leaf, at Guelph; Boston vs Star of Syracuse, at Syracuse; Indianapolis vs St. Louis, at Indianapolis; Hartford vs Allegheny, at Pittsburg.

Monday, May 28.—Racing: Louisville, Ky. Base Ball: Live Oak of Lynn vs Maple Leaf, at Guelph; Boston vs Star, at Syracuse; Indianapolis vs St. Louis, at Indianapolis; Hartford vs Allegheny, at Pittsburg; Tecumseh vs Lowell, at Lowell.

Tuesday, May 29.—Trotting at Le Roy, N. S.; Westminster, Md.; Freeport, Ill.; Fleetwood Park, N. Y.; Ambler Park, Pa. Base Ball; Tecumseh vs Lowell, at Boston.

Wednesday, May 30.—Trotting as above. Annual Spring Games N. Y. Athletic Club, Mott Haven. Match: Walnole Rifle Association vs Moss Rifle Association. Cricket; St. George's Club vs Union of Philadelphia. Regatta: Rutherford Park.

FOREST AND STREAM

AND ROD AND GUN.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MAY 24, 1877.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week if possible.

☞ Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

T. C. BANKS, Western Manager. S. H. TURRILL, Business Manager.

ENLARGEMENT.

WE present to our readers this week our much promised enlarged paper. To-day's issue approximates to something of the style, system and perfection which we had anticipated for our issue of May 1, the date of the beginning of our joint enterprise; but mechanical obstacles have intervened which compelled us to issue a journal sufficiently faulty and conspicuous in its short-comings to provoke a stream of reminders and complaints in person and by mail, which were the more distressing because we were ourselves blameless and actual sufferers, through detriment to the good health and integrity of our journal. We have now once more assumed the direct control of our own printing office, and hope henceforward to "go on and prosper." Every line of type of the present issue has been set up anew this week under disabilities that would have discouraged offices with greater facilities for composition, and at last we feel that we can present a clean and creditable sheet, which will prove to be but a sample of what may be expected and pledged for the future.

—Sportsmen who, during the summer months, visit the wilds of the Catskills, will be glad to know that an association composed of leading residents of Green County has been organized for the protection of birds and fish.

—Robert Bland and Michael Gregory, charged with stealing trout from the premises of Mr. Masury, owner of the club house property at Eastport, Long Island, have been held in $500 each to appear before the next Grand Jury of Suffolk County. Mr. Masury lost about 4,000 trout.

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grilse and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from $15 to $150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining, to imitate the genuine article) without letting our customers know just what they are getting.

P. O. Box, 1,291.—*Adv.* ABBEY & IMBRIE, 48 Maiden Lane.

THE FUTURE OF PERU.

THE waking up of the people of Peru to the fact that they are wasting time in not availing themselves of the civilization of the rest of the world, which has been indicated by late dispatches to the daily press from that country, calls to mind the wonderful history of Peru, and lends a new interest to the story of her ancient glory and almost romantic ruin. The re-development of her very great natural resources, and the opening to the world of her inland riches and glorious scenery, will, no doubt, lead to a future prosperity, of which now only a few of her citizens have any conception. The best days that empire ever saw were no doubt those of the Incas, when she was governed by her aboriginal kings with a firm and kind rule which commanded both the respect and love of all the subjects. Every resource of the empire which their skill could develop was brought into use, and the "Children of the Sun" were a more respectable, comfortable, happy and moral people than they have ever been since.

Our old interest in this really noble country and in her grand antiquities has been revived, and our memory reinforced by reading Mr. E. George Squier's charming book of incidents of travel and explorations, entitled "Peru," a finely illustrated edition of which has just been issued by the Harpers. It is astonishing to be reminded of the vast extent of Peru at the time when the despoiling hand of Pizarro was laid upon it; and it makes one's blood boil yet to think of the fearful atrocities which those merciless gold seekers perpetrated in their greedy search for precious metals.

The Inca empire was then at the apex of its glory. From their dominating central plateau in the Cordilleras, where Lake Titicaca lies like a jewel on the mountain's brow, the native emperors had pushed their government south as far as Chili, north beyond the powerful kingdom of which Quito was the capital, and from the Pacific on the west to the dense forests of Brazil on the east. The area of their empire was equal to all the United States east of the Mississippi. It was diversified by every manner of scene and climate, from the snowy peaks and bleak uplands of the Andes to the arid sand deserts along the ocean and the vine-tangled, tropical jungles where the Amazon took its rise. People living under such different geographical and climatic conditions must necessarily have greatly varied characteristics, and that the small tribe to which the rule of the Incas was originally restricted should have been able to leave their little valley, and not only conquer but also hold together so wide and various a commonwealth, is very wonderful. But from the massive remains of their architecture we are able to get a hint of the means which they employed, for there is an absence of written documents, and the chronicles of the prejudiced Spaniards are not a lway trustworthy. We can trace enormous fortresses guarding the passes of the mountains, and holding in subjugation the distant frontiers, connected together by splendid roads and elaborate bridges.

Much of this wide extent of country was uninhabitable, and in the narrow fertile valleys extraordinary means were used to economize every inch of soil. The ancient inhabitants built their dwellings on arid slopes of hill, among rough rocks, and walled up their dead in caves and clefts, or buried them in irreclaimable sands, in order to save all the scanty cultivable soil for agriculture. They excavated great areas in the deserts until they reached moisture enough to support vegetation, and then brought guano from the islands to fertilize these sunken gardens. They terraced up every hill and mountain side, and gathered the soil from the crevices of the rocks to fill the platforms. Perhaps China and Japan alone can show a parallel to the extreme utilization of soil for the cultivation of maize and quinoa, which obtained at the time of the Incas. But this was intended for the support of the nobility. The poorer population lived in dense masses, in huts of stone, or frail houses of grass and bark, practically slaves of the quality of the empire, although the humane policy of the Incas forbore to put an actual yoke of serfdom upon any native's neck. Mr. Squier tells us that the present population of Ecuador, Peru and Bolivia, which constituted the ancient Inca empire, is about five millions, and that when the Spaniards landed they found something more than twice this number of inhabitants.

What the future of this great commonwealth would have been had it not vanished before the Spaniards, is a subject for interesting conjecture. Architectural improvements were then in progress everywhere. The material progress of the country was far in advance of what it is now. There were better facilities of intercourse and the pursuit of happiness, better protection, a wider agriculture, more manufacture, less pauperism and vice, a purer and more useful religion than Peru has ever seen since. Pizzaro swept the country of its precious metals, drawing fabulous sums from its mines and treasure-houses. Potosi is about exhausted, but the mines about the Carro de Pasco, 13,000 feet above the sea, still yield silver abundantly. Gold is not liberally distributed in Peru, but tin, copper, quicksilver and coal are to be obtained. Other sources of revenue are the guano islands, the birds and seals upon which the Incas protected, aware of the value of the excrement as a fertilizer; and the precious chinchona, or Russian bark, from which quinine is made. To develop these great resources, or redevelop them, the government has projected an extensive system of railways, and private enterprise is building more. Whether these efforts will result in bringing a large agricultural people to the high table-lands of Peru, the Thibet of America, and to the immense and interesting basin of Titicaca; whether they will make the deserts of the coast to "bloom and blossom like the rose:" whether they will develop new life in the people, and will be a new source of wealth to the people, remains to be seen. We can only hope so, and that before long the splendid table-lands of the Andes will be easily accessible to sportsmen, tourists and health seekers. *Vive la Peru!*

THE NEW YORK BENCH SHOW.

BEFORE continuing our remarks on the New York Bench Show it may not be out of place for us to notice some communications which have appeared in English journals from intending exhibitors from that side. It cannot be denied that, perhaps, considering the short time at their disposal, the Westminster Kennel Club erred in inviting entries from Great Britain. We are aware, however, that they had been offered certain facilities as to the carriage of dogs; but it seems that, on the part of the steamship company, such dogs should be accompanied by their owners. A cable dispatch was thereupon sent over and an answer received from Mr. Ramsden, agent of the Williams & Guion Line, that dogs would be carried on the steamers of that line at the rate of five pounds each for the round trip. Although this seemed rather a long figure to pay for dogs whose entrance fees amounted to two dollars each, the club preferred to pay it rather than to cause disappointment to any intending exhibitor. And these rates have been paid on the dogs of Messrs. Macdona, R. J. Lloyd Price, A. A. Brown and others, and would have been paid on all dogs sent over. There were entrance fees received from three other English owners, which, upon the dogs not being forthcoming, were duly returned to them. We trust that our contemporary, the *Fanciers' Gazette*, will make a note of this fact. Mr. Price won the champion pointer prize with Snapshot, and Mr. Brown, of Liverpool, won with his mastiffs, so that these gentlemen, at least, have no reason to be disatisfied. Considering the magnitude of the show, and that it was the first one held in New York, it seems scarcely just that unwarrantable aspersions should be cast upon it by the English sporting press. The invitation extended to Mr. Macdona to come over and judge was a compliment paid to the whole English sporting fraternity, and we have every reason to believe that that gentleman is fully satisfied with the treatment he has received at the hands of American sportsmen.

We have before contended that in bench show judging, to the average spectator at least, it would be about as satisfactory to draw the names of the dogs out of a hat. In the open classes we had certainly picked out a number of dogs as being likely to meet the judge's eye, and who were not even noticed. We have every reason, however, to believe that Mr. Davidson, with the English setters did his duty most impartially, but it is rather discouraging to have one's preconceived ideas so rudely dispelled as they were on this occasion. The fact is there were too many dogs to be judged in the limited time allowed, and we hope on another occasion to see not only more time given to a careful examination of each class, but possibly a triumevirate of judges. An important question arose in the Gordon class, when Mr. Leavitt's Sancho, a black and white dog, with the slightest tan markings, was placed first over Mr. Belmont's Robin. Mr. Belmont protested against the award on the ground that Sancho was not a Gordon; but the decision of the judge was upheld, owing to a want of evidence as to Sancho's not being a Gordon. We confess that we had hoped to see the standard for Gordons in this country of crosses and mixed breeds one that would eliminate the white as much as possible, a consumation which is dispelled, or at least postponed, by this decision.

Another circumstance which caused considerable confusion was the fact that in several instances dogs were entered in two classes, and having been judged in one class and returned to the stall in which they were found, were necessarily not to be found in a stall corresponding with the number of the second entry. This error, or omission, or whatever it might be termed, occurred more particularly in the Gordon classes, and was partially the fault of the committee through their deciding, after the regular premium list was printed, to have an extra class for black and tan dogs. It seemed at the time, however, that this course was absolutely necessary. One class for native and imported Gordons had the effect of either entirely throwing out, or else forcing into the native English class, all black and tan, or black, tan and white dogs that were in any degree cross bred. Take for instance the get of Mr. Colburn's Dash; without this extra class they would have been forced into the native English class, where the judge would have had nothing to do with them, or else been debarred from entering. We might cite as one instance of what we have alluded to with regard to dogs being entered in two classes, the case of Dr. S. Fleet Speir's bitch Fan. This bitch was entered in class 9-A, the only other entries being Mr. Bassford's Nellie and Mr. Granger's Beauty. Beauty was at once disqualified as being imported. Fan, having been entered also in class 9, was not in the stall corresponding with her entry in class 9-A. Consequently Mr. Bassford's bitch had a walk-over. Subsequently the fact that Fan was in another stall was discovered, and Mr. Macdona, calling both bitches into the ring, gave a most unqualified decision in favor of Dr. Speir's bitch. Mr. Bassford, however, persisted in claiming the money, and rather than have any words about it the committee paid him the $30. gold, prize money, which Dr. Speir most generously offered to divide, being satisfied with the honor of winning. We think in this the club was wrong, as every decision of the

judges is subject to a revision by the committee, and in this case they plainly could have withheld the award.

The display of red Irish setters, Mr. Macdona says, was the finest he has ever seen, and in fact the whole show, in the quality of the dogs in attendance, and in order and general results, he characterizes as being ahead of anything ever held across the water.

Old Rover went back on the Nevada last Tuesday week, but we shall have his blood here. Mr. Brown's magnificent team of mastiffs returned at the same time. Snapshot, Mr. Lloyd Price's pointer, will remain here a while longer. Mungo, the magnificent St. Bernard brought over by Mr. G. de Landre Macdona, and sold to Mr. Lester Wallack, is dead. Neva, the St. Bernard bitch, was sold to Mr. Leroy Z. Collins, and Ranger II. and Magnet have both been sold in this country, the former to a gentleman of Pittsburgh, Pa., and the latter to Mr. Donner. The little fox terrier puppy which took the prize, Mr. Macdona very generously presented to Mrs. Park, whose little prize-winning toy terrier was poisoned. Jet, the black Skye terrier, returned with Rover. Mr. Macdona himself sails on Saturday in the Britannic, of the White Star Line. And so winds up the great New York Bench Show, a show unparalleled as a success, and which did more in three days to elevate the dog into the firm position in which he is now placed in this country than all the shows and writing that had preceded it.

THE ANGLING WATERS OF NORWAY.

THE rivers and fiords of Scandinavia have long been the resort of British, German and French anglers, but now, when a new season has but fairly opened, the discouraging word comes that the field is no longer a productive one for the profession.

Almost all the rivers of Norway are noble streams, that flow rapidly down from and empty into the sea at the bend of long fiords. The lands on the banks of these streams belong to various proprietors, and nearly all of them have been in the habit of setting fixed nets. The result, which might have been predicted from such an avaricious course, has already come. About ten years sufficed to exterminate the salmon, and now the rivers not only do not furnish any fish to the greedy nets, but the landowners find that they have cheated themselves out of the income which they formerly derived from the rental of fishing privileges. Thus we see repeated the history of our own American rivers. The responsibility for this ruin of the whole stream lies mainly with the farmers near the mouth. It does not suit them to believe that the salmon are hatched at the head of the river, and they insist upon their right to take everything passing their land, refusing to sell the right to fish or rent it at a long lease.

Now, as a recent writer in the London *Field* has said, there is a very important fact to be borne in mind with reference to the salmon in Norway. They are by no means so prolific as in other countries further south, perhaps owing to the early freezing of the rivers and the great quantity of ice; but, whatever be the cause, it takes but a short time to alter the character of a fishing river. So that at the present day, high as rents are in Scotland and Ireland, a larger return, judged by the weight of the fish caught, is to be got by the British angler at home than in Norway.

Moreover, there seems very little prospect of a remedy. The English flyfisher knows how discouraging has been the history of salmon legislation in Great Britain, and the same elements of avarice, ignorance and selfishness, multiplied four-fold, are to be contended against in Scandinavia. Nevertheless, it is to be confessed that sturdy attempts have been made by a few intelligent men to secure fish-laws which shall be effectual in restoring the salmon to Norway's locks and streams, or, at least, in staying the insane ravages which are now going on. In the river Moselle, France, ten years ago, salmon had almost entirely disappeared; but now they are again quite abundant—the result of artificial stocking. The original extirpation was caused by the same reason we complain of here, the dragging of the river with seines and the use of all kinds of nets, etc. These are now prohibited.

QUACK SCOUNDRELISM.—We have had several letters from eminent sources complaining of the advertisement referred to below, of whose character we were wholly ignorant. One of our firm took the trouble to call at the so-called doctor's "office" in Philadelphia, and found a garret room with two women engaged in preparing labels. The "doctor" himself, we need hardly say, can never be found; consultations are not encouraged by him. Of course we took the advertisement from our columns at once, and, as may be supposed, will never receive a cent of pay for it. We hope the scoundrel may be unearthed and punished as he deserves. We regret to have been made an accessory, although we plead entire ignorance.

YONKERS, N. Y., May 19, 1877.

EDITOR FOREST AND STREAM:

I regret to see that the FOREST AND STREAM, *Spirit of the Times*, and perhaps other papers, are inadvertently assisting to swindle your readers by publishing among your reading matter the advertisement of Dr. (?) Stone. He is simply a scoundrel, who "borrows the livery of Heaven to serve the devil in." To make sure before writing I sent for his receipt, which contains some articles not usually kept, especially in country drug stores, costing, say fifty cents. As he knows they cannot be obtained easily, and, as he says, not for less than $3 50, "he feels" I quote, "willing, and considers it his duty to benefit his fellows in any and every way he can," and thus add his humble mite toward carrying out the blessed doctrine taught in the Sacred Volume and practiced by Him "who went about doing good," and then offers to send by mail to any "fellow sufferer" the drugs for $3. Should such a damnable sacrilegious scoundrel and hypocrite be allowed to advertise in a respectable paper? SUBSCRIBER.

—The mean mid-day temperature at New Smyrna, Florida, for the month of April, was 73 deg.; 7 A. M. 65 deg.; 9 P. M. 64 deg. Highest for the month, 81 deg; lowest, 60 deg.

GAME PROTECTION.

Boston, May 9th, 1877.—Wm. Kimball and George W. Boardman, of Haverhill, Mass., have been arrested by State Constables Allen and Hunt charged with setting nets in the Merrimack river for the purpose of catching shad, contrary to the statute in such case, made and provided. The accused were tried in court and fined $35 each, from which they appealed.

—Subpœnas have been issued for a number of persons who have violated the game laws at Conesus Lake, this spring.

—The Salmon River Sportsmen's Club, of Pulaski, contemplates running an excursion to Syracuse during the State shoot.

THE STATE CONVENTION.—It is probable that the convention of the State Sportsmen's Association, which is to be convened at Syracuse, will be held during the third week in June, commencing, probably, on the 18th. The preparations are on a very extensive scale, and the affair will doubtless be a very enjoyable one.

In the following letter the writer makes a point which is worthy of most thoughtful consideration.

MINER'S RANCHE, San Diego Co., Cal.

MR. EDITOR:

From all quarters of our American sporting world arises a universal, long drawn, heartfelt cry, "Preserve the game!" I sincerely hope and believe that if this demand is kept alive, the end, so desirable to every sportsman, will eventually be attained. The means for its accomplishment will surely be found in time if all those interested will keep the subject in agitation, and, above all, put their own hands, as well as tongues and pens, into the work. It is not my purpose to instruct as to the most effective means for the attainment of this end. But there is one means that I have not yet seen mentioned, which in my humble opinion would be, to say the least, quite as effective as heaping maledictions, however richly merited, upon pot-hunters, farmers' boys and other pests. That is, for every sportsman to abstain from butchery, and confine himself to a rational and moderate indulgence in shooting game. For a man who only at long intervals can tear himself loose for a day or two from the chains of business, it is perhaps excusable to kill all he possibly can in the very limited time he can snatch. But can this be said of him whose time is his own, and who hunts for sport as often as the pot-hunter does for profit? Are not tens of thousands of birds annually slaughtered merely to swell "bags," already reasonably large, beyond the "bag" of some friend or rival, or else to furnish foundation for an evening's boast at the sporting rendezvous? I know sportsmen, gentlemen, capital companions, and splendid shots, who during the season are in the field at least one-half the time, and yet always make it a point to kill every bird they possibly can. When they have shot 30 or 40 pinnated grouse, 25 or 30 quail, or 12 or 15 woodcock, etc., they have no more idea of stopping than they had after the first shot. It never enters their minds that they have for that day had as much sport as any rational creature should desire, and that further shooting is mere murder. Who is the more reprehensible, the man who is at heart as true a sportsman as I am, who hunts only for sport, but is by poverty compelled either to sell his game to pay for time and ammunition; or I, who can afford to hunt, but kill three times as much as he does only to give away? On what principle do I denounce even the mercenary wretch who sweeps the land of game professedly for profit, while I do the same to give, or often, to throw away? Now, this is not so noticeable in the East, where there is little danger of any one making a very large bag; but in the West the wasteful destruction of game by genteel but thoughtless murder is enormous. I say thoughtless, because the class to whom I refer are generally high-minded gentlemen, to whom it is impossible to impute any motive but thoughtlessness. Now if all sportsmen would set a reasonable limit to the "bag" and leave the field when it is reached, they would have quite as much true sport as in excessive slaughter, and would certainly contribute far more to the preservation of our noble game than they ever will by showering invectives on pot-hunters. And their denunciations would then come with far better propriety than they do now.

It may be said that this idea is Utopian. It certainly is, so far as imposing upon sportsmen any binding obligation is concerned, and has not been mentioned with that view. But I think its fulfilment by aid of the native sense of propriety of all true sportsmen quite an easy matter. I will state my own practice; not by way of boasting, for it is no more a ground for boasting than ordinary temperance is, but only to show that it is possible to enjoy to the fullest extent the divine pleasures of the field without being immoderate. It would be difficult to find a bigger lunatic on the subject of hunting than I have always been, from the earliest days when I practiced on my grandfather's chickens and pigs with a piece of lead pipe pounded shut at one end and touched off with punk, up to this very day. Few persons have laid awake more nights over a prospective hunt, spent more time in fondling a favorite gun, lingered more lovingly around the window of a gun store, or felt more of that indescribable burning, yearning sensation that in autumn crawls with red hot feet through all the recesses of one's soul, and which I call the sportsman's fall fever, than I have. And few have preserved so keen and unimpaired, through other attractions which tend to weaken it, their relish for the sports of the chase. And yet I find my enjoyment in no way diminished by the moderation of which I have spoken. On moving West some ten years ago, I soon lost the foolish pride I had always felt in making a "big bag," and which, in my native State, New Jersey, I had, for obvious reasons, rarely been able to gratify, and have ever since made it a practice to stop shooting at a reasonable number. Time and again, in Minnesota, I have left the field with 15 or 20 prairie chickens, 10 or 12 woodcock, or 12 or 15 quail, when I could just as well have doubled, or sometimes even tripled, the number, and felt just as much satisfaction as if I had done so. Even here, though surrounded by thousands of quails, hares, etc., with nothing to do but amuse myself, and with all shooting conveniences at my nod, I have always limited myself to 20 quails a day, and have only overrun this number when going out with some of the sportsmen and tourists who come in winter to this capital sporting ground. I find myself just as well satisfied in leaving the field with hundreds of birds all around me, and twenty in my pocket, as I would be with myself and horse loaded down with them. I follow the same practice with all game.

Now, I am satisfied that sportsmen who will fairly try this plan for one season, will find that they have just as much pleasure as in wholesale murder. The true sportsman's pleasure does not lie in the mere killing, any more than it does in the mere eating of game. It lies largely in the surroundings and attendant circumstances, in a hundred attractions of nature too extensive to mention; excessive slaughter is a habit, not a taste—a habit of yielding to a brutish propensity which is strengthened by an unreasonable pride in excelling some one else, or having something to boast of. The man who smokes twelve cigars a day has not a whit more of true enjoyment than he who confines himself to six. The former yields only to a habit.

Gentlemen, I say in perfect sincerity, try it. Limit yourselves for one season to a reasonable number per day, and see how it works. This will be an easy matter where there are clubs. There can be no question as to its effect upon the game, and I verily believe the effect upon yourselves will be equally satisfactory. Excessive killing cannot be justified on any grounds of common sense, reason or decency. I should like to hear the view of others on this subject.

T. S. VAN DYKE.

FATAL RATTLESNAKE BITE.—Our Lake George correspondent, "The Old Pilot," recently mentioned the case of an acquaintance who was recently bitten by a rattlesnake while breaking up a den at Lake George. The man has since died, although it is believed he would have survived but for the injudicious advice of friends, who advised him to take a cathartic. Our correspondent says:

"Burton was getting along finely. Walked all over his farm, inspecting his cattle, sheep and horses. Being a little costive, he was advised by friends to take a good dose of pills; consequently, before going to bed, he helped himself, and took as many as he wanted. Before daylight he was taken with cramping pains, which grew worse and worse until he died, which was between eight and nine in the morning. He walked the house, lay on both bed and floor by turns, and finally died in terrible agony. He had been told not to take pills by the physician, and his family kept him from so doing, being aware that it was a most certain death if he did."

The Rifle.

THE SCIENCE OF SHOOTING.

A BULLET discharged from a firearm, an arrow from a bow, a stone from the hand, or any projectile while in its flight through the air, is submitted to and controlled by the action of three forces.

First, There is the power which drives the missile along; second, the gravity, or weight, which keeps constantly drawing it toward the earth; and, third, the resistance of the atmosphere, which has a tendency to stop its progress.

Although these forces are universally known to influence the projectile while in the air, the extent of their control is neither understod nor appreciated by a large number of shooting men.

By asking what is meant by the point-blank range of a rifle, it is safe to say two-thirds of the answers from riflemen would convey the idea that it was the range or distance the firearm could throw the bullet in a straight line without deviating from the line of sight. Webster, in his "big dictionary," gives the following definition: "Point-blank—The point to which a projectile is supposed to move without a curve."

After a careful research, it has been found that the dictionary and the standard books on shooting do not exactly agree on this subject. To point where the line of sight is intersected by the trajectory, when approaching the ground, is the point-blank range of the gun, which may be varied by elevating or depressing the rear sight, and when a rifle is said to shoot point blank at 200 yards range, it is to give the information that it will "hold up" at that range and hit the mark by aiming directly at it. The term is generally applied to "open-sighted" rifles, where the sights are not movable, and which will shoot at the certain range, whatsoever it might be, without aiming above or below the mark.

Major G. L. Willard, U. S. A., in his admirable book on rifle shooting, tells us that the point-blank range of the U. S. rifled musket (1862) with the sights down, is 100 yards; and explains that to hit a man in the breast at 100 yards, he should aim at his breast; at fifty yards, aim at his hip; at one hundred and fifty yards, aim at his throat; at two hundred yards, at his head, etc.; and adds, "that the number of points-blank can be increased by the use of the raised sights."

Nothing having weight can move in a direct line when thrown in the atmosphere, unless, of course, it is hurled vertically. Because, even without the air's resistance, the attraction of gravitation would not permit it. Regardless of the bulk or density of projectiles, or the velocity which may be imparted to them, our works on natural philosophy tell us they are continually and instantaneously influenced by gravity while in the air.

A bullet can be thrown with such force as to go in an apparently straight line, its direction not being sensibly altered for a short distance, but, in all cases, a certain deviation from the line of fire will be found to exist.

To prove the constant controlling influence of gravitation, the following experiment has been tried: The barrel of a gun was placed in a perfectly horizontal position on the top of a high tower. This would make the line of sight and the line of fire parallel to each other.

In discharging the rifle, without regard to the initial velocity given to the bullet, it was found that the ball would strike the ground in the same time which would elapse in dropping from the muzzle. If a number of guns should be loaded, using different amounts of powder to each gun, placed in horizontal positions, and fired, those having the largest charges would give more velocity, and thus greater ranges to the bullets; all of which, however, would strike the ground at the same moment.

This proves that the projectile is acted on by gravity, from the very *instant* of leaving the gun, and to keep it from "fall-

ing short," the line of fire must necessarily cross the line of sight.

By taking these facts in consideration it can be seen that the only way to overcome "Mr. Gravity's objections" is to make the line of fire cut the line of sight, and, to a certain extent, the greater the angle the greater the range. According to Galileo's theory, the range is greatest when the angle of elevation is 45 degrees; the resistance of the air essentially modifies this conclusion, and governs, to no small extent, the path of a bullet. By calculation, it was found that with a ball, fired with an initial velocity of 3,200 feet per second, and the attraction of gravitation, alone to influence it, the range range would be 20 miles, with the same elevation, but through the air's resistance, the projectile would come to the ground in less than two miles.

To obviate the high trajectories, disadvantageous alike to soldier and huntsman, the projectile is given increased initial velocity, on the principle that the sooner a ball reaches the mark aimed at, the less chance or time it will have to fall or be influenced by the wind. It is an easy matter to lower the trajectory of a rifle, and it can be done by reducing the weight of the ball and increasing the charge of powder for any distance up to 600 yards; but by so doing, the long range would be lost, as the bullet would fall rapidly. The combination of a moderate weight, very flat trajectory and long range in a rifle, is an impossibility.

According to Greener, the smooth bore has a point-blank range of 50 yards with a spherical ball. If the same barrel should be rifled the range is increased to about 85 yards, with a similar charge of powder, and is tolerably flat up to 180 or 200 yards, but after that distance it drops suddenly. To get a longer range the bore must be reduced, retaining the same weight of projectile, consequently the ball must be elongated, as it would then offer less resistance to the atmosphere, and to keep the long bullet point foremost it must receive good spiral motion. Some experiments were tried in England a few years ago with the Enfield, Enfield-Snider and Whitworth rifles. The results and facts proved very interesting. The following are a few of the items:

The Enfield rifle, 1853 pattern, fired from a shoulder-rest, the point aimed at and the rifle being five feet above the level of the ground, with the sights for 100 yards; the average of the shots struck the ground 277½ yards off.

The Whitworth rifle, 2ft. 9in. barrel, 480 gr. bullet, 75 gr. powder, under the same conditions as the above, struck the ground at 321¼ yards.

When the Enfield was put perfectly horizontal in a fixed rest with "no elevation," 4 ft. 10ins. from the ground; the average of the shots struck 188½ yards away.

A Snider long Enfield, under similar conditions, three feet from the ground, threw the shots on an average of about 165 yards away.

The fall of a bullet from the long Enfield-Snider at 100 yds. was 10 inches; at 125 yards, 18½ ins.; at 150 yds., 26⅝ ins.; at 175 yds, 35⅝ins.; at 200 yds., 51¼ ins.

The height of the bullet above the level of the axis of the bore of a long Enfield Snider (577 bore), was found to be, with 500 yds. elevation—at 20 yds., 3ft. 8½ ins.; at 100 yds., 6 ft. 6ins.; at 200 yds., 10 ft. 9ins.; at 300 yds., 11ft. 5¼ins.; at 400 yds., 8ft. 2¾ins.; 450 yds., 4ft. 10ins.

The Express rifle is claimed to have the lowest trajectory, and its principle can be explained in a few words; light bullets and large charges of powder. OSCICO.

CREEDMOOR.—THE SPRING MEETING AT CREEDMOOR TODAY (May 24).—The spring meeting for the season 1877 will open at Creedmoor. Eight matches are provided on the programme, and it is intended to occupy not more than two days in their completion, and with the use of the new wing on the range this can doubtless be readily accomplished. The prize list includes $350 in cash and four badges, two revolvers and a flag. A moderate prize list indeed, but probably as full a one as the directors are able to afford. The Directors' match for the gold badge of office will be fought for the fourth time, the previous winners being G. W. Wingate and Major Henry Fulton (twice). Last year it was taken with 31 points. There are enough good marksmen now in the board to make this a good match. The other matches are well varied, though we think that an aggregate prize to include competitions II, III, V and VI might wisely be added. The military men have enough to occupy them, while the small bore experts will find in the Leech-cup match an opportunity to show the results of their spring practice. It would be almost safe to hazard the opinion that the winner will not be an International team man. The running deer match should for convenience sake be kept open during the meeting. The full list of matches stands as follows:

MATCH I—DIRECTOR' MATCH.—Open only to Directors and Honorary Directors of the National Rifle Association. Distance, 200 yards. Position, standing. Weapon, any rifle. Rounds, five, with two sighting shots. Entrance fee, $4. Prize, the Directors' Championship Gold Badge, shot for annually, and held by the winner during the year.

MATCH II—SHORT RANGE MATCH.—Open to all comers. Distance, 200 yards. Position, standing. Weapon, any rifle. Rounds, seven, and two sighting shots. Entrance fee, $1. 1st prize, cash, $40; 2d prize, a Colt's revolver, presented by Messrs. J. P. Moore & Sons, New York, value $20; 3d prize, cash, $15; 4th prize, badge, value $5; 5th, 6th and 8th prizes, each, cash, $3.

MATCH III—MILITARY SHORT RANGE MATCH.—Open to teams of five, from any company, troop, or battery of the National Guard of New York, or other States, or of the regular army, navy or marine corps, to be composed of company officers, non-commissioned officers, or privates, certified to have been members of the company they represent, on March 1, 1877. Distance, 200 yards. Position, standing. Rounds, seven, and two sighting shots. Teams to use the rifle their company is armed with. Entrance fee, $1 per man. Teams representing organizations using carbines to be allowed to use the full rifle sight. 1st prize, an embroidered flag, to be won three times before becoming the property of the winners; won last year by team from Co. "I," 7th Regiment; value, $100; 2d prize, cash, $40; 3d prize, cash, $25.

MATCH IV—CAVALRY MATCH.—Open to team of five, from any cavalry troop or artillery battery of the National Guard or Militia of any State, or of the regular army of the United States. Each man to be certified by the commanding officer of such troop or battery, to be a regular member of the organization he represents, and to have been such on March 1st, 1877. Each team to appear in the prescribed uniform (full dress or fatigue), and to use the authorized weapon their troop or battery is armed with. Distance, 200 yards. Position, standing. Rounds, seven, and two sighting shots. Entrance fee, $1 per man. 1st prize, cash, $30; 2d prize, cash, 20.

MATCH V—MILITARY MID-RANGE MATCH.—Open to teams of five, from any company, troop, or battery of any State, or of the regular army, navy, or marine corps. Position, any, without artificial rest. Distance, 500 yards. Rounds, five. Teams to use the authorized weapon with which the organization they represent is armed. Each company, troop or battery may enter as many teams as they choose. Entrance fee, $1 per man. 1st prize, cash, $50; 2d prize, cash, $25; 3d prize, cash, $15.

MATCH VI—INDIVIDUAL MATCH. (Carton.)—Open to all comers. Weapon, any rifle. Distance, 500 yards. Second class targets, with 11-inch white carton in centre (counting six). Rounds, ten. Position, any, Without artificial rest. Entrance fee, $1. 1st prize, cash, $30; 2d prize, a revolver, presented by Messrs. Fowler & Fulton, 330 Broadway, New York, value, $25; 3d prize, an ammunition case, presented by Mr. Homer Fisher, 260 Broadway, New York, value $12; 4th prize, cash, $10; 5th prize, a badge, value $5; 6th, 7th, 8th and 9th prizes, each cash, $3.

MATCH VII—"LEECH-CUP" MATCH.—Under the auspices of the Amateur Rifle Club. Open to all native born citizens of the United States, and all resident members of the Amateur Rifle Club, regardless of nationality. Distances, 800, 900 and 1000 yards. Position, any, without artificial rest. Rounds, fifteen at each distance, without sighting shots. Weapon, any rifle within the rules. Entrance fee, $1 for members of A. R. C., and $5 for all others. Prize, the Leech Cup to be held by the winner during the year, and Championship Gold Badge, value $50.

MATCH VIII—RUNNING DEER MATCH.—Open to all comers. Distance, 100 yards. Position, standing. Any rifle; sights to be rear centre of the barrel. Five consecutive runs. Each competitor to be allowed four entries, but only the highest score to take a prize. 25 cents for each entry. A fine of 10 cents will be imposed for—1. Firing at the deer while out of bounds; 2. Not firing at all; 3. Hitting the deer on the haunch. Such fines to be equally divided among the three competitors, making the three best scores. 1st prize, cash, $15; 2d prize, cash, $10; 3d prize, a badge, value $5.

Creedmoor has had a busy week since our last issue. Strangers and visitors to the range may now feel pretty sure of finding shooting going, call when they will. The militia have three days per week set apart for their use, Monday, Thursday and Friday, and under the liberal interpretation given the shooting orders, men fire once and over again until by a liberal application of the doctrine of chances they manage to qualify. We predict a marked increase to the number of marksmen for 1877, and a very marked advance in the ordnance general's bill for ammunition furnished the men. The amateur club men are working away on Tuesdays at the problem of separating themselves into a senior and junior team, though the only merit to the plan is in the practice it affords. Wednesday, the 16th, brought the first competition for the Van Sicklen prize of a shot gun, and but few marksmen took the trouble to attend it. Saturday last was a general field day. The second competition for the Remington $300 gold cash prize was on, and such is the disgust of the experts at being tied down to the conditions to factory filled ammunition, that it was with great difficulty that the requisite quorum of ten was found to constitute a match. There were other long range men shooting on adjacent targets, but they preferred using cartridges of whose uniformity they were assured. As it was, two of the ten retired from the match after less than a dozen shots; but spent the day shooting on in an intelligent manner with their own ammunition. The scores stood:

	900	1000	Total
Mr. J. P. Waters..	68	75	143
E. H. Sanford	72	70	142
F. H. Winslow.....	75	43	118
R. Rathbone.....	70	48	118

	900	1000	Total
G. L. Morse	73	38	111
I. L. Allen	57	45	102
A. Anderson.....	64	29	93

The eighth competition for the *Spirit of the Times* medal, at 300 yards, off-hand, was called at 3 P. M., with between thirty and forty entries, E. H. Sanford winning with 37, in the possible 50, the scores running:

The Irish-American Rifle Club held its first match for the season during the afternoon for an elegant gold badge of unique design, presented by J. S. Conlin. The conditions were—Distances, 200 and 500 yards; position, standing at the former, and any, without artificial rest, at the latter ranges. Seven scoring at each distance, and the scores:

F. F. Millen.		Colonel Burton.	
Yards.	Totals.	Yards.	Totals.
200 ..... 4 3 4 3 5 3 4—26		200 ..... 2 2 0 3 4 4 5—21

500 ..... 0 0 4 3 5 5 3—21—42		500 ..... 4 2 0 2 2 3 3—16—26	

Gen. F. F. Millen, the president of the club, becoming the first winner, and celebrating his victory by a brief season of Irish hospitality. The General holds the responsible post of rifle editor of the *New York Herald*, and in combined knowledge of the theory and practice of rifle shooting has few superiors at Creedmoor.

—President Lerdo, of Mexico, and suite were at Creedmoor last Tuesday, inspecting the range and watching the amateurs at their long range sport.

—President Stanton, of the N. R. A., has arranged a match to come off at Creedmoor on Saturday afternoon, the 26th inst., open only to members of the Stock Exchange; 200 yards, off hand, any rifle. The winner to wear a gold badge, and the loser's pocket book, with contents, to be given piecemeal to the other competitors.

—The Council of the National Rifle Association of Great Britain in its arrangement for the July meeting have acknowledged the justice of having aggregate prizes for the best marksmen. In place of giving the highest honors or the rank of champion to a winner in any particular match, the palm of general superiority is now to be given to the best average score in a number of competitions. The application of this rule has been thus far but sparingly evident at Creedmoor, where its necessity is the greater, in so far as we have much less "stage shooting" than is common on the Wimbledon range.

Whether or no the International Trophy will call out a meeting of representative teams during the coming fall it is at present impossible to say. There is little hope of seeing a team from either of the transatlantic countries, though it may be that Canada will favor us with a delegation of her small-bore experts. Under the very excellent compromise rule adopted by the N. R. A., if it be that there should occur a lapse in the progress of the match for this year, the competitions will hereafter be of biennial occurrence. If the eminently proper suggestion of our foreign friends that the match should occur on neutral ground and not on the home ranges of any of the competing teams should be adopted as a part and portion of the condition of the trophy, we know of no better battle ground than France. There would be no difficulty in getting the proper accommodations there. The trip would be delightful. The Americans would be heartily welcomed; the Irishmen, everybody knows, are three quarters French, and all the teams would find a clear, sunny sky under which to hold the battle of the butts. Such an invasion might lead the native Frenchman into the idea of long range shooting—a sport in which, as yet, he has not made any mark.

ZETTLER'S GALLERY.—The Zettler Rifle Club held their weekly shoot at 207 Bowery, May 8. Conditions, 100 feet, off-hand, Creedmoor target, 22 cal. rifle, possible 50 points:

Name.	Total.	Name.	Total.
T. Kliesrath.....	49	B. A. Moore.....	46
C. G. Zettler.....	49	B. Zettler.....	45
P. Fenning.....	48	M. L. Riggs.....	45
J. Dutil.....	48	D. L. Beck.....	45
M. Engel.....	48	W. Klein.....	45
D. Miller.....	47	George Coulter.....	44
R. O'Donnell.....	47	T. Zimmerman.....	43
M. Dowler.....	47	G. A. Schurman.....	41
B. S. Brown.....	47	P. Ross.....	41

HELLWIG'S RIFLE GALLERY, 695 Sixth avenue, New York.—The sixth competition of the Centennial Rifle Club took place Monday, May 21st, for their gold badge, given them by Mr. Hellwig. Their best scores are thus, out of a possible 100 points, with a Wesson rifle:

Name.	Score.	Name.	Score.
A. E. Long.....	93	T. Jewessen	85
W. R. Brown.....	89	A. Oats	83
A. Q. Adams.....	87	Q. R. Marshall	80
J. Maguire	84		

This shooting is done in lying down position at a 100 feet range.

Yours respectfully, A. G. HELLWIG.

HELLWIG'S RIFLE GALLERY.—The fifth competition of the Centennial Rifle Club for a gold badge presented by Mr. Hellwig was held Monday, May 14. The following scores, out of a possible 100 points, were made:

Name.	Total.	Name.	Total.
W. R. Brown.....	94	W. Marshall.....	88
Mr. Oats.....	91	J. Maguire.....	88
J. Q. Adams.....	89	T. J. Jewesson.....	84
A. E. Long.....	89		

The shooting was done in lying position.

Hellwig has a cash prize shooting tournament now in progress at his gallery, 200 chances, ten shots each, 100 feet off-hand. Prizes from $10 to $1 cash.

ZETTLER RIFLE ASSOCIATION held their weekly team shoot at the gallery, 207 Bowery, May 15th, for three gold medals, open to members only, off hand, 100 feet, Creedmoor target reduced for distance; ten shots, with two sighting shots. Possible, 50; scores below 40 not counted.

M. B. Engel.....	50	B. S. Brown.....	45
D. L. Beckwith.....	49	R. O'Donnell.....	45
P. Fenning.....	48	D. Miller.....	45
T. Kliesrath.....	48	B. Zettler.....	45
M. L. Riggs.....	47	M. Dorrler.....	44
G. A. Zettler.....	47	G. A. Schurmann.....	44
R. Zimmerman.....	47	W. Klein.....	43
J. Dutil.....	46	F. W. Fabarius.....	43
C. Judson.....	46	L. A. Beates	41

CONLIN'S GALLERY.—As the number of competitions for the "Amateurs' Badges" increases, so does the strife to become the winning men grow more and more earnest, and, during the 4th inst, which took place Thursday evening, May 17, there were many exhibitions of skill which were flattering to the contestants and interesting to the spectators The following are the ten best scores made during the contest, with the names of the makers:

Name.	Total.	Name.	Total.
M. L. Riggs.....	48	Fred. Alder.....	45
W. M. Farron.....	47	J. Honig.....	45
P. Fenning.....	47	N. B. Thurston.....	45
L. C. Bruce.....	46	C. Von Gerichten.....	45
M. B Engel.....	46	Leon Backer.....	44

Highest possible score, 50.

This is the second time Mr. Riggs has won the "first" badge, and, according to the conditions, if won again by him, it becomes his property. The fifth competition will take place Thursday evening, May 24. We have received for publication the following letter from Mr. Conlin, relative to the late shooting tournament, instituted for his benefit:

CONLIN'S SHOOTING GALLERY, 1,222 BROADWAY,
New York, May 17, 1877.

GENTLEMEN—I beg herewith to acknowledge the receipt of $257, being the proceeds of the match so kindly instituted for my benefit. I will consider it a favor if you will express my gratitude to those who participated in the affair, both to the friends who so liberally donated the prizes, to the marksmen who so generously came to the front, and to every individual member of your committee for the trouble taken by them, which resulted in the great success of the tournament. Once more thanking you, I am yours truly, JAMES S. CONLIN.

To the Committee in charge of the "Conlin Benefit Tournament."

CONLIN'S GALLERY.—During the month of March the Zettler Rifle Club received a challenge from a party of gentlemen who frequent Mr. Conlin's gallery to shoot a gallery match on the following conditions: Ten men a side, ten shots per man, string, Kolnsamen, 100 feet, off-hand, 22 cal. rifle, for the championship of 1877. The challenge was promptly accepted, and Thursday, May 10, was the day fixed upon, and Conlin's Gallery the place. Mr. Conlin selected an excellent team, and the match was very close, the Zettler team winning by 1 1-16. Quite a number of prominent marksmen were present and enjoyed the hospitalities of Mr. Conlin.

ZETTLER TEAM.		CONLIN TEAM.	
M. B. Engel.....	4 15-16 inches.	C. E. Blydenburgh.	3 11-16 inches.
M. L. Riggs.....	5 13-16 "	C. A. Cheever....	5 6-16 "
W. Klein.....	5 13-16 "	L. C. Bruce.....	5 11-16 "

Total.....	67 1-16 inches.	Total.....	68 14-16 inches.

THE NORTHWESTERN RIFLE ASSOCIATION.—A meeting of the Northwestern Rifle Association was held at the Grand Pacific Hotel on the 15th inst, at which seven clubs were represented. It was decided to hold shoots once a month by the different clubs, members of the Association, on their own ranges, commencing June 13, and on the second Wednesday of each month thereafter. The Association hold a final meeting in October, at which time contests for a grand prize will be held; also contests for highest individual scores. A silk banner, appropriately inscribed, was designated as the

grand prize of the Association. The aggregate score and highest individual score at each monthly meeting will be furnished the secretary by telegraph at the close of each meeting, and by him sent to each of the contesting clubs. The distances to be shot will be 800, 900, and 1,000 yards, fifteen shots at each distance, no sighting shots, Creedmoor rules to govern. After the transaction of some further routine business the meeting adjourned.

NEW YORK.—Waverly, May 13.—The "Amateur" Rifle Team of Rochester and the Waverly Rifle Team shot a return match at "Shepard Range," on Thursday, May 10, 1877. The distance shot was 800 and 1,000 yds., ten shots at each distance. A more unfavorable day for a decent score has never been known on the range:

AMATEUR RIFLE TEAM.

Name.	800 yds.	1,000 yds.	Total.
C. E. Rider Muzzle Loader	33	25	58
George Stillson, "	42	32	74
James Brown, "	39	38	77
A. B. Smith, Maynard	38	20	56
S. A. Servis, Muzzle Loader	32	18	50
B. B. Yates, Remington	36	28	64
	218	161	379

WAVERLY RIFLE TEAM.

Name.	800 yds.	1,000 yds.	Total.
E. F. Wells, Remington	45	28	73
T. J. Kase, "	41	32	73
G. W. Fish, "	38	31	69
D. D. Knapp, "	35	26	61
W. B Campbell, "	37	28	65
A. Hildebrand, Sharps	33	38	73
	231	183	414

Waverly team winning the match by 35. Let me say, *not* boastfully, that this little "Granger" club has never been beaten. VERNIER.

CONNECTICUT.—The Stamford (Conn.) Amateur Rifle Club had a field day Wednesday, May 16, at the Waterside Range. The first prize was a valuable telescope, offered by I. Gall, a well-known Union square (N. Y.) optician. It was won by Mr. R. H. Keene, by a score of 39. Last season the prize was won twice in succession by Mr. F. Smith, on scores of 37 and 36. The following is the result, in detail, of Wednesday's shooting:

Name.	Total.	Name.	Total.
R. H. Keene	39	C. Minor	35
J. H. Swartwout	38	C. Dewing	30
E. H. Sanford	37	W. H. Sanford	23
F. F. Smith	36	E. E. Leeds	19
W. W. Skiddy	34		

The distance was 300 yards, two sighting and ten scoring shots.

RIFLE NOTES.

"Antler" sends good diagram of target counting 69 as the possible, at 4-inch bulls-eye, 150 yards. The sights on the weapon he describes as of his own make, as follows:

"The globe is similar to the Beach combination, but I think it is better from the fact of the open or bead-sight being so constructed as to lie solid on its base independent of the globe or pin-ball sight, thereby obviating the possibility of moving the bead out of line in raising or lowering the globe."

RECOIL.

WILMINGTON, May 15, 1877.

EDITOR FOREST AND STREAM:

Having seen a discussion in your columns on the subject of recoil, I desire to say a few words. "Shot's" suggestion is well made. It had already occurred to me. "Toronto's" illustration about the boiler is good, but he fails to make the correct application. He is wrong when he says "there is no recoil that can take place with a gun until the ball leaves the muzzle." The recoil is felt at the moment the ball starts in the barrel. Suppose, when the gun is fired, the ball could be held so tightly that it could not move, and the barrel sustained the pressure of the charge, there would be no recoil, because, as in the boiler, the pressure is equalized, and the contending forces would be in a state of equilibrium. Now, suppose the ball suddenly "gives way," and starts down the barrel. The "give way" of the ball corresponds with the give way of the head of the boiler, and the recoil occurs at the same instant. This would be the case were the barrel indefinitely prolonged and the ball never left it. The above illustrates just what occurs in the rifle. The highest velocity a ball can acquire is when the powder is entirely consumed before the ball moves. Recoil depends upon the pressure of the charge and the suddenness of the give way, and is simply the reaction of the gun in its effort to eject the ball. The fact that the recoil comes with the moving of the ball is important, as otherwise we would have no control over it; as it is, we have, and in my next communication I will endeavor to show the causes of recoil and the means of reducing it. DELAWARE.

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

STODDARD'S CARTRIDGE LOADER.—A new advertisement of Stoddard's cartridge loading implement appears in this issue, announcing size No. 10. We have one of these complete and ingenious tools in our office, have seen the various operations performed, have examined its construction, considered its size, neatness and prepossessing appearance, and do not hesitate to pronounce it a success. If it is desirable to the sportsmen to have a single tool most simple in its construction, one that can be carried in the pocket, performing all the possible operations on shells and in a satisfactory manner, then we think that it will not be amiss to secure this implement. We think it fills the bill, is a successful combination long needed, and is worth the price. We do not see how it can be improved. We are told that not a single instance has yet occurred when it has been shown to the sportsmen that it has met with other than favorable consideration and a tender of the price. We have no reason to doubt the statement, and for ourselves predict a sale of 10,000 of the implements. We know C. J. Stoddard & Co. to be reliable in every particular, and the orders sent to them will be attended to in a prompt and satisfactory manner.

FINE VERSUS COARSE POWDER.—Duck Hunter, Sacramento, Cal, says: "Why do all writers advocate coarse powders, when, for a shot gun, fine is better. It is quicker, and will kill farther. The professional hunters here, who shoot thousands of ducks for the markets annually, use F. F. F. G. powder exclusively, and would not be persuaded to change it for the coarser brands. It is all nonsense paying one dollar per pound for powder, when that which can be bought for thirty cents will shoot just as well in a shot gun."

We are inclined to think that the nonsense is all the other way. A quick powder does not give the same penetration; is apt to spoil the pattern, fires the gun quicker, produces greater recoil, and is harder on the gun. As for buying powder at $1 per pound, that is useless also. A good coarse powder of the "ducking" brand, can be bought for from 40 to 60 cents per pound, and is quite good enough for ordinary shooting.

THE FLIGHT OF SHOT.—A correspondent writing from Philadelphia thus describes his experience in determining the flight of shot:

"Placing screens of thin paper in line with each other at 20, 30 and 40 yards, respectively, from the muzzle of the gun, the centres covering each other exactly, and then shooting the charge through them all, I found that the pellets of shot did not fly in regular diverging lines, but went more like a lot of oyster shells than anything else I can compare them to; not only curving down, which might be expected, but up and in every direction, apparently crossing and recrossing each other in the most remarkable manner, in one case giving a better pattern at 40 yards than at 20, but generally falling off in pattern considerably. The targets made on the screens, in circles proportionate to the distance—that is, 15 in., 22½ in. and 30 in.—were 145, 137 118 pellets (1 oz., No. 6 sparks; 288 pellets, actual count); 3½ drms. Orange Lightning. This is an average of several shots. The larger sizes of shot go better, particularly in regard to the falling off in pattern, and the smaller sizes much worse. This wild flight, I think, must be caused by the shot being deformed by passing through the barrels. Some that were picked up had one side ground smoothly off, as if cut by a knife, which must have been caused by the pellets rubbing on the inside of the bore in passing through it. I have tried the new breed of birds—viz: glass balls—and think they are very good practice, though they do not give you much time, but keep you wide awake. N.

[We wish that some one having the time would make simi'ar experiments, using chilled shot. We are of the impression that much better results would be obtained from most guns if the shot were hardened somewhat.—ED.]

—Hon I. E. West, our quondam correspondent at Newberne, North Carolina, since our paper was first issued, has pulled up his stakes and removed to Yankton, Dakota Territory, where he is engaged in the practice of law. He promises to renew his contributions at an early date. He writes, May 9th, as follows:

"I saw on my route here, after reaching Missouri Valley Junction, a point near the Missouri river, large numbers of wild ducks, prairie chickens, and a species of plover resembling the kill-deer, as we call them East. The little ponds along the railroad, and even the ditches by the road-bed were filled with mallard, teal, and a small duck with bill like a crow called in North Carolina the 'Blue Peter.' I understand that in the small lakes a few miles North East from this place, immense numbers of wild fowl are found. I hope to prove the truth of the assertion soon."

GUNS, LIGHT AND HEAVY.

EDITOR FOREST AND STREAM:

Some weeks ago Recapper had a letter in the ROD AND GUN to the effect that the most of the sportsmen of the present day overweight themselves with metal. I thoroughly agree with his views in this respect, and for the benefit of those about to purchase guns between now and opening of the shooting season, give a rough table of weights best adapted to guns of different bores. I must, of course, begin by saying that I do not expect guns of from 20 to 15 bore to be used for wild fowl shooting, or asked to perform as well as 12 to 10 bores. For all shooting on land, where the sportsman has to carry himself, his own gun and ammunition the great desideratum is the least weight combined with the greatest amount of power. A first-class walker, in half training, can carry a 7 pound gun and a few cartridges, and cover 4½ to 5 miles an hour for 6 or 8 hours, while a 9-pound gun would choke him off in 2 or 3 hours. I am speaking from the experience of a friend of mine, who, last summer, could be relied on for 5 miles an hour up to ten hours. Of course he was a good walker, and when stationed at the Cussagie was considered the best walker, and one of the first steeplechase riders in the United Kingdom. He it was who talked me into trying the Schultze and Dittmar powder, and in anything connected with either pedestrianism and horseflesh his authority is excellent. In most of his tales of English, Irish and Scotch moors, the burden ran the same, get yourself in best fettle and carry as little weight as you can help, if you want a bag. Another friend of mine, in form a giant, built like Miller, the wrestler, and 15 years ago as good a man (for example, he whipped Heenan like a 16-year old school boy ten years after the great Sayer's fight), weighing 280 pounds without much superfluous flesh, says, "He will be shot if he wants to carry more than 8 or 9 pounds at the outside." What is gained in weight and strength of a gun, beyond a reasonable amount, only tends to make the aim of the sportsman slower, and the man using a gun above his weight and strength, will have the pleasure of being slow on his birds, and shooting behind all quick crossing shots. Shooting pigeons from a trap is no criterion, as a man may use as heavy a gun as he likes, but is not fagged and wearied by carrying it over rough ground. My table of weights is viz.: 20-bore, 5 lbs. 4 to 6 oz.; 16-bore, 5 lbs. 10 oz. to 6 lbs.; 12-bore, 6 lbs. 12 oz. to 7 lbs. 8 oz.; 10-bore, 8 lbs.; for land shooting, as much more as the taste and strength of the sportsman may fancy for fowl shooting. For charges a fair rule is half a dram of powder to pound weight of gun. Shot for 20-bores ¾ oz.; for 16-bore, ⅞ oz.; 12-bore, 1⅛ oz.; 10-bore, 1¼ oz. Of course for exceptional shooting heavier charges can be used, but the difference in recoil is very quickly perceived. I am rather amused at J. J. E. so chivalrously championing the muzzle loader. If he has not already got one I beg to advise him to make a heavy loading rod, to be attached to button hole on land, or lie beside him in canoe. With such he can send his charges home with one thrust instead of losing time with a a ramrod. If the weather be fine, and the birds do not come too fast the M. L. is as good as the B. L. But if the weather be cold and wet, the caps to be put on with fingers that are moist, and perhaps the gun so saturated with water that it can't be made explode, then the B. L. begins to shine. I have still several muzzle loaders, relics of bye-gone days, that, to give them their due, shoot as well as wood and iron can do, but I generally lend them to some of my punters, to save their B. L. cartridges. To sum up in a few words, the muzzle-loader is a good and faithful servant, but the breech-loader is a most luxurious one. As to the scale of charges I have given above, they are intended for the B. L., and are slightly heavy for muzzle-loaders. The style of boring has now become a mere piece of fancy, as you can order a gun to be made of any desired degree of class or open shooting, and be sure in getting what you order. As to action it is purely a question of taste, most of the actions now made being quite safe, though some are very ugly. For choice I prefer the old positive lever and double grip, and think it the neatest looking, but not one in a hundred will agree with me. As I am an invalid and easily tired I must end my letter by conveying my sincerest and best wishes for prosperity to the new combination pape FOREST AND STREAM AND ROD AND GUN. ROYAL.

SHELLS.

MANCHESTER, N. H., May 17, 1877.

EDITORS FOREST AND STREAM:

Your correspondent, A. B. B., solicits, in your issue of April 28, my experience with shells, such as are used in the breech-loading shot-gun, and I hasten to respond. There are several items of importance to be considered in connection with the proper use of shells, and I shall endeavor to specify some of them. In the first place, the chambers for the shells should be constructed with great care and accuracy, and with as perfect a circle and finish as any part of the barrels. In the second place, the length of these chambers should correspond with the length of the shells to be used. Then, as the outer diameter of these shells is larger than the bore of the gun, it becomes necessary to start a conical taper from the forward end of the chambers, and extend it up the barrels, some distance, until it conforms exactly to the calibre of the gun; special care being taken to make a perfect cylinder, and with a perfect polish, just as I have recently reccommended for the process of choking guns. The shells, whether paper or metal, should fill the chambers as closely as it is possible to insert and extract the same with ease. The rims of the shells should also exactly fit into the sockets of the barrels and extractor, so that, when the barrels are locked, the case of the shells shall rest firmly against the breechplate of the gun. The gauge of the shells should also be the same as that of the gun, so that the charge may pass out of the shells into the barrels with the least possible obstruction. When both paper and metal shells are used in the same gun, this condition is somewhat contravened; for it is well known that the gauge of the metal shells is nearly one size larger than that of the paper shells. To counteract entirely this discrepancy it would be necessary to have the thickness of the paper and metal, of which the shells is made, precisely uniform. It would not be advisable to reduce the thickness of the paper shells to conform to the metal, because it would impair their strength; but it would seem preferable to make the metal shells conform to the paper. An approximation to this result may be obtained by carefully constructing the above-mentioned taper. It would seem to be best, in view of what has been said above, to have the breech-loader constructed to use only the metal shells, such as we now have; for in this case the chambers would be less, and the taper therefrom much more gradual. This may seem like "splitting hairs" to some, and I do not place much stress upon it, nevertheless, I consider this, and all the other considerations I have presented, as contributing something toward the best results. If we would prevent the escape or waste of gas, lessen the recoil, protect the shells and gun from the injury, and, in a word, accomplish all that a sportsman's heart could desire, then, all the items I have named must claim our recognition. The gun is like any other machine, the nearer to perfection are its fittings, the adjustment of its various parts, and the entire workmanship, the longer it will last, and the better will it perform its functions, if duly supplied with materials for its work, and skillfully handled. I come now more directly to my experience in loading and using shells. For metal shells, I use over the powder one of Eley's thickest and best wads, two sizes larger than the gauge, and a thinner one, of the same size, over the shot. For paper shells, I use the same kind of wads, but one size smaller; partly to conform to the smaller gauge, and partly to avoid the enlargement of the shell, and it may not be amiss to state here my reasons therefor. The crimping is done to prevent the charge from moving, and in order to do this, the part of the shell turned in must rest upon the wad over the shot. This crimping machine can only turn in a certain portion of the shell, about one quarter of an inch. Now suppose I wish to load my shells with different charges, as I often do when trying experiments at targets, or in shooting various kinds of game, how can I apply this process successfully to meet all these requirements? Perhaps some one will say, cut the shells off, and thus make them conform to the required standard—very well; but who is willing to incur all this labor and trouble for a fancied, or, to say the least, a very slight advantage? But suppose you make the shell shorter than the chamber of the gun—much or little—for this is done in all cases where crimping is applied, a space is left at the end of the shell, in the chamber, larger than its gauge, into which, when the gun is discharged, the charge will instantly expand, and then as quickly contract, in order to pass along its destined course. In this case, will there not be some friction, some recoil, some injury to wads and shot, some diminution of force, and some depreciation of the best result? So it seems to me, however others may regard this matter. As pertinent to this subject, let me say, we do not apply our crimping machines to our metal shells, and why not? Is it not as necessary to apply this process to keep the charge secure in the metal shells as it is in the paper shells? It seems to me so; for if one shell requires something to stay the charge more than another, it is the metal rather than the paper shell. Whether to use one or two very thick wads over the powder, such as Ely's best, is still a mooted question, and sportsmen seem to be about equally divided on this question. If two are used, it is maintained we increase the force of the powder; or, in other words, the firmer you confine the powder the greater will be its explosive power. This is undoubtedly so, and it is also true that a corresponding recoil of the gun will result therefrom. Whether the former will more than offset the latter, when applied to the shot-gun, I have my doubts; at present I give no decided opinion, for I intend to test this matter by repeated experiments. It is some extra trouble to insert two wads instead of one—to say nothing of the extra expense. If two wads over the powder should prove to be preferable, all things considered, would it not be an improvement to have the thickness required embodied in one? One other objection to crimping which I omitted to insert in its proper connection I will add here, viz.: that it forms a ring or ridge, which must give way to the wad or the wad to it; in either case it becomes a serious obstacle for the charge to overcome—greater than can be found in any one item. This article demands remodeling and rewriting, but I beg to be excused for this once, hoping to do better in the future. I hope A. B. B. may find, by careful searching, a satisfactory answer to his suggestion; if not, call again. A. G. DOLE.

Manchester, N. H., May 1, 1877.

P. S.—I would not use bone-dust or any other article for the sake of filling up the shell to accommodate the crimping.

—The western farmer, to whom "the grasshopper has become a burden," sitteth upon his front door step and mournfully chanteth, "Now, Oh where is the prairie chicken?" While from the pot-hunter at the settlement below cometh up the sad refrain, "Gone to the Eastern land." O'VERICUS.

The Kennel.

SPECIAL MEETING OF THE N. A. K. C.—In response to a call by the president (at the request of several members) for a special meeting of the National American Kennel Club, a meeting was held on Friday, May 11th, at 10 A. M., in New York. Dr. Jarvis was appointed secretary *pro tem.* Dr. Rowe, in a few remarks, as editor and representative of the Chicago *Field*, tendered the pedigrees published by that paper for the use of the club.

After a thorough discussion by several of the gentlemen present, in regard to the publication of a kennel register, which would be regarded as authority and national in its character by the sportsmen throughout the land, Mr. Raymond submitted the following resolutions, which were voted upon and unanimously carried:

WHEREAS, In the opinion of this meeting, it is desirable to expedite the publication of a Kennel Club Register, under an authority that will both harmonize all fairly conflicting views and command the respect and elicit the cordial support of the sportsmen throughout America.

Resolved: That the tender of the pedigrees and kennel histories published and possessed by the Chicago *Field* for the use of the club be accepted with thanks.

Resolved: That the FOREST AND STREAM be courteously invited to submit, for the purpose of such publication, the records of pedigrees in its possession.

Resolved: That such publication by the club be made by some prominent and respectable publishing house other than one connected with any of the sportsmen's newspapers.

The foregoing resolutions having been carried, further discussion took place in regard to the committee on the compilation and publication of the National American Kennel Club Stud Book.

Mr. Smith, of Canada, desired all sectional prejudice and newspaper rivalry to be done away with; that the National American Kennel Club, likewise its stud book, should be free from even a taint of suspicion of being in the interest of any kennel or section of the country, or of any newspaper; and he thought that unless such was the case its birth would be its death. Mr. Lathrop thought the gentlemen present were proof that the club was not sectional in its character.

Mr. Raymond moved that a gentleman from the West, one from the East and one from Canada compose the publication committee. Mr. Lathrop moved that Mr. Morford, of N. J., be placed upon that committee in place of Mr. Burges with Messrs. Smith and Sterling, it being understood from Dr. Rowe's remarks that Mr. Burges was willing to yield his place upon the committee to an Eastern man, so as to remove all sectional and newspaper jealousies. Both these motions, together with the amendment that Mr. Marford's not being a present member of the club be waived, were carried. It was moved and carried that the secretary *pro tem.* send proceedings of the meeting to the sporting papers.

On further business coming before the meeting, on motion of Mr. Raymond it was adjourned *sine die.*

—We learn that Major George E. Alden has sold his fine young orange and white setter Clyde, by Mr. Foreman Taylor's celebrated Sancho, to Capt. Joseph E. Alexander, of Savannah, Ga. Clyde was bred by Horace Smith, Esq., and bids fair to be an exceedingly good dog with proper care.

—William T. Evers claims the names Al. P. and Con for a brace of red Irish setters, from the kennel of Mr. A. S. Phillips, at Trenton, N. J. Sired by C. Z. Miley's imported red Irish setter Buck, he by Hon. Ed. Moleyn's Ruby out of Fanny, by Luck; dam A. S. Phillips' imported red Irish setter bitch Maud.

—Mr. Jno. C. Develin's red Irish setter bitch, "Moya," visited "Elcho," at the kennel of Dr. William Jarvis, at Claremont, N. H., 22d April ult.

RAILWAY FARES FOR DOGS.—Once more we turn to the old familiar theme of railway fares for dogs. The generosity and alacrity with which the railway companies responded to Mr. Lincoln's letter asking for free transportation for dogs to and from the New York Bench Show, is worthy of the thanks of the entire community, and we are happy to state that, with a single exception, the orders issued by the superintendents were strictly obeyed by the employés of the roads. The exception we allude to is the N. Y. Central & Hudson River Road. Notwithstanding the letter of the superintendent of the road, which was published in this paper, and in which it stated in the most unequivocal terms that there would be no charge for dogs, the baggage-masters insisted on being paid. Mr. Farrar, who came all the way from Toledo, was treated shamefully. On both trips he was mulcted, and in going home $15 was demanded from him for his dogs. Perhaps Mr. Miller, of Newburgh, was treated even worse, as his dogs were not even allowed on the train, and he was obliged to send them down by barge. We have yet to hear of any person who was not compelled to pay. We would suggest to the committee having in charge the Syracuse Bench Show that they look into this matter, otherwise there will be no dogs from here, at least over that road.

While on this topic there is one other point to which we would like to allude. That is the fact that on the D. L. & W. R. R., the fare for a passenger from Newark to New York is from 15 to 20 cents, and the company is responsible for damage, while the fare from Newark to the Erie tunnel for a dog is 25 cents, and the company are not responsible. We ask, why is this thus?

GUYON'S "KATE."

GUYON'S "KATE."—We print this week a portrait of the fine pointer bitch "Kate," the property of our correspondent Col. Rawlings Young (Guyon), of Corinth, Miss. "Kate" belongs to that rare old breed which has been in the possession of southern sportsmen for so many generations, and we are glad of the opportunity to reproduce her portrait, as it were, alongside of dogs born in the north. The cut is enlarged from a pencil sketch made by her owner, and we await his commendations of our artist's efforts.

AN EPISODE OF THE BENCH SHOW.

ALBANY, N. Y., May 15, 1877.

EDITOR FOREST AND STREAM:

In reference to the sweepstakes trial (Special class 1) of last Thursday, when after a most close examination and inspection of fifty-five of the finest setter dogs, both from this country and abroad, two of the judges, Mr. Macdona and Capt. Taylor, decided in favor of the imported red Irish setter, Rory O'Moore, (belonging to myself), and Messrs. Twaddell and Davidson in favor of (Mr. Smith's) Paris. The ring was cleared of all the dogs save these two, (Rory O'Moore and Paris). An umpire was chosen in the person of Dr. Strong, who, amid great excitement on the part of the bystanders, proceeded to take the measurements of each dog. The result was as follows: That if there were two cups, or if the $150 cup was money instead, he would divide it, but on merely technical points he decided in favor of Paris. His chief point in favor of Paris was that the spinal cerebrum was a little better developed than in Rory. Dr. Strong afterwards confessed to me that he was not aware that Rory was but 20 months old, and supposed him at least as old as Paris, 3½ years, and he also said that he still lacked a year's development, or rather that he would continue to develope for another 12 month, and that his development would then be in full perfection. You are aware that it is an unusual thing to find so close a competition especially between the Irish setter (where color cannot be considered) and the Laverack. Nor does it seem right to bring them together, but you will find the above facts correct. Rory O'Moore was also, as you are aware, winner of the first prize in class 7. I am not especially seeking a notoriety for my dog, but I am proud of him, and have reason to be, and if you will make some mention of the above, as it is both deserving and worthy, I will be obliged to you. W. N. CALLENDER.

In reply to the above, our Kennel Editor says that in view of the fact that it was by his request that Dr. Strachan (not Strong) consented to act as referee, after the consent of both parties interested had been obtained, he of course watched the proceedings with great interest. The result as given to the committee was that Paris won to 20 points against 16, and we must in justice remark that whatever may have been said to the owner of Rob Roy, nothing was said to the committee about dividing the prize. We agree with Mr. Callender that it was very hard on his dog to be judged against an English setter, a dog of so different a type, but we do not see why color should not have been marked in his favor. Color is a distinctive mark in the Irish setter, and perfection in it should count in his favor as much as anything else. Rory O'Moore has one of the handsomest sterns we have ever seen on a dog, and we certainly never saw a dog, out of the field, cary it more gracefully.—ED.

—One of the attractions of the late bench show of dogs was the case of Greener guns exhibited by Mr. H. C. Squires, of this city. This was the same case, and contained the same guns as were exhibited by Mr. Greener during the Centennial at Philadelphia. It contained, also, the silver cup won at the various trials by this well-known maker. The case and contents remain at Mr. Squire's store, No. 1 Cortlandt street.

EDINBURGH DOG SHOW.

[*From our Special Correspondent.*]

Since 1877 commenced we have had large and good dog shows in all the three kingdoms. "Ye merrie citie" of Carlisle opened the ball, at which place the Dandie Dinmont terriers were the *piece di resistance*, no less than 85 of these varmint little demons, that Scott has made immortal, putting in an appearance, the show being the first ever held under the auspices of the Dandie Dinmont Club. Ould Ireland followed close on Carlisle, with a show almost exclusively made up of Irish dogs, fewer specimens being sent across the channel than at any Irish show I have visited. The Irish setters were the most attractive classes at the Dublin show, and a very grand lot they were. Scotland has now re-established its character as a dog-producing and dog-loving land, which was in some danger, no show of any size having been held in North Britain last year. The fact, however, of the land having lain fallow for a season has proved beneficial, as the show superintended by Mr. Brown at his Royal Gymnasium, Edinburgh, last week, was by far one of the largest and, in quality, much the best of any hitherto seen in Scotland.

The entries numbered close on 600, divided into 42 classes, which were, with a few exceptions, excellent. Mastiffs were a strong class for Scotland, where they are not so much kept or bred as in England. The winner is a fine, massive animal, pretty well ribbed home, large in bone and straight on his legs, a great desideratum, these heavy dogs often getting a bit crooked, especially in their hocks becoming, as the "Maister of Game"—the oldest English writer on dogs—so well expresses it, "crompyng like unto an ox". "Colonel," the dog we are describing, is also good in head, having a large and broad skull, and is neither too bully nor too blood-hound-like in muzzle. Dagmar, by Champion Granby, out of Champion Countess, has, as a bitch, a good head, and is altogether a grand fronted bitch, but her cromping hocks kept her out of the prize list, although she can can give both 2nd and 3d prize dogs three-quarters of an inch in skull.

The St. Bernard class was a fair one, a fashionably marked son of Champion Thos. taking premier honors over Gesler, who is one of the true type but was out of condition. The Newfoundlands were good The winner, Mr. Howard Mappleneck's Leo, is a fine, big, burly chap, of a rusty black color, he possesses a massive and intelligent head, fine chest, great strength of limbs and fine, big paddles. A dozen deer hounds competed, instead of which number we should have had at least fifty, which is little creditable to the land of their birth that all the prizes went to English exhibitors. Fred Gibson showed a young Goliah in statue, in a ten months' puppy by Captain Graham's Swarran out of Bob Nickall's magnificent bitch Linda, a winner at Alexandrea Palace, Maidstone, Crystal Palace, Cork, and all our best shows. The puppy Juglesidi stands nearly 31 inches at shoulder measure, 11½ inches from occiput to end of nose, and is proportionate throughout. Greyhounds, another dozen and also a good class, but not equal to their rough-haired

cousins. The winner, a fawn and white, is by Beadlimore out of Avonside, and shows a lot of racing quality, although just a trifle heavy in the shoulder. Pointers were not numerous, but they were all of a good and workmanlike stamp, suitable for moorland work. Mr. Lort judged them well, ignoring to a great extent color, which has at many of our English shows been allowed to influence decisions too much. Champion setters formed a group of English, Irish and Gordons, delightful and refreshing to the eye of a sportsman—Dash, Flora, Bess, Venus and Duke of Bengall—but all had to lower their colors to the Irish champion Dick, a dog with about as good a head as Palmerston, better in chest, rich in color, and good all over; his name and some of his progeny are well known to many of your readers. Gordon setters were much above an average. The winner was a splendid specimen, well made throughout—fine, long and well shaped skull, long muzzle, with well developed olefactory organs, a nice carriage in moving—a proof of symmetry; his neck and shoulders are light and elegant, the latter nicely sloped; he is well ribbed, and his quarters and sickle hocks unexceptionable. Bitches were also good, and not one shown was unworthy of commendation. In a fair class of Irish setters the defeat of Mr. G. W. Gordon McHaffie's well-known and really superlative bitch Mina, by a young aspirant to fame, created quite a small sensation, but Mr. Lort was, we think, quite justified, Grouse, the winner, being an exceptionalist ngodogod. He won his fam at Dublin, where he took fir y nder Mr. Lort. He was thene claimed before entering the ring by the representative of *The Country*, and passed into the hands of Mr. Fletcher, in whose keeping he has wonderfully improved. In the English setter class the Laverack strain was strongly represented. Your readers will regret to learn we have lost that veteran setter breeder at the ripe old age of 78 years, but his name will last and be respected by sportsmen in connection with one of the best and handsomest strains of sporting dogs the world has yet seen. Few better classes of wavy-coated retrievers have ever been shown—old Hull's blood coming out very showy indeed. We think Bayker, by Wyndham out of Young Bounce, about the best in the class. We can recommend this blood alike for work and good looks. Curly-coated retievers were, generally speaking, coarse spaniels of different kinds, competed together, a large number of clumbers appearing. Lord Haddington exhibited a nice team of this breed, including four ten-months'-old pups of the true clumber type, but at present looking rather leggy. They were priced at £6 and £7 each, which was dirt-cheap. Irish water spaniels, of which there were several fine specimens, had to appear in the variety class.

Coming now to the smaller and mostly non-sporting classes, sheep dogs were a disgrace to Scotland, being composed of "lang-lug'd," half-bred setters—they were not worth criticism. Bull dogs, although few, were of the first water. Vero Shaw's Smasher is a *smasher*, considered by competent judges the best young dog of this breed we have seen for years. Second honors were divided between two good ones, and Kit was really very highly commended, although by accident omitted from the official prize list. These are all of the true type as recognized by the bull-dog clubs. Mr. Shaw swept the boards in bull terriers, large and small; he has in these two breeds, perhaps, the best kennel in the world. Bedlingtons, mostly hailing from "Coaly," Newcastle, were a fine lot. These are a class—if I may judge from the schedule of the New York Dog Show, just received here—you do not encourage in the States, but they are worth importing; second cousin to the Dandie on higher legs, with a dash of bull judiciously hidden. They are courageous and enduring, and make rattling vermin dogs. They numbered 27 here.

Black-and-tan terriers, with the exception of the redoutable Belcher, Surprise, General and two smaller ones, were inferior. Fox terriers, especially the dogs, were better than usual at Scotch shows, and Dandie Dinmonts and skye terriers literally swarmed. Mr. James Locke, an experienced breeder and successful exhibitor, judged the Dandies single handed, and out of the 50 selected the best for honors. Edinburgh is noted for skye terriers, and the prick-eared class was a large and good one; but there was one prevailing fault, namely—shortness of back. Mr. Locke and Mr. Dabjial judged and gave pretty general satisfaction. Of the remaining classes there was nothing worthy of special comment, except Italian greyhounds, which was the largest and best class I have ever seen. There were a few good pugs, but the class did not do justice to the breed In the small-sized variety class were wire-haired fox terriers, white English terriers and Dachshunds.

In closing my remarks, may I be allowed to say there are many regrets expressed here that time was not given to English exhibitors to send some of their specimens to the New York show, and it is hoped by many that a really international show may yet be held; and should the Westminster Kennel Club essay such a venture, I am certain they need not lack hearty co-operation on this side the Atlantic.

THE SHREWSBURY FIELD TRIALS.—Without having space in which to give an account of the various events of the above meeting, we cannot refrain from printing from *Bell's Life*, the graphic account by the representative of that paper, of the gallant manner in which old Ranger won his victory.

"The Shrewsbury Stakes brought a wonderful lot of aged setter dogs together, including Ranger, Dan II., winner of the Field Trial Derby last year; Y. Sam, the winner of the Grouse Stakes in the Highlands last year; Rake, the winner of numerous trials; and Sam, another big winner; besides Dash II., last year's champion, who cleared everything out. Probably it is the best field Ranger ever met, and the old dog never acquitted himself in grander form, or proved more effectually, to the discomfiture of those who have abused him, that they were wrong, and that I was right three years ago, after he beat Rector in the fashion he did, in saying in these columns that Ranger was the best setter in the world. The stake opened by John Armstrong's Y. Sam making a great example of Mr. Statter's Frolic, as he ran round him and took two beautiful points, in very grand form. Y. Sam is quite one of the cracks of the day. Then Mr. Llewellin's Sam beat Mr. Lonsdale's Spanker easily, followed by Mr. Lipscombe's Bill defeating Mr. Fontleroy's Pound, who was unfortunate. Then came down champion Ranger with Y. Dan, and the old dog in racing for the lead, got it just as he pleased, and when going forty miles an hour his keen nose drops him on birds in his old form, and of course they are there. In seven minutes, over a large space of ground, he takes three points to Dan's one, and very soon the flag goes up for him. Then he is given a turn with Y. Sam, and he steps away from him with the same ease, racing up by the side of the fence, and down he is again on birds. The next point is in the middle of the field, and Y. Sam here declines to back him naturally, and as every fault must go against such cracks as these, he is turned out, and after Dash II. has defeated Rake, he too is given a turn with Ranger, the working of the two dogs being magnificent: but Ranger leads when they race for their casts, and he finds, or when Dash II. finds, he backs him across a forty acre field.

The spectators think Ranger is first, Dash II. second, and one of the Sams third, but Young Sam settles his father, and the judges place—

Mr. G. de Landre Macdona's bk w t d Ranger, by Quince—Judy, 6 yrs	1
Mr. J. Armstrong's bk w t d Y. Sam by, Sam—Bess.	2
Mr. G. Brewis's bk w t d Dash II., by Blue Prince—Kate	3

Ranger has been trained and worked for this event by E. Bishop of Newton, who got the condition prize for Ranger also, so he does Bishop immense credit. I hear by telegraph that this extraordinary setter has also won the Champion Cup beating Mend, Nora, Norna, Bow Bells, and Bang, so he is now fairly in his old position as the champion setter of England.

SAVED.—A correspondent in Pottsville, Pa., sends us the following account of the manner in which a resident of that place saved his dog: Dash, an imported English setter, belonging to a gentleman living in the suburbs of this town, was enjoying a repast the other day, when he miscalculated the dimensions of a bone which became securely wedged in his throat. For ten days the poor animal could not eat anything, and was about dying from starvation, when his master and a friend went to work with a sharp knife and cut a slit three inches long in his throat, pulled out the bone and immediately sewed up the slit with some black silk thread, and to-day the dog is as sleek, fat and happy as if his throat was never cut.

DOM PEDRO.

—If there are any persons who were awarded premiums at the late Bench Show, and have not yet received them, they can be paid by applying at this office.

MEETING OF THE NATIONAL KENNEL CLUB, NEW YORK.—We are requested to insert the following: "Will you please state that the annual meeting of the National American Kennel Club will be held at Syracuse, N.Y., Tuesday, June 19th, instead of June 5th. "N. ROWE, Pres."

—Mr. Franklin Sumner's field trial bitch, "Diana," by "Leicester," out of "Doll," whelped on the 2d inst., 7 bitches and 3 dogs; one bitch has since died. They were sired by Luther Adams' dog "Drake."

DITTMAR POWDER.

Please direct all letters for the above powder to Neponset, Mass. Capt. Bogardus and Ira Paine, now in England, are using my powder.
CARL DITTMAR.—*Adv.*

(*Continued from page 244.*)

RUTHERFORD PARK REGATTA.—There will be a regatta on the Passaic, at West Rutherford Park, on Wednesday, May 30th, when valuable prizes will be given for pair-oared gigs, single-scull shells, four-oarred shells, pair-carred shells and six-oarred gigs. Entries must be advanced to Edward Smith, N. J. City, on or before the 20th inst.

SCHUYLKILL NOTES.

PHILADELPHIA, *May 26*, 1877.—The boating season on the Schuylkill for this year seems to promise comparative quiet. There will be no open spring regatta, and the local navy regatta does not as yet awaken a decided interest, although the event is near at hand. On Friday, a week ago, there was a very pretty race between undergraduates of the University of Pennsylvania, the crews being from the University Barge Club and the College Boat Club. They pulled over the national course one and a half miles, the latter club winning by a little more than a length. Time, 9m. 32½s.

The result was a surprise, as the College crew seemed inferior in both strength and style.

On the Saturday following the Undine Barge Club celebrated its twenty-first anniversary. The only race was between the following two eight-oared shell crews, which had been selected by their respective strokes, over a mile course.

LONGFELLOW.	ALBION.
Bright, stroke.	Stille, stroke.
Roberts, No. 2.	C. Barnes, No. 2.
Middleton, No. 3.	Hart, No. 3.
Heinitsch, No. 4.	T. Lennig, No. 4.
Smith, No. 5.	Cabeen, No. 5.
Scarborough, No. 6.	Colahan, No. 6.
Goddard, No. 7.	Moody, No. 7.
Cheston, No. 8.	Wilson, No. 8.
W. C. Brown, of the Crescent, cox.	Gillingham, cox.

Stille's crew crossed the line in 7m. 23½s., with the other boat lapping the Albion's stern about two feet. After the race the members with a large number of their lady friends, on a chartered steamer repaired to Ringstetten, the club's house at the Falls, where music and feasting inaugurated the twenty-second year of the organization. SCULLS.

FOREST AND STREAM.—A meeting of the stockholders of the FOREST AND STREAM PUBLISHING COMPANY will be held on the 14th day of June, 1877, at 2 o'clock P.M., at the office of the Company, at No. 103 Fulton street, in the City of New York, to consider the proposition to increase the capital stock of the Company from the sum of $25,000 to the sum of $50,000.

CHAS. HALLOCK, } Trustees.
WM. C. HARRIS, }

Dated New York, May 2, 1877.

—A gentleman took his little boy to a model farm to see the wonders of the place. After they had been there a short time the little fellow ran crying to his father, being at the same time pursued by a big turkey-cock, which was trying to get a piece of bread out of his hand. "What, my boy," said the father, "are you afraid of a turkey? Why, you ate part of one yesterday." "Yes, papa," responded the little fellow, wiping his eyes, "but this one isn't cooked."

TENACITY.—First North Briton (on the Oban boat in a rolling sea and dirty weather): "Thraw it up, mon, an' ye'll feel a' the better!" Second ditto (keeping it down): "Hech, mon, it's whuskey!"

Adirondack Tales.

W. H. H. Murray. The Golden Rule Publishing Company, Boston.

We welcome this book as a contribution to that too limited class of literature which draws its inspiration from the pure and healthful atmosphere of the woods and mountains. The book is written with an enthusiasm for the life in the woods depicted in its pages, and everywhere bears evidence of an appreciation of those lessons which nature is ever ready to teach those who are but willing to receive them. The moral running through the book is that for those who are weary and harrassed by the toils and trials of life, there is a relief in the woodlands, by the river and among the mountains. The first tale—"The Story the Keg Told Me"—is that of a miser who, possessed by the fear of loss, fled into the heart of the wilderness, and there counted his gold in solitude and safety, until the majestic grandeur of the mountains about him overawed his soul, and the softer voice of the night whispered to him that there was something better than the dross he was worshiping. The longest and, we think, the best of these stories, is that of "The Man Who Didn't Know Much;" much—that is—of the knowledge to be learned in towns, but who, in the woods, could pull an oar and shoot a gun, who became perfected in the elements of a manly character, and finally, amid the smoke and flame of a burning steamer, knew how to die a willing death of heroic self-sacrifice. The remaining pages comprise several shorter sketches of Adirondack travel, told in the usual humorous and racy style of the author. We learn, with pleasure, that this is the beginning of a promised series.

THE FLIRT, by Mrs. Gray. T. B. Peterson & Co., Philadelphia. This is one of the "Peterson's Sterling Series," the list of which comprises some much better books than the present volume. The plot of is no great intricacy, nor the book of much merit. It belongs, however, to those intensely sentimental books which are devoured *ad nauseam* by a certain class of people, and among that class will no doubt find general acceptance.

—It is reasonably contended that those who advance the physical welfare of the race are no less to be honored than the geniuses whose special sphere is in the intellectual. A man like B. T. Babbitt, who devotes himself to making that most necessary of articles, soap, then, is to be admired and honored if he can manufacture an article like B. T. Babbitt's Toilet Soap, which is the most perfect of all toilet articles.—*Adv.*

—The well known and responsible house of W. H. Schieffelin & Co., wholesale druggists, have become agents for the sale of Helmbold's medicines.

—It is proposed by the Coaching Club to have a parade of their coaches on May 26. They will meet in Madison avenue, facing Twenty-third street, at 4½ P. M. The route will be up Fifth avenue, along the west side of the Park to Stetson's, returning by the east side, down Fifth avenue to Washington square, and back to Madison square.

CEMENT FOR IRON AND STONE.—Glycerine and litharge stirred to a paste hardens rapidly, and makes a tolerable cement for iron upon iron, for two stone surfaces, and especially for fastening iron in stone. This cement is insoluble, and is not acted upon by strong acids. Cloth can be cemented to polished iron shafts by first giving them a coat of best white lead paint; this being dried hard, coat with best Russian glue dissolved in water containing a little vinegar or acetic acid.—*Iron.*

STRAGGLERS IN OUR STREAM.—The above is the title of a paper contributed to Appleton's June number by the Hon. Robert B. Roosevelt. It is written with his usual vein of pleasant humor, and must prove as great a *bonne bouche* to the anglers of the south side of Long Island as he tells a malcotte of ells is to himself. The article is full of curious information as regards the fishes of that district, and should be read by all the game and fish preservers of the island, as it exposes the devices of the pestilent poachers who afflict that fair land.

Tiffany & Co., Silversmiths, Jewelers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their Timing Watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. TIFFANY & CO. are also the agents in America for Messrs. PATEK, PHILIPPE & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Bronzes and Artistic Pottery is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Union Square, New York.

The Kennel.

EDINA KENNEL.

JESSE SHERWOOD, Proprietor, Edina, Knox County, Mo., breeder and importer of Sporting Dogs. Pointers, setters, spaniels, fox and beagle hounds. "Sancho," imp. Pointer, stud dog; fee, $35. Spratt's Patent Meat Fibrine Dog Cakes.

GENUINE

STAMPED

From the reputation these Meat Fibrine Cakes have now gained, they require scarcely an explanation to recommend them to the use of every one who keeps a dog. Suffice it to say they are free from salt, and contain "dates," the exclusive use of which, in combination with meat and meal to compose a biscuit, is secured to us by Letters Patent. For sale in cases of 112 lbs. each. F. O. Du LUZE, sole agent, 18 South William street, New York. Special terms to dealers.

THE "FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries

OF NORTHERN MICHIGAN, VIA

Grand Rapids and Indiana Railroad.

(Mackinaw, Grand Rapids & Cincinnati Short Line.)

Sportsmen who have cast a fly or trolled a spoon in the waters of the **Grand Traverse Region** will come again without solicitation. All other lovers of the Rod are invited to try these waters, wherein

The fish named above, as also **Muscalonge, Pike and Pickerel,** abound.

In no other streams east of the Rocky Mountains is the famous **American Grayling** found in such numbers.

Brook Trout Season opens May 1st.

Grayling Season opens June 1st.

The sportsman can readily send trophies of his skill to his friends or "Club" at home, as **ice for packing fish** can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries less enough to afford the finest of fashion.

On and after June 1st **Round Trip Excursion Tickets** sold to **Points in Grand Traverse Region,** and attractive train facilities offered to tourists and sportsmen; also, on and after July 1st, **Mackinaw and Lake Superior** Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, send to Forest and Stream office, or address

JAMES MEYER, JR'S.,

Girondin Disinfectant,

IS THE MOST EFFECTIVE, POWERFUL, AND CHEAPEST

DISINFECTANT AND DEODORIZER.

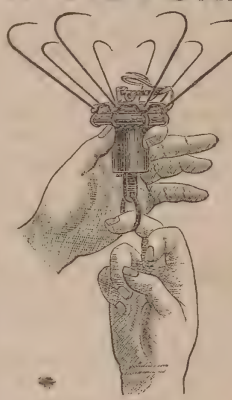
Is, when diluted, with from five to nine parts water to one part of pure fluid Inodorous, Colorless. Does not injure any object or material it may be applied to. Never fails to destroy contagion, and neutralizes almost instantly the most offensive odors, vapors or gases, and is unrivalled for the dressing of offensive wounds on men or animals.

Its merits are indorsed by a host of prominent names in the medical profession and the business community, Public Institutions, Railroad Companies, Car Lines, Hotels, Undertakers, etc., and Charles Rice, Chemist, Bellevue Hospital, New York, etc.

SOLD BY ALL THE PRINCIPAL DRUGGISTS.

To quart and pint bottles and cases of 12 bottles, quart or pint; in five gallon demijohn; 10 gal. kegs; half. barrel of 20 gallons; barrel of 40 gallons; hogshead of 60 gallons.

Wholesale by JAMES MEYER, JR., & CO.,



P. O. Box 3257. 85 AND 87 BROAD STREET, N. Y., Proprietors and Sole Manufacturers in U. S.

☞ Send for full circular containing official testimonials, AND IN ORDERING GOODS NAME "FOREST AND STREAM."

☞ THE GIRONDIN DISINFECTANT FOR KENNELS.—Mr. Chas. Lincoln, Superintendent of the Baltimore Dog Show, writes a letter to Messrs. James Meyer & Co., in which he says: "I used your 'Girondin Disinfectant,' and found it an excellent remedy, fulfilling, as far as the Dog Show was concerned, all that you claim for it, and I shall confidently recommend it to all shows where I go. Yours, CHAS. LINCOLN, Supt. Baltimore Bench Show."

A VICTORIOUS INVENTION.

The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game.

The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.

It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or, when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation.

It is adapted for bait of any description, and, when, set, no Animal, Fish or Bird that touches the bait can possibly escape. It does not mangle or injure its victims in the slightest degree, nor need they be handled to free them from the trap.

PRICE LIST:

No. 1—For fishing and all kinds of small game and animals sent by mail.....35 cents,

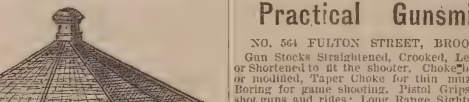
No. 2—For catching Mink, Muskrats, Raccoons, large Game, Fish, &c.....75 cents,

No. 3, or Rocky Mountain Giant, for catching Bears, Wolves, Panthers, &c. Can be easily set by a boy, and will stand a strain of several hundred pounds. Weight, 10 to 15 lbs. $10.

All goods sent, charges paid, to any address on receipt of price. Address

Chas. L. Coate,

330 Fulton St., Brooklyn, N. Y.



P. O. Box 214.

AGENTS WANTED.

PAINTING.—THE PATRONS' PAINT COMPANY are manufacturing the *INGERSOLL READY-MIXED PAINTS*, and *BRUSHES*, and selling them at full trade discounts, delivering them freight paid, and no money required until the goods are received—making them cheaper than even the material can be bought elsewhere. They are an absolutely pure article, possessing great endurance and brilliancy, and are giving great satisfaction all over the country. We have a Patron friend who saved enough alone on Paint purchased to pay his Grange expenses for a life-time. They also sell *ROOF PAINT* 30 per cent. cheaper than any one else. It is to the interest of all about painting to write and have sent free their book, *"Every One His Own Painter."* It will save much money, whether you buy their Paint or not. Address, 259 FRONT STREET, NEW YORK.—*(From "The Farmers' Friend.")*

Highest Honors
AT THE
CENTENNIAL WORLD'S FAIR, 1876.
SHONINGER ORGANS.

PRONOUNCED UNANIMOUSLY AS THE

Best Instruments.

Their comparative excellence is recognized by the **Judges** in their **Report**, from which the following is an extract:

"The **B. SHONINGER ORGAN CO.'S** exhibit **as the best Instruments** at a price rendering them possible to a large class of purchasers, having a combination of Reeds and Bells, producing novel and pleasing effects, containing many desirable improvements, will stand longer in dry or damp climate, less liable to get out of order, all the boards being made three-ply, put together so it is impossible for them to either shrink, swell or split." **THE ONLY ORGANS AWARDED THIS RANK.**

This Medal and Award was granted after the most severe competition of the best makers, before one of the **most competent juries** ever assembled.

New styles and prices just issued, which are in accordance with our rule, the **BEST ORGANS** for the least money.

We are prepared to appoint a few new Agents.

Illustrated Catalogues mailed, postpaid, upon application to

Hart's Sportsman's Favorite Metallic Shells,
FOR BREECH-LOADING SHOT-GUNS.
These shells are easily loaded, and the caps easily extracted from inside. Head solid and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing miss-fires. The Cone is made of nickel, and fastened solid in its place. Neither rusts nor corrodes fast, like movable anvil made from steel. The Nickel Cone also prevents miss-fire when a cap has been left on shell for a few days, which is liable to occur either in steel or iron. These shells are finely finished, and made any length ordered, from 2½ to 3½ inches.
☞ Shells and Loaders and Descriptive Price Lists can be obtained from all the leading Sportsmen's Houses throughout the country. GEORGE E. HART & CO., Newark, N. J.
FROM CAPTAIN BOGARDUS, CHAMPION WING SHOT OF AMERICA.
MESSRS. GEORGE E. HART & CO.: Gentlemen—The fifty shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly, A. H. BOGARDUS.

"St. Louis Conical Base Paper Shell."

Having made important improvements in our Shell, we can safely recommend them as equal, if not superior, in quality to any Paper Shell manufactured in this country or in Europe.
Among the advantages claimed for these Shells, are: A saving of 25 per cent. in the use of powder; also the great decrease in recoil. The sizes made are No. 10—2½, 2⅝, and 3 inches; No. 12—2½, 2⅝, and 2¾ inches. Longer Shells will be made at extra cost. They are not reloadable. Sample, 100, sent by express on receipt of $1.15 for No. 12; $1.30 for No. 10.
Factory and office, No. 2,220 De Kalb street, St. Louis, Mo.
St. Louis Patent Shell Manufacturing Company.

W. & C. SCOTT & SONS.

TRIPLEX.

First Prize Medal and Diploma, awarded at the Centennial Exhibition, for excellence of workmanship and material in their **Premier Quality** and medium grades. Their **New Patent-Triplex** Lever Grip Action and **Compensating Lump.** The attention of sportsmen is requested to the above new action. Its superior strength and solidity impart greatly improved shooting powers. Hard hitting being the desideratum required, is obtained by this powerful gun. Prices of the New Triplex Lever Grip, $175, $225 to $400. Marked the Triplex 10-bores extra. Our highest grade is as usual marked the PREMIER QUALITY.
[Extract from FOREST AND STREAM, New York, December 26, 1876, Contributed by one of the Judges of Awards of Guns at the Centennial:]
"This action (The Triplex Lever Grip) combines in the highest degree strength and simplicity, and must rapidly secure the favor of all who test its merits.

COMPENSATING LUMP. Strongly recommended. It is invaluable, and should be ordered on every gun. Costs about $10 extra. Choke-bores, medium or full. Our guns to be had of the principal dealers in the trade only.

Orange Sporting Powder.

Orange Lightning Powder.
The strongest and cleanest powder made. Nos. 1 to 7. Packed only in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

Orange Ducking Powder.
For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6¼ lbs. each, and canisters of 1 and 5 lbs.

Orange Rifle Powder.
The best for rifles and for all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6¼ lbs., and in canisters of 1 lb. and ½ lb.
All of the above give high velocities and less residuum than any other brands made.

JACK'S VISION.

'TWAS just four bells—it was no more—
My quid was gone, it grieved me sore;
The tedious night was waning slow,
Loud snored the blissful watch below.
Our bark lay loafing on the seas,
With not a lazy zephyr's breeze.
'Twas stilly night, the sky was bright,
The sea gave back each starry light;
I stowed me snug beneath the rail,
And soon the stars grew wan and pale,
But scarce to doze had made decision,
Ere I beheld, in truth, a vision.
I stood beside my mammy's door,
As oft in boyish days of yore,
And scann'd the prospect, hill and plain,
And yellow fields of waving grain;
The beach, the cove, the crescent bay,
Long Bridge and Trumbull's, granite gray.
'Twas morn—the dews lay freshly round,
The birds were up with merry sound;
The milkman's horn I heard afar,
Then, rattling round the square, his car.
Sweet Sue, in witching morning dress,
Sat blithely milking brindled Bess;
And when I caught "her bonny ee,"
She kissed her tiny hand to me,
While near and far each barn-yard crew
Bawled many a cock-a-doo-die doo.
When lo! before my feasting eyes,
What johnny cakes and pumpkin pies!
Fresh wheaten loaves that were not coarse,
And gravied steak that sham'd "old horse;"
Sweet Sue stood pouring out the batter,
The cakes were smoking on the platter;
The grace was long, I thought it queer,
For then my yarn just parted here
And left me—all my dream a wreck—
Dim gazing o'er the moonlit deck.
What should I see? Pray do not ask.
Slow rising from the "harness cask,"
Methought 'twas sure the steed of death,
For icy horrors froze my breath;
A ghostly goblin, lean and bare—
A ghastly bag of bones they were!—
That rattled horridly and dread
'Tis wondrous that I am not dead!
More hideous demon, devilish fright
Ne'er mocked a luckless mortal's sight;
Of purple scurvy's livid hue,
Exceeding ulcerous fetid dew;
Those pale, green eyes, blood-shot and sore;
I roared aloud, "All hands to prayers."
A horse's ghost, or else a mare's,
Broke stable door, with malice fell
Up through the harness cask from hell.
What! Jonah's son! I'd like to know,
Hath waked its welcome watch below;
Thou demon fright, what brings thee here?
Alas! alas! no good I fear,
Pray ope thy mouth, if goblin may,
And tell us if the devil's to pay.
Then oped a mouth sepulchral foul,
With half a neigh, and half a howl.
It spake, I heard, I'd swear the rhyme
Beat Baalam's ass of olden time.
And thus the goblin said—if not,
I wish I may be hung or shot—
"Alas! alas! like thee, I fear!
No good this night hath brought me here;
I've toted stones this many a year,
O'er many a hill to many a pier;
In dust and thirst, and sweat and pain,
'Neath burning sun and soaking rain;
With kicks and cuffs and dire abuse,
Now salted down for sailor's use.
All in my harness, hoofs and shoes,
Sent off to sea for whaling crews;
Horse-power packed down in salt to keep
For business on the mighty deep.
Took from the brine by tarry paws,
Boiled in a pot with bleeding boars,
Served up with slush in wooden tub,
Then christened by the name of "grub!"
The sailors view me with disdain,
They take me up with grief, 'tis plain;
They look me o'er with sad surprise,
They fling me down and raise their eyes,
Insult and blackguard to my face
The manes of my departed race,
And wish my harness, hoofs and coat
Stuck smugly in the owner's throat.
Ye pick my meat, ye pick my bones,
And fling the rest to Davy Jones"
He said—and fled, for at his head,
Curses and marline spikes were sped;
He fled with hideous muttering moans
Rattling his scurvy purpled bones;
And where he went—who'll dare to ask?
Heaven save us from the "Harness cask!"
I've told the vision, every whit—
Perhaps not inspired like holy writ,
Well told or ill—I sadly fear
More truth than poetry is here.

For Forest and Stream and Rod and Gun.

A Typhoon off the Japanese Coast.

"And then the storm blast came, and he
Was tyrannous and strong;
He struck with his o'ertaking wings,
And chased us South along.

"With sloping masts and dipping prow—
As who pursued with yell and blow
Still treads the shadow of his foe
And forward bends his head—
The ship drove fast, loud roared the blast,
And southward aye we fled."

COLERIDGE.

IT is said that every one born to live in this world has a certain amount of hardship, suffering and trial to go through before he or she can cast up their earthly account, and were it not for the fact that our existence is frequently interlarded with some pretty bitter experience, life would neither be happy nor enjoyable.

Be this as it may, I fancy that there are many who would willingly dispense with some of the incidents connected with their career, could they but have a foretaste of that which they are afterwards destined to pass through.

In February, 1869, the writer, who was then at the newly opened port of Hiogo, Japan, took passage on the steamer M., which was to sail for Yokohama on Monday evening, the — inst. The weather which had been rainy and blustering all the morning, in the afternoon increased in violence, and had a portentious look foreboding nothing good, and which was not at all lessened by the fact that the native craft were moored close in shore, and parallel to each other for safety's sake, their grass hawsers creaking and groaning as they uneasily rode each incoming swell. The M—— was anchored some two miles off the shore, and to reach her I was forced to use a *Yana-fune* belonging to the agents of the steamer, which was propelled by four *sendoes*. As the mail bags had been placed on board the boat and entrusted to my care, and everything being in readiness, we pushed off from the hatoba, with a heavy ground swell, toward the steamer, which was pitching and rocking in the bay with steam already up. About a mile from shore the wind increased, coming in fitful gusts, while the sea, which was against us, made it hard work for even the four stalwart Japanese scullers, who, stripped to the buff, with every muscle strained to its utmost tension, were apparently gaining but little headway toward the vessel.

I had started out with a thick overcoat, top boots, and was warmly clad and comparatively comfortably ensconced in the cabin of the boat upon a pile of mail bags, endeavoring to take matters as philosophically as possible, and wondering whether we should reach her before dark, as it was now getting well on to six o'clock, and the days being short, night soon sets in. A small boat, however, in a heavy head sea, is, perhaps, not the most satisfactory place for reflection, much as we might feel so disposed, and what few thoughts were passing were suddenly checked by an exclamation from one of the boatmen, and a green sea breaking on board, filling the little cabin and drenching the mail bags and myself thoroughly. Crawling out and not understanding the gibberish, as it then seemed to me, of the boatmen, who were now quite excited, I pointed first to the steamer and then to land, but no answer was deigned me, and they continued with unremitting vigor, puffing and blowing, to keep the boat's head pointed for the steamer. It was decidedly quite an unpleasant position to be placed in. Every wave washing us from stern to stern, and thinking it might be advisable under the circumstances to do as the sendoes had done, I commenced to strip, leaving nothing on but a light undershirt and an overcoat thrown loosely about me, for it was a question in my mind whether we should ever reach the steamer at all. After an hour's work the M—— was reached, and as it was almost dark we shouted lustily for help. The gang-plank being down the mails were pitched to the quartermaster, and I might truly say, myself likewise; for, benumbed with cold from an almost nude state for fifteen minutes, my limbs refused motion, so that I was in some way pulled on board, taken into the captain's lower cabin, rubbed with hot flannels and plied with stimulants by incomparable celestial servants, and after half an hour's application of this sort of thing I came round again. Captain M—— was quite surprised at the time that any boat should have put off that afternoon, as two hours previously all the small craft in the bay had made for an anchorage, and were out of harm's way. Instructions had been given to sail that night, but the captain, taking into consideration a falling barometer, a pitch dark night, and the very threatening aspect of the weather, wisely concluded that discretion was the better part of valor, and accordingly postponed his departure until the following morning, when prospects of better weather were anticipated.

The morning dawned, the sky was clear; the wind had in a measure subsided, and to all appearances the weather was all that could be desired. Alas, for the snare and delusion—

"A sadder and a wiser man
He rose the morrow morn."

The anchor was hoisted on board, and steam being already up we left Hiogo anchorage, and with a moderate breeze steamed down the Suwo Nada for Kii Channel. We had fair weather until noon, during which time we met many junks, which were all evidently in great haste to make land.

"We have made an untimely mistake, Dr. Topin, in leaving to-day," remarked Captain M——, as we paced the deck; "and," continued he, "I am rather afraid that we shall get some rough weather outside to-night, off Oosima, and if we do we shall get it strong."

I replied that everything seemed favorable enough to me, except the steady fall in the barometer, which is not a pleasant thing at any time at sea, and more particularly so on this especial occasion, as we were short-handed in the crew.

The afternoon was in a measure a repetition of the previous one. The clouds were ragged, and the scud flew low; the wind was squally and with heavy flaws; everything in fact looked and felt as if something worse was soon to follow.

We made the entrance of Kii Channel and the light on Oosima late that evening, and kept our course about East. The land at this time was scarcely discernible, owing to the almost impenetrable blackness of the night, and as the wind was still rising and a heavy head sea coming up the channel, we were glad to leave it astern and get into the rolling Pacific.

The steamer, a long, sharp iron screw-boat of about 1,000 tons, formerly a Calcutta and Chinese opium clipper, clove the crested seas like a knife, while the water ran aft in tons on her flush deck. The prospect was anything but pleasant, and Capt. M—— quietly remarked, after finding the barometer had fallen to 28.20, that "we were in for it." There was certainly no sleep to be thought of then, so laying in a handful of cheroots and seeing things safely lashed in my cabin, I went up on deck, and, stepping cautiously upon the ladder leading up to the bridge, ascended carefully and took my station beside the first officer and the captain, who were engaged in earnest conversation. The wind had now increased to a heavy gale from the N. N. E., and orders were given to have the two men at the wheel lashed, and life-lines stretched along the deck, which was imperatively necessary in face of the vast volume of water continually pouring on board. Precaution had previously been taken to have everything snug aloft, an operation which was happily gone through when the weather was less threatening. I soon descended from the bridge, and, after being well soaked, succeeded in the difficult task of getting back into the cabin again, which I was heartily glad of, as it was no easy matter to keep on one's legs on the bridge of a steamer pitching and tumbling into a seething sea.

Turning in standing, I endeavored to catch a few moment's sleep, but soon found that this was out of the question. At midnight the wind had increased, and it whistled through the rigging with most doleful effect, while the creaking and groaning of the vessel, and the noise of the rush of the mighty waters above and around us, were anything but pleasant sounds. The pitching caused by the heavy sea rendered it impossible to keep in one's berth, and to make matters still worse, a small iron safe, which was used by the captain to stow away his papers, etc., broke adrift and came crashing through the drawers under my berth. To try to be still, and have this thing, weighing about a ton, dancing about like a pea in the cabin, was not to be thought of. So, after a desperate leap, I managed to clear it without loss of life or limb, gain the main saloon, and beckoning to two celestials, half dead with fright, who were trying to steady themselves against the mizzenmast, we cast a rope around the fractious bit of iron, and securely lashed it to the mizzenmast after a great deal of

trouble. At three o'clock in the morning noise and confusion, baffling description, reigned supreme. Still, the steamer, now on her beam-ends and wallowing like a log in the sea, was somewhat under control. "Water!" I yelled in the ear of one of the boys. "Where is the drinking water?" But all to no purpose. I fancied I saw his lips move, and could barely catch that magical phrase, "No sake," which no doubt was roared at me in reply. The cabin at this time was drenched through and a complete wreck. The racks over the dining tables, containing the glassware of the steamer, were buried about promiscuously during every lurch. Tumblers, wine-glasses, decanters, bottles of Worcestershire sauce, condiments, etc., were whizzing about in dangerous proximity to my head, and swelling the already large pile of *debris* on the floor. The scene, notwithstanding our critical position, was ludicrous, and I could not suppress a smile when glancing into the pantry, the door of which had, in the early part of the storm, become unhinged and broken. I noticed plates by the dozens, and table service of every description rattling down like a shower of peas, and breaking without apparent noise.

It was almost an impossibility to keep one's feet at all, and it is quite surprising how insensible one becomes to knocks and bruises under such circumstances, which, if happening at any other time, would be counted as quite severe accidents. The night seemed as if it would never end and as the cabin clock had long since left its proper station and become a thing of the past, I could but vaguely guess at the time, my own watch having stopped through having its owner jarred and tumbled about. All the lights were out or broken, with the single exception of a swinging lantern, which seemed determined to remain in its place and add to the horror of the situation by casting a dull, flickering and sickly glimmer about the wrecked cabin. After an age of torture as it seemed and being unable to communicate with any one, even if such a thing were possible, the cabin appeared to be possessed with a dull, gray gloom, which was evidently daylight or the nearest approach to it. Carefully working my way up the companion-way I peeped out of the window and looked forward, and what a sight met my eyes! The steamer seemed enveloped in a thick shroud of foam blown off the water. The boats were gone, davits twisted, the bridge had disappeared, top-yards and masts were broken off; sails which were so carefully and neatly furled the afternoon previous were now in shreds and ribbons. No mortal was to be seen on deck. The smoke funnel seemed bent, twisted, and filled with unsightly holes and encrusted with salt; the bulwarks were broken, stove in and splintered. Everything moveable on deck had been washed away. The steamer lay on her beam ends, and in a state of perfect pandemonium. The wind had increased to such an extent that it made it impossible for the sea to rise, and the water was actually blown from off the surface of the waves, charging the atmosphere with a fine saline spray, which rendered respiration a matter of much difficulty. During a lull in the storm, for the duration of a half hour, the spoon drifts subsided with the wind, and huge seas rose and came tumbling on board in all directions. One moment we breasted these watery hills seemingly to the clouds, and with a suddenness that made one lightheaded; the next, with a heavy lurch, the steamer would sink into a valley of blackness, as if never to rise again, while towering mountains of water seemed to encompass her on all sides with a roar of indescribable grandeur. With tottering limbs and bruised body, I worked my way by a side door into the captain's cabin, where both he and the first officer were for a moment, after having been by the wheel during the greater part of the night. By great effort I understood him to say that "it was doubtful if we got out of it at all, as we were now in the vortex." This was not at all pleasing, and it would be hard to conceive a more precarious position to be placed in than the present one. Our only hope was in the staunchness of the vessel and strength of her engines, which had stood an extraordinarily severe test; but should they break down within the coming hour our chance for life was slim indeed. It was of little use to look at the barometer, which was swinging about like the pendulum of a clock. We knew we were in a very trying predicament, and the worst was probably yet to come. The seas were terrible to look upon, and their roar was that of a pack of fiends incarnate, endeavoring to engulf an almost helpless craft that was pitched and buffeted about as easily as a straw. It would require a pen of more than ordinary power to give the faintest delineation of so grand a scene, in which a man is about as powerless as a mouse in the clutches of the elements. Those who have passed through similar experience can perhaps recall the innate insignificance a man feels under such circumstances, utterly helpless, and at the divine mercy.

The cargo had been shifted during the storm to the port-side, and as a consequence the steamer had a heavy list in this direction. As it was impossible to right her now, we were forced to remain in this condition during the rest of the typhoon. The native sailors had long ago cut off their top-knots as a sign of having given up the last despairing hope and being ready to meet death. Others were chanting their death songs, while still others were so stupefied with fear as to be incapable of moving or even speaking, but lay about like logs, wherever they had fallen, in a semi-paralyzed condition. A large quantity of water having made its way into the furnace room of the engine, and being constantly pitching about by the lurching of the vessel, caused great volumes of steam to arise from the engine hatch, which added only to the desolate condition we were in. The engineers also experienced much difficulty in keeping the fires alive, and were forced to act as stokers themselves, all dependence on the native firemen vanishing with the commencement of the storm. These plucky fellows and two Chinese quartermasters stuck to their post and worked bravely and well, and to their unflagging efforts our ultimate safety was in a great measure due.

In the space of an hour the wind came in sharp puffs from every point of the compass, which warned us of our approach to the inner circle of the storm. Twenty minutes later it blew with redoubled violence, the sea becoming confused and boarding us from all quarters. For three long hours we battled with the elements—pitched, tossed and hove about like a cockle-shell by the resistless winds and waters, while our condition, to all intents and purposes, was perfectly helpless. At about noon the wind, though still fierce, blew steadier, and gradually settled into a heavy gale from the north-west, and much to our great relief the sea became more regular. At four o'clock in the afternoon a faint rift in the storm-driven clouds revealed the sun for a few moments, and by a hasty observation we made out that we had drifted nearly ninety miles to the southward of Oshima by the force of the wind, sea and strong current off this part of the coast. The clouds having, to a great extent, been dispersed and the night being clear with a brilliant moon, we made land on the port bow at 8 o'clock, but the sea was still too heavy to think of making more rapid progress; so, after having bent a new storm trysail, we lay quietly to during the greater portion of the night, and having induced, by promises of speedy return to land and extra wages, the still terror stricken crew to turn to and re-stow the cargo, the steamer was soon put on a level keel and full head of steam turned on. The decks were heaped with tangled and broken rigging, smashed skylights and stove deck-houses, and in anything but a ship-shape condition. It took some time to get things in order, but at 8 o'clock on the morning of the third day out we bore up for Suruga Gulf which was on our port bow, and in the afternoon steamed quietly along in comparatively smooth water with that grand and peerless old sentinel Fuji Yama abreast of us with its snow-capped dome glittering like a huge diamond in the sunshine. With the exception of a snow flurry which left the atmosphere clearer and more bracing than before, we glad ally made our way toward Yeddo Bay, passing large quantities of wrecked stuff, the remains of unfortunate junks who had fared much worse than ourselves. At 10 o'clock in the evening Rock Island was just ahead, and steaming very cautiously up Yedo Bay we passed Kau-on-saki light early in the morning, and at 9 o'clock dropped anchor among the shipping at Yokohama on as glorious a morning as one could wish to see, after having passed through one of the heaviest typhoons ever experienced on the southern coast of Japan.

April, 1877. TOJIN.

For Forest and Stream and Rod and Gun.

TURKEY HUNTING IN FLORIDA.

"WHAT do you think of trying the 'old fields' for turkeys this evening? Bill Wilkinson wants to go, though I'd sooner he wouldn't; but I think we are bound to run against an old gobbler down there, and we can lie out all night so as to hear them calling at daylight in the morning."

As O'Steen said this I felt like gobbling a turkey myself, and, equipped with a gum blanket to keep off the dew, my breech-loader, and a plentiful supply of cartridges loaded with buck-shot and No. 8, I was speedily ready for the fray. O'Steen and Wilkerson scorned the blanket, and the latter took enough "mountain dew" with him to keep out the dampness and inspire him with sufficient courage to face the most ferocious gobbler that ever lived, or died. The "old fields," distant some three or four miles from O'Steen's ranche, had formerly been an old plantation, but the house had been burned down long previous to the war, and it was now abandoned. All signs of civilization had gradually disappeared, excepting a canal that, flowing from an immense swamp, intersected it in several directions, and though now choked by debris, still, by the regular lines of its banks, showed the hand of man had once been there. At intervals groves of live oaks were seen, and having reached one of these in close proximity to the swamp, we concluded to camp there, and deposited the gum blanket and provisions we had brought. We then decided on our plan of operation. Wilkerson was to proceed along the edge of the swamp about a mile, and remain near its edge, while O'Steen and I would at once enter, and taking the bank of the canal, proceed some distance, when we would sit down and listen. We accordingly left Wilkerson (who, having taken several pulls at his flask, was not as keenly alert as a turkey hunter should be), and stealthily entered the swamp, the broad bank of the canal serving as a pathway, though at times huge vines crossed it, presenting some obstacles to our progress. Wild orange trees grew here and there, the golden fruit looking very tempting, though we knew by bitter experience it was not as sweet as it might be. Having pushed our way about a quarter of a mile, we arrived at as comparatively open spot, where we could have a view in every direction for a short distance, and here we resolved to take our position. The sun was still about an hour high, but already twilight was beginning to settle over the thick recesses of the swamp. No sound broke the stillness save the distant hooting of an owl, and occasionally the cry of the little "cat squirrel" that, safe from our fire, climbed out on a tree over our heads. Yes, there was another sound, not so agreeable—the music of the mosquito, myriads of which attacked and caused us to think, unutterable things; *that* could be heard, while the little sand-fly, in his quiet, insinuating way, proceeded to investigate us, as though a commission appointed for the purpose. It seems to me the acme of self control to have a mosquito alight on your neck after a preliminary hum, and not slap him as he bores you; but I didn't slap him, I was hunting turkeys, and the slightest movement would have caught the keen eye of *Pinnacea*, if in sight. I couldn't avoid trying to flap my ears, however, and should certainly have made an ass of myself on that occasion had I been able; but flapping was too much for one of my years, and I desisted. Carefully concealed behind the dependent leaves of a palmetto, we sit motionless for some minutes, when slowly a muffled sound like distant thunder falls upon the ear. The old hunter turns his head toward me and whispers, "Did you hear that?" "I hear a turkey strut." Again we hear the sound, louder than at first, though still indistinct. Now the insects are unheeded, and every nerve is strained to catch a view of the noble bird. Hark! again the muffled drum, this time accompanied with a loud gobble that rings upon the air. O'Steen raises his turkey call to his lips, and sounds a cry for the old gobbler. My heart is almost in my throat, for fear he should make a false note; but the old hunter has called too many turkeys to lose his nerve, and the tones ring out clear and true. In vain, however; the old cock has hens with him, and thinks "a bird in the hand worth two in the bush;" but he struts with all his might and gobbles again and again, though still invisible. Motioning me to remain at my post, O'Steen slowly rose, and with cat-like tread, stole off gently into the swamp, taking up a position some fifty yards away. The sun had now set, and still the game did not show itself. I was beginning to fear our watching was in vain, when O'Steen approached and said: "I've got the hens perched now, and as soon as the gobbler flies up into the tree we'll fix them." As he spoke, the sound of mighty wings beating the air was heard, and to our surprise the old cock appeared flying directly toward us. He was evidently looking for the hen that had called so persuasively in our direction, and so well had he located us that he flew into an immense tree immediately overhead. A projecting limb almost concealed him from view, and to get a shot I moved out a little, when "fluff! fluff! fluff!!" he flew out of the tree, presenting a beautiful mark. The gun came to my shoulder, and as she roared out there was an indistinct vision, through the smoke, of a huge mass of bird falling on the other side of the canal, through which O'Steen immediately plunged, fortunately striking a shallow spot, and seizing the turkey in triumph, rejoined me a few minutes afterward.

A noble bird it was, weighing, as we subsequently ascertained, nineteen pounds. His plumage was a mass of golden bronze, tinged with the most delicate purple, and I thought for the moment, as I stroked his breast feathers, that I had never seen anything more beautiful. But night was approaching, and we hastily bent our steps to the trees where O'Steen had located the two hens. Although he had carefully noted the spot, we strained our eyes in vain for some time, endeavoring to see them, as the foliage was quite thick. At length our movements drove one of them out, but my gun snapped, and my companion was not in a position for a shot. The other we could not dislodge, and concluded it had taken flight at my shot at the gobbler. Shouldering the latter, O'Steen led the way toward camp, but a dilemma speedily arose. In moving about looking up in the trees, we had left the canal, and became completely turned around, and after pushing through the bushes and vines until we came out into an open spot we had not before seen, O'Steen, woodman though he was, acknowledged himself lost. Fortunately at this juncture the moon arose, giving us the points of the compass; as we had entered on the eastern side of the swamp, and after climbing decayed logs, and working our way through pools of water that suggested moccasins, we struck the canal, when, giving a shout, we were gratified by a halloa, which evidently proceeded from Wilkerson in the direction of our camp. A few minutes' walk now brought us to the edge of the swamp, whence, at a short distance, we beheld our comrade's stalwart figure under a live oak tree, engaged in feeding a blazing fire he had kindled. He had seen no turkies, but had heard us shoot, and said he "knowed from the noise it made it was that new fangled gun without a ramrod," and he "reckoned she had fetched something." "Yes," said O'Steen, "if I had that gun, she should never shoot nothin' but buckshot, and no money could buy her." Having thus expressed himself, he hung the turkey on a stout sapling, and proceeded to investigate the bag of provisions we had brought for supper. Wilkerson collected about a cord of wood to keep the fire going all night, and seating himself, calmly proceeded to peel and eat a sour orange to my infinite astonishment, assuring me that he liked it "splendid." After supper and some reminiscences from O'Steen of the killing of bears, deers, etc., we replenished the fire and laid down around it to sleep. The others were soon in a deep slumber, lying on the bare ground, but though I spread the gum blanket down with my boots for a pillow, Morphens deserted me. One side would freeze and the other roast, and just as I would get into a doze I would have to turn over to warm the cold side, and cool the warm side, and would be effectually awakened. I resolutely closed my eyes for some time, when a strange noise made me open them with the thought that perhaps a wild cat was trying to steal the turkey. An owl was sitting on a limb blinking his big eyes, evidently at a loss to understand matters and occasionally venting his astonishment in the cry I had heard. I arose and drove him away and, finding myself thoroughly awake, stepped out from the shadow of the live oak and admired the scene as much as possible from a past-midnight point of view. The full moon shone clear and beautiful, high in the sky, throwing a lustre on the leaves of the palmetto and bringing out in full relief the long, gray moss that hung in festoons from the dark live oaks.

Our camp fire had become a mass of coals, with here and there a flickering flame darting up sufficiently to shed a light on the sleeping men and show the old gobbler in the back ground, while the shining barrels of our guns, resting at the foot of one of the huge trees, threw back the light of moon and fire as one or the other triumphed. Strange to say, no insects disturbed us here, and after listening to the hooting of a convention of owls I went back, threw a log on the fire and, lay down to think of the strangeness of being in the woods at such an hour, to kill that turkey over again, and to wish I was asleep. I must have dropped off at last, for I was startled when O'Steen arose, and told me to put on my boots and get ready; daylight was coming. A faint gleam in the East verified his words, and as we made ready for departure the crash of a falling pine sounded away off in the woods. All stopped and listened, as a turkey is sure to gobble when a tree falls, if in the neighborhood. Sure enough, we hear one a mile off, near the edge of the swamp. Leaving Wilkerson to take a different route we seized our guns and started at a quick walk, at times breaking into a trot as the turkey would call again. My gobbler seemed like nothing, as I carried him slung over my shoulder, his neck in my left hand. It was only as we stopped for a moment's rest that I took what a weight he was, so obtrusive were we of everything but the game we were after. At length we were, apparently, in close proximity to it. Evidently he had not yet left his roost. We were passing through a grove of palmettoes whose dead leaves lay on the ground making it almost impossible for me to walk without noise as they crackled under foot, but my companion glided around and over them, scarcely making a sound. Breathless, we halted behind a fallen log and sat down for a rest. The turkey at this juncture gobbled in the most outrageous manner and O'Steen tried his call, but without effect. At length he whispered to me, "Mr. S., let me take your gun and go over there and kill him. This gun I have is no account, yours is sure; we can't both go there over the 'meeter leaves.'" "Yes," said I, "but suppose he comes this way and attacks me, what can I do? I can't shoot that old pot-metal thing." But seeing his disappointed look I handed him my gun and the old fellow departed with a twinkle in his eye that meant business. Not the breaking of a twig or crushing of a leaf marked his progress as he disappeared. There was silence for what seemed a long time in my suspense.

The bird had stopped gobbling, perhaps had flown. Suddenly a loud report, followed by the fall of a heavy body, and in a few moments O'Steen appeared, his ancient countenance lighted up with a smile of triumph, and a gigantic gobbler thrown over his shoulder. As he laid the bird down he simply remarked, "It must have been a hundred yards. I killed him on his perch." Those two birds were a study for an artist. Gathering them and our guns we started for home, being shortly joined by Wilkerson, who now proved his usefulness on a hunt by slinging both birds over his broad shoulders and carrying them without a symptom of fatigue until we reached the house, where, after a hearty breakfast, I tumbled into bed, and successfully wrestled with the sleep that had evaded me under the live oaks.

For Forest and Stream and Rod and Gun.

ROUGHING IT IN CANADA.

THE reader has doubtless read of canoe trips, all over Europe and the United States, and as "variety is the spice of life" I now propose to tell you how a party of four,

cousisting of "Toasty," "Dave," Brown and the writer, went on a canoe trip on the back lakes of Canada.

Early in September, '65, we packed up our traps, in as small a compass as possible, to be handy for portaging, and started from Lindsay, Ont., the terminus of the Midland Railway. Some one is always behind hand with his preparations for a trip of this kind, and the town clock was just giving warning that it was time to rest from the labors of the day when we slipped into our canoes, one double and two single, bark. A pleasant paddle of eight miles down the Scugog River brought us to Sturgeon Lake, a renowned place for maskalonge and black bass fishing. (A summer hotel has just been erected on Sturgeon Point—1876—and if any of your readers want to find a pleasant spot to spend two or three weeks with their families in midsummer, where they can have a fair amount of sport and at a very reasonable price, they might "go farther and fair worse.") Our route lay across the head of the lake, between Ball and Sturgeon points, to the mouth of Fenelon River, where we pitched our tent, about 11 P. M. of a lovely moonlight night, having made sixteen miles.

We were up at daylight, paddled up to Fenelon Falls and found we could portage up the timber slide, which saved us a "carry" of nearly half a mile. Cameron's Lake, a beautiful sheet of water nearly round, and about three miles across, calm and bright as a mirror in the early sunlight, was soon crossed, then followed a mile and a half up Balsam River, the rapids (which are now overcome by a government lock) calling forth all our skill and muscle, we passed Rosedale just as the sleepy inhabitants were rubbing their eyes to let in the daylight, and finding Balsam Lake perfectly calm we made for Big Island, which contains about 400 acres, and landed at the head or north end, at a famous picnicking ground. Here we found a party of acquaintances from Montreal and Lindsay, who had come for a deer hunt. So we decided to spend the day with them. We were roused out the next morning at 4 o'clock to take our positions at the watching points for deer. The hunter or guide having already got the dogs started back of the camp, fortunately for the deer the fog did not lift until he was swimming, and he was seen by one of the Montreal gentleman to pass Ship Island and land on the east shore. The "recall" was fired, and we got dinner and packed up. The two parties united, and now consisted of seven canoes—three bark, one basswood board, and three very light butternut log canoes. The latter very long and sharp, being the racers of the fleet.

We got away about 2 P. M., with quite a strong westerly wind, coming out of West Bay, which made it rather lively for us with our loads when in exposed places between the islands. However, we reached the inlet, Gull River, with nothing more serious than getting our blankets wet from the white caps occasionally breaking over us.

Two miles of pleasant river paddling and the classic village of Coboconk is reached. Made a short portage past the sawmill, and after two miles more of river, which seemed to have been cut out of the solid lime-stone rock, we entered "Little Mud Turtle" Lake. Some deep holes at the foot of the short but rapid *shoot* from "Big Mud Turtle" Lake cannot be surpassed for black bass fishing with rod and line, which, in my humble opinion, is very much better than trolling for them, though they take the spoon eagerly. We pitched our tents on the west shore of "Big Mud Turtle" Lake, another lovely sheet of water, about three miles long, with small, rocky islands sprinkled about here and there. Made about ten miles to-day. Got to bed early and enjoyed such sleep as can only be had under similar circumstances.

Some of the party were out early in the morning and brought in some very fine maskalonge for breakfast. One of our Montreal friends gave us an exhibition of his skill in landing a ten-pounder into a single bark canoe, immediately in front of the camp, which nearly resulted in him and the "lunge" changing places! He succeeded in taking the fish in, but not until he had nearly taken a plunge-bath and half filled his canoe! We got under way about 9 o'clock, portaged over a neck of land at "Perkins" into the river, half a mile up stream and another short portage at McLaughlin's mill a quarter of a mile, and we have a *lift over* at the Natural Dam, which, as its name indicates, is a dam in the river, formed by an ancient upheaval at the rocky bed, forming a fall of about five feet. Half a mile and we come to Elliott's Falls. There is a good water-power here, with a fall of about twenty feet. A portage of about three hundred yards, partly up a steep bank, and we are once more on the gently flowing stream. These portages make lively work with a large party like ours, there being a general rush to see who won't be last! A steady pull of four miles gives us a rest after the four portages, and we enter "Moore's" Lake, which is the beginning of the Salmon Trout waters, and the last lake on the route in which Maskalonge have been caught. A short portage at Moore's Falls and we are into Gull Lake, one of the largest lakes on this chain, being about eight miles long and four or five wide, with seven or eight islands in it. Gull Rock is a conspicuous spot near the middle of the lake, and "Miners' Bay," on the east side, the scene of a good deal of misplaced energy. The Salmon Trout fishing is first-class here in September, and up to the commencement of the close season, the 15th of October. In September it is necessary to troll between the islands and in deep water, with about half a pound of lead on the line, but later the fish will be found just off the spawning beds, two or three rods from the shore, and little or no sinker is required. The very best bait I have used is the No. 5 silver spoon, red inside, made by Delany of Orillia, who being somewhat of a sport knows what is wanted. His tackle has one decided virtue, it is strong and neat. I fancy I see some of the readers of the FOREST AND STREAM turning up their classic Roman or Grecian nasal organs at the idea of catching fish when they are coming to their spawning beds. Let me explain. For a few days before the spawning season actually begins it is a rare thing to catch a female fish there. The males apparently coming on the beds first, and it is only when they have rubbed the upper surfaces of the stones clear that the female fish deposits her spawn. When the spawning season is at its height I have known one good spearsman to kill 225 fish in one night, from dark till 2 A. M., and ranging from two to twenty-six pounds weight. Fortunately, this wholesale slaughter is now being rigidly put down by the numerous government inspectors. But to resume—we camped on the east side of the lake at a nicely sheltered inlet; had a heavy rain in the night, which proved our tent to be water-tight and comfortable. Our Lindsay friends put out their dogs and we helped to watch. Two deer came into the lake, but got away again. "Toasty" had a shot at one of them as it was going out, but apparently did not hurt it much.

Another beautiful, fine, warm day. The next day we were again out on the watch. Dave and Brown both missed a deer. They were rather green at shooting out of a bark canoe in a rough sea. Our friend Madden shot one which sunk like a stone before he could get to it. He killed it too dead, and should have driven it till it got blown with wind. This was the only one killed by our party out of five deer which the dogs ran in to-day. We afterwards learned that a settler had got one of them. A young trapper named Cowan came along in the evening and camped with us. We found that he was going thirty or forty miles further north. So "Toasty" and I decided to accompany him. "Dave" and Brown elected to remain with the larger party, not caring to undertake the harder work on the larger portages farther up stream.

We made an early start with Cowan, and after a pleasant paddle through the early fog up the lake and four miles up the river, came to Gull River Bridge, or Minden, a small backwoods settlement, and the last on the route. Procuring a further supply of groceries here, not of the very best, we continued up the river about two miles to the long "portage." This is a "carry" of two miles over a bush road. Considerable time was lost in getting a settler to take us over on a "jumper" with an ox team, and as it was just about dark and raining and a tolerably rough, rocky road, even for the back country, the less said about it the better perhaps.

After a good night's rest, a lovely morning and a hearty breakfast made us forget the previous evening's experience. This is one of the benefits of "roughing it." "Mountain" Lake, about two miles long, surrounded by mountainous, rocky bluffs, is well stocked with salmon trout, and empties into Horse Shoe Lake, from which Gull River takes circuitous course of some five or six miles to the point where we had left it to make the long portage. By this "carry" we save about eight miles, included in which is about three miles of impassable rapids and falls. A short carry past the falls at the head of Mountain Lake, which is four miles long, but we leave it a mile from the north end, on the west side, and enter Little Bush Konk Lake through a narrow and roundabout channel, which looks like anything but the proper course. This lake, which is only about half a mile long, is soon crossed over, and we pass under a dilapidated government bridge on the Peterson line. If this road had ever been used it showed no traces of it then. "Big Bush Konk" Lake, a fine open sheet of water about five miles long and four wide, is the receiving basin of three separate chains of lakes. The east branch coming in about a mile up the east shore, the west branch almost directly opposite, and the north branch at the extreme north end of the lake. Our course took us up the east branch, or Grass River, which is very shallow, in some places almost impassable for a loaded canoe at this season of the year. About a mile up stream we made a short portage past the ruins of a saw-mill which probably never had been completed. Another mile and we enter Beech Lake, which is about a mile long. A short portage takes us into Maple Lake. There is one settler living on the north shore, with a squaw for housekeeper, and an acre potato-patch. He evidently gets a living, as do most of the settlers in this region, by trapping and hunting. At the point between the two lakes we found Cowan, Sr., and his wife camped. We put up our tent near by and had a hearty meal of venison, off a buck killed by Cowan the day before. And now for a little experience. Our boots having got pretty well soaked with wading up the shallow rapids on Grass River—to save the bottoms of the canoes—we put them, as we thought, at a safe distance from the fire to dry out some, but in the morning, the fire having run in the leaves and moss, had "gobbled" up the leg of one of my boots. So I was left with one boot and a very poor substitute for a slipper—rather a bad lookout in the woods and thirty or forty miles from the nearest shoemaker. We paddled leisurely up Grass River, "Grass" Lake and "Pine" Lake to "Cranberry" Lake, found the water very shallow and the portages long, so turned down stream again to Cowan's camp. They having decided to trap up the north branch, we started with them the next day down to Big Bush Konk Lake, then up to its head. Here we found a river a quarter of a mile long, nearly all rapids and a fall of about sixty feet. We found the portage over the hill rather tough work, but were amply repaid when we launched our canoes on "Hall's" Lake, which is one of the most beautiful lakes in the whole chain. We found an excellent campfug, ground on the land beach at the north end, which, by the way are rather scarce and difficult to find in this rocky country. Early the next morning Mr. Cowan put out one of the dogs on the east shore and "Toasty" the other on the west shore. About 7:30 the latter brought in a fallow doe, and while "Toasty" and I were after it in came a rousing big buck from the east shore. Not seeing the Cowans in chase, "Toasty," leaving me to look after the doe, started off at about sixty to the minute after the buck. If anything in the shape of sport, that can be had within reasonable reach, can equal the pleasurable excitement of a chase like this I have yet to experience it. The buck struggled hard and was near getting away, but finally gave up the battle after the third round. We got both deer to the camp at 8:30, in comfortable time for breakfast. In the afternoon we cleaned up our guns, reorganized our loads, and got ready for a start for home, the Cowan family going further north for the fall and winter trapping.

The downward trip occupied about five days, as we stopped to fish occasionally, and shot a few ducks on Cameron's and Sturgeon Lakes and Scugog River. We arrived home in good time, feeling all the better for the trip, and as an evidence of the way that kind of a holiday agrees with the writer who is cooped up in an office most of the year, the scale beam showed an increase of thirteen pounds avoirdupois in the fifteen days. G.

ILLINOIS.—The bill for the establishment of a Board of Fish Commissioners to increase the product of fisheries by artificial propagation and cultivation has been defeated in the Illinois Senate. The Chicago *Times* thus pointedly speaks: "The proposed Board, which the Senate so valiantly refused to inflict upon the people, would have consisted of three gentlemen of wealth and culture, who proposed to stock the rivers and lakes of Illinois with valuable food fish, *pro bono publico*, entirely at the owner's expense. The reason for the valiant refusal of the Senate to inflict that Board upon the people presumptively was that there was 'not a d— cent in that bill.' Had it been a measure to transfer some more earnings of the people to the pocket of a new lot of office-holders, all Hades could not have prevented its passage." The above comments certainly have more truth than poetry.

ROVER.

—Summer tourists will board at the best Niagara Falls hotels this season for $3 50 per day.

Fish Culture.

ABSTRACT OF THE NINTH ANNUAL REPORT OF THE COMMISSIONERS OF FISHERIES OF THE STATE OF NEW YORK.

BETWEEN May 21st and June 27th 1,927,000 shad eggs were taken and artificially impregnated, and 1,850,000 young shad turned loose into the Hudson a few miles below Albany. In proportion to the number of ripe fish secured, these results compare favorably with those reported last year; and, so long as the mature shad are denied an occasional free passage to their spawning grounds, a larger showing cannot reasonably be expected. The cause of the diminution of the quantity of spawn manipulated is due to the great increase of the number of fishermen, who are engaged either in fishing for the market, or in taking supplies for their own families and neighborhoods, to be salted down for future use.

A few years ago and the shad fisheries of the Hudson were being abandoned; as the yield was increased by the operations of the Commission, the fisheries were resumed and new ones were established, so that to-day there are nearly ten times as many nets in the river as there were six years ago. The result is that, although the general catch was much larger than heretofore, the actual number of ripe fish which ran the gauntlet of these obstructions and reached the upper waters was diminished. This will be a self-regulating operation, alternately increasing as to fish or fishermen, until a weekly close time is established to permit a proper proportion of breeders to reach their accustomed spawning grounds.

It was not deemed desirable to continue the operations with salmon in this State where the streams are so utterly obstructed with dams, nets and weirs, till the results of previous attempts had been obtained.

California salmon, like those of the eastern coast, remain in fresh water about a year, and are, while in the condition of fry or smolts, often taken in the nets and weirs. After that they disappear, undoubtedly going to the sea, and in a few instances, perhaps, passing all obstructions and getting there; but as yet it cannot positively be said that any have returned.

In confinement they seem healthy, but, unlike the Eastern salmon, when in that condition, the males are smaller than the females, never exceeding about half a pound, but they produce the milt or male fecundating fluid. This has been used to impregnate the eggs of the brook trout. The experiment was made in the fall of 1875, and about one-quarter of the eggs manipulated were fertilized, thus showing that either the conditions were unnatural or the spermatic fluid was not vigorous and healthy. The fish thus produced are probably males and incapable of continuing their species. They are growing well, and in their appearance show the evidences of their double origin.

The parent males were two years of age, at which period they develop their milt regularly, never afterwards increasing in size, whereas the female salmon produce no eggs when kept in fresh water. This is equally the case with the female eastern salmon, while the male eastern salmon, which attains the same size as the female, does not even produce milt.

The young of this cross have been retained at the State hatching works and are growing finely, being by February 1, 1877, about four inches long.

There can no longer be any question of the success and importance of fish culture as a public undertaking. All countries where proper steps have been taken and the right means used to increase the supply of fish, give one and the same response. With many varieties, such as migrate for example, the consequences are not so immediately visible, but in smaller and confined localities the problem is a simple one. The number of fish taken out of such waters depends upon the number put in, either by artificial or natural means. Any waters can be stocked, and the commissioners feel assured of most gratifying and satisfactory returns from their operations with brook trout. The public take a lively interest in these beautiful and valuable fish, and will keep careful watch over them. Nearly three millions will have been distributed by next spring, and of these a large percentage will grow, mature, and afford both a healthful recreation for individuals and food for the public.

Many rivers and ponds which have been exhausted will be replenished, and the labor and expense will be repaid a hundred fold.

Through the instrumentality of the New York Fishery Commission, since its creation in 1869, many millions of fish of various varieties have been placed in the waters of our own country and several shipments have been made to Europe.

For the purpose of ascertaining if any appreciable improvement in the fishing had already resulted from the various distributions, a communication was sent to parties who had received installments of fish, asking for information on the following points:—

1. What number and kind of fish have been distributed in waters with which you are acquainted?
2. What has been the effect of the fishing?
3. What is the character of the waters as to bottom, temperature and so forth?
4. What general suggestions can you offer for the improvement of such fisheries?
5. What is the ordinary yield of fish?
6. What has been the largest yield lately?

The replies to these questions uniformly testified to an interest in the subject exceedingly gratifying to the Commission; and, although sufficient time had not elapsed to record any practical returns from the dispositions made in many localities, from others, where the waters had been less recently stocked, very satisfactory reports were received. These, however, without exception, strongly condemned, and the Commissions join in the condemnation, the use of nets and seines during the spawning season.

—The forthcoming report of the Canadian Fisheries Commission will show an increase of exports of Canadian fish to Europe. Mackerel are entering more into the supply for domestic consumption in the fresh state, and are sent to Europe in the same condition. Herring are extensively shipped to Sweden and Germany, the latter business having grown up within a year.

PROTECTING SHAD IN THE SUSQUEHANNA.—The Joint Legislative Fish Commission, who have concluded an examination of the fishery at the Columbia Dam, are generally of the opinion that the State has expended enough money on such useless experiments, and that the most feasible way of inducing shad to ascend the Susquehanna River beyond Columbia is to destroy the dam and substitute for it an incline, extending along the stream a few hundred feet, which would insure a sufficient depth of water to enable boats to pass to tidewater. A sub-committee has been appointed by the joint commission to consult the officers of the Reading Railroad Company and ascertain their views of the suggested device.—*Phila. Times.*

FISH UNDER BLUE GLASS.—Prof. H. D. Butler, the Superintendent of the New York Aquarium, has placed blue glass sides in some of the tanks containing the lower order of animals and vegetable life. The blue glass has now been in position for several weeks, and Mr. Butler says, that from what he himself has observed it has benefited the creatures very materially; that it diffuses and softens the rays of sunlight and conveys a mild color to the water similar to the natural light beneath the surface of the ocean. A marked peculiarity was, that when the anemones began to bloom or expand their tentacles they invariably leaned toward the side of the tank having the blue glass, and the hermit crabs and other shell fish were oftener found next the colored side of the tank, and against the glass, than anywhere else.

—A large quantity of black bass and other fish have been destroyed in the Jackson River, Alleghany County, Va., by the workings of the Lawmore Iron Works having been turned into the river. The company will be prosecuted under the act.

RE-STOCKING THE STREAMS.

THE WORK OF THE NEW YORK STATE FISH COMMISSION—
A LIST OF THE RE-STOCKED STREAMS SINCE
APRIL 13TH.

A few weeks since the *Express* in an article on the State Hatchery at Caledonia, published an extended list of the various fish distributed by the New York Commission in the different lakes, rivers and streams of this State during the present spring. Up to that time 58,000 salmon brook trout and whitefish eggs had been distributed, and a total of young fry as follows:

Whitefish	980,000
Salmon trout	1,961,000
Brook trout	546,000

Since that time 434,500 young brook trout have been distributed, swelling the sum total of the latter to 980,500. The following list which is handed us by Mr. Monroe Green, will show the streams where distributed, and the number of young fry contributed since April 13.

	Brook Trout.
Oquoquo Creek, Broome county	20,000
Rog Head, tributary to Fishkill Mountain Creek, Dutchess county	15,000
Saugerties Creek, Ulster county	500
Creeks in Ulster county	20,000
South Oyster Bay Creek, Long Island	12,000
Creeks in Westchester county	30,000
Cold Creek, and others in Alleghany county	12,000
Orange county creeks	9,000
Baldwin Creek, Chemung county	5,000
Twelve streams, tributary to Sandbank Creek Tioga county	20,000
Streams tributary to Cohocton River in Steuben co.	15,000
Vanscoys, Tuscarora and Goodnue Creeks, Steuben county	15,000
Creeks in Saratoga county	20,000
Lutes' trout brook, Saratoga county	5,000
Creeks in Greene county	30,000
Beaver Creek, Oneida county	15,000
Creeks in Cayuga county	10,000
Creeks in Montgomery county	12,000
Dugan Creek, Monroe county	5,000
Davenport Creek, Lewis county	17,000
Caledonia Creek, Livingston county	60,000
Three creeks in Steuben county	60,000
Allen's Creek, Monroe county	6,000
Brighton's " " "	5,000

Canadice Lake, Livingston county	15,600

The distribution of brook trout only fairly began last season, and already favorable reports have come in from most of the streams which were re-stocked then, as well as from the various lakes and other waters in the State. The Fish Commission is a laudable enterprise, and deserves the success that appears to meet its endeavors.

THE MICHIGAN GRAYLING.—The grayling has only of late years been introduced to public notice, and with that introduction has at once sprung into general favor. Several weeks ago Mr. George H. Jerome, the superintendent of the State fisheries, went with a party of six to the head-waters of the Au Sable and Manistee Rivers, pitched their tents on the Manistee, and on April 14th commenced fishing for grayling. They immediately made catches, and handled the fish with a view of procuring the ova, but found that they had all, or nearly all, spawned. Of the exceptions, Mr. Jerome stripped three ripe female fish, but was unable to get any milters. One of the female fish stripped—a fish of about the average size—yielded, by actual count, 3,555 eggs, ripe, perfect, and nearly of the size of the egg of the brook trout. After she was stripped, Mr. Jerome weighed the fish, and she weighed exactly nine ounces. A brook trout of the same size would not have yielded over four or five hundred eggs, thus demonstrating the fact that the grayling can be cultivated ten times as easily as trout. They made the further discovery that this fish inhabits some of the northern central lakes of Michigan. Mr Jerome and his party reached the city recently, having in their possession 285 adult graylings, which they took to the hatchery at Pokagon, where they have found a home and will soon be joined by about 600 more, which Mr. Jerome will add to the group as breeders. It is also his purpose to place 100 of these fish in each of three streams or rivers and lakes in the southern part of the State, and demonstrate, if it is to be demonstrated, that these splendid fish can live as well in our southern waters as anywhere. Mr. Jerome ascertained the time for spawning, the probable yield of ova, and the practicability of their culture in the waters of our lakes. Mr. Jerome says he regards the grayling as the gamiest fish on the American continent. It fights its captors with greater ferocity than the trout, and in flavor and quality ar excels that favorite fish.

MICHIGAN SALMON.

NILES, May 21, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

What! *Michigan* salmon? Yes sir, verily, Michigan salmon! None of the common, cheap sort that dwell down East and away out West that we read about, but the pure, luscious production of the pure, fresh waters that bubble from the valleys and gush from the hillsides of Michigan!

What a thing is this! Not yet four years ago their embryonic parents were transported by "lightning express" from beyond the Sierra Nevada to Michigan, and now a gentle, healthy brood desport in the crystal, *non-saline* waters of the State. Many are the witnesses who will attest to the fact that they are genuine—"to the manor born"—no bogus Cunningham affair is this, I do most humbly assure you. The "wee darlings"—thus christened by unanimous voice—are in outline and feature and shading the very counterparts of their imperial prototypes.

Michigan salmon, indeed! You will search the authors and fauna records in vain to find the species, for this is something new under the sun, King Solomon to the contrary notwithstanding—newer even than the books. Please tally one for Michigan. GEO. H. JEROME.

NATIVE MICHIGAN SALMON.—The first native salmon ever seen in this State, and the first ever known to have been found in the fresh waters of the Eastern States since the extensive efforts to cultivate this luscious fish, was shown on Thursday forenoon by Fish Commissioner George H. Jerome, who brought the little active fellow here in ice water. Members of the Legislature and others saw it on the steps of the State House. It was about two and a half inches long, with the salmon-colored tail fins and the fat dorsal fin, which are certain marks of the *salmonidæ*. It is unquestionably a descendant of those California salmon brought into the State for propagation in 1874, and was caught at the Pokagon hatchery May 18 while trying to run up towards the entrance of a small spring. These salmon, it is believed, will prove successful in the fresh waters of Michigan, for our lakes and rivers contain the shrimp and other food upon which the salmon thrives.

Commissioner Jerome deposited a quantity of grayling in the purest waters of Jackson, Kalamazoo, and Cass counties this week. The grayling is the most gamey fish, the most delicious when cooked, and the most troublesome of all fish to catch with a seine or net. All the specimens obtained by Mr. Jerome were taken with a hook.

The observations and experiments of the fish commissioner are fast knocking theories in the head, and even knocking the life out of many ancient notions. It has been long supposed that trout devoured each other, or at least that the large ones ate up the small ones. But in the State hatchery there are three generations of trout, living like one happy family—grandparents, parents, and children, enjoying themselves together—and it is only when some little fellow gets weak and practically worthless that he is disposed of in the maw of one of his bigger relatives.

The expense of the State Fish Commission will begin to come back into the pockets of the people in a very short time. Horatio Seymour, of New York, says that an acre of water stocked with choice fish will make a larger return in money every year than an acre of land planted with any farm crop.

PROPAGATING THE BLACK BASS.

NEW YORK, May 21, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

I am glad to see in your last issue a warning against the introduction of black bass into waters fitted for other and more important fish.

Some years ago, with several others, I protested against the rage for black bass, which, like every other infatuation which takes possession of our impulsive nation, threatened to destroy so many trout streams or brooks which once were and could be again stocked with trout.

I know that such large rivers as the Connecticut and Delaware cannot be given up to trout alone, but I have never been able to see the sense of stocking rivers with shad and salmon—*salar* and land-locked salmon—and then putting in the most prolific and destructive fish to eat up the young fry. I know the gaminess of black bass, but they are worse than pickerel to "clean out" a stream of every living thing; for pickerel are limited by their habits to the muddy and sluggish stretches of water, but black bass lie in and thrive best in the very pools and rifts frequented by trout and young salmon. In time the bass will "pervade and invade" every tributary and stream running into the above named large rivers, even up to their sources, and trout will cease to be.

I was informed the other day that the black bass (hauled with such ill-advised labor and some hardship some winters ago) introduced into Racquette Lake had begun to show themselves; so the "cleaning out" of the trout in this the largest lake in the woods, as well as in Beach's, Forked, Blue Mountain, etc., is only a question of time. Some malicious guide had already placed pickerel in Long Lake, and so the trout fishing of Racquette River has gone. Now, had the New York Commissioners of Fisheries introduced these black bass to Long Lake, so as to eat up the pickerel, anglers would have rejoiced. But Racquette and the other ponds named are the highest waters in the State, and separated by Buttermilk Falls from Long Lake, up which the pickerel could not go. So these ponds seemed picked out for trout preserves.

Found as I am of black bass, I am not prepared to place them before trout or to go 250 miles to the Adirondacks to catch them.

MANHATTAN.

—Livingston Stone, Esq., of Charlestown, New Hampshire, has gone to Oregon to superintend fish culture operations in that section.

—Mark Twain and the Rev. Joseph Twichell, of Hartford, Conn., have gone together on a fishing excursion.

Natural History.

GOSSIP ABOUT THE BLACK BEAR.

The black bear, or *Ursus americanus*, scientifically speaking, once roamed over the entire United States, though now, in the Eastern States, it is nearly extinct. In the wooded portions of the West and South are yet to be found numbers of them, and they constitute a leading feature in the expectations of the sportsman who visits the deep forests and mountain fastnesses of those districts. The bear is omnivorous in his tastes, and will eat acorns, corn, crayfish, fish, insects, young pigs, and is remarkably fond of the acrid bulb of the *arum* or Indian turnip. Settlers on the frontier not unfrequently lose their young porkers wandering in the woods and bruin very justly gets the credit. Extravagant stories are told concerning his attacking man, but in ninety-nine cases out of a hundred they are to be taken *cum grano salis*. It is true that when wounded the bear will savagely attack his persecutor, and the female will fight furiously in defense of her young, but ordinarily it is disposed to run away. When the bear climbs he does it by clasping the trunk of the tree, and consequently he cannot climb a sapling or very small tree—a hint which the inexperienced Nimrod may keep in mind when he and his bear reverse positions and have a race. Although the bear is not remarkable for graceful movement, and seems rather clumsy, he can run faster than man. He is a good swimmer also, delighting in an occasional bath, and when water is not convenient he rolls in a mud-hole. In walking, the bear uses the whole foot, and is consequently plantigrade. His paws serve him well for overturning logs and rocks for the insects under them; and overturned stones are good indications of his presence.

In captivity, the bear, if taken young, makes a not disagreeable pet, though the surliness of an old one has passed into a proverb. They produce from two to six young at a birth—oftener three or four. The bear does not build a den or dig a hole unless Nature has already formed a place partially adapted, when he will pull the leaves together for a bed. In the extreme North he hibernates profoundly, seeking some log or hollow formed by the uprooting of a tree, and on the approach of a snow-storm, curls himself up, and gets snowed into a warm bed. When in this position he is often caught, his situation being betrayed by the melting of the snow above his nose. A popular error is that during hibernation the bear sucks his paws. This is a mistake, caused, doubtless, by the fact that he does use his big paws to cover the naked tip of his nose to keep it from becoming frosted. Like all hibernating animals he goes to his winter's nap loaded with fat to keep up life, and he devotes the autumn months to rooting for acorns and nuts. He will frequently make long journeys from a district ill adapted to his wants to one better provided. It is an interesting sight to observe a bear on his hind feet in a blackberry patch, pulling the bushes toward him with the disengaged fore feet and picking ripe berries, neglecting the green ones. But perhaps he is fonder of honey, and will go any length for a bee tree, or overturn a hive and rob it, with thousands of angry bees around him, while he enjoys the combs with perfect *nonchalance*. In confinement he is extravagantly fond of sugar and molasses.

When hunted, the bear is game in every sense of the word; and when set upon by dogs can wipe them out, one after another, by a blow of his strong paws; and it takes an uncommon amount of shooting to put a final quietus to his vitality. Among the many errors that fasten on the public mind through misrepresentations of natural objects is the representation of a bear fight, so often found in our school books, in which a bear is represented as standing upright on his hind feet while a man with a drawn knife is lunging at him. How utterly silly is such a proceeding needs only a trial to verify. If any reader of the FOREST AND STREAM ever attempts such a foolhardy feat he will never read another article from the pen of HOWARD MILLER.

HOW THE OYSTER BUILDS HIS SHELL.

EDITOR FOREST AND STREAM AND ROD AND GUN:

The body of an oyster is a poor, weak thing, apparently incapable of doing anything at all; yet what a marvelous house an oyster builds around his delicate frame! When an oyster is first born he is a very simple, delicate dot, as it were, and yet he is born with his two shells upon him. For some unknown reason he always fixes himself on his flat shell, and being once fixed he begins to grow, but he only grows in summer. Inspect an oyster shell closely, and it will be seen that it is marked with distinct lines. As the rings we observe in the section of the trunk of a tree denote years of growth, so does the marking of an oyster tell us how many years he has passed in his "bed" at the bottom of the sea.

Suppose an oyster was born June 15, 1870, he would go on growing up to the first line we see well marked; he would then stop for the winter. In the summer of 1871 he would more than double his size. In 1872 he would add to this house. In 1873 and 1874 he would again go on building till he was dredged up in the middle of his work in 1875, when he would be five and a half years old. The way in which an oyster builds his shell is a pretty sight. I have watched it frequently. The beard or fringe of an oyster is not only his breathing organ—*i. e.*, his lungs—but his feeding organ, with which he conveys the food to his complicated mouth with his four lips. When the warm, calm days of June come, the oyster opens his shell, and by means of his fringe begins building an additional story to his house. This he does by depositing very fine particles of carbonate of lime, till they at last form a substance as thin as silver paper, and exceedingly fragile; then he adds more and more, till at last the new shell is as hard as the old shell. When oysters are growing in their shells they must be handled very carefully, as the new growth of shell will cut like broken glass, and a wound on a finger from an oyster shell is often very troublesome.

SAN FRANCISCO, May 7, 1877. OSCAR SPITZER.

THE ENGLISH SPARROW.

IS HE A BLESSING OR A NUISANCE?

The sparrow question has from time to time been discussed in these columns at considerable length, and although the friends and enemies of this now abundant bird have wrangled over him so much, no observations have been recorded which have settled the point in dispute.

The following correspondence from the Boston *Transcript* is of great interest as bearing directly upon the point at issue, and as coming from those whose opportunities for observation have been exceptionally good. Dr. Brewer has been from the first, a most ardent defender of our immigrant and has been zealous in saying all that he could in its favor:

BOSTON, April 23, 1877.

John Galvin, Esq., City Forester: Dear Sir—Having taken a deep interest in the introduction into this country of the house sparrow of Europe, and while holding my own convictions, based upon careful observations, as to the value of this bird, and as to the truth or falsehood of the accusations made against them, I take the liberty to ask you a few questions. I do this because I well know that your previous knowledge of the habits of this species, and your daily opportunities of a closer observation of them than any one else can enjoy since their introduction into Boston, give to your evidence an indisputable importance, and that your conclusions far outweigh the crude and hasty opinions of prejudiced persons who have never had the same opportunities as yourself, and whose sweeping assertions have no reliable data for their basis, but are, therefore, untrustworthy and worthless. You have, no doubt, seen those oft-repeated accusations, all of which are contrary to my experience. Desiring to know whether I am right or wrong in my conclusions, I take the liberty of appealing to you, that you may correct me, if I am wrong, and confirm me wherever I may be right.

Was the introduction of the sparrow attended with any marked effect in Boston, in the destruction of insects injurious to the foliage of our ornamental trees on the Common and elsewhere in the city?

Have you any reason to believe that the sparrow is still beneficial to our community in the destruction of injurious insects?

Have you ever known the sparrow to attack any other bird or contend with any species, except when in defence of its own nest or box?

Have you noticed any decrease in the numbers of our native birds that visit our city in the summer season? and if so, of what species? and do you attribute any decrease to known adverse action of the sparrow?

The *Daily Advertiser* recently asserted as a positive, indisputable fact that the sparrow shows a particular animosity against the robin and the bluebird. If this be true, it cannot have escaped your notice. Have you witnessed, or have any of your men reported to you, any instance of said animosity?

In this matter, with all my own warmly-interested feelings in sympathy for and in favor of the sparrow, I desire a full and candid statement of your convictions, drawn from your own observations, whether they be in support of my views or the contrary. Yours, very sincerely,

THOMAS M. BREWER.

CITY HALL, BOSTON, April 23, 1877.

Dr. Thomas M. Brewer: Dear Sir—I am perfectly willing to answer all your questions frankly and fully. You are right in supposing that I am and have been familiar with the habits of the sparrow, even before their introduction. Since their coming to Boston my duties and those of my men have given us constant opportunities to notice what they do. Their introduction into Boston was immediately attended with great benefit, almost beyond all calculation. The trees on the Common were infested with a nasty yellow caterpillar which destroyed the leaves and buds of the elms and other trees; and these insects increased very rapidly, in spite of all that my men could do to destroy them. And, at the South End, the elm trees were eaten every June by swarms of canker worms. Both of these pests have been pretty nearly exterminated, and the trees, many of which would otherwise have died, have been saved.

The sparrow is still of great use. But for it, these insects would return, and other pests would attack the trees. Last spring (1876) the buds of many of the larger elms, as they were opening, were attacked by a great many of a small kind of lice. The sparrows soon found them out and ate them greedily. Consequently the foliage, instead of drying up, as it would have done but for the sparrows, was never finer. My men could do nothing. They had no wings like the sparrow, who could cling to the buds and clean them one by one. Yet for all the good the sparrows were doing, there were some so prejudiced against it and who can see no good, but only harm in everything it does, who raised a hue and cry that the sparrows were eating the buds! Instead of that they were eating the bud-eaters; but instead of being thanked for the good they were doing, they were only abused. I believe that the wages of all my men would not compensate Boston for the loss of the sparrow.

In answer to your third question, I say, without hesitation, the sparrows do not molest or interfere with any other bird. It does not trouble the robin or bluebird, or manifest any animosity against either. All summer long they are together, and it would be impossible for this to be done without my men or I noticing it, yet I never witnessed anything of the kind.

I have not noticed any decrease in the numbers of any kind of bird, but, on the contrary, a very marked increase of various kinds. The robins were more numerous on the Common last summer than ever before. The little chip-sparrow has become very numerous, and seems to be very fond of the sparrow, often feeding on the same bit of bread. The small martins have very greatly increased in numbers on account of the number of boxes. These they have taken possession of whenever they want one, and drive the sparrows away. Before the sparrows came there were no blue-birds at all. Now they are becoming quite common, and often treat the sparrows very badly, taking away from them their boxes, and breaking up their nests. The sparrows of course show fight, but the blue-birds are always too strong for them. The writer in the *Advertiser*, in my opinion, is all wrong.

I am all in favor of the sparrows. I believe that they do no harm, but a great deal of good. Thousands of dollars would not pay the city for their loss, and I would be very sorry to see anything done to prejudice people against them or permit their destruction.

[Signed] JOHN GALVIN, Superintendent.

On the other hand testimony to the sparrow's idleness and general incapacity in what is supposed to be his particular department, comes to us from Indiana in the following note:

INDIANAPOLIS, May 14, 1877.

EDITOR FOREST AND STREAM:

A few years ago the English sparrow was introduced here for the purpose of "worming" and "bugging."

From less than a hundred they are now become thousands, and still the caterpillar swings its nest on the elm and pear tree. The "miller" flits in undiminished numbers about the evening lamp. In fact, it is believed that these "foreigners" are mere scavengers, alighting upon the streets and eating offal with our common pigeons. And more than this, it is said that these belligerent little fellows have driven away most of our native birds.

Will your readers in Boston, New York, Philadelphia and other Eastern cities please give us, through your paper, their observations in regard to these pirates? If they corroborate these statements, I am in favor of utilizing these usurpers as they do in France, where they are sold by the peck for pot-pie. ARROW.

We ask earnestly for further evidence on this subject, but would remind our correspondents that observations are what are most necessary for the settlement of the question, and that theories and opinions are here of but little value.

Our correspondent, W. W., of Brooklyn, in an article in the *Argus*, has recently discussed very pleasantly certain facts and fancies regarding the sparrow. We know the writer to be a close and kindly observer, and there is a value and sincerity in his hints. In one respect his statements vary largely with the usual opinions that have been wrought into a serious indictment against the sparrows. He, too, insists that they do not drive away other birds, and gives instances within his own knowledge where they have lived pleasantly in mixed neighborhoods. We regret that the article is so long that we cannot reprodnce it here.

FRESH AND SALT WATER EELS.

EAST BAY, Mich., May 17, 1877.

EDITOR FOREST AND STREAM AND GUN AND ROD:

An opinion appears to prevail regarding the habitat of the common eel, and from it I am led to believe that they are only found in waters in direct and close proximity to the sea, or rather where they may return to salt or brackish waters for the purpose of spawning. These ideas are put forth in one of the New York State reports on Fisheries. That I know what an eel is when I see it I will only aver that I was one of those boys who went "bobbing for eels" nearly twenty years ago. Since then I have found eels in the Grand River—a stream which empties into Lake Erie from the Canada side near Port Colborne. They were taken at Brantford in the old canal just below the lock gates, this being some sixty or seventy miles above the Welland Canal. Surely, they did not return back to salt water either by the Welland Canal or the Niagara River. I have also taken five real eels from the mud in winter on the Conejos River, one of the sources of the Rio Grande, this being upwards of a thousand miles from the Gulf. I know of others being taken near there in summer at the mouth of Rio La Jara. While constructing the trout ponds of Mr. Baker in West Denver, Colorado, I saw one specimen in what is known as Smith's mill ditch, the water supply of which is taken from the Platte a few miles above Denver. This eel certainly was a long way from home if said home was in salt water. Very respectfully, GORDON LAND.

WET WEATHER BIRDS, ETC.

GAINSVILLE, Tex., May 18, 1877.

Like your London correspondent ("Inquirer," London, England), I am puzzled to know what your correspondent from Houston, Texas, meant by "wet weather birds," mentioned in your issue of February 8, 1877. From the habit of McCown's bunting (*Plectrophanes McCowni*) frequenting flat lands in immense numbers, I have surmised that it might be the bird refered to. While collecting eggs this season three instances of ants destroying eggs have been noted. In one instance the bird was incubating while the ants were eating the albumen which was escaping through a hole in the bottom of the nest. The other nests had each a cow-bird's egg, and were likely abandoned. Is this common? G. H. RAGSDALE.

BIRDS OF THE COTEAU DES PRAIRIES OF EASTERN DAKOTA.

BY CHARLES E. M'CHESNEY, M. D., U. S. A.

(*Concluded.*)

Fuligula valisineria. Canvas-Back Duck. This duck arrives April 15, and I think it probable that a very few remain here and breed, but the greater majority continue on their northern flight with little more than a passing notice of this region at this season. Returns in the early part of September, and gradually increases in numbers until the middle of October. Takes its final departure on October 30.

Bucephala clangula. Golden Eye. Arrives April 15, and soon passes on to the north about the 1st of October. Returns in considerable numbers and remains until Oct. 30.

Bucephala islandica. Barrow's Golden Eye. Is seen here for a few days from April 15 in considerable numbers.

Bucephala albeola. Buffle-Head Duck. Puts in his appearance April 9, and in a few days departs. Returns about the middle of September to remain until October 22, during which time it is quite abundant.

Erismatura rubida. Ruddy Duck. A few specimens of this duck in full plumage have been taken here during June. It is, however, rare.

Mergus merganser. Merganser Duck. At any time from April 10 until October 30 this duck can be found here in large numbers; breeds here.

Mergus cucullatus. Hooded Merganser. Is seen for about a week from April 10, and then passes north, to return October 1 in small numbers, and disappears October 31.

Pelecanus trachyrhynchus. White Pelican. Arrives April 20, and the greater majority pass north. A considerable number, however, spend the summer here. During the fall migrations it again becomes numerous. Departs October 30.

Graculus dilophus. Double-Crested Cormorant. Is found here from April 18 until October 30 in considerable numbers; breeds here.

Larus argentatus var. *Smithsonianus.* Herring Gull. Is found here from April 8 until October 30 in large numbers; breeds here.

Larus (Chroicocephalus) atricilla. Laughing Gull. This gull makes its appearance April 8 and remains until October 30. Is very numerous; breeds here.

Larus (Croicocephalus) Franklinii. Franklin's Rosy Gull. Arrives here April 8, and remains here until Oct. 28. Not quite so numerous as the preceding; breeds here.

Sterna forsteri. Forster's Tern. Arrives April 20, and remains until October 1. Very abundant; breeds here.

Sterna hirundo. Common Tern. Is found here in large numbers from April 20 until Oct. 1; breeds here.

Hydrochelidon lariformis. Black Tern. Is very abundant from April 20 until October 1; breeds here.

Colymbus torquatus. Great Northern Loon. Is seen here in small numbers from October 1 to October 31.

Podilymbus podiceps. Pied-Billed Grebe. Arrives May 1 and remains until October 31. Breeds here; is abundant.

THE FAUNA OF MICHIGAN.

BY ARCHER.

(*Continued.*)

FAMILY PARIDÆ.

GENUS LOPHOPHANES.

Lophophanes bicolor. Bonap. Black fronted tifmouse. An occasional visitant. In 1876 were plentiful in Eaton and Barry Counties.

GENUS PARUS.

Parus atricapillus. Linn. Black capped titmouse, Eastern Counties.

Parus carolinensis. Aud. Southern or Carolina titmouse.

Parus hudsonicus. Forst. Hudson's Bay or brown capped chickadee. Found abundantly in Upper Peninsula and around Mackinac. More rare in Lower Peninsula. Occasionally seen in St. Clair and Lapin Counties; possibly further South.

GENUS SITTA.

Sitta carolinensis. Lath. White-bellied nuthatch.

Sitta canadensis. Linn. Red-bellied nuthatch.

FAMILY CERTHIDÆ

GENUS CERTHIA.

Certhia americana. Bonap. Brown creeper.

FAMILY TROGLODYTIDÆ.

GENUS THRYOTHORUS.

Troyothorus ludovicianus. Bonap. Great Carolina wren.

Thryothorus bewickii. Bonap. Long-tailed house wren. Extremely rare. A single specimen from Niles, Michigan.

GENUS TROGLODYTES.

Troglodytes ædon. Vieill. House wren.

Troglodytes americanus. Aud. Wood Wren. Obtained at Gross Isle, Wayne County. Prof. Fox.

Troglodytes hyemalis. Vieill. Winter wren.

GENUS CISTOTHORUS.

Cistothorus stellaris Cab. Short-billed marsh wren. Seems to be confined to western part of State.

Cistothorus palustris. Baird. Long-billed marsh wren

FAMILY MOTACILLIDÆ.

GENUS ANTHUS.

Anthus ludovicianus. Licht. Titlark. American Pipit.

FAMILY SYLVICOLIDÆ.

GENUS TUNIOTILTA.

Tuniotilta varia. Vieill. Black and white creeping warbler.

GENUS HELMITHERUS.

Helmitherus vermivorus. Bonap. Worm-eating swamp warbler. Rare visitant to southern counties.

GENUS HELMINTHOPHAGA.

Helminthophaga chrysoptera. Cab. Golden-winged warbler.

Helminthophaga rubricapilla. Baird. Blue-winged yellow warbler. A frequent visitor to Southern Michigan. Has been seen as far North as Genessee County.

Helminthophaga ruficapilla. Baird. Nashville warbler.

Helminthophaga celata. Baird. Orange-crowned warbler.

Helminthophaga peregrina. Cab. Tennessee warbler.

GENUS PARULA.

Parula americana. Bonap. Blue yellow-backed warbler.

GENUS PERISSOGLOSSA.

Perissoglossa tigrina. Baird. Cape May warbler. Very rare.

GENUS DENDROICA.

Dendroica æstiva. Baird. Yellow warbler.

Dendroica coronata. Gray. Yellow-rumped warbler.

Dendroica maculosa. Baird. Black and yellow warbler.

Dendroica cærulea. Baird. White-throated blue warbler.

Dendroica blackburniæ. Baird. Orange-throated or Blackburn's warbler.

Dendroica dominica Baird. Yellow-throated gray warbler. A single specimen of *D. dominica* has been taken within the limits of the State.

Dendroica Pensylvania Baird. Chestnut-sided warbler.

Dendroica striata. Baird. Black polled warbler.

Dendroica castanea. Baird. Bay-breasted warbler.

Dendroica cærulescens. Baird. Black-throated blue warbler. Two specimens, St. Clair County.

Dendroica virens. Baird. Black-throated green warbler.

Dendroica pinus. Baird. Pine creeping warbler.

Dendroica kirtlandi. Baird. Kirtland's warbler. This is doubtful. I catalogue it on the authority of Rev. H. Charlier.

Dendroica palmarum. Baird. Yellow red-polled warbler.

Dendroica discolor. Baird. Prairie warbler.

GENUS SCIURUS.

Sciurus aurocapillus. Swain. Golden-crowned thrush.

Sciurus noveboracensis. Nutt. Small-billed water thrush.

Sciurus ludovicianus. Bonap. Louisiana water thrush.

GENUS OPORORNIS.

Oporornis agilis. Baird. Connecticut warbler. Rare.

Oporornis formosus. Baird. Kentucky warbler. Rare.

GENUS GEOTHLYPIS.

Geothlypis trichas. Cabau. Maryland yellow throat.

Geothlypis philadelphia. Baird. Mourning warbler.

GENUS ICTERIA.

Icteria virens Baird. Yellow-breasted chat. I give this on the authority of the late Dr. Willson.

GENUS MYIODIOCTES.

Myiodioctes mitratus. Aud. Hooded warbler.

Myiodioctes pusillus. Bonap. Green black-capped fly-catcher.

Myiodioctes canadensis. Aud. Canada fly-catcher.

GENUS SETOPHAGA.

Setophaga ruticilla. Swain. American red-start.

FAMILY HIRUNDINIDÆ.

GENUS PROGNE.

Progne subis. Baird. Purple martin.

GENUS PETROCHELIDON.

Petrochelidon lunifrons. Baird. Cliff swallow; eave swallow.

GENUS HIRUNDO.

Hirundo horreorum. Barton. Barn swallow.

Hirundo bicolor. Vieill. White-bellied swallow.

GENUS STELGIDOPTERYX.

Stelydopteryx serripennis. Baird. Rough-winged swallow.

GENUS COTYLE.

Cotyle riparia. Boie. Bank swallow, sand martin.

(*To be continued.*)

A GAME BIRD INDEED.

PHILADELPHIA, May 7, 1877.

EDITOR FOREST AND STREAM:

While Mr. Stiles, of Cape May County, N. J., was passing through a swamp recently, he observed two eagles fighting in the air, and seeing them fall to the ground apparently locked together, he ran to the spot. One of the eagles having succeeded in escaping from the claws of the other, took to his wings, but the other attacked Stiles savagely, who, arming himself with a club, after some difficulty felled it to the ground. Mr. Stiles thinks that if he had had a cord with him he could have taken it alive, but as he had no means of securing it, he was forced to kill it. It was sent to me. The eagle is now at Mr. John Krister's, who says that it has the largest talons he ever saw on a bald head. W. L. ABBOTT.

ACCLIMATING FOREIGN BIRDS.—At the last meeting of the American Acclimatization Society, on Friday, Messrs. Eugene Schieffelin and John Avery were appointed a committee to purchase foreign birds and animals. The society has already imported a number of English starlings and Japanese nightingales, which will soon be liberated in Central Park. They have also bought a lot of English quail, which will be turned out in Blooming Grove Park, Pike County, Penn. They intend to import a number of English hares for the same place.

ARRIVALS AT CENTRAL PARK MENAGERIE FOR WEEK ENDING MAY 19.—One robin, *Turdus migratorius;* presented by Mr. Edward Kiernan, New York city. Two red-tailed hawks, *Buteo borealis;* presented by Mr. R. C. Scrimgeour, New York city. One gray squirrel, *Sciurus carolinensis;* presented by Mr. J. L. Edmonds, New York city. One Southdown ram, *Ovis aries;* presented by Mr. Lewis G. Morris, New York city. One Passerine parrakeet, *Psittacula passerina;* presented by Mrs. Karrel, Yonkers. Two California quail, *Lophortyx californicus;* presented by Mr. S. Davis, New York city. Four prairie wolves, *Canis latrans;* bred in the Menagerie. W. A. CONKLIN, Director.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR WEEK ENDING MAY 22.—Two beavers, *Castor canadensis,* purchased; one red-tailed buzzard, *Buteo borealis,* presented; one common pigeon, presented; one sparrow hawk, *Tinnunculus sparverius,* presented; eight striped gophers, *Spermophilus tridecem-lineatus,* born in Garden; one reed bird, *Dolichonyx oryzivorus,* presented.

The Kennel.

CANINE THERAPEUTICS AND PATHOLOGY.—No. I.

BY ARCHER.

THERAPEUTICS, *Therapeia, Therapeutica,* from *Therapeua,* "I cure." By the term is meant the application of remedies for the cure, alleviation or prevention of disease. Taken alone, and in its widest sense, it includes not only medicinal agents but many surgical operations. In connection with materia medica, the meaning of this term is limited to the application of medicinal substances for the purposes above indicated. It is with hesitancy that I attempt this series of articles, for if taken in its fullest sense Therapeutics embraces so wide a range of subjects that it is almost impossible to bestow a due consideration on the whole, and it is very evident that a treatise on the science in its more limited sense, namely, that of including the principal articles of the materia medica alone, as applied to canines, would be very incomplete and defective. In these chapters, therefore, some of the most ordinary remedial agents, which properly belong to surgery, as blood letting, issues and setons, will receive notice, as being inseparably connected with the former class of Therapeutic agents.

Therapeutics and pathology are so intimately connected with each other that unless the latter be well understood, theoretically as well as practically, it is almost impossible to be a successful therapeutist, hence I shall not not neglect that branch. It is true that occasional empirical practice may succeed in effecting cures, but he who alone is well instructed in the science of pathology can administer remedies with a hope of anything like uniform or permanent success. By the term pathology is meant a thorough knowledge of disease, its causes, characteristic signs and symptoms, the morbid changes which take place in the several organs of the body, and an intimate acquaintance with morbid anatomy. But this does not comprise all that is required to form a sound therapeutist. He should be thoroughly acquainted with the medicines which he employs, their natural history, their chemical composition, their physiological effects on the healthy animal, their *modus operandi* in morbid conditions, their effects in over-doses, and their manner of producing death. To this he should add a knowledge of their indications and contra-indications, as well as of those combinations which diminish or increase the medicinal activity of the various drugs. Such an amount of knowledge is only to be obtained by long study, experience, and close observation.

Notwithstanding the rapid strides in human pathology which have been made of late years by the aid of chemistry and the microscope, but little progress has been made in the science as applied to our canine friends, and that little is largely the results of experiments made in behalf of the former; hence many points yet remain involved in deep obscurity. Of these hydrophobia may be taken as a prominent example. When we have ascertained more precisely the seat and nature of how obscure diseases, which can only be done by more extended anatomical researches, and when the *modus operandi* of medicines on the canine frame is more thoroughly understood we shall doubtless be enabled, by attacking the cause of the disease with appropriate remedies, to at once eradicate it from the system; but in the obscurity which at present hangs over our knowledge of the history of various diseases, we must, in many instances, content ourselves with playing, if I may so express it, a secondary part by attacking the symptoms which present themselves in the course of a disease; and he will be the most successful who does not allow the smallest of these symptoms to pass unheeded but directs his efforts to their removal and alleviation. It is not only on the bold, prominent symptoms which arrest our notice, that attention should be bestowed, but it is upon the small, perhaps insignificant symptoms that the experienced will seize, and from which he will oftimes have to draw deductions, to serve as a guide in regulating his subsequent treatment of the case. Such minor symptoms must be sought for or they never will be discovered; indeed, it should be laid down as a rule in practice that there is no such thing as a trivial symptom, for even the smallest may be fraught with deep importance to the experienced eye of the intelligent prescriber. Paradoxical as it may sound, it is undoubtedly true, that in some diseases the very absence of an ordinary symptom is of itself sufficient to constitute one. These observations are not intended in any degree to detract from the vast importance of endeavoring to ascertain, by close and vigilant examination, the source and origin of a disease which we are called upon to treat. Without an accurate knowledge of these points we shall fail to effect a radical cure, however successful our efforts may prove in alleviating for a time the severity of the symptoms.

A consideration of the diversified causes in which certain diseases have their origin should teach us the necessity of minutely examining into each individual case, and of adapting our remedies to the cause, as far as that can be ascertained. It should, further, teach us to receive with great circumspection remedies which from time to time are paraded as specifics, or "almost specifics." The practice too, of treating a disease according to its name without minutely examining into each particular case and adapting the appropriate remedies to the several indications which present themselves, can not be too strongly reprobated. In prescribing medicines for the removal of disease it should ever be borne in mind that nature tends, in the majority of cases, to repair injuries inflicted upon the body, and to remove morbid or deranged conditions of the system. This instinctive healing power—the "*Vis Medicatrix Naturæ*"—is undoubtedly capable, when aided by a judicious system of hygiene, of effecting the cure of disease, particularly when it is of mild character, without the assistance of any medicine whatever. When consequently a disease presents itself for treatment, in which hygienic means alone offer a fair prospect of success, they should always be employed in preference to medicines, it being always best to restore health by the most simple means.

The credit which is really due to this natural healing tendency is too often ascribed to some drug which the patient may happen to be taking at the period of improvement or recovery, and thus many medicinal substances become endowed with reputed powers which they really do not possess. It does not necessarily follow because a case recovers under a certain remedy, that recovery is due to that agent. In illustration of the fallacy of any such deductions I may mention a case of my own: Having seen it mentioned in the FOREST AND STREAM that areca nut was a certain anthelmintic, I determined to give it a trial at the first opportunity. Shortly afterwards a friend applied to me to examine a favorite setter and prescribe. Giving him some powders of the nut I gave the necessary directions as to their administration. A day later, having occasion to visit one of his family professionally, I asked regarding the dog, and was informed the remedy had acted like a charm, and at the termination of the call we passed out to the stable to see the animal. Inquiring as to how he administered the powder, my friend answered that he had not given it himself, but had delegated the administration to his hired help. On being called the latter ackdowledged that the medicine had not been given at all, it having been forgotten. Now observe, had the medicine been taken as we supposed, and intestinal worms passed a few hours later, as was the case, what would have been more natural than to have ascribed the benefit to the remedy employed? whilst, in fact, it was entirely due to the unassisted powers of nature. It is necessary that medicine should uniformly, in a *large number* of cases, produce a certain amount of benefit before we are warranted in attributing to it the power of curing or alleviating a disease, or in other words in endowing it with the character of a valuable remedy.

In connection with this subject it may prove neither useless nor uninstructive to my readers to offer a few remarks on the use and abuse of new medicines. Whenever a hitherto unknown remedy is brought prominently forward the periodical journals of the day overflow with accounts of the wonderful cures performed by its means. It would almost seem that the grand panacea of the old philosophers had at last been discovered; and if we are to believe it to be endowed with all the wonderful and varied powers which its advocates ascribe to it, we might with one swoop consign all the old articles of the Materia Medica to the sea of oblivion. Novelty is always pleasing, even in medicine, and the nervous or hysterical woman who reads or is told of the wonders effected by some newly discovered medicine, is seized with a desire to test its virtues. Her faith is increased by the report of the unexampled cures of cases similar to her own; and the medical man himself, not uninfluenced by the pleasure of novelty, without intentionally desiring to deceive, holds out a hope to the patient that a remedy has at last been discovered, which promises to be more successful than any which had been previously administered. Thus given by a sanguine medical man to a confiding patient, particularly when the latter is laboring under a nervous or hysterical affection (a class of maladies much more common than is usually imagined), it is not very surprising if improvement take place, and the supposed cure is, in turn, added to swell the list of wonderful successes; not that the remedy, perhaps, is devoid of medicinal power in certain cases; indeed, it may be a very useful medicine, but its capability of curing all diseases, many of them essentially differing in character, should be received, to say the least of it, with extreme caution. One of the most striking illustrations of modern folly is the *Blue Glass Mania,* and from the window in front of which I am writing I count no less than five sashes of "Pleasonton's humbug," and from which the owners are deriving benefit; and no wonder—four of the invalids are hysterical and the fifth always derives benefit from every new thing that comes out, and yet is always ailing. But I have forgotten that canines and not hysterical human beings form the subject of my article; and, thank Heaven! we are not troubled with hysterical dogs, nor do they demand the chemical affinities (which would puzzle a Bacon, a Liebig or a Faraday to elucidate, but does not the modern journalist and reporter) of blue glass. From this it is not to be understood that I am opposed to the introduction of new remedies; on the contrary, I believe that he who discovers any new means, medicinal or otherwise, for the alleviation or cure of disease, whether in man or beast, and states the same to his fellow-laborers in the field of medicine in an open, fair and honorable manner, deserves the best thanks of the profession and the public. I would also urge that every medicine which holds out a fair promise, either from its chemical composition or from its known physiological effects, or which emanates from a respectable source, should receive a fair trial; but it should not be received with credulous simplicity, be employed in diseases of extremely diversified character, nor be expected to act in turn as a tonic, depressant, stimulant, sedative and diuretic. Yet such is the way that a new medicine is too often received, and when it fails to fulfill all the extravagant hopes which have been entertained of it, without further ceremony it is thrown aside as a failure. In this manner I am convinced many really useful medicines have been discarded. Being satisfied that the medicine in question possesses real medicinal virtues, it should be employed cautiously, noting with care its physiological effects and the amount of benefit derived in each case. When it has succeded, in a large number of instances, in producing uniform benefit, it may be classed as an established remedy. Nothing is more fallacious than to call a medicine a remedy for a disease on the strength of one or two occasional successful terminations which have taken place under its use—terminations, perhaps, due solely to *Vis Medicatrix Naturæ.*

P. S.—I see in your issue that a correspondent lost a valuable dog from a dose of tincture of cantharides. *I care not who says to the contrary, the practice of administering the drug in order to anticipate nature is pernicious.* Cantharides is very uncertain as a medicine, and when given in doses sufficient to produce aphrodisia (sexual excitement) is almost certain to act as an irritant poison, causing inflammation of the intestinal canal, of the urinary and genital organs, and engorgement of brain with blood, and consequent death.

THE SYRACUSE BENCH SHOW.—Judging from the reports we receive from Mr. Lincoln, who is now installed at Syracuse in his usual energetic prosecution of its details, the dog show to be held in connection with the annual Convention of the State Sportsmen's Association promises to be a very brilliant affair. With the exception of the Hippodrome, no place, says Mr. Lincoln, has he seen which is so well adapted for the purposes as the Armory at Syracuse. The prize list, which we have before printed, is on a very liberal scale, the amount given in each of the sporting classes being $25 for dogs and bitches respectively. The date of holding the show has now been definitively fixed at the 19th, 20th, 21st, and 22d of June, just one day too long for the health or comfort of the dogs. The rules and regulations are the same as those which pertained to the bench show in this city. The special prize list is not yet out, but three handsome prizes, valued at $50 each, have already been donated by the Wesminster Kennel Club, to be awarded to the best English, Irish, and Gordon setter dogs or bitches. Entries close on June 14, and must be addressed to Charles Lincoln, Superintendent, Syracuse, N. Y.

TENNESSEE STATE SPORTSMEN'S CONVENTION—ANOTHER DOG SHOW.—The Tennessee State Sportsmen's Association has decided to give, as the champion stakes for the fall dog exhibition, for braces and single, $250 to the first, $150 to the second, and $100 to the third. In the pup stakes, $150 will be given to the owner of the first, $100 to the second, and $50 to the third. The shooting tournament will occur during the last three days of the week, three matches being had each day.

DOG POISONERS.—A correspondent writes us from Miamus, as follows:

The dog poisoners are at work here. Within the last ten days five as good hounds as ever ran a fox have been poisoned, two owned by Silas Morrell, two by Lew Morrell, and one by Theodore Morrell. Is there any law that protects owners of dogs in this State? The dogs were all kept in kennels and chained, near the house of the owners. Whoever poisoned them was obliged to come on the owner's land. Hoping you will throw a hot shot at the dog poisoners in your paper, and confer a favor on a fellow sportsman, I remain yours, F. G.

If the dog poisoners could be caught in the act, or even if there could be sufficient evidence procured to convict them of the poisoning, it would be sufficient. It is an exploded idea that dogs are not property, and can be destroyed at will. The penalty for killing a dog would be as severe in proportion to the value of the animal as for killing a horse, a cow, or any domestic animal.

PERSONAL.—Mr. Geo. De Forrest Grant, of the Westminster Kennel Club, arrived from Europe on Saturday last by the steamer City of Berlin, after an extended tour through India. While in England Mr. Grant looked at many fine pointers, and the kennels of the club will be reinforced within a few weeks by some of the best blood in England.

THE HOME FOR DOGS.—On the last day of the dog show the committee of the Westminster Kennel Club found themselves in a rather embarrassing position. They were notified that their lease expired at 12 o'clock on Thursday night, and yet there was no opportunity of removing their dogs by that time. Under these circumstances an extra day was inevitable; but to relieve themselves of all suspicion of a desire to make money out of it, it was decided to donate the extra day's net proceeds to the Society for the Prevention of Cruelty to Animals. Hence the correspondence which we print below:

WESTMINSTER KENNEL CLUB, New York, May 21, 1877.

HENRY BERG:

My Dear Sir: At a special meeting of the Westminster Kennel Club, it was resolved that the net proceeds accruing to the club from admissions to the bench show of dogs, held at Gilmore's Garden, on May 11, should be donated to the Society for the Prevention of Cruelty to Animals as a nucleus for a fund to provide a home and hospital for lost and sick dogs. As President of the Westminster Kennel Club I have much pleasure in handing you herewith the check of the treasurer of the club for $1,295.25, as per following statement:

Gross receipts, Friday, May 11	$2,789 50
Paid attendants, etc	293 00
Balance	$2,596 50
Rent of the Garden for that day, as per agreement of Mr. Shook—viz., one half of net proceeds	$1,295 25
Balance	$1,295 25

Trusting that this small amount will be sufficiently increased by further donations, so as to enable you speedily to carry out the object for which it is intended, I remain, with respect and regard,

ALEX. S. WEBB.

In his reply acknowledging the check Mr. Berg says:

This society has long regarded the subject of the removal from the streets of vagrant and miserable dogs as one worthy of the intelligent legislation of the city authorities, as well as the tender consideration of the public, and it has always held itself ready to co-operate with all humane and reasonable measures in that direction. But, believing that no dignified and effectual means have hitherto been adopted, it has preferred to hold itself aloof therefrom, in the hope that at no distant day the City Government would approve of the plan repeatedly proposed by this society for the decent abatement of the evil. In a moral point of view alone, the community cannot afford to tolerate a cruel system of slaughter of any dumb creature, more especially the faithful and companionable dog. It is best that the authorities should entertain this subject also with a reference to its permanency; and it is not a little surprising that, while evils of less magnitude have appropriate bureaus of administration, this one has been left to a fitful and unavailing procedure.

The sum which you have so generously appropriated for the founding of a "protective home," shall be safely guarded until, through the liberality of the friends of that loyal race of animals whose improvement it is the province of your successful club to cultivate, the amount shall have attained proportions adequate to the realization of the wish which inspired the donation. It is to be hoped that our able and excellent Chief Magistrate, Mayor Ely, will view with favor the addition of the already respectable sum realized from licences, etc., to that which you have provided, and, along with what may be added thereto by a sympathising public, hasten the approach of a better state of things than has yet prevailed.

—The Rev. J. Cumming Macdona returned to England by the steamer Celtic, of the White Star Line, on Saturday last. The evening before his departure a farewell dinner was tendered him at Delmonico's, by the Westminster Kennel Club—an event so perfect in its details, and so thoroughly enjoyable, that it will long be remembered by every participant. G. De Landre Macdona, Esq., and the Rev. Victor Macdona, sailed on Tuesday in the steamer Wisconsin, of the Williams & Guion Line. We wish those gentlemen prosperous voyages, and trust that we shall have the pleasure of welcoming them to our shores again next year.

—Mr. E. H. Lathrop, of Springfield, Mass., advertises in another column a fine pointer for sale. Mr. L. sells this dog in consequence only of his kennel having been increased by the receipt of a beautiful bitch puppy, by Boss out of Cosey, the celebrated strain of our friend Ethan Allen, of Pomfret Centre, Conn. Mr. Lathrop has also been the fortunate recipient of a puppy by the field trial winner Drake out of Mr. George Delano's Diana.

VALUABLE INFORMATION.—*A New Work on the Dog.*—From an examination of the proof sheets of Mr. Hallocks' forthcoming book, entitled the SPORTSMAN'S GAZETTEER AND GENERAL GUIDE, we are convinced and feel bound to assert that that portion relating to the "*Care and Training of Dogs; their Diseases and Remedies*" will be perhaps the most useful to the sportsman and the most valued. With that thoroughness, care, accuracy, and completeness which characterize all Mr. Hallock's literary and editorial efforts, he has enlisted the aid of eminent physicians and physicists who are thoroughly versed in canine thereapeutics and training; and the result is shown in a work of instruction which must supersede all old and long time standard books on the dog, now rendered obsolete by modern study and information. That portion of the work relating to "The Care, Training and Management of Dogs" comprises the following sub-divisions, namely:—

Choosing a Dog; the Kennel; Feeding; Feeding Puppies; Age; Muzzling Dogs; Docking Tails; Spaying; Breaking Dogs; Backing; Retrieving; Flushing; Raking; the Puzzle Peg; the Force Collar; Apparent Want of Nose; Gun Shyness; Wide Ranging; the Check Cord; the Whip—its Use and Abuse; Breeding; Throwing Back; Transmissible Faults, Defects, Imperfections, and Diseases; In-breeding; Breeding at Puberty; Breeding for Kind; Plurality of Sires.

The chapters on Canine Therapeutics are equally full, intelligent, and important to the student and breeder. It is subdivided as follows:—

Thread Worms; Tape Worms—three varieties; Inflammation of the Bowels; Diarehœa and Dysentery; Colic; Inflamed Eyes; Opthalmitis; Cataract; Shedding Hair; Mange; Scabies; Ring Worm; Alteration of Secretions; Purpura Canina; Pneumonia; Distemper; Lung Fever; Splenic Fever; Epilepsy; Convulsions; Chorea; Hydrophobia; Canker; Coughs; Hernia; Tumors; Bronchocele; Vermin; Tender Feet; Gnawing the Feet; Emetics; Disinfectants; Seventy-one Prescriptions and Formulas; Scale of Doses of Dogs of Different Ages.

The portion of the *Gazetteer* devoted to dogs alone comprises one hundred and twenty-five pages.

In Mr. Hallock's book are given the latest researches in pathology, and the endeavor has been made to bring the treatment up to a level with the present progress of medicine. All existing works on diseases of the dog are behind the times. Mayhew is of no value whatever. His modes of treatment and deductions are things of more than a century since, and he shows himself to be completely ignorant of the first principles of pathology. Youatt and Blaine are every way his superiors, and the former is first. No progress seems to have been made in veterinary science as applied to canines for the last hundred years. Almost everything in Mayhew is found in an old work, entitled "A Sportsman's Dictionary," published in Edinburgh, 1769. Pathologists have done more for the dog than has ever been supposed, in their vivisections, and it is only when all the deductions are collated that they become valuable. These appear to have been put into practical use, so far as possible, in this book. The literature of the subject has been thoroughly ransacked. At the same time technical terms have been avoided as far as possible. We are pleased to notice the extreme caution used in recommending medicines and their application, and the use of cold effusions in diseases of an inflammatory character are scarcely treated upon, for the reason that they are dangerous for non-medical hands; and this book is not written for doctors, but for the general information of those whose knowledge of therapeutics is supposed to be limited.

—The Westminster Kennel Club has adopted a uniform dress coat, somewhat similar to that of the English Kennel Club, and which was worn by the Messrs. Macdona at various entertainments in this city.

—Mr. Robert Neville, of Upperville, Laquier County, Va., writes us that his imported red Irish setter bitch Norah, by Basto, out of Ruby, whelped three puppies to Gen. Hilliard's Palmerston, on May 22.

Messrs. J. & R. M. Nesbitt, of Cambridge, Mass., who recently bought Rock from the St. Louis Kennel Club, have now purchased the field trial bitch Dora, originally imported by Luther Adams, Esq., from the same club.

NAMES CLAIMED.—The Westminster Kennel Club claim the names of Regalia for a lemon and white pointer bitch, by Sensation, out of Lilly, and Minnie, Dutchess and Vixen for lemon and white pointer bitches, by Sensation, out of Whisky.

LARGE LITTER.—A correspondent writes us from Norwich, Conn., that Mr. R. E. Ringer's pointer bitch recently dropped a litter of eighteen puppies, five dogs and thirteen bitches. Next!

"INSTINCT OR REASON."

EDITOR FOREST AND STREAM:

Last week at a meeting of the Hallock Sportsmen's Association, Mr. D. P. Smith, one of the members, was accompanied by his setter dog Nep. About 10 o'clock the dog, who had been sleeping quietly at his master's feet, arose and walked several times, rather uneasily, between his master and the door as if he desired to go; then turning his attention to the hats on a table he snuffed them over, apparently not finding what he wanted, then walking to the door of an adjoining room, on the knob of which Mr. Smith's hat hung, he, after smelling of the hat, took it carefully in his mouth and delivered it into Mr. Smith's hand, the pleased look on his face and the wag of his tail plainly showing that Nep wished to be excused. Mr. Jno. W. Knight, another member present, related the following story of a dog he owned: The dog was a large Newfoundland, weighing 145 pounds, and was very much attached to a diminutive black and tan terrier belonging to a physician in town. The terrier was poisoned and the body taken to a small piece of woods near the house of Mr. Knight. Soon after the death of the black and tan, a son of Mr. Knight with other lads, accompanied by the Newfoundland, Rover, were wandering through the said woods and came across the remains of the terrier. Rover seemed to evince as much grief as a dog could at finding his small friend and protege had departed this life, and with difficulty he was called on by the boys, and soon disappeared only to return after a time with his face and legs showing traces of moist black earth. Thinking he had been digging for a wood chuck or other small animal the boys returned and found the body of the little dog gone, but the marks of Rover's paws in the soft earth; and a small mound newly made, solved the mystery, for under a slight covering of the soil was found the body of the terrier. Rover had performed the last sad office for his little friend, and had been grave digger as well as chief mourner. Mr. Knight has since had to perform a like office for faithful old Rover. Is it instinct or reason? *Non nostrum est tantas componere lites.* GLENS FALLS.

DETROIT, Mich., May 21, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

On the 12th inst., I paid a visit to my friend George Carpenter, of Owasso, Mich., and to take a look at the setters that he has been handling during the early part of this season. The first on his list is Katy, property of J. N. Dodge, of this city. She is lemon and white, and out of Wm. Mason's Belle by Leicester. She is rather under size, but is a clipper in the field. Mr. Carpenter gave her a whirl while I was there, and I tell you she is a perfect race horse. Second on his list is the blue Belton Maud, owned by J. H. Canniff, of this city. She is now in whelp by Carlowitz, and is a very handsome animal. Third on his list is the blue Belton Mell, the property of L. F. Whitman, of this city. She is in whelp by Rob Roy. Mr. Carpenter has thoroughly handled Maud and Mell during the time they have been carrying their whelps. Fourth and last on the list (but not the least) is his black and tan setter Fred. He and Katy were turned out in a field together, and he works beautifully. He is not very fast, but is fast enough, and works his ground very carefully. We sat on a fence to take a rest while he ordered the dogs to work the field, which they did finely.

On May 15th L. F. Whitman's blue Belton Mell whelped 7, 4 dogs and 3 bitches, all black and white. Two of them are black, white and tan, and marked the same as their sire, Rob Roy. One of the whelps has since died. The remaining 6 are getting along finely. John Davidson, the veteran sportsman of Monroe, paid us a flying visit on the 24th inst. The boys say he looks as happy as of yore, but does not look as fleshy as usual. C. E. Mason, of this city, while in the woods near Tawas, M., a few days since, killed a black bear.

MANN.

SYRACUSE, N. Y., May 15, 1877.

EDITOR FOREST AND STREAM:

I send you two items about the Syracuse Dog Show. The prize lists and forms of entry are now ready, and can be had on application to me. The progress of the show is going on very satisfactorily; all the leading railroads have been written to, asking them to convey dogs free of charge to and from the show, when accompanied by their owners. The State Armory will be splendidly fitted up for the show; the benches will be raised 30 inches from the ground, and the stalls made from clean *dressed* lumber. A space of three feet will be allowed for each dog, and cages provided for the toy dogs.

L. H. Smith, Esq., of Strathroy, has very generously presented $20.00 in gold, as a special prize, to be given in any way the committee may direct. The committee have decided to give it to the best pointer dog or bitch in the show.

The United States Express Co. have sent the following letter:

(Copy.)
82 BROADWAY, NEW YORK, 26 May, 1877.

To Charles Lincoln, Esq.:

DEAR SIR: Yours of the 25th inst. just was received. We do not run our express to Syracuse, but we will transport dogs to the point of transfer at single rates.

Yours respectfully,
CHAS. A. DE WITT, Genl. Supt.

Yours truly,
CHAS. LINCOLN, Supt.

DACHSHUND.

NEW YORK, May 22, 1877.

EDITOR FOREST AND STREAM:

The last number of the Chicago *Field* contains a remarkable account of the dachshunds exhibited at the late New York Bench Show. The writer seems to have taken great pains in examining all the different "teckels," but how is it that such a good judge entirely passed No. 578 and 579, two fallow reds, exhibited by Mr. Francis Leister, N. Y.? He also marks them only, Punk 2d, whereas it should have been Punk 1st, and Nelly 2d. He further asserts that if Dr. Twaddell's dachshund had been there for competition also, they would have taken all prizes. Here I like to differ with the writer.

Dr. Twaddell very properly made different classes, and there should be in future always two classes for large and small "teckels." However, there were no dogs of this breed on exhibition, which came up better to the real German idea of a thoroughbred dachshund than Punk and Nelly. Therefore I doubt whether a well-posted judge could have been found that would have preferred any dogs to the above-mentioned couple.

I heard a remark of Col. Skinner, who acted as judge and awarded the different prizes at the Centennial Bench Show to Dr. Twaddell's dogs, that there were no more perfect pair of dogs on exhibition, and that he had never seen their superior either here or abroad; and as he has a great experience with these dogs on both sides of the ocean, "he ought to know!"

The "foreign gentleman" to whom the *Field* refers, as giving Dr. Twaddell praise for his (in fact) excellent judging, must have been bulldozed somehow, as the ribbons were wrongly displayed in several instances. He so paid Dr. Twaddell a rather poor compliment, as it was only corrected on the last day of the show. Blue and red ribbons were given to a couple of white dachshunds with tan spots—a color that is never seen in a thoroughbred dachshund—and as I understand, by mistake, as none of these were awarded a prize. There were also some other dogs which were awarded prizes, but had no ribbons displayed over their stalls.

Now, I like to ask how the *Field* editor or the "foreign gentleman" could agree with the judging, as long as the *Field* gives a wrong account, and the ribbons were wrongly displayed during the show?

Was the foreign gentleman at the time probably the happy possessor of the then lost judge's catalogue, which contained the original and real prize winners?

Dr. Twaddell, who deserves the highest credit for his judging, has some excellent dachshunds of the smaller breed; but the more he will breed after the shape and style of Punk and Nelly, the more he will improve this already good breed. CAST IRON.

[The judge in the dachshund class decided that there were three distinct types of dach present, and with the consent of the committee so decided, awarding three first and three second prizes. The ribbons were originally put up correctly and in accordance with the numbers marked in the judge's book.—ED.]

The Rifle.

THE INTERNATIONAL MATCH OF 1877.

On Monday morning last Mr. George S. Schermerhorn, Jr., Secretary N. R. A., received the following cablegram:

To "Col." Geo. S. Schermerhorn, Jr.:

National Rifle Association will send a United Team to Creedmoor this year. E. ST. JOHN MILDMAY.

Captain Mildmay is Secretary of the N. R. A. of Great Britain, and the telegram certainly looks as though the International trophy was not to enjoy the quiet which promised to mark the season of 1877. The telegram made quite a stir in rifle circles; all were glad at the prospect of a contest, and all were equally certain that victory would once more perch with the American eagle. "We'll whip 'em again," was the first remark of the majority on hearing the news, and if the team be selected with the proper care we doubt not ourselves that there is ample skill in our American shooters to bring about such a result. At present it is impossible to say what arrangement had been made on the other side leading to this determination on the part of the British N. R. A. Mail correspondence will clear that up. As a matter of fact and record, the original conditions of the match do not recognize any "united teams," but distinctly calls for national teams, specifying Scotland, Ireland, England, etc., as nations, to be invited. It was only in the perplexing stage following the misconstruction of our invitations last year which led to the agreement on the part of the Americans to accept a mixed British team for that year. The offer was not then accepted, and nothing was said about its continuance for another season. If the British N. R. A. think by the offer of the above to cut off a separate representation from Scotch, Irish and English marksmen, should such be offered, they are in error; but if the plan of a united team is put forward with the idea of economizing effort and concentrating material into a stronger team, the offer will no doubt be accepted, but not to the exclusion at any future time of separate teams. The only safe grounds on which the Americans can stand is to adhere to the original trophy terms, leaving the question of a united team to the decision of those composing it, and standing ready to recognize any separate team which may present itself. By our next issue we hope to have fuller information from the other side, and shall then speak on the important question of the selection of the American team.

THE STOCK EXCHANGE BOYS AT CREEDMOOR.

We print herewith a sketch of the *personnel* of the Stock Exchange boys who shot at Creedmoor on Saturday:

Amory is a lieutenant in the Seventh Regiment, an *habitue* of Creedmoor—knows every target there; was there practising all the day of the match, and is a good shot; is one of the tip-top boys of the board, as he is of this list; has a keen eye, and, in fact, does a "Kean" business, and is hard to beat anywhere.

W. C. Dominick is also a lieutenant in the Seventh, and if practicing will prevent it he will not often be beaten, although he did not fire a shot on the day of the match before the score. He used a Remington military rifle.

Meigs never shot a match before, and don't pretend much with the rifle, but asks no odds with a shotgun. Has served his time in a regiment, and his name will probably be near the top of the list.

Kimball never shot at a target before, but probably did his share popping over chipmunks and woodchucks in his younger days. He is something of a sportsman, but his *forte* is with a fly-rod.

Dewing is a new member of the board, and is not so well known. Judging from his complete rig, he must make some pretensions at being a good shot. What he don't know Cary, with his carpet-bag, is willing to teach him.

B. Dominick is a brother of W. G. and has served his seven years in the Seventh, and, like W. G., is one of the *gentlemen*

of the board. He had bad luck in this match. You must not bet on his only getting 17. He is a good shot.

Putnam is an old Twenty-thirder and knows how to handle a rifle. If he doesn't he ought to.

Phippard is one of the good fellows of the board, but never shot at a target before. He is persevering, and if he makes up his mind to shoot, look out for him.

Drake is one of the handsome men of the board; parts his hair in the middle; is an old fancy *stock* raiser; has often hit the bull in the eye. He is a very quiet man, and you can't bet on him.

Des Marets is an ex-officer of the Seventy-first, and he is disappointed that he didn't make a better score.

Hughes is a Seventh veteran, and to him more than any other is due the credit of getting up the match and giving the boys a good day's sport.

Lockwood and Quick are both members of the Seventh.

Cary is *the* handsome man of the board. In his earlier days he was a crack shot with the crossbow at Albany. He rides free on the Twenty-third street cars. He was at Creedmoor all day and had made 22 up to the time of the match. He did well in the match. You will see him again.

Cecil is not used to shooting at bulls-eyes. If it had been a *bear's* eye he would have scored every time.

Stanton was the biggest toad in the puddle—a good fellow—captain of the boys. He made good shooting all over the range, and some excellent rulings.

Mackenzie and Burras propose to pool their shots hereafter.

Cowing is a lieutenant in the Twenty-third and is a good shot, but he didn't find the target until the match was over. Better luck next time.

ZETTLER RIFLE ASSOCIATION held their weekly shoot for the three gold badges, Tuesday, May 22, with the following conditions: Target, Creedmoor, reduced for 33 yards, possible 50 points; rifle, .22 cal., off-hand, two sighting shots. On June 14, the third annual shooting festival of this association, the medals will be awarded as follows: The one making the most points since January, 1877, first badge; one for best average of centers (any one missing a weekly shoot declared out), second badge; highest score to take third badge. Seven men tie on a full score for this badge:

F. G. Fenning.....49	C. Judson.....46
C. Zettler.....48	J. Duth.....46
R. Zimmerman.....48	M. Engel.....45
C. A. Schurman.....47	P. Ross.....45
F. Brown.....47	A. E. Moore.....44
D. Mosier.....47	M. L. Riggs.....43
[illegible].....46	M. Dorrier.....43
T. Kessler.....46	

CONLIN'S GALLERY.—The fifth competition for the Amateurs' Badges came off last Thursday evening, May 24. The following are the best scores made during the evening:

L. C. Bruce.....45	M. L. Riggs.....43
C. H. Johe.....45	Leon Backer.....43
M. R. Engel.....44	Dr. T. Wildes.....43
W. M. Farrow.....43	J. Honig.....41
Robt. Miley.....43	H. Funke, Jr.....41

Mr. L. C. Bruce has now won the first badge twice, as was also the case with Mr. M. L. Riggs last week, and if either gentlemen win it again it will become the winning man's property.

The sixth regular shoot of the Amateur Clubmen was held on the 22d inst. The morning was fine, but at noonday a lively shower fell, not strong enough, however, to drive all the men from the firing points. The scores, fifteen shots at each range, stood:

	800 yds.	900 yds.	1,000 yds.	Tl
H. S. Jewell	69	67	72	208
L. L. Allen	64	70	69	196
K. H. Madison	68	64	56	188
T. E. Lamb	67	64	56	187
T. S. Dakin	66	60	58	184
R. Rathbone	65	62	54	174
G. L. Morse	67	55	52	175
Homer Fisher	58	64	52	174

SIXTH RIFLE ASSOCIATION.—The second spring meeting of the 6th Division Rifle Association will be held at the East Syracuse ranges, on June 6th and succeeding days. The programme of matches is the largest yet prepared by the association, the cost of prizes aggregating over $1,300 in value. The competitors are: 1st. Directors' match. 2d. 51st Regiment match. 3d. Short-range, all comers, 200 y'ds, 5 prizes; $68.00. 4th. Sixth Division, N. G., match for teams of 7. 5th. Cavalry match for teams of 5. 6th. Teams of 5 for each company in 6th Division. 7th. Open to officers of 51st Regt. 8th. Open to line officers of 54th Regt. 9th. Open to members of 6th Division. 10th. All comers, mid-range match. 11th. Long range match.

JAMAICA, L. I., ROD AND RIFLE ASSOCIATION.—The fifth challenge badge match of this association was shot on Saturday, May 26. The challenge badge was won by Geo. H. Creed; the 38 badge by John Fleming. The score was as follows:

Geo. H. Creed, S.....46	Wm. Durland, Jr., M.....41
Geo. A. Reed, S.....43	Jno. R. Feury, R.....39
Jno. M. White, S.....42	Jno. Fleming, S.....38
Theo. Rogers, M.....42	Jno. Ryder, M.....37
Geo. A. Hicks, M.....42	Steph. Ryder, B.....34
Geo. W. Dobson, M.....42	Jas. M. Oakley, R.....33
Wm. S. Cogswell, E.....41	

S, Sharps; M, Maynard; R, Remington; B, Ballard carbine.

—Any one desirous to purchase a rifle gallery would do well to inquire at Miley's (under Park Theatre, Brooklyn). The present owner is going into other business. [*See advertisement.*

CONNECTICUT.—The Stamford Amateur Rifle Club held its third competition for the Williams' Challenge Badge on the afternoon of the 19th inst. Distance, 200 yards, off-hand. The previous winners have been W. H. Sandford and W. W. Skiddy. The score on the 19th stood:

T. F. Smith	5 4 4 4 5 4 4—30	J. H. Swartwout	3 3 4 3 4 3 4—24
E. H. Williams	4 4 3 4 5 4 3—27	C. W. Minor, ...	3 3 2 3 4 2 3—20
C. Bowling, ...	3 4 4 5 4 3 4—25	H. A. Burdett, ...	3 3 2 3 5 2 2—20
W. H. Sanford	4 5 4 4 4 3 5—25	W. W. Skiddy	3 0 4 4 3 3 3—20

The annual meeting of the club was held on the evening of the same day. The former president, Mr. E. H. Sanford, having declined very reluctantly, at a re-election the following officers were chosen: President, Mr. W. W. Skiddy; Vice-President, Mr. R. H. Keene; Sec. and Treas., Mr. Schuyler Merritt. Executive Committee—Messrs. J. H. Swartwout, Clark Bowing, W. H. Sanford, A. T. Swords and Walton Ferguson. The club is in a prosperous condition, and it is proposed to extend the range to 500 yards, which will add to the variety of the matches and to the interest of the members and their friends in rifle shooting. On Wednesday forenoon, May 30, there is to be a match under the auspices of the club, open to all comers. The match will begin at 10 o'clock. Distance, 200 yards, two sighting and seven scoring shots. Entrance fee, $1. The prizes are three in number—$10 to first, $7 to second, and $3 to third.

MASSACHUSETTS.—The Massachusetts Rifle Association inaugurated its new 1,000 yards range target at Walnut Hill, Woburn, last Saturday afternoon; the possible aggregate being 115. The following was the score:

C. C. Ebbard	44	17	34	95
W. H. Jackson	49	16	29	85
J. A. Lowell	36	21	28	85
A. P. Clark	44	18	22	84
William Gerrish	36	18	26	80
D. Kirkwood	34	20	25	74
J. Wemyss, Jr.	36	21	17	79
W. Poland	38	17	12	76

New 1,000, 500 and 200-yard targets will be set as soon as the work can be done, and then this range will not have a peer except in Creedmoor, over which latter it, however, has advantages, as the firing points are about 300 yards apart, and the targets are backed with natural hills of fine sand.

MASSACHUSETTS RIFLE ASSOCIATION.—The first spring meeting at Walnut Hill, near Boston, under the auspices of the Massachusetts Rifle Association, will take place Monday and Tuesday, June 18 and 19. The matches are: 1st. Directors' match, 200 yards. 2d. All comers, 200 yards; 10 prizes; value $244. 3d. Open to Massachusetts militia, 200 yds., Springfield or Peabody rifles. 4th. Long range, all comers, 800 yds. 7 rounds: 900 yds., 8 rounds; 1,000 yds., 10 rounds; 9 prizes, value $175. 5. All comers, 200 and 500 yds., 10 rounds each; 9 prizes, $237. 6th. Challenge match to teams of 5, from any club in New England, 200, 500 and 1,000 yds., any rifle; 10 rounds per dist. 7th. 200 yds., "consolation." T. L. Stevenson acts as executive officer, and a good meeting is anticipated.

NEW JERSEY.—The monthly contest of the Hackensack, N. J., Rifle Association for that society's badge came off on the 25th instant. The result of the competition was as follows: H. L. Burns, 40; W. Holberton, 40; A. B. Banta, 39; J. Wood, 37; B. S. Erie, 37; C. W. Vanderbeck, 36; J. M. Van Valen, 36; M. C. Gillham, 35; B. Van Strachwitz, 34; W. P. Ellery, 34; De Cooklin, 33; J. M. Gamewell, 29; E. Ackerman, 28. In shooting off the tie Burns beat Holberton.

—The opening shoot of the Newark Schutzen Society was held at their park May 14 and 15. At ring target Wm. Flammer, of Newark, came out head with 63 points, Wm. Hayes making 62. At the man target W. Klein won with 28 points, and at the bull's-eye target Ph. Klein. The prize for most bull's-eyes went to G. Schalk, of Pottsville, Pa.

—The Jersey City Shooting Society held their opening prize-shoot at Greenville, N. J., May 18 and 19. The first prize was won by C. G. Zettler, 66 rings; second prize by Wm. Klein, with 65 rings.

—Adjutant-General W. A. Stryker, of New Jersey, has notified Adjutant-General Townsend, of New York, of the intention of the First Brigade, N. G. S. N. J., to send a team to the inter-state military match at Creedmoor next fall.

FROGMOOR.—The Crescent City Rifle Club were out on the 23d, shooting for the Lilienthal Cup; no sighting shots; no coaching; fifteen shots, 800, 900 and 1,000 yards. The day was very hot, thermometer 83 in the shade; wind very light, shifting from eleven to one; the sun very bright. The following are the scores:

John K. Renaud, Rem. Creed.

800	0	5	5	3	4	5	4	5	5	3	5	4	4	4	5—62
900	4	4	3	5	5	5	5	5	4	5	4	5	4	5	5—64
1,000	5	4	4	5	5	5	5	4	4	5	5	5	4	4	3—67—197

R. G. Eyrich, Rem. Creed.

800	0	5	4	5	5	0	3	4	5	5	5	5	5	5	5—61
900	5	5	5	3	5	4	5	5	5	5	5	3	5	5	5—70
1,000	3	4	4	4	5	5	5	4	4	3	4	5	5	5	4—64—195

Wm. Arms, Rem. Creed.

800	4	5	5	4	5	5	4	4	2	5	5	4	3	5	4—63
900	5	4	5	5	4	4	3	5	5	3	5	5	4	5	4—68
1,000	0	4	5	5	4	5	4	5	4	5	3	3	4	4	5—59—190

Jules Piffaut, Rem. Creed.

800	2	5	4	3	4	5	4	4	5	5	3	5	5	3	4—63
900	4	4	3	4	3	2	5	4	4	5	5	5	2	5	4—65
1,000	3	5	3	5	3	2	5	3	5	5	3	4	5	2	5—58—186

James Buckley, Rem. Creed.

900	5	4	3	4	4	5	0	4	3	4	4	2	5	5	5—57
900	4	5	5	3	5	4	5	5	4	4	5	5	5	4	4—69
1,000	0	5	5	2	3	4	0	5	5	5	4	3	4	5	4—54—180

E. T. Manning.

800	5	0	0	5	0	4	4	4	5	3	0	3	4	3	3—43
900	3	5	4	4	5	4	2	5	5	4	3	3	5	3	5—69
1,000	4	4	4	5	5	5	3	4	5	5	5	4	4	3	0—69—163

Messrs. Piffaut and Manning's scores were their first effort at the long ranges. It has been the opinion heretofore that dark-eyed men do not make good shots. Mr. Piffaut's being black will contradict that belief. In your last, in speaking of the match between the Brooklyn and New York teams, you say that 1,186 is the best score made by six men since the Irish-American match of last year. You were no doubt led into that error by not having seen the score made by the Crescent City Rifle Club's first competition for Sharps' Rifle Co.'s prize, shot on 26th of January last. Conditions of the match: 15 shots at each distance, no sighting shots and no coaching; winner to lead at the three ranges. The following are the scores of the six highest: John Glynn, 206; Wm. Arms, 205; R. G. Eyrich, 201; Dr. Geo. Howe, 200; James Buckley, 194; John K. Renaud, 191—total, 1,197. The Crescents now begin competitions for places on the team to go to Creedmoor in September to compete in the inter-State match. GUSSIE.

NEW ORLEANS RIFLE WORK.—Mr. S. G. Eyrich, one of the New Orleans long-range experts, sends samples of targets made by him at 1,000 yards, 68 points, and at 900 yards 74, the shots ranging 5 4 5 5 5 5 5 5 5 5 5 5 5—74t, he best targets we believe yet shown at this intermediate range. In a letter accompanying the diagrams, Mr. Eyrich says, under date May 10:

I send you by this day's mail copies of my targets at 900 and 1,000, made January 26, for Sharps Rifle Company prize. Conditions: Fifteen shots at each range, 800, 900, and 1,000 yards, no sighting shots, and no previous practice on day of match. I send you these, as I consider the 900 yard score very fine and cannot find any record where it has been made before in an individual score where coaching was prohibited. All of our good shooting has been done with Remington guns, and our boys swear by them. Mr. Dudley Selph having twice made a score of 208, has excelled his previous work by making, on the 6th inst., 214—73 at 800, 73 at 900, and 68 at 1,000—fifteen shots at each range. Some time in June the Crescent City Rifle Club propose to give a festival, lasting three or four days, in which we will have a long-range competition for a suitable prize, at which time we hope to be able to induce the long-range clubs of Houston and Galveston, to visit us and participate. We hope to send on a team to compete in the Inter-State match, to be shot this year at Creedmoor. I think the teams should consist of eight men, at least six, instead of four. Out of twelve or thirteen of your guns that are here, ten of them have made scores of over 200, and one of the others 195—the others have not been used. The clubs are now soliciting prizes to be shot for; that is, donations from our friends here. One of the jewelers here has ordered from New York a very handsome cup. Others will do as much.

—The Hon. B. H. Hill was a guest of the Savannah Rifle Association at their regular practice at the Hermitage last week, and made a score of 13 out of a possible 15.

—A rifle club has been organized at Woodstock, Vt., with Chas. M. Marsh as secretary.

—At a meeting of the Fisherville, South Cayuga and Selkirk teams, held at Selkirk, Ontario, on the 24th inst., a team match was held, resulting in the following scores for the several squads: Fisherville Amateur Rifle Club—George Nablo, Capt., scoring 25 points; J. W. Holmes, Sec. and Treas., 17 points; J. Otterman, 25 points; G. Held, 27 points; Peter Nable, 18 points; N. P. Finch, 27—total, 139 points. South Cayuga Rifle Team—W. Wismer, 22 points; D. Dashwood, 18 points; J. Fathers, 26 points; J. Wismer, 17 points; O. Fathers, 23 points; J. Clarke, 17—total, 123 points. Selkirk Rifle Club.—W. Saunders, 26 points; B. Beyers, 25 points; J. Armstrong, 23 points; J. Smith, 17 points; J. Boyer, 22 points; W. Harper, 19 points—total, 132 points.

RIFLE NOTES.

Mr. Merritt King, of the law firms of King & Montgomery, Ithaca, writes very approvingly of a new rifle he has received. He says:

I have neglected to write you anything with reference to the "Ballard Long Range Rifle," purchased about a month since, because I wanted to give the gun a thorough trial before saying anything about it. I have given it several trials at 400 800 and 1,000 yards, and am satisfied that there is nothing like it. I have competed with the Sharps and the Remington long-range rifles, and beaten them both upon every trial. And besides, the recoil with my rifle is scarcely perceptible, while with the other two mentioned it is a source of great annoyance. My rifle has been examined and admired by a great many persons since it came to my possession.

ORANGE JUDD'S RIFLE EXPERIENCE.

MIDDLETOWN, Conn., May 26, 1877.

EDITOR OF FOREST AND STREAM:

"Whyte," of Houston, Texas, in your journal of last week, speaks of a matter of considerable importance, viz., the difficulty of deciding as to what rifle to purchase by the numerous rifle clubs springing up everywhere, without having to buy their knowledge in the costly school of experience.

I believe in rifle clubs. If in each of 20,000 towns of our country we have an average of twenty-five men, who, from practice, would be able to send most of their bullets within a three-foot ring at forty yards, and at least one shot in five at half a mile or more, we should have a constant ready force of half a million men, who would be expert enough to warn off or strike down all the invaders the combined world could send against us. It would be a wonderful economy, and add immensely to our national strength, if our general government should discharge ten regiments of regulars, and expend the money they cost ($8,000,000 to $10,000,000 annually) in promoting local rifle clubs, by furnishing trainers and, if need be, ammunition, and even ranges and guns, and badges or medals to be competed for as stimulants.

My own observation is, that rifle clubs are promotive of good morals. The people will have amusement of some kind. Every rifle shooter is aware that the use of liquors and tobacco unfits him for good marksmanship. I know a case where a man was fast becoming a confirmed toper, but on getting interested in shooting at a club, where he was ambitious to excel, he laid aside his cups—to the great gratification of his friends and neighbors. The tendency of rifle shooting is in this direction. Any one giving attention to the matter will be surprised at the absence of drinking, profanity, low language, bickering, etc., at the rifle range gatherings, as compared with horse racing assemblages, and even ball playing. In ball playing and boating only a picked "nine," or six take part, and have the benefit of the exercise. At the rifle club, however large, all take part. In the former two, especially in ball-playing, the exercises consist of short, sudden, straining spurts. In rifle shooting, the continuous gun-cleaning and the gentle reaction of the gun supply just enough of appropriate exercise, while the study of the effects of gravity, wind, light, barometer, thermometer, etc., are of an educating and elevating character. Many have died from direct or indirect injuries in the ball field, and there are to-day in our country at least ten thousand men and boys with broken fingers or other injuries incident to ball-playing. In all the rifle shooting in the whole country there have probably not been a score of accidents, fatal or otherwise.

I think the above reasons are enough to justify my "belief in rifle clubs." More could be added if need be. I have personal reasons for speaking well of this recreation. From malarial disease contracted in the Volunteer Sanitary Commission Service during the campaigns of 1863 and 1864, I was more or less an invalid for a dozen years. In the summer of 1875 I procured a "Creedmoor rifle," studied up the "principles of gunnery," as taught pretty thoroughly in my college mathematics thirty odd years ago, and, by reading, picked up what information I could from recent improvements and practice. During nearly two years I have, weather permitting, spent a few hours each Saturday afternoon at a rifle range, and on as many other days as business would allow, sometimes an hour or two daily towards evening—making this my chief exercise and diversion from business thought and care. As the result, I have better health and more strength and vigor, and do more business and writing than in a dozen or fifteen years prior to taking up the rifle. I can but speak well of the bridge that carried me over from a morass to solid ground.

To your Texas correspondent, let me say that more from chance than otherwise, my first Creedmoor was a "Remington." It has been fired by myself and a friend about 8,000 times, and has never been back to the manufactory or other shop; it has had absolutely nothing done to it except to change the rear sights from the grip to the heel, and to take out the fly or detent from the tumbler, so as absolutely to prevent its being fired except with "positive intention." In all of these guns of recent make the fly is omitted. And yet this original plain gun shoots just as well to-day as when "bran new," or better. (I have "insignia" enough to show how *well* it always shoots). I want no better gun, and don't expect to want any other until they get us up one to shoot a mile, which I hope they will soon do—say a 13 or 14 lb. gun carrying a .60-100 or .70-100 bullet, if need be. I think I could handle such a gun more

When I began shooting I had to have help to carry and clean a 10 lb. gun, and could only fire eight or ten 90 grain charges without being prostrated; now I can carry my gun one to three miles, clean it myself at every charge, and fire, without stopping, fifty or sixty, or more 95½ grain charges, and enjoy the pleasant jarring sensation, coming home refreshed by the exercise.

So much for my gun. I like the Remington gun, because the makers are themselves ingenious practical men, who give constant personal attention to their work, and take a personal interest in it that mere salaried employes could hardly have. But there are doubtless other good "Creedmoors." I shoot alongside some that prove that.

I will say to "Whyte" and others, that with equally good guns, and with equal nerve and steadiness on the part of the shooter, a great deal depends upon intelligent study of the conditions of light, wind, thermometer, and barometer, etc. Cooler air and high barometer—not usually taken much into account—indicate a condensed atmosphere, offering increased resistance, and a slight increase or diminishing of resistance, has a decided effect upon a bullet when its force is greatly weakened, as it is after flying 700 to 900 yards. A change of a single inch in the barometer will sometimes make eight or ten points difference in the elevation required, equal to 12 to 16 feet at the 1,000 yard target.

But more important still, if possible, is the ammunition. A grain of powder below 95 grains makes 8 to 12 inches difference in the striking elevation at 1,000 yards; six grains in the weight of a 550 grain bullet has about the same effect. Again, 90 grains of powder weighed on a dry day and left in the scale over night, or until the air becomes damp, will weigh down 91 to 92 grains. Hence, I buy not less than 10 lbs. of powder at a time to secure uniformity, keep it in tightly closed cans, pour it directly upon the scales from a tight flask, and weigh to a fortieth of a grain weight. The bullets I wet with saliva, and stand them to dry, to shrink and fasten the patch, then weigh them all and sort them into lots of the same weight, and mark them as 550, 548, 552 grains, when they differ, and use on the same day those of the same weight, or vary the sight if the bullets vary. It is of the greatest importance to have the bullets evenly and uniformly patched, and to have them go into the shell with no marring or crinkling of the paper, and to just fit the shell well, otherwise a slight defect on one side may readily give the bullet a wrong direction as it leaves the barrel. A careful lad weighs my powder, but I allow no one to insert the bullet in the shell for me. I don't like to get everything else all right for a bull's-eye, and be in doubt as to my ammunition. But I have stretched this rambling, after-supper scribbling out too long already. Some expert ought to give a full chapter on this subject of preparing ammunition properly. My observations at the few ranges I have visited is that poor ammunition has quite as much to do with poor shooting, at long range, as has the quality of the guns in general use. O. J.

CREEDMOOR.—The seventh regular shoot of the season of the Amateur Rifle Club was held at Creedmoor on Tuesday, 29th inst., with a puffy six o'clock wind blowing. The leading scores stood:

	800 yds.	900 yds.	1000 yds.	Tl		800 yds.	900 yds.	1000 yds.	Tl
H. S. Jewell	64	72	66—202		T. S. Dakin	72	64	57—193	
I. L. Allen	68	67	61—196		G. L. Morse	64	61	56—181	
J. P. Waters	70	76	57—193		H. Fisher	57	63	59—179	

—Judge Stanton, Gen. Dakin, Gen. Shaler, Col. Gildersleeve, Gen. Wylie and Mr. George S. Schermerhorn, Jr., of the ex-Committee N. R. A., met last Tuesday afternoon and accepted offers of prizes from Messrs. Schoverling & Daly and from the *Turf, Field and Farm*. The former will be for a $65 mid-range Ballard rifle, open to all comers, at 200 yards, 15 rounds, no cleaning of rifle and no sighting shots, any rifle; to be won three times before becoming personal property; one-half entrance fees in each match to be distributed to three highest scorers. The new *Turf, Field and Farm* Badge will be under same conditions as last, except that Messrs. Collins and Hayes, the winners of the previous badge, will be barred out from again winning. The cablegram from the N. R. A. of Great Britain was then taken up, but in lack of full information of the intentions of the senders, it was resolved to await information by mail; but the Committee were unanimously in favor of providing a team to meet the United Kingdom team referred to in the telegram, and that the competition be for the Centennial trophy, if it can be done consistently with the action heretofore taken and in fairness to the former competitors.

☞ The condensed report of the Creedmoor spring meeting, crowded from our columns this week, will appear in our next issue. It will be of service for reference in the future.

DITTMAR POWDER.

Please direct all letters for the above powder to Neponset, Mass. Capt. Bogardus and Ira Paine, now in England, are using my powder.
CARL DITTMAR.—*Adv.*

New Publications.

CANADIAN BIRDS OF PREY. By Hy. G. Vernor. Dawson Brothers, Montreal.

We are pleased to learn that the first edition of this valuable and beautiful work has been nearly sold. Very many copies have gone to England. The price of the book has been reduced to $12 in American currency. There are thirty photographs of species. We have noticed this book before at length. It is unquestionably a valuable addition to the scientific literature of the country. We have been interested to know what Mr. Vernor had to say upon the much vexed subject of "Osprey's Taking Dead Fish," and, upon turning to its pages, we are rewarded by finding the following passage on pages 88 and 89: "Wilson goes so far as to state, 'It is singular that the hawk (Osprey) never descends to pick up a fish which he happens to drop, either on the land or on the water. There is a kind of abstemious dignity in this habit of the hawk superior to the gluttonous voracity displayed by most other birds of prey, particularly the bald eagle, whose piratical robberies committed on the present species have been already fully detailed in treating of his history.' But, alas, for this 'abstemious dignity!' it is not supported by fact. The fish hawk will descend after a fish when he has dropped it—which he seldom does, however—and takes good care that his second grasp is more secure than the first. He will even condescend to pick up a stray fish, wounded or dead, which may happen to attract his keen eye, as it floats, white side uppermost, down the stream. On one occasion, on cleaning out our canoe after a day's fishing in Mud Lake, on the Rideau, we threw out a number of large suckers, which had been caught early in the day, and started for Newborough. These fish remained floating on the surface of the water, and their white bellies and red fins formed conspicuous objects. Hardly had our canoes got well under way again when three fish hawks flew directly to the spot, reconnoitered the floating fish for a few minutes and then without more ado descended, and each bore away a prize. I have never, however, seen a *tainted* fish so taken up, although such were floating for days when fish hawks were numerous."

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

C. J. P., Painesville, Ohio.—You will find full information in regard to the Adirondacks in Wallace's "Adirondack Guide," which we can furnish you.

H. H. H., Chattanooga, Tenn.—Where can I obtain the publications of the Smithsonian Institution on Ornithology and Zoology? Ans. From Dodd & Mead, 138 Broadway.

F. M. C., Franklin, N. J.—Can obtain marine glue at T. H. McAllister's Nassau street, city. It is used in the preparation of microscopic slides. Price about 50 cents per small bottle.

J. A. S., Ancram.—Please advise me whether you consider A. J. Hudson, 220 East Railroad street, Syracuse, N. Y., a reliable gunmaker? Ans. We do not know of any gunmaker in Syracuse by that name.

SNIPE, N. Y.—1st. Can snipe be shot in Connecticut along the Sound during the summer months? 2d. Where can I buy the St. Louis conical base shell in this city. Ans. 1st. Yes. 2d. There is no agency in this city that we are aware of.

E. F. Y., Boston, Mass.—Should a third-class Creedmoor target stand on end or on the side, that is, six feet high and four feet wide, or six feet long and four feet high? Ans. It should stand on end six feet high and four feet wide.

NATCHETOCHES, La.—Do you know of any way to destroy the bug known in this country as the cockroach, which is very bad on clothing, etc? They are very numerous in our store. Ans. Use a solution of alum or Paris green; also, Persian insect powder.

QUERIES.—Is the fishing good at Barnegat and Greenwood Lake? Which are the best places to stay at in both these places? Ans. The fishing is excellent at both places. Kinsey's Ashley House, at Barnegat, and Brandon House or Windermere at Greenwood Lake.

C. F. H., Plymouth, Mass.—In last issue of FOREST AND STREAM you make the close season for black bass from Dec. 1 to June 1; which, I think, is the old law on them, and should be from December 1 to July 1. Ans. You are right. The close season is from Dec. 1 to July 1.

ANTLER, South Bend, Ark.—Where can I get a good duck dog, and at what price? What is the best breed? Ans. The Irish water spaniel, or Chesapeake Bay dog would answer your purpose, but we know of no way you can get one but by advertising.

P. S. R., Providence, R. I.—Please give the close season for black bass in New Hampshire, Connecticut and Vermont? Ans. May and June are close months for black bass in New Hampshire. In Connecticut June is the close month; in Vermont from May 15 to July 1.

F. L. D., Gibsonton Mills, Pa.—Please say what is a good pattern for a breech-loader, 8 lbs., 12 gauge, 30 inch barrel, 3½ drachms powder, 1⅛ oz. shot, 30 inch circle, 40 yards? Please name number pellets for No. 4, 6 and 8 shot? Ans. One-half the number of pellets in the charge is a good pattern for a cylinder bore gun. An ounce of No. 4, 6 and 8 shot contains respectively 132, 218 and 390 pellets.

MYSTIC, Boston.—Can you inform me where I can get a book or books that will show the way to instruct poodles in tricks for the stage? Could you tell me of any reliable man that trains dogs for the stage? Ans. There is no book giving the information you desire. An advertisement in the New York *Clipper* will bring you the man you want.

C. C. L., Philadelphia.—Can you tell me of any private boarding houses at the Arkansas Hot Springs, or of any person to whom I could write for information? Ans.—There are plenty of boarding houses, but we do not know who keeps them. Address C. Ransom, 11 West Twenty-fifth street, New York, who has lived there. Good hunting and fishing is to be had in the vicinity of the Springs.

D. H. M., Boston.—My Gordon setter dog has two large warts on his under lip, which have made their appearance inside of a month, and are daily growing larger. Will you be kind enough to inform me what I can do to remove them? Ans.—Painting with tincture of iodine will probably remove them; if not, have them touched with nitrate of silver.

F. W. K., Milburn, N. J.—If Decoration Day is not too early in the season for salt water fishing, will you kindly tell me where to go (not too far from New York) to expect some sport, and oblige a constant reader? Ans. Would advise a trip to the Fishing Banks, down the bay. Take the steamer Seth Low. Tickets, $1, to be had of Al. G. Foster.

W. S., Milwaukee.—Will you give me the address of some one who has a good breed of beagle hounds? Ans. D. G. Hartt, Northport, Suffolk County, N. Y.; J. E. Diehl, Beverly, N. J., and Jesse Sherwood, Edina, Mo., were exhibitors of beagles at the late New York Bench Show.

GUNS, Bethlehem.—1st. What reputation have guns manufactured by E. M. Reilly & Co., London? Do they compare favorably with such makers as Scott, Greener, etc.? 2d. Do you know anything as to the quality of fly rods made by Dingee Scribner, St. John, N. B.? Ans. 1st. They rank with the very best makers. 2d. Excellent.

T. C. G., Cedarville, Ohio.—Please inform me, through your columns, as to the size and color of Capt Bogardus' patent glass balls; also, if they can be sent by express with safety. Ans. The balls are about three inches in diameter, of a bottle green color. They are packed in barrels, and can be sent with safety, either by express or as freight.

INQUIRY, Utica.—The meat of fresh trout being the daintiest and sweetest that the Lord ever made, is it possible that it requires the essence of hog to make it palatable? In other words, is not the frequent or even prevailing alliance of pork and trout in culinary operations in the woods wholly unnatural? Will you please give your readers the original lit(t)eral meaning of the word scrotum?

JOHN, Setauket.—The owners of adjoining lands are bound to maintain their equal proportion of the fences, but the party, before proceeding to make repairs, must give his neighbor notice in writing to repair his part, and then if he fails to do so for one month after such request the other may go on with the necessary repairs, and charge and collect half the cost from the delinquent proprietor.

SENEX, Conn.—"Photographs of the successful competitors at the dog show are sold on the streets." Is this so? What are the names of the successful ones—those so distinguished? Have you any for sale? If not, where can they be bought? What is the price? Ans.—We presume the first paragraph referred to the portraits (?) in the illustrated papers the week following the show. We have portraits of many of the dogs on exhibition which we sell for 25 cents each.

M. A. B., Bethel, Conn.—1st. Please inform me if there is good hunting within fifty miles of Richmond, Va. Ans.—Excellent hunting for quail within twelve miles on the Chickahominy. 2d. In what part of Virginia are the best hunting grounds? Ans.—Probably in the mountain region, though there is fine deer shooting in Brunswick and Dinwiddie. 3d. Please give me the address of some reliable shot-dealer. Ans.—Any of the gun-dealers advertising in our columns deal also in shot.

SUBSCRIBER, Columbus, Ohio.—Please give a sure and simple receipt for making a fire escape rope, quite fire-proof, and how to apply the same? Ans. Soak in a concentrated neutral solution of tungstate of soda, diluted with about one-third of water, and then mixed with 3 per cent, of phosphate of soda.

M. R. H., Hoboken.—In several instances I have cut the ends of my setters' tails. Does this injure a dog's chance for a prize at the New York Bench Show? 2d. Please describe how the English field trials are managed? Ans. 1st. Docking a dog's tail is not a bar at a bench show in this county. 2d. To describe how the field trials are managed would take up too much space. We must refer you to our back numbers, containing reports of them.

A. A. B., New York.—Give me a list of the books that treat of breeding, raising, points, etc., of the setter dog? My object is to get a work or works that treat largely on the setter subject, or solely on it? Ans. "The Setter," by Edward Laverack, is the only book which treats solely of the setter, but you will find further information in "Stonehenge," and "Dinks, Mayhew and Hutchinson."

D. H. L., Brooklyn.—Will you please inform me whether the whole net proceeds of the New York Bench Show is to be appropriated to a home for lost dogs, or whether the net proceeds of a certain day or days? Ans. The net proceeds of the last day only, and was so appropriated because the club desired to be relieved from any imputation of continuing the show beyond the advertised time for any money-making purposes.

W. S., Watertown, Wis.—My dog has a constant shaking of the head, causing the ear to flap against the neck. I cannot find any sore on his ears, but pulling his ears or striking him seems to hurt him much. Have tried Battings's remedy of Liq. Plumbi and aqua distil, but find no relief. Ans.—Try 20 grains of sulphate of copper dissolved in 8 ounces of water. First wash and dry the ear thoroughly, and inject some of the wash in the ear night and morning.

B. M., Philadelphia.—Will you please inform me of some book that I can buy in order to receive instructions in breaking a setter dog? Dog is nine months old, and a little headstrong. Has been broken a little and not thoroughly? Ans. "Dinks, Hutchinson and Mayhew" is recognized as standard authority. Hallock's new "Sportsman's Gazetteer," to be published next month, is very full of dogs, the care, training, diseases and remedies.

H. A. S., Brunswick.—Please inform me what measurements are taken and what is the formula used by the principal clubs in this country to determine the time allowance for sailing yachts. Be particular to state if water line or overall measurements are taken. Ans.—The allowance and mode of calculating same varies with different clubs. Some have a regular table of allowances, based upon an allowance length, which is found by adding the length on water line to that over all and dividing the product by two. The general allowance in open boat sailing is two minutes per foot.

J. A., Edenburg, Pa.—I have a valuable pointer, and he seems to be a little "under the weather." Last spring he had the distemper, but I thought he was thoroughly cured, yet ever since he has done a little coughing, and his throat appears at times to be stopped up. When sleeping he shakes and sneezes. He rubs his head and nose all the time, as if they were itching. Please tell me, if you can, what I am to do for him? Ans. Try a Dover powder night and morning for two or three days.

FRANK, Springfield, Mass.—What kind of a gun would be most serviceable to me in Florida, premising in the first place that I cannot afford a breech-loader. What size bore, length of barrels, and weight of gun would you advise? Could I get a good, plain, serviceable muzzle-loader for $30? Also, please give the charge for such a gun? Ans. For general shooting we should recommend a 12-gauge gun, weighing 8 pounds, with 30 inch barrels. You could get a serviceable muzzle-loader for the price you game. The charge for such a gun would be about 3½ drs. powder and 1¼ oz. shot.

X. Y., Milwaukee.—A. bet B. that the Alerts would beat the Athletics two to one in both games. In the first game the score stood 4 to 4; in the second the Alerts beat the Athletics 8 to 0. A. contends that he has won the bet, because on both games the score stood 12 to 4, which is more than 2 to 1. B. contends that he has won the bet, because in one of the games the score stood 4 to 4, which is not equal to 2 to 12. Ans. A. loses. The bet was on the games, not on the total score of two games.

E. H. P., Amherst.—1st. What and how obtained is the preparation for making canvas waterproof? 2d. Near which of the coast towns of Connecticut is there good woodcock shooting? Ans. 1st. Buy the ingredients required yourself. Take of sugar of lead and powdered alum of each in the proportion of half a pound to a bucketful of rainwater, dissolve and pour off into another vessel. Steep the canvas thoroughly in the solution, and let it remain some little time; hang up to dry, but do not wring it. 2d. We cannot say that there is good shooting anywhere, but you will find some woodcock near all of the towns on the Sound.

CAPT. DUCAIGNE, Cincinnati, O.—I noticed some time since in some one of the papers that one or two gentlemen had had the barrels of their guns severely "shortened" (unintentionally) by too deep choking. Can you give me address of a person having good barrels, etc., even as short as 24 inches, for sale? 2d. Do "your folks" (R. and G. branch) have copies of the J. Cypress' "Sporting Sketches" for sale now; if so, at what price? 3. The "Winchester" people were talking of getting machinery into position for making for their arm a new cartridge (more powder and lead). Are they ready to supply them? Ans. 1st. Address any reliable gunmaker. 2d. Yes. 3d. The new Winchester gun using 70 grains of powder was to be ready in June.

E. H. R., New York.—A party of us (four gentlemen) wish to take a pedestrian excursion for a few days, walking twenty miles per day. Will carry along fishing tackle to rest ourselves with occasionally. Please inform me whether the trip to Delaware Water Gap would be a good one, or not, and what route you would take. If you can think of any pleasanter route please mention it. Can we procure a map of this region as a guide, and, if so, where? Ans.—The trip to Delaware Water Gap would be a very pleasant one. Would advise you to take the Erie Railroad to Port Jervis, and start fresh from there, following the river. Or you might take Montclair road to Greenwood Lake, and foot it from there. The Housatonic Valley is a delightful pedestrian route. Walk up and boat it down. Send your boat to head waters by rail. Colton, 172 William street, publishes a map.

—Undoubtedly one of the best and cheapest stocks of Carpetings, Oilcloths, Mattings, etc., to be found in the United States is that of Messrs. JOHN H. PRAT, SONS & CO., Washington street, Boston. I. W. Adams is the sportsman of the firm, and will take special pains to please any of our friends calling upon him, or with any orders sent him. It is a good, reliable house.—*Adv.*

—Mr. John Davidson's field trial bitch Doll has been bred to his Dash II. The same owner's Flora II. has been bred to Chester, and his blue bitch Nellie has been bred to Charm, are within two days of each other. What a lot of puppies friend Davidson will have on his hands at one time!

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MAY 31, 1877.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information betwee gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week if possible.

☞ Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

T. C. BANKS, Business Manager. S. H. TURRILL, Western Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Thursday, May 31.—Trotting: Le Roy, N. Y.; Westminster, Md.; Freeport, Ill.; Fleetwood Park, N. Y.; Ambler Park, Pa. Base Ball: St. Louis vs. Cincinnati, at Cincinnati; Chicago vs. Louisville, at Louisville; Boston vs. Star, of Syracuse, at Boston; Marshaltown vs. Clinton, at Clinton, Ia.; Tecumseh vs. Manchester, at Manchester; Indianapolis vs. Allegheny, at Allegheny City; Hornells vs. Erie, at Hornellsville, N. Y.; Auburn vs. Maple Leaf, at Auburn; Knickerbocker, Jr., vs. Jasper, at Manhattanville; Buckeye vs. Rochester, at Rochester; Live Oak of Lynn vs. Rochester, at Lynn; Mutual vs. Fairbanks, at Chicago; Athletic vs. Hartford, at Hartford.

Friday, June 1.—Trotting: Freeport, Ill.; Fleetwood Park, N. Y.; Ambler Park, Pa. Base Ball: Buckeye vs. Rochester, at Rochester; Philadelphia vs. Indianapolis, at Philadelphia; Athletic vs. Hartford, at Hartford; Star vs. Live Oak, at Lynn; Tecumseh vs. Fall River, at Fall River; Indianapolis vs. Athletic, at Philadelphia.

Saturday, June 2.—Racing: Jerome Park, Cincinnati, O. Rifle Shooting: Creedmoor. Base Ball: Live Oak of Lynn vs. Rochester, at Lynn; Indianapolis vs. Athletic, at Philadelphia; Buckeye vs. Auburn, at Auburn; Athletic vs. Providence, at Providence; Metscomet vs. Taunton, at Taunton; Star vs. Lowell, at Lowell; Tecumseh vs. Live Oak, at Lynn; Germantown, vs. Beverly, at Beverly; Resolute vs. Orange, at Orange; Hudson vs. Putnam, at Prospect Park; Osceola vs. Nameless, at Prospect Park.

Monday, June 4.—Racing: Cincinnati, O. Trotting: Belmont Park, Phila. Base Ball: Buckeye vs. Rochester, at Rochester; Mutual vs. Fairbanks, at Chicago; Cricket vs. Maple Leaf, at Binghamton; Tecumseh vs. Yale, at New Haven; Star vs. Manchester, at Manchester; Indianapolis vs. Boston, at Boston.

Tuesday, June 5.—Racing: Jerome Park, Cincinnati, O. Trotting: Belmont Park, Phila.; Pittsfield, Mass.; Hudson, N. Y.; Utica, N. Y.; Medina, N. Y.; Muskegon, Mich.; Dubuque, Ia.; Maryville, Mo.; Parkville, L. I.; Pittsburgh, Pa.; Mystic Park, Boston. Base Ball: Hartford vs. Boston, at Boston; Buckeye vs. Auburn, at Auburn.

Wednesday, June 6.—Trotting as above. Spring meeting of the Sixth Division Rifle Association at Syracuse, N. Y.; Amateur Rifle Club team competition, Creedmoor.

G. B. Raymond's native English setter bitch Abbey, orange and white, 1 year, by Young Laverack out of Dido, has passed into Messrs. La Montagne's kennel, New York.

Mr. H. Oderick claims the name Tips II. for his fox terrier dog (second prize at the last New York bench show). Tips II. is out of Nettie by Tips I., both imported by Mr. Oderick.

NATIONAL AND STATE ASSOCIATIONS FOR THE PROTECTION OF FISH AND GAME.

The National Association will hold their annual convention on Tuesday, June 5, at the Vanderbilt House, Syracuse, N. Y. It is expected that every State in the Union will be represented, as matters of vital importance to the association will be acted upon.

The New York State Association will hold their convention in the third week in June, commencing Monday, the 18th, and everything indicates that it will be most successful.

The home clubs, the Onondaga and Central City, have appointed an Executive Committee, consisting of Messrs. Greene, Smith, John A. Nichols and Francis E. Carroll, who have located their headquarters at No. 8 Laurel Block, where all communications should be directed desiring information.

Valuable prizes have been obtained for competition at the trap and target, fly casting contest and bench show, aggregating several thousand dollars. The bench show of dogs, under the superintendency of Mr. Chas. Lincoln, promises to be a grand success, while the exhibition of living fish in aquariums will add additional attraction, it being the first attempt of this description by the association. Another department has been arranged for manufacturers and dealers of sportsmen's goods, to place on exhibition their consignments.

All dealers in sportsmen's goods and material are requested to forward a case of goods, enclosing a large placard designating their firm, which will be placed under the immediate superintendency of an experienced and capable manager.

Quite fortunate were the sportsmen in obtaining the use of the State Armory for exhibition purposes. The building is 180x85 without a post or pillar to obstruct the view, with a large gallery the full length of one side, and ante-rooms *ad libitum*. The bench show, fish aquariums, and sportsmen's goods will be exhibited in this mammoth hall.

The ground for field sports is located about four miles from the centre of the city, on the line of the Central Railroad. Trains will run every half hour. No fear is anticipated but what a supply of pigeons will be obtained.

BIRDS OF PLUME PROTECTED IN FLORIDA.

AN addition has been made to the law in Florida, which was approved March 2d, 1877, affecting very seriously the interests of scientific collectors, but designed, we suppose, especially to reach gunners, both native and stranger, who either destroy wantonly, or shoot to supply feathers for the market for decorations for ladies' attire. We print the text of the law as follows:

CHAPTER 2,043.—[No. 67.]

An act to Prevent the Wanton Destruction of the Nests, Eggs, and Young of Sea birds and birds of Plume in this state.

The people of the State of Florida, represented in Senate and Assembly, do enact as follows:

SECTION 1. From and after the passage of this act it shall not be lawful for any person or persons to wantonly destroy the nest, eggs or young of any sea bird or bird of plume in this State, on the land or coast, or in any seas, bays, rivers, creeks, or harbors, or within a marine league of the coast of said State.

SECTION 2. Whoever violates the provisions of this act shall be guilty of a misdemeanor, and, on conviction, shall be fined in a sum not less than ten nor more than twenty dollars, at the discretion of the court.

There does not seem to be any exception or exemption granted by the law, as above presented. But if natural history suffers, it will be for the public good. It was high time that some restriction should be put upon the indiscriminate and senseless fusilade upon the herons, water turkeys, linkins, buzzards, parrots, pink curlews and other birds of plume, which one has been obliged to witness every winter from the decks of the passenger steamers that ply upon the rivers of Florida. Travelling will be more tolerable in future seasons, for the present; and nervous invalids will now be induced to take a trip for health, which their former experiences have deterred them from repeating. In an economic point of view the provisions of the law will be worth, at least, $50,000 to the State, promoting travel throughout her territory.

Florida has now a *good* game law. It permits the winter visitor to shoot at pleasure, but will not permit him to export or carry game out of the State. It fosters legitimate shooting only. Now, if it would only define its close seasons, making them just and reasonable, so as to protect the Mickles and other hotel hunters from shooting deer in April and May, and does after 1st of February, and the guests at the great caravansaries from eating sick meat, it will greatly extend its usefulness and widen its sphere of reform.

But this killing of plume birds has been even more serious than most of the best informed have imagined. Not only in the interior rivers has the destruction been rife, but the breeding islands among the Keys and on the Gulf of Mexico have been almost depopulated of their cormorant and pelican inhabitants. Nature adjusts her laws to carry out certain ends, and with the destruction of so much feathered life the rules of compensation become disarranged, and the country suffers—generally from a sanitary standpoint. The law does not specify the period during which the enactment is to remain in force, but we hope it will continue three years. At the end of that time there will be birds enough. In the warm climate of Florida animal life is extremely prolific, and protected by its jungles and wilderness swamps, will have every opportunity to resuscitate, propagate and multiply. Florida owes its game law mainly to the persistent efforts of "Al Fresco" (Dr. C. G. Kenworthy), and Major G. A. Alden, who is President of the "Hallock Game Protection Club" of New Smyrna.

CONNECTICUT.—Rather an interesting case of infraction of the game laws was tried recently at North Windham, Conn. It seems that prior to the expiration of the close season Albert Church had repeatedly taken trout with hook and line from the old historical Stone House brook, and was indicted for same. The case excited great interest throughout the country, and when it was brought to trial a large concourse of persons had assembled. The case was clearly proven, but the defense was a perfect bombshell. Mr. Church testified, and proved, that he had taken the trout for the purpose of stocking other waters, which, under the statute, he had a perfect right to do, and was acquitted.

—An enthusiastic law-observing, game-protecting correspondent, who is president of a large game protective club at Glen's Falls, writes:

"I hope next winter that a bill will be passed prohibiting *all* spearing, as the people, if allowed to spear suckers, pickerel, etc., will spear bass. My first attempt at catching lawbreakers was not a success. After waiting for hours on the shore of the Long Pond with an officer and another member of the club for some men to come ashore (they had the only boat that had been put into the water at that time), we found they only had suckers and *sich*. I sprained my left hand falling in the dark, and the men were so frightened that I doubt if they ever spear a sucker again this year."

This is worse luck than P. P. (Poor Pickwick) had when he went shooting with Mr. Winkle. Our friend, though commiserated, should be encouraged.

MICHIGAN.—The following are the officers of the Michigan State Sportsmen's Association for the coming year:

President—Dr. E. S. Holmes, of Grand Rapids.
First Vice President—E. C. Nichols, of Battle Creek.
Second Vice President—John E. Long, of Detroit.
Secretary—Arthur J. Holt, of Grand Rapids.
Treasurer—A. B. Turner, of Grand Rapids.

—William W. Hulst, of Beresford, Volusia County, Fla., says: "Our club is the only sporting club, I believe, in Volusia County, and has completed its organization. A. Rossitter, Jr., President; D. M. Adee, Vice-President; and your servant, Secretary and Treasurer."

OAK PARK, Ills., May 21.

EDITOR FOREST AND STREAM:

The new amendments to the Illinois State Game Laws have passed both the House and Senate, and now only lack the Governor's signature to become a law. Without doubt the Governor will approve it.

The principal changes are as follows: The opening day on prairie chicken is extended from August 15 to September 1. The 15th of August was late enough certainly for the opening, especially in the southern half of the State. Even in the northern part they are often in such packs by the 1st of September that they will not lie to dogs in the open stubble and grass, except on very favorable days.

The open season for quail is changed from October 1 and January 1 to November 1 and February 1—a wise measure, I think. In shooting last fall two-thirds of the quail I found were unfit to kill. The Chicago market showed the same state of affairs in October, a large share of the birds being unfit for sale or consumption; while, on the other hand, the extended time to February will have no effect on their breeding, unless in the southern part of the State. I flushed an unbroken covey near Decatur, in the central part of the State, the first of May. No snaring, netting, or trapping of quail *at any time*, under heavy penalties.

Summer woodcock shooting is abolished, the opening being set at September 1.

The opening for deer, turkey, and ruffed grouse is set for October 1.

The laws on water fowl remain about the same. They have been inoperative in the past, and will probably continue to be so. Their flight being uncertain and migratory is the principal cause. The penalties are $5 to $25, or imprisonment in default of payment of fine.

I will forward you a complete copy of the bill when it becomes a law.

I do not think Mr. Greene Smith will experience as much difficulty in getting his prairie chickens, as a correspondent of the Chicago *Field* thinks he may shoot all he wishes himself, while any of his friends who are *residents* of the State may ship them anywhere they wish. The act in regard to this reads: "It shall be unlawful for any person or persons who is or are non-residents of the State to kill, trap, etc., for the purpose of selling or shipping out of the State, etc., any prairie chicken, quail, grouse," etc.

It will not stop the shipping of game out of the State. The business will be carried on by dealers the same as before, while any one so disposed may become a citizen under favorable circumstances and kill and ship his game or get a resident of the State to do so for him. Large numbers of prairie chicken wintered in this part of the State, and their booming is distinctly heard these fine spring mornings. The heavy rains we are having is very detrimental to them at this time.

Quail here are gone. In a ride of seventy miles across the country I did not hear or see a single Bob White. The deep snow last winter exterminated them in places. In the central and southern part of the State, where the weather is less severe, they are quite plenty.

TOM TRAMP.

—The New York bookbindery of E. Walker's Sons have removed to No. 14 Dey street, where they have four fine lofts and an abundance of room for their immense business. The firm was established in 1830, and have the well earned reputation of doing good work. The firm pay faithful attention to all orders from distant customers, and when the exact styles of binding desired are specified the very best materials and workmanship are guaranteed. As a curious instance of the confidence reposed in the skill, care and fidelity for which this bindery is noted we will state that after the only existing files of the New York *Journal of Commerce* (covering a period of fifty years) had been terribly damaged by the late fire, they were sent to Messrs. E. Walker's Sons to be restored as far as possible. This difficult job is now in progress, and will be completed as well as human skill and patience can perform it. Specimens of its excellent work received a gold medal as far back as 1851, at the Crystal Palace Exhibition, and silver medals and diplomas have since been repeatedly awarded to them at various State fairs.

NEW DISCOVERIES RESPECTING EELS.

EDITOR FOREST AND STREAM:

I wish to record through you the results of my experiments with these curious *apodal* creatures the Eels, for, unless I am mistaken, all received theories as to their habits are errors, and our entire knowledge concerning them a delusion.

The accepted opinion of their method of reproduction goes on the idea that they deposit their spawn in the salt water during the winter or early spring months; that the spawn hatches in the months of April and May, and that the young ascend the streams in May to find some suitable mud-endowed pond where they can live, luxuriate, eat and grow fat. All this is contrary to the habits of every known variety of fish, and was only approved after considerable investigation and on what seemed sufficient evidence, but there was always more or less doubt about it, and it required the confirmation of the actual taking and hatching of the eggs under those conditions. These eggs, however, were never found in salt water, nor for the matter of that, anywhere else; and I too have not found them, and consider it possible that eels are viviparous and produce living young. Certain it is that the oldest fishermen assert that they have never seen eggs in eels anywhere or at any season; but unfortunately, fishermen, both the oldest and youngest, are like the rest of the world, and never seem to see anything even when it is perched on the ends of their noses. The man who can see what really exists before him becomes a great man, and great men are scarce. He is a Bierstadt, a Seth Green or an Agassiz, and hence if the fishermen have never seen spawn in eels, that is very little evidence that spawn does not exist in them.

I am slow in drawing conclusions from any one experiment, but my experiments this year have been so conclusive that I cannot refuse to credit the inevitable deduction from them, contrary as it is to all that I have supposed heretofore to be the truth as to the manner and place of reproduction of these creatures. This year I built two small preserves below my trout pond on Long Island, leading one into the other, and the upper one connected with the main pond by a wooden trough. In the lower pond I had nothing at first, but afterwards some trout of from one-quarter to one-half a pound in weight. In the upper preserve were placed six hundred California salmon from those hatched by Mr. Mather in the New York aquarium, and the trough was arranged with sand and gravel to hatch a few thousand trout eggs. These arrangements were merely temporary, as I had great doubts about their working satisfactorily. Nearly 10,000 trout eggs were laid down and hatched beautifully by April 1, the loss being immaterial. The sac was rapidly absorbed until by April 17 the fry were very lively. At that time a few young eels, not larger than a lady's hair pin, passed the screens and were seen in the troughs. They were semi-transparent, evidently just hatched and came from the pond. These grew rapidly when not killed, and some escaped our notice. During my temporary absence I was informed that they were eating the trout fry, and although I returned on April 17, most of the latter had been devoured. In moving the rest I had to dig up the sand, and found it filled up with eels, from two inches to six inches long, which had buried themselves in it and were hidden away wholly out of sight. There were three screens of fine wire netting in the trough; one at the head, one at the foot, one between the two. Now that the sand was gone the young eels were to be seen in myriads passing from the main pond down the trough and thence into the first preserve. The salmon had grown so large that they would occasionally eat one, and in the lower pond were now the large trout and few or no eels.

It was impossible that the eels could have come up stream from the salt water bay, as the discharge from the lower preserve was through a pipe also grated, and with a two feet fall. Besides we saw them descending the trough; in black masses they settled down and endeavored to get through the lower screen, never seeking to pass the upper one. By April 26, as they collected at the lower screen, they were being taken out by millions in a small net (made for the purpose) of mosquito netting. Most of them were so young that the heart could be plainly seen, and its pulsations, which were rapid, noted under a microscope. I could find nothing of the supposititious heart in the tail, but my magnifying glass may not have had sufficient power. In a few days after their first appearance they would lose their translucent color and became black and opaque with the delicate seration, or reticulation on their sides, of the perfect eel. Towards the last of April the supply of young diminished, and we almost cleared the trough and upper preserve of them; there never were more than a few in the lower preserve, but by May 19 they were more plenty than ever, and as the lower screen in the trough had been moved, they poured into the upper preserve in myriads.

Now, none of these eels came from the bay; they were all descending from the pond where they must have hatched or been born. To be sure they kept their heads up stream, but fish of all kinds in descending a stream invariably do that, as every one who has watched them knows, and for the reason that in that way they can escape danger, and can regulate their rate of descent. Salmon descend rapids, and shad go down our rivers head up stream, and so does every kind of fish when left to its natural course. It is true they would occasionally swarm back up the side of the preserve, into which they had wormed their way with so much persistency, but that was probably due to eel-perversity. It was seeing them climb perpendicular flood gates in that way which had convinced me, as no doubt it had convinced others, that eels were ascending, not descending the rivers in the spring. If my present conclusion is right, it accords with the practice of all migratory fish, and brings eels into the ordinary catalogue of breeding in fresh water, and growing in salt. It seems to me impossible that I could be deceived. There were very few eel fry in the main stream into which the preserves emptied; scarcely more in the lower preserve, through which alone could they obtain access from below to the upper preserve; in the latter they existed in millions, their numbers increasing immensely about May 1, when the lower screen in the trough was removed; and in the trough they were also found in solid masses of wriggling life. Eel pots were set during this time in the main pond and caught some large eels, but none of these contained spawn, and I have no knowledge whether they are viviparous or oviparous, but I am firmly persuaded that the supposition that they produce their young or deposit their eggs in the salt water is a mistake.

This conclusion has been reached only in the last few months, and even now I read an article of my own in *Appleton's Journal* which was written before I had this knowledge, and which contains the old error; but, as I have said, although opinions which are hastily formed are apt to be mistaken, this appears so firmly established that I submit it to the criticism of your readers. One unaccountable event took place, which in fairness must be mentioned: all the young eels disappeared out of both of my ponds about May 22, "leaving not a wrack behind," and giving me no idea whither they had gone. They were then mostly too large to have passed either the screen above or below, and as there had been a rain during the night the eccentric scamps may have wriggled directly over the sides and dams of the preserves into the main stream, or they may still be buried in the sawdust at the bottom. They are a wise race. Last year they were in inky lines of countless numbers in the main stream. They had probably gone down the fish-way which is placed in the dam at the flume. This year they discovered the new and more feasible passage of my breeding trough and followed it, none, so far as I can ascertain, having recourse to their former method of descent. A few were seen at the outlet of the pipe which supplies the hydraulic ram, but so far, none, comparatively speaking, have been seen in the stream below the pond or preserves. The latter have been an effectual eel trap from which I have sent thousands of eels to other parts of the country, and which have proved an effectual exterminator of what I regard as the most fatal enemy of trout in Long Island waters.

Yours, very respectfully,
ROBERT B. ROOSEVELT.

OBITUARY.—Hon. E. H. Rosekrans, late Justice of the Supreme Court, died at his residence in Glen's Falls, on Tuesday morning, May 1. Judge Rosekrans was born in Waterford, N. Y., October 16, 1808, and graduated with honor from Union College before he was eighteen years of age; studied law with his uncle, Judge Samuel G. Huntington, of Troy, and practiced with him two years after he was admitted to the bar in October, 1829, when he was barely twenty-one years old; settled in Glen's Falls in 1831; was district attorney from 1835-45; judge of the county court from 1847-51; judge of the supreme court, two terms, from 1855-71, and was honored with LL. D. by his *alma mater* in 1867. Judge Rosekrans was an ardent sportsman, and one of the most promising clubs in the State, organized for the protection of fish and game, had its origin in his office. Among his friends, and especially in his family, his superabounding and genial good humor and pleasantry made his presence ever enjoyable, and turned a dull hour into a season of sparkling joy. In the death of Judge Rosekrans the bar of Warren County has lost a valuable member, and the community a much esteemed citizen.

A CONTEMPTIBLE ACTION.—A letter written in confidence is generally supposed to be sacred, but we regret to say that one, at least, among our correspondents is either ignorant of, or else has willfully violated the obligation which is supposed to exist among gentlemen. Some time since, a Mr. Dunham, of Leeds, Mass., wrote to us for information regarding a party of this city, and in the desire to do him a service, we answered frankly but confidentially. Our surprise can be imagined when the party referred to presented the letter which had been forwarded to him by Mr. Dunham, and asked for an explanation. While there was nothing in the letter of which we are ashamed, or that we will retract, the breach of trust is so glaring that we cannot refrain from giving it publicity.

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grilse and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from $15 to $150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining, to imitate the genuine article) without letting our customers know just what they are getting.
P. O. BOX, 1,294.—*Adv.* ABBEY & IMBRIE, 43 Malden Lane.

A SAD ACCIDENT.—The many friends of Hon. Charles W. Hutchinson, of Utica, will be grieved to learn of the accident which has befallen him. While trout-fishing in the North Woods, a few days since, he slipped from a log and broke his leg short below the knee. He reached home on Saturday night, and judging from his letter, while undoubtedly suffering great pain, maintains that equanimity and *esprit* which is so natural to him.

OUR WASHINGTON LETTER.

[FROM OUR SPECIAL CORRESPONDENT.]

BIRDS FOUND IN THE DISTRICT OF COLUMBIA—THEIR HABITS, TIMES OF ARRIVAL AND DEPARTURE, ETC.—THE GREAT FALLS FISHING CLUB.

WASHINGTON, D. C., May 18, 1877.

SPORTING matters in this vicinity have been remarkably dull this spring. Usually we have had very good white perch fishing from the middle of April to the latter part of May, but frequent rains this season have kept the river very high and muddy. The water now is as yellow as a pumpkin, and will probably remain in that condition a week or two yet, even though we have clear weather. The cold northeast storms which have prevailed so extensively destroyed all snipe shooting. In the neighborhood of the city, upon suitable low lands and marshes, these birds are often plentiful in early spring, when the weather is favorable; but I have not heard of a dozen being killed this year. A careful hunt of their favorite haunts on one or two occasions has resulted in the bagging of two or three birds, where eight or ten have been killed in an hour or two in previous years.

SPRING AND AUTUMN VISITANTS.

The welcome little warblers of every description with their bright and gaudy plumage, which usually make the woods and thickets so lively with their chirping in spring, have been kept away from us this year by the backwardness of the season. I have noticed but few arrivals thus far, though I have watched carefully the places which they usually frequent. In a recent letter I mentioned all the game birds found in this locality, and a brief mention now of the warblers, thrushes, fly catchers, finches, and other small birds which are spring and autumn visitants, while it may not be of much interest to the sportsmen I hope may be to the student of natural history. Though the number of birds which are resident throughout the year, and those which breed here is considerable, they are few in comparison with those which pass through during their spring and autumn migrations and remain for a longer or shorter time each season. The number of species indeed is not greater, but the individuals of each are very numerous. It is on this account that for a month or so during the spring and autumn the collector is amply repaid for his pains, while at other times ornithologizing, except for some particular birds, is hardly worth the time and trouble. The great mass of the birds which pass through the district in their spring migrations do not stop to breed before reaching at least the New Eng. States, and many go still further north, spreading through the Canadas into British America to the region around Hudson's Bay. In mentioning our spring and autumn visitants, I again quote from the perfect list prepared by Drs. Coues and Prentiss. Of the fly catchers we have four species—trails, least, acadian, and yellow bellied; the latter is a common summer resident, and the only one that breeds here in any numbers. The least fly catcher, *Empidonax minimus*, frequents exclusively the margins of small streams, brooks and briar patches. Of the thrush family we have six species, known as wood thrush, *Turdus mustelinus*, hermit thrush, *Turdus pallasi*, tawny thrush, *Turdus fuscescens*, olive backed thrush, *Turdus swainsoni*, and gray cheeked thrush, *Turdus alicæ*, the latter being a variety of the *Swainsoni*. The robin, *Turdus migratorius*, also a member of this family, is a permanent resident and a few breed; the greater part, however, proceed north in summer and south in winter. They are found in all localities, and many nest in the parks about the capitol and President's house. The hermit thrush arrives earlier than the others, and immediately becomes very abundant. They frequent chiefly open woods. The tawny thrush is the rarest of the species. It remains here but a short time and is shy and solitary, frequenting high open woods, but keeping near the ground. The olive backed and gray cheeked thrushes do not remain here long, and none breed in this locality. The ruby crowned kinglet, *Regulus calendula*, is usually very abundant, but none breed here. They frequent orchards, thickets, copses, cedar patches, etc., but are not often found in high woods. They are abundant in fall, and in full song before they leave. The spring migrations always embrace a number of both sexes with the head perfectly plain. There are twenty-two species of *Dendræca* found in North America. Of these, fourteen have been observed here. Not one is a permanent resident. Three only, *D. pinus, Aestiva, discolor*, breed; one, *D. coronata*, is a winter resident; nine others are spring and fall visitants. Of these, seven, *D. virens, Canadensis, Blackburniæ, Castanea, Pennsylvanica, Striata, Maculosa*, do not differ materially in numbers, habits, or times of arrival and departure. One, *D. palmarum*, differs in times of arrival and departure, and very remarkably in habits; one, *D. superciliosa*, is an accidental visitor; one, *D. tigrina*, is exceedingly rare. Most of these warblers are found in high open woods, except the *Dendræca palmarum*, yellow red poll warbler, which frequents old corn and buckwheat fields, associating with various species of sparrows, differing in this respect from all others of its genus, and resembling the *Oporornis agilis*, Connecticut warbler. *Trochilus colubris*, ruby throated humming bird, is the only humming bird found here, but is abundant in the fall. It frequents exclusively the gardens in the city, patches of wild flowers, etc., and breeds plentifully in the high woods. *Tyrarmus carolinensis*, bee martin, breeds plentifully here, but the greater number go further north. *Siurus auricapillus*, golden crowned wagtail, is a summer resident, and exceedingly abundant. They arrive about the middle of April, and for about two

weeks keep perfectly silent, hiding in the thickets and laurel brakes, so that its loud, harsh notes are not heard until the first of May, when they fill the woods, greatly to the annoyance of the collector searching for rarer and more retiring species. It keeps on the ground rustling among the dry leaves for insects, and, when disturbed, flies to the nearest tree. *Siurus noveboracensis*, water wagtail, is quite common in spring and fall, and breeds sparingly. It is eminently aquatic; swampy thickets, thick gloomy woods interspersed with puddles, where it associates with *Rhyacopphilus solitarius*, solitary tatler, are favorite resorts. *Siurus ludovicianus*, large billed water wagtail, is generally considered rare, but is not at all uncommon at certain seasons in particular localities. From the 20th of April to the 10th of May it may always be obtained, by an acute collector, in the dense laurel brakes which border the banks and fill the ravines leading into Rock Creek and Piney Branch. It is usually very shy, darting at once into the most impenetrable brakes. Its note is a sparrow-like chirp, like that made by striking two pebbles together; but it has also a loud and melodious song. *Setophaga ruticilla*, red start, is exceedingly abundant in spring, and is found in all woody or swampy situations. It has a habit of running along little twigs, sideways, and has a note very similar to that of *Dendroeca æstiva*. *Mimus carolinensis*, cat bird, a summer resident, is exceedingly abundant, and is found in all briar patches, along fences and in thickets. It seems rather careless in concealing its nest, but very solicitous in protecting it. *Passerculus savanna*, savanna sparrow, is found on low moist meadows and watery savannas, from March 15 to the first week in May, and from October 10 to November 10. It is shy and retiring, and is always found on the ground. *Coturniculus passerinus*, yellow winged sparrow, inhabits exclusively meadows and fields, keeping closely concealed in the grass. *Coturniculus henslowi*, Hewslow's bunting, is a summer resident, but exceedingly rare. *Zonotrichia albicollis*, white throated sparrow, is chiefly a spring and autumn visitant, but numbers spend the winter in sheltered localities. They arrive early in October, and are exceedingly abundant during that month; and become numerous again about the 1st of April, continuing so until the middle of May. They frequent chiefly briar patches, hedges, roadsides, etc., in fall and winter; but, in spring, are found on the ground in open woods. *Spizella socialis*, chipping sparrow, a summer resident, is semi-domesticated like the home wren. They breed in orchards, gardens, shrubbery, and about porches, but are especially fond of building their nest in small cedar bushes. *Polioptila cærulea*, blue-gray gnat-catcher, a summer resident, is very abundant, and breeds in high open woods. On its first arrival, early in April, it frequents tall trees on the sides of streams. *Melospiza palustris*, swamp sparrow, are chiefly spring and autumn visitants, but very abundant in the fall. They are very secluded and retiring in their habits. *Passerella iliaca*, fox colored sparrow, is also a spring and autumn visitant, though some spend the winter in sheltered situations. They are abundant from November 1st to 30th, and during the month of March, and eminently gregarious. They inhabit thickets and the denser briar patches and laurel brakes, and sing just before departing. None breed. *Euspiza americana*, black throated bunting, is a summer resident, and inhabits open fields and meadows. It is abundant, especially in the spring. *Guiraca ludoviciana*, rose breasted *grosbeak*, is a rare summer visitant, and seen only at intervals. It is found in high open woods, generally in small companies, but is shy and difficult to procure. *Guiraca cærulea*, blue *grosbeak*, is a summer resident, and rather rare. It breeds in much the same places as does the cardinal *grosbeak*. At other times it is found in more open situations—orchards, sparse woods, etc. *Agelaius phœniceus*, red winged black bird, is a resident nearly all the year, but more abundant in spring and fall, especially the latter. They breed in this locality, and commence to flock over the marshes and cornfields in August. They arrive in flocks early in March. *Icterus baltimore*, Baltimore oriole, is chiefly a spring and autumn visitant, though many breed. It arrives the first week in May, and remains until the latter part of September, frequenting orchards and high open woods. *Icterus spurius*, orchard oriole, is a summer resident, and not uncommon. It arrives the first week in May, and remains till the latter part of September, frequenting orchards, meadows, and high open woods. *Vireo olivaceus*, red eyed vireo, is found in all high open woods from April to September. It is the most abundant summer resident. *Vireo gilvus*, warbling vireo, is a common summer resident, and is especially abundant in the city. It is very seldom seen in the woods with other vireos.

Vireo solitarius, blue headed vireo, is the rarest of the vireos, and inhabits high open woods, associating with the red eyed and yellow throated members of that family. *Vireo flavifrons*, yellow throated vireo, is abundant and frequents high open woods. *Vireo noveboracensis*, white eyed vireo, is also found in great numbers. *Mimus polyglottus*, mocking bird, is a summer resident but rare. It arrives about the 25th of April, and leaves about the middle of September. *Harporhychus rufus*, French mocking bird, is a summer resident, and abundant. *Thriothorus ludovicianus*, great Carolina wren, is a permanent resident, but most abundant in the summer. It breeds in thick shrubbery about gardens. It is very shy and unfamiliar. *Ieteria viridis*, yellow breasted chat, a summer resident, breeds very abundantly, and frequents exclusively dense and impenetrable briar patches. The males are exceedingly shy and difficult to procure until the females commence incubation, when they are quite the reverse. *Parula americana*, blue yellow back warbler, a spring and autumn visitant, is exceedingly abundant from April 25th till the middle of May, and a few breed. They inhabit exclusively high open woods, and are usually seen in the tops of trees or at the extremities of the branches, in the tufts of leaves and blossoms. *Geothlypis trichas*, Maryland yellow throated warbler, is a very abundant summer resident, and breeds in great numbers. *Oporornis formosus*, Kentucky warbler, is a rare visitant, and is found chiefly in low woods with thick undergrowth, ravines, etc. It is very silent, but not shy. A few breed here. *Helmitherus vermivorus*, worm eating warbler, is a rather uncommon summer resident, and breeds sparingly. This bird is slow and sedate in its movements. *Helminthophaga chrysoptera*, golden winged warbler; *Helminthophaga pinus*, blue winged yellow, a worm eating warbler; *Helminthophaga ruficapilla*, Nashville warbler, and *Helminthophaga peregrina*, Tennessee warbler, are all found here, though they are somewhat rare. A few breed in this locality, Mr. Ridgway, of the Smithsonian Institution, having recently found the nest of the golden winged warbler near the Little Falls of the Potomac.

To mention at length the habits, time of arrival and departure of the many birds which are found in this vicinity during the spring, summer and fall, would require much space; but among the numerous families noticed there may be found *Parus carolinensis*, Carolina chick-a-dee; *Muiotilla varia*, black and white creeper; *Cistothorus palustris*, long-billed marsh wren; *Cistothorus stellaris*, short-billed marsh wren; *Troglodytes ædon*, house wren; *Myiodioctes mitratus*, hooded warbler; *Myiodioctes pusillus*, green black-capped fly-catcher; *Myiodioctes canadensis*, Canada fly-catcher; *Pyranga rubra*, scarlet tanager; *Pyranga æstiva*, summer redbird; *Hirundo horreorum*, barn swallow; *Hirundo lunifrons*, cliff swallow; *Hirundo bicolor*, white-bellied swallow; *Cotyle riparia*, bank swallows; *Cotyle serripennis*, rough-winged swallow; *Progne purpurea*, purple martin; *Myiarchus crinitus*, great-crested fly-catcher; *Sayornis fuscus*, tom tit; *Contopus virens*, wood pewee; *Melanerpes erythrocephalus*, red-headed woodpecker; *Chætura pelasgia*, chimney swift; *Antrostomus vociferus*, whip-poor-will; *Chordeiles popetue*, night hawk; *Ceryle alcyon*, kingfisher; *Cyanospiza cyanea*, indigo bird; *Pipilo erythrophthalmus*, towhe bunting; *Dolichonyx oryzivorous*, bob-o-link; *Molothrus pecoris*, Cowper bird; *Quiscalus versicolor*, purple grackle; *Charadrius virginicus*, golden plover; *Aegialitis vociferus*, Rildeer plover; *Actodromas maculata*, grass snipe; *Actodromas minutilla*, least sandpiper; *Ereunetes pusillus*, semipalmated sandpiper; *Symphemia semipalmata*, willet; *Totanus melanolenca*, yellow shanks plover; *Totanus flavipes*, smaller yellow shanks plover; *Totanus solitarius*, solitary tatler; *Tringoides macularius*, spotted sandpiper; *Actiturus bartramius*, Bartram's tatler; *Numenius longirostris*, long-billed curlew; *Rallus elegans*, fresh water marsh hen; *Rallus virginianus*, Virginia rail; *Porzana carolina*, common rail; *Cocygus americanus*, yellow-billed cuckoo, and *Cocygus erythrophthalmus*, black-billed cuckoo.

THE GREAT FALLS FISHING CLUB.

The members of this organization, which has been in existence for the past eight years, have removed their headquarters from the place heretofore occupied by them near the Falls to the Douglass Farm, about two miles this side of the Falls. The organization is now in a very flourishing condition, and the members are anticipating some rare sport this season, as the Potomac, adjacent to the Douglass Farm, is one of the best fishing places on the river. The scenery in that locality is very attractive, and there are numerous eddies filled with bass. Mr. Nat. Sardo, an old fisherman and a genial companion, now presides over the organization, with Mr. Theodore Friebus as Secretary and Treasurer. The membership, limited to ten, consists of Messrs. Jacob Schieffley, Samuel Strong, L Oppenheimer, Nat. Fugit, John Hancock, Melvin Noyes, Dr. Smith Townsend and Dr. Ralph Walsh. They have five excellent boats at their club-house, together with an immense line box always filled with minnows for bait, besides a seine for catching the minnows, perforated buckets for their transportation, etc. A competent caterer furnishes meals to the members and their guests at reasonable prices, and the Club is about as well equipped for the enjoyment of the sport as any similar organization in the country. Mr. Oppenheimer, who is a very successful fisherman, probably has taken more bass than any other person fishing the Potomac. Last fall he captured 145 in three days, many of them weighing two and three pounds. He is passionately fond of the sport, and there is hardly a desirable fishing spot on the river in which his line has not been dipped. During the months of August and September he has been very successful with the fly in rapid waters, but his experience is that the bass will not rise to it at other times.

Decoration Day was observed yesterday with appropriate ceremonies. All honor to the brave!

HELMBOLD.—Dr. H. T. Helmbold, the famous manufacturer of Buchu, whose career excited the wonder of two hemispheres, after having been eleven times incarcerated in insane asylums, resumes his old business, associating with himself other gentlemen under the name of the Helmbold Manufacturing Company. The plucky little Doctor asserts that he is sane enough to satisfy his friends on that point, and he has both their good will and substantial co-operation. He expects to speedily double the already large sale of his great diuretic.

—It is unlawful to catch black bass in Virginia and New Jersey before the 1st of July. The State law for New York was off on the 20th of May.

Sea and River Fishing.

FISH IN SEASON IN JUNE.

FRESH WATER.	SALT WATER.
Trout, *Salmo fontinalis.*	Sea Bass, *Centropristris atrarius.*
Salmon, *Salmo salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo oshuis.*	
Land-locked Salmon, *Salmo glaveri.*	Striped Bass, *Rocens lineatus.*
Black Bass, *Micropterus salmoides;* *M. nigricans*	White Perch, *Morone americana.*
	Weakfish, *Cynoscion regalis*
Muskanonge, *Esox nobilior.*	Bluefish, *Pomatomus saltatrix.*
Pike or Pickerel, *Esox lucius.*	Spanish Mackerel, *Cybium maculatum*
Yellow Perch, *Perca flavescens.*	
	Cero, *Cybium regale.*
	Bonito, *Sarda pelamys.*
	Kingfish, *Menticirrus nebulosus.*

FLIES IN SEASON FOR JUNE.

Hawthorn, No. 11.—Body, shining black; feet and head, black; wings, bright hyaline.

Shoemaker, No. 10.—Body, ringed alternately with light gray and salmon; feet, dark ginger; wings, the mottled gray of the mallard; and the mottled of the woodcock mixed; setæ, mottled woodcock.

Black June, No. 10.—Body, peacock's herl; feet and wings black.

Dark Stone, No. 8 *and* 9.—Body, dark brown; feet, yellow brown; wings, luteons.

Governor, No. 10.—Body, peacock's herl; feet, dark red hackle; wings, made of the darkest part of the bittern's wing or brown hen.

Green Drake, No. 7.—Body, white posterior, half ribbed with black, green yellow, mottled with brown; setæ, dark brown.

Brown Drake, No. 7.—Body, feet and wings, a golden yellow brown; setæ, dark brown.

Raven, No. 11.—Body, feet and wings black.

Wren Fly, No. 9.—Body, clay yellow; feet made from the scapulary feathers of the English wren or quail; wings and setæ, mottled widgeon.

FISH IN MARKET.—The present fishing season is a peculiar one in many respects. About ten days ago the first bluefish were taken on the North Carolina coast, and to-day they are being caught along the New Jersey, Long Island and as far east as Newport, R. I. The salmon season opens twenty days earlier this year than last; the first of the restigouche catch were received in splendid order by E. G. Blackford, Fulton Market. They came through in 48 hours from the nets of the fishermen, and for symmetry, brilliancy and flavor, are unsurpassed by any fish in the world. Sheepshead are very plenty in market, from Windmill Point, N. C.

The shad season is about closing, and all along the coast the report is that it has been the most unproductive in years. Our quotations for the week are as follows:

Striped bass, 15 to 20 cents per pound; bluefish, 10 cents; salmon, green, 50 cents; mackerel, 10 to 15 cents each; shad, Connecticut River, 50 cents; white perch, 15 cents per pound; Spanish mackerel, 65 cents; green turtle, 15 cents; terrapin, $12 per dozen; halibut, 15 cents; haddock, 8 cents; kingfish, 18 cents; codfish, 8 cents; blackfish, 12½ cents; herrings, 6 cents; flounders, 8 cents; porgies, 12 cents; sea bass, 15 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 18 cents; soft clams, 30 to 60 cents per 100; pickerel, 15 cents; Long Island trout, $1; Canada do., 50 cents; hard shell crabs, $3 50 per 100; soft crabs, $1 50 per dozen; weakfish, 18 cents.

ANGLING IN OYSTER BAY—OPENING OF THE CAMPAIGN.—A party of jolly anglers, nine in number, including Mr. S. D. Phelps, of Chicago, Rut Schuyler, Mr. Brainerd, Abbey, Charles Imbrie and others, all under the pilotage of the Bald Eagle of Currituck, ran down to Oyster Bay on Tuesday last to test the new method recently invented by Abbey & Imbrie for taking weakfish with rod and reel and the pearl squid, so successful last year. They found a fine run of Squeteague in the bay, and tried for them by "drifting" in the gut, and in every other way, without securing a bite. They then dropped anchor on the "Cinders," and had exceedingly fine sport, killing between two and three hundred fish, of which more than one hundred and fifty were sea bass, averaging 1¾ pounds; but several of them, by actual scale weight, ran over five pounds! The party were taken care of by the far famed hostess, Mrs. Dominy, and did ample justice to her excellent larder and culinary skill. On their return they found the waters more crowded than ever, with fly nets, gill nets, pounds, fykes, and other infernal devices for the wholesale slaughter of fishes.

As regards the weakfish, the particular object of the expedition, they predict a large run into New York Bay at any moment—a prediction which will warm the heart of Pop Reynolds and other anglers of the Jersey Club.

Advices from Mr. C. T. Richardson, the well known Superintendent of the Oquossoc Angling Association, under date of 10th inst., state that Camp Kennebago was in thorough order to receive guests. As four years have elapsed since the first landlocked salmon were put in these waters it is anticipated that in addition to the attraction offered the angler in the shape of six, seven and eight pound speckled trout, this famous member of the *Salmo genus* will be captured in considerable numbers. Gentlemen desiring to visit Camp Kennebago will please address Geo. Shepard Page, or L. B. Reed, Vice-Pres't., 10 Warren street, N. Y. Lake Point Cottage, at the outlet of Rangeley Lake, the beautiful camp of Theo. L. Page, of New Orleans, was opened May 12th by the owner. He will occupy it With his family and friends until Oct. 1st.

CONNECTICUT.—*Bridgeport, May* 14.—A gentleman from here caught a trout last week in the Shepang River that weighed 2 pounds and 9 ounces. All the country is wild on that fish. G. H. J.

Hartford, May 20.—Some remarkably large shad have been taken in the river near Norwich this season. One was caught the other day which weighed eight pounds; two others in the same haul weighed nearly seven pounds each.

— Hon. Henry B. Harrison and his nephew, T. B. Osborn, have gone to the Rangley Lakes in Maine.

A Connecticut river salmon weighing twelve pounds was caught in one of the ponds at Saybrook, yesterday. It was sent to New York.

English herring are being fished for successfully near Watch Hill. One haul of a seine there filled forty barrels, and is considered one of the largest ever made in the Pawcatuck river.

NEW YORK.—*Pisco Lake,* May 23.—Just back from a ten days' trip, with over a hundred pounds of trout, and all my neighbors are feasting. My biggest take weighed 10½ pounds, and my boss speckled trout, two pounds three ounces, dressed. Trolling just fairly started on Pisco and Lake Pleasant. PISECO.

Adirondacks, May 22.—Would I could make a cast; hook you as I do a speckled beauty, and land you here in the Adirondacks, dear old woods! where the sportsmen love to meet. Thus far this year none of the old guests are about, save a few who for years visit here and cannot be tempted to go to Maine. It is a fixed fact that traveling here is growing less inviting, owing to the inroads of civilization—and no attempt made to check violators of the law. At Martin's I find registered Mr. S. Arnold, Mr. Mason and family, Dr. Corrigan and party, Mr. Handley, Mr. Gregg and son; at Bartlett's Sportsmen's Home, Mayor Thatcher and family, Vice-President Wheeler, Dr. Rouleyn, Mr. W. H. Snow and wife; at Paul Smith's, Dr. Trudeau and family, Mr. Titus, etc., etc. A few days ago "Paul" came near being burned out. The woods have been "generally on fire," and approached his house; but sixty men came to his aid, and after hard work saved its destruction. Trolling this season in the Upper and Lower Saranac has been excellent. Dr. Rouleyn, last week, took in two hours one trout weighing 14½ pounds and one weighing 12½ pounds, and others, making his catch 40 pounds in three hours; but this was extraordinary. To the disgust of the sportsmen a small *homeopathic* steamer plies on the upper lake. Mosquitoes and black flies have made their appearance, and for six weeks will reign in all their vexation. The hotels here are all admirably kept, the guides faithful and obliging, and to the true sportsman and lover of nature no spot is more inviting. Two parties are on Raquette Lake in camp. SMITH.

Johnstown, May 25.—I was at Canada and Caroga and Piseco Lakes last week, and took fifty pounds of trout; weather unfavorable for good fishing. J. M. P.

— Wm. S. Kimball, the manufacturer of the celebrated "Vanity Fair tobacco" at Rochester, is going to try the Landlocked salmon at Sebec, from thence to the trout of Moosehead, and after that, salmon on a famous river in New Brunswick.

PENNSYLVANIA.—*Lewis' Lake.*—This lake cannot be surpassed for a place of resort. It is situated on the highest range of the Alleghany mountains, accessible by railroad to Muncy, then by coach twenty miles up the mountains—one of the most delightful rides imaginable. The place has not been very widely known to the pleasure seeker until lately. Last fall five cottages made their appearance, one built by a gentleman of means from Philadelphia, Pa., one from Milton, Pa., and the remaining three by citizens of Muncy, one of them being a very eminent physician. About one dozen more will be erected the coming season. Two boarding houses have been in existence for a number of years. The lake covers about three hundred and fifty acres of ground, and contains brook trout, lake trout, and a number of other species. The brook trout fishing is to be found in the many small mountain streams which head close by, but the rarest sport is the duck shooting, there being always an abundance of them and very easy to get. A fire is very comfortable in the hotest July evenings. COMMY.

PENNSYLVANIA.—*Greenville, May* 25.—The Hon. Ben. L. Hewitt, State Fish Commissioner at Hollidaysburg, and wife, together with President Judge, of this County, A. McDermitt and wife, were guests of N. C. Packard, of this place, to-day. Mr. Hewitt gave us a good deal of useful information on pisciculture, also on the hunting of setters and pointers; and, by the way, I would be gratified to see Mr. Hewitt's idea of the same in the FOREST AND STREAM AND ROD AND GUN. B.

We would warmly second the desire expressed by our friend B. No doubt the Judge can give us much information that would serve our readers to good purpose.

VIRGINIA.—*Norfolk, May* 21.—Fish coming in lively now. Saturday there were so many thousand tailors (medium sized blue fish) brought in that they could not be disposed of except for the compost heap. Saw one gray trout (*squeteague*) Wednesday that weighed 13½ pounds, and was 37½ inches long. Round heads (king fish) are coming in fair quantities. None taken with hook and line yet.

One large woodcock was picked up in the west end of the city last week that had flown against a tree and broken his skull—very unusual to see them here so late. A beautiful specimen of the large legged avosets was shot a short time since on the flats a short distance below the city. Some few ortolans, reed birds, rice buntings or bobolinks (any other names for them that you know of?) still here. Many of the migratory birds are very late passing through this year. Glass ball shooting is the only thing in order now—some very good scores made; none cleaner, however, than your correspondent made last week, each of his shots being scored *missed.* D.

48 MAIDEN LANE, New York, May 24, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

I see in your number of this date that "Messrs. Abbey & Imbrie are going to fish the York River next month." Your friend, Mr. A. G. Shilkinson, will probably do so, but my partner and myself have no such intention. If Mr. Shilkinson is as agreeable a companion as he is a writer (and we believe him to be even more so), there is reason for us to be sorry that your prophecy has no chance of being considered canonical.

The truth of the matter is that poor Abbey must forego salmon fishing this season for business. I shall do what little I can for the *Salmo salar* on the Grand River. As I shall be in the company of Senator Edmunds of Vermont and Mr. Andrew Clerk, I think there is a fair chance for pleasant evenings as well as pleasant days. I know the FOREST AND STREAM AND ROD AND GUN tries to tell the truth, but there seems always to be great difficulty in telling a "fish story" correctly.

Yours very sincerely, CHAS. F. IMBRIE.

BASS FISHING IN LAKE GEORGE.

THE bass in Lake George are of two kinds—the Oswego and Rock Bass. The Oswego is the most gamey fish that swims in the lake. It requires an experienced angler to capture one that weighs over half a pound, unless the fish should be so deeply hooked that he could not tear loose if suspended in mid air. If after several attempts by jumping out of the water and shaking his head he cannot get free, he will go for the bottom and continue to struggle for liberty until he becomes exhausted. Should the angler get over anxious to force him to the surface, he will leap and shake himself; invariably in such instances he will get free; the strength required to raise him tears the flesh, makes the hole large, and his lightning motions tear or shake the hook out. If time is taken, when he takes a run, give him more line, but under a firm, steady, and even strain, which will cause him to take a circle. In doing this you can slowly gather in line. Never attempt to lead him into the landing net until he gets so tired that he can be seen to lie flatwise in the water; even then it is necessary to avoid all quick motions. There are hundreds of pounds taken every year, the largest of them weighing between five and six pounds. They would multiply very rapidly were it not for the spearing done during the spawning season, and another mode of destroying them, viz: when the female has selected her ground for a bed she cleans off all the loose dirt with her fins, and forms a basin, varying from one to three feet in diameter; when completed the sand and gravel looks as clean as it would if washed by man; she will take in her mouth and carry off any small stick or stone that is dropped into the bed. Vagabonds who know this habit prowl along the shore in a small boat in calm, still weather, with a stout pole, heavy line and a large hook covered with worms; when they come to a bass bed they pull close enough to it to drop the baited hook into the nest, which will be picked up to be carried away and dropped outside. While so doing the fish is hooked; if not captured the first time, she will very soon return to her bed. If the offensive thing is found she will again place herself in jeopardy. In this manner millions of bass are yearly destroyed. Among all the laws for the protection of bass in the waters of Lake George not one act has been sufficient; the penalty is not enough, the and time prohibiting the taking of them has never been long enough. The time should be of sufficient length for the young to be of sufficient size to get out of the way of perch and rock bass. While the female is living no other fish dare approach the bed or molest their young when hatched. The time should be from the first day of April to the first day of August. The penalty should be both fine and imprisonment, $15 fine and fifteen days in the county jail for each and every bass taken within the time specified.

Thousands of bass are taken yearly, by men who fish for the hotels, that will not weigh four ounces. All they care for is to get their money, whether the fish are fit to eat or not. In this case the hotel keepers are as much to blame as the fishermen. If they would not buy such small fry they would not be caught.

The catching of bass in Lake George is confined to the Summer and first fall months. There are one or two places in the lake where they can be taken very late in the fall, and have been taken in the Winter through the ice. Those taken at this time of the year are usually very large. There is a reef of rocks that comes within about eighteen feet of the surface; on one side for some distance the bottom is covered with a fine, long, green grass: on the opposite the water is very deep. A person has got to know the spot to a small boat's length in order to get them. The exact spot was known by only two or three men for some years, and is not known by very many at this day.

The rock bass are not very good eating fish. The meat is soft; they inhabit the rocks, and are invariably filled with a small, dark grub under the skin. They have a very large mouth and use it to the best of their ability. They go for all kinds of bait, small and large. If they have a few seconds to work, the hook will be out of sight. In order to get the hook the stomach will have to be opened. Nothing is more annoying to the sportsman when fishing for the Oswego with a nice, lively minnow, than to have his float disappear and give the fish time to get the hook well down, and then find it deep in one of these red eyed gormandizers. They take the fly also. I have been trolling for Oswego and fastened to a good fish, and while handling him have had one or two of these useless things fasten to the other flies on the leader. They are a great destroyer of young fish. The young fish seek the crevices among the rocks for safety, and become food for the rock bass. If these fish inhabited all parts of the lake there would not be much sport in fishing. Their abode is among loose rocks along the shore and under sunken logs and tree tops. Strangers not accustomed to fishing often get where these fish are found and enjoy their good luck at catching such a quantity, but they find when they return to the wharf that "all is not gold that glitters" when they see the man that has charge of the boat throw the fish overboard. They might congratulate themselves if they were aware that they had been the means of destroying a large number of fish cannibals; sometimes they do not find out their mistake, and go away thinking that anybody can go to Lake George and catch as many fish as they choose.

In order to make a sure catch of Oswego bass it is necessary to be supplied with various kinds of bait. The bait that takes well one day may not do the next; minnows, grasshoppers, black crickets, young frogs and angleworms are used. I have had as find sport with nothing but angleworms as any bait used. The hopper and cricket are best late in the season. It depends much on the weather what kind of bait to use, especially in trolling. The more cloudy the day, the more bright and lively should be the fly or spoon used. In trolling for bass a very small fly is best. The trolling spoon should be of the smallest kind made. I have never seen one too small. The more dainty the outfit, the quicker they take it. THE OLD PILOT.

Farrar's Guide to Rangely Lakes is now published by Messrs. Lee & Shepard, Boston, and C. T. Dillingham, Broadway, New York. The map and guide to Moosehead Lake will be ready July 1st.

ON SHARKS AND OTHER MATTERS.

PERCE, February 10, 1877.

Our genial correspondent, Mr. Phillip Vibert, whose anecdotes regarding dogs, etc., have been read with so much interest, sends us, from his home in Perce, Quebec, this further installment:

I am pleased to learn by your issue of the 1st inst., that my communication on the breeding of wild geese has led to no less than three other cases of extensive and successful breeding being fully authenticated—and, as you justly observe, decoy birds can thus be easily procured—a few, no doubt, from Gaspe Basin, if bespoken in time.

I have been greatly surprised to learn, through your valuable journal, that a doubt has ever existed as to sharks being man-eaters, not haters. An old superstition exists among British seamen, that sharks will follow in the wake of a ship having sick persons on board, when at the point of death. Be this as it may, the following facts, which are fresh in my memory, would go far to confirm Jack in his nautical prejudices.

In February, 1823, I was on board of a vessel owned by members of my mother's family, which sailed from Messina in Sicily, bound for St. Petersburg. The Captain was far gone in consumption. The doctor who attended him—and had kindly taken him to his house during our stay in port—strongly urged his remaining on shore, but to no purpose. He hoped he might live to be landed in the Island of Jersey, his native place on our way up channel. But he died a fortnight after leaving Messina, and we consigned his body to the deep, between Cape de Gatta and Cape Palos, on the coast of Spain. For some days previous to his death, a large shark followed the vessel, and was daily seen by all hands; but, strange to say, he did not put in an appearance on the day of the burial, though we were becalmed all the morning. Two days later, as we were nearing Gibralter, with a light air from the eastward, I proposed to the new captain to give the white streak a touch of paint, to make the old craft look ship shape. No sooner said than done. A ladder was slung over the side with a board on the rungs, forming a safe scaffold, and another young man and myself went to work. One side was finished, and we had only the port quarter to paint, when a man in the main top shouted in an excited tone, "Alongside there! Halloa! Look out, the shark is close to you!" I turned round quick as thought, and, to my inexpressible horror, I beheld the huge monster, for he was twelve to fifteen feet in length, within six feet of us, evidently about to make his deadly spring. Shouting to my companion, I dropped a large paint brush overboard, and sprang up the rope which held the ladder, and gained the deck. As I write, I fancy I see the leering eyes of the monster in anticipation of a glorious feed. The stage was about two feet from the water. The man in the top said that the moment I dropped the brush the shark followed it. Sorry it did not hold a few ounces of arsenic or other deadly poison. We finished our job nevertheless, the man in the top keeping watch, and the captain on the quarter with a loaded gun.

I remember also having read an account in some book of voyages of a boy falling overboard, and a sailor jumping after and saving him. The boy was safely hauled up, but his gallant rescuer, when some six feet out of the water, was cut in two by a shark.

But a well authenticated proof of the voracity of the shark exists in the dining hall of Christ's Hospital—better known as the Blue Coat School—in the city of London—where any visitor may seen an oil painting, representing a ship's boat and crew rescuing a man who has fallen overboard, and is minus a leg, which had been amputated by a shark. The hero of this misadventure afterwards became Sir Brook Watson, a celebrated naval constructor, during the close of the last century.

A great grand-uncle of the writer, on the maternal side, named Joshua Mauger, was a partner of Sir Brook, and finally retired with a large fortune, hence my knowledge of the history of the painting. The following anecdote may not be uninteresting to the readers of FOREST AND STREAM.

The aforesaid grand-uncle lived in great style in London, and had a country seat near Lymington, a then fashionable watering place in Hampshire. He had a daughter—an only child—who married a general in the British army, a son of a Peer of the realm. They had no children, and she dying before her husband, made a will in his favor. The general, on his demise, left all his property to his relatives, including two splendid life-size, half-length portraits of Mr. and Mrs. Mauger, by that celebrated painter, Sir Joshua Reynolds. My grandfather having, through an old friend in London, ascertained the then owner of the portraits, stated his anxiety to become possessed of them, and acting under his advice, called upon the nobleman, and having explained who he was, he proposed to purchase the portraits, and give his lordship any reasonable sum. This, his lordship politely declined, stating that though the portraits formed no part of the family gallery, he prized them as works of art—as masterpieces of the great painter. My grandfather was not a little chagrined at this rebuff, as he would willingly have given a handsome sum for them. His uncle had left him the greater part of his massive plate, his splendid china dinner and breakfast sets, every piece of which had his coat of arms engraved or beautifully painted thereon, a considerable sum of money and handsome legacies to all his children, yet his heart yearned for the paintings, as life-like likenesses of his deceased relatives. He returned to Jersey, and had nearly forgotten his disappointment, when, after a lapse of some months, he received a letter from the agent of the Southampton Packets, advising the arrival of two large cases, and enclosing a letter, which, on being opened, proved to be from his Lordship, begging his acceptance of the portraits. The old gentleman's surprise could only be surpassed by his delight at thus becoming possessed of what he had long considered a lost heirloom. This princely gift proves that the donor was a right Noble Man! PHILLIP VIBERT.

SPLIT BAMBOO RODS.

To our customers and the public:—In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which will be pleased to mail to any address, proving the falsity of their assertions.

CONROY, BISSETT & MALLESON
Manufacturers, 65 Fulton Street

FISHING IN NORTHERN MICHIGAN.

EDITOR FOREST AND STREAM:

If your readers will take a good map and trace the many watercourses that mark this section they will notice what an extent of country is drained by the Cheboygan River. Lakes and rivers abound with fish, with scarcely any inhabitants surrounding, save here and there a few Indians. A party of us had been left by steamer at Cheboygan on a quiet Sunday evening at the end of August. We made arrangements that night to go up the river by a small steamer as far as it was possible to go. Monday morning found us at breakfast by 6:30; also a party of Chicago ladies and gentlemen, who intended to go up about twelve miles to fish for bass. A small steamer was waiting for us above the dam. The whole party, numbering about twenty, was soon aboard, and we quickly left the few scenes of civilized life. The river winds through grand old forests and lagoons, from which our puffing little boat scares up many ducks and cranes. These scenes are new to us. The changing forest, touched by an early frost. The crisp air is quite a relief from the heat of bricks and stones of a parched city in mid August; but we are aroused. Away before our boat is stretched a monster lumber raft drifted across the river. The little steamer pulled and tugged in vain. There was no way to get through. After an hour's hard work they landed us, and said we should find plenty of fish while they returned to the mills for a lumbering tug and crew. The party divided itself into three companies. Two boats had been left for us to fish from, so to fishing they went. Myself and a young lad from Pittsburgh found a small point up the banks of the stream. Rods were soon jointed, lines rigged, when to our disgust we found our bass flies had gone back with the boat. Well, we tried for sunfish. Some of the party caught a few miserable little things, all bones. Luck had gone against us sure. We tried 'hoppers-fish, but caught nothing until Uncle P—— said: "Here! come in and get some young frogs." We soon had about twenty the size of a fingernail in our pockets. So, rigging up strong tackle, we tried with frogs. I dropped into a school of bass about fifteen feet from the boat. The frog had hardly sunk a foot before my rod went down and the reel began to whiz, while the bass began to rush this way and that; after playing him about ten minutes we carefully drew him to the side of our boat, and, taking him by the gills, lifted him into the boat—a beauty weighing about four pounds. A few minutes after young P—— said: "S——, I've got him, and a buster, too!" So it was—larger than usual—a fine fish, that fought hard for life; but the boy was a cool hand, and knew how to handle big bass. Need I say they were soon dead and cleaned, cooking for dinner, for the whole party were hungry. We caught about six of these fine fellows before we were able to proceed on our journey. Perhaps some lovers of the art will lift their hands in horror that a disciple of Izaak should thus degrade our gentle sport, but if they wanted fish as badly as we wanted those bass they would excuse us. We alone caught anything worth cooking; and dry bread or crackers make a poor dinner for a party of ladies. Often during these warm days we long to get away from the city. The flies are ready, the rod stands in the corner waiting, and the spring of our Orvis trout-rod sends an electric thrill through all our system; the youngster by our side catches the infection, and worries us with, "Papa, say, papa, when are you going to start for Michigan?" We only wait for some communication from a trapper friend to join him in fishing for grayling in the Manistee and Au Sable Rivers; while the memory of our romantic trip up the Cheboygan River will be a bright spot in our life for years to come. Yours, respectfully, NORMAN.

FISHING IN LAKES SAN ANDREAS AND PILERCITOS, CALIFORNIA.

EDITOR FOREST AND STREAM AND ROD AND GUN:

I have, I believe, for these two or three years past, addressed your valuable journal on the subject of angling in our sportsman's clubs' lakes, in the vicinity of San Francisco, giving you some account of the salmon and trout taken in them by the members and others. According to the rules lately made by the club, only the members an I those residing at some distance from our city are permitted to fish in these waters. It is now in my power to present to you and your numerous readers a very satisfactory report of the sport enjoyed by the followers of the rod in two of these lakes this season. Owing to the dryness of our late winter and spring, the water in them has become ve y low—so low that before the next rainy season we are rather in dread of a water famine in San Francisco, as the supply of that necessary element is likely to fall before the beginning of next winter. It is probable, I think, that this small quantity of water in two of these large reservoirs—Lakes Pilercitos and San Andreas—is the cause of the fishing in them being so good, as the catch of trout in the one, and salmon in the other, is almost unlimited. In Pilercitos one would have no difficulty in bagging 100 trout in twelve hours, and in San Andreas, before a restricting law was passed by the directors of the club, fifty salmon was no uncommon number to be taken. Another reason why the fishing has been so successful, is, of course, that the young fish or chub, and other food that the trout and salmon have subsisted on, have been diminished in quantity, making them more eager to bite at any bait or artificial fly. The fishing has, indeed, been too good, as is well known, as things which we can obtain very readily and easily are never so much prized as those which require more time and labor to make our own. The new rule is that a single angler shall not be allowed, in one day's fishing, more than twenty-four salmon in San Andreas, and fifty brook trout in Pilercitos.

In San Andreas the salmon average about one pound in weight, and in Pilercitos the trout are about eight inches in length. This, to be sure, is rather small as to size for great sport, but it is somewhat recompensed by the number that can be taken. All these fish are in capital condition, are very gamey, and excellent for the table.

The other day I caught ten salmon in San Andreas in three hours, trolling with a small spoon from a boat, having to row and handle the rod at the same time; that is, I was alone in my boat, and with my foot on the butt of my rod I used the oars, dropping the latter when a fish seized the spoon. This is not near so pleasant as having two in a boat—one to row while the other fishes, or for each person to do both, alternately.

I do not consider this lake angling is at all equal in pleasure to river or creek fishing, where there is so much interesting, grand, and even romantic scenery to be enjoyed, with a continual change of views. The scenes around San Andreas Lake are rather bleak and barren, and the angler is exposed much to our trade winds, which blow more or less all through the spring and summer here; but Lake Pilercitos is inclosed with beautiful hills and mountains, clothed in lovely vegetation of trees, shrubs and brilliantly colored wild flowers, and is thus well defended from the high winds at the fishing seasons.

Lake Merced, one of our trio of lakes, and the nearest one to the city, contains many large Lake Tahoe or River Truckee trout, averaging now about three pounds, some of which have been taken whose weight has reached nine and a half pounds. This lake has also been furnished with young salmon, but there is no place in it where they can successfully spawn, therefore they are becoming scarce, and this ke of water needs a speedy replenishment of young fish of the genus of several varieties.

Another species of brook trout, averaging two pounds, which inhabit the McCloud and Pitt Rivers, in the upper portion of the State, are being transported here by our energetic Fish Commissioners, and will be a great acquisition for us, as our native brook trout in the more southern portion of California average no more than about a quarter of a pound. E. J. HOOPER.

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME.

QUAIL.—The valley south of the Blue Mountain range and running west through New Jersey and Pennsylvania was, prior to 1868, not surpassed by any territory in this country for quail shooting. Its advantages were—abundance of birds, and open cover for shooting. The land is chiefly limestone sub-stratum, rich and highly cultivated, wheat and corn being the staple crops; and the timber is remarkably free from undergrowth. The birds were winter killed in the winter of 1868-69, and notwithstanding they were since protected by special legislation, the winters and springs were against them, and up to last winter they had not recovered to within eighty per cent. of their former numbers. But reports from well-informed sportsmen and farmers through this section state that last winter did not destroy the quail; that the wheat and rye are better, and the quail more plentiful than they have been for years; that the spring has been unusually propitious for breeding, and that the prospects for good shooting in these two States are more flattering than they have been for an interval of eight years.

PIGEON MATCHES.

MASSACHUSETTS.—The Sportsmen's Club of Spencer, Mass., have purchased one of Bogardus' glass ball traps, with 200 balls. They purpose to try their skill on Memorial Day, Wednesday, May 30.

NEVADA.—The following are the scores in the last monthly shoot between twelve members of the Virginia Shooting Club. Conditions: ten single rises at 26 yards, ties to be shot five double rises. The wind blew great guns, and the birds very inferior. Referee, Mr. Balsey; Judges, Messrs. Dillon and Loynachan:

D. H. Jackson	6	G. Kritzer	6
Schoneman	5	T. Diamond	5
B. Robinson	9	W. Dormer	8
Conroy	7	G. Bryson	5
H. Parker	8	J. McCauley	9
J. S. Kaneen	7	Geo. Daly	7

The birds being scarce, Messrs. Robinson and McCauley agreed to shoot off at some future time for the stakes.

ILLINOIS.—The members of the G. P. S. C., of Champain, Ill., shot a match for a medal on the 9th inst. Conditions of the match, single and three double rises; lame birds. The following is the score:

Conley	0	1	0	*	1	1	00 11 11—7
Monroe	1	1	0	1	0	1	11 11 11—10
Button	1	1	1	1	1	1	01 10 11—9
Scott	1	1	1	0	1	1	11 11 10—10
Kiler	1	1	1	0	1	1	11 00 11—9
Huff	1	1	*	1	1	1	10 10 11—9

NEW YORK.—The following scores were made at a sweepstakes shoot of the Wayne County Sportsman's Club at Clyde, N. Y., on the 9th instant, at glass balls, Bogardus' trap, 18 yards rise, ten birds each.

L. A. Dayton	7	M. J. McIntyre	4
Ben Catchpole	6	J. M. Corvey	4
Geo. Wride	3	J. M. Burghdurf	4
J. M. Streeter	7	C. G. Elliott	5
H. K. Compson	10	Ira Damewood	7
Jake Wurts	5	J. York	3
O. A. Helmer	7	Bob Catchpole	1

Compson took first money, Dayton won second in shooting off ties of seven, and Catchpole took third.

The members of the Long Island Shooting Park assembled at Dexter's on Saturday last to shoot for their champion cup. The conditions were seven birds at 25 yards rise, the previous winner to stand at 27 yards. The following is the result:

W. Wynn	1 1 1 1 1 1—7	Hance	1 0 1 0 —2
Edwards	1 1 1 1 0 1—6	Applegard	1 6 —1
Broadway	1 1 1 1 0 0 1—5	Walters	0 0 —0
Auston	1 1 0 1 1 0 —4	Yates	0 0 —0
Madison	0 1 0 1 1 1 —4	Williams	0 —0
Weitar	0 1 1 1 0 —3	Henderson	0 —0
Redden	1 1 0 1 0 —3	Hone	0 —0
Jonnson	0 1 1 0 —2		

Time of shoot—1 hour, 15 minutes.

NEW JERSEY.—The members of the Midway Shooting Club, of Matawan, N. J., met on Thursday, May 24, at Margan's Station, on the line of the New York and Long Branch Railroad, to witness the contest for the club badge, an exquisite piece of workmanship, and as appropriate an emblem as the sportsman could desire. The conditions were ten birds each, 21 yards rise, H and T traps, 1¼ oz. shot, 80 yards boundary, between Wm. A. Dunlop, present holder, and Stephen Lamberson, challenger. Annexed is score:

W. A. Dunlop	1 1 1 1 0 1 0 1 1 1—8		
Stephen Lamberson	1 1 1 1 1 1 1 1 1 0—9		

Dunlop's fifth bird fell dead outside.

Following this was a sweepstakes, $3 entrance, three birds each, with seven entries.

S. Lamberson	1 1 1—3	John Pierson	1 1 1—3
Cort Warne	1 1 1—3	H. A. Warne	1 1 0—2
James Vanbrokel	1 1 1—3	W. A. Dunlop	1 1 0—2
James Lamberson	1 1 1—3		

Tie on three.

S. Lamberson	1 1 1—3	James Lamberson	1 1 0—2
Cort Warne	1 1 1—3	John Pierson	1 1 1—3
James Vanbrockel	1 1—3		

Second tie.

S. Lamberson	1 1 1—3	James Vanbrockel	1 1 0—2
Cart Warne	1 1 1—3	John Pierson	0 —0

Third tie.

S. Lamberson	1	Cort Warne	1

First money divided between Stephen Lamberson and Cort Warne. Second divided between H. A. Warne and W. A. Dunlop.

Same Day.—Sweepstakes. Conditions same, with eight entries.

James Vanbrackel	1 1 1—3	Abe Ten Eyck	1 1 1—3
Cort H. Warne	1 1 1—3	Stephen Lamberson	1 1 1—3
H. A. Warne	1 1 1—3	R. Disbrow	1 1 0—2
W. A. Dunlop	1 1 1—3	James Lamberson	1 0 —1

Tie on three.

James Vanbrockel	1 1 1—3	W. A. Dunlop	1 1 0—2
Cort H. Warne	1 1 1—3	Abe Ten Eyck	1 0 —1
H. A. Warne	1 1 1—3	Stephen Lamberson	1 0 —1

Second tie.

James Vanbrackel	1 1 1—3	H. A. Warne	0 —0
Cort H. Warne	1 1 0—2		

MICHIGAN.—The Detroit Gun Club had a shoot for State medal, which was held by J. E. Long, on their new grounds, —The Hurling Park—on the 9th inst. Wm. Clark, of Toledo, referee; S. F. Whitman scorer, and Wm. Hart manipulated the trap strings behind a blind; English rules, 80 yards boundary, 20 yards rise, five ground traps, eleven birds each. The following are scores made:

J. E. Long	5	J. V. D. Eldridge	9
Cook Cousins	9	D. C. Sanborn	6
E. H. Gillman	9	M. K. Cristy	6
E. C. Nichols	4		

Ties at nine.

Cook Cousins	1 1 1 1 —5	J. V. D. Eldridge	1 1 0 1 0—3
E. H. Gillman	1 0 0 w		

A number of sweepstake matches were shot on the same day. During the medal shoot the wind was blowing almost a gale. The most of the birds were good, strong birds, but were very loth to leave the traps when sprung, and some of them actually walked from five to ten yards from the traps before rising. Some of the shooters had rises that would measure every foot of forty yards, so they did not do such bad shooting after all. S. F. W.

Shoot at Hurlingham Park, Hamtiamick, on the 21st inst., H and T traps, 21 yards rise and 80 yards boundary; ten birds each. Class shooting.

E. H. Gilman, captain	1	1 1 1 1 1 1 1 1	1—10
S. H. Turrill	1	1 1 1 1 0 1 1 1	1—9
C. A. Mack	1	0 1 1 1 1 1 1 1	1—9—28
Golt Stenbone, captain	0	1 1 1 1 1 1 1 1	1—9
J. V. D. Eldridge	1	0 1 1 1 1 0 1 1	1—8
Ed. S. Barbour	0	1 1 1 1 0 1 1 1	1—8—25

THE STATE SHOOT.

A correspondent writes from Poughkeepsie as follows:

"In your paper of May 17, you notice the meeting of the State Sportsmen's Convention to be held at Syracuse in June, and that the committee have contracted for twenty thousand birds (pigeons) to be shot at by the sportsmen attending the convention. For the information of your numerous readers will you please, in your next issue, give us as near as possible the number of pigeons destroyed to obtain the twenty thousand for the gentlemen sportsmen to amuse themselves over, at this, their annual gathering, and oblige, W. S. J."

[We regret that we cannot supply our correspondent with the information he desires. In fact, we believe that as the convention is postponed until the 18th proximo, the birds are still flying in freedom over the trackless expanse of the North Woods. If they are captured we shall have to refer our correspondent to the committee having the matter in charge.—ED.]

THE MASSEY CARTRIDGE CRIMPER.

MARYLAND, May 23, 1877.

EDITOR FOREST AND STREAM:

As I have derived both amusement and instruction from your pages, I am induced, for the benefit of others, to refer to a little implement in the sporting line, recently met with, but in which I have no pecuniary interest whatever, which appears to supply a want of those who use breech-loaders, and more especially those who use light rifle shells, which it is desired to reload. It is the Massey Cartridge Crimper, and may be thus described, having been invented, I believe, within the past year, but as yet little known. It appears to answer a want which has not heretofore been satisfactorily supplied by any other cheap device. Its simple form and practical value will interest those who wish to do fine rifle shooting in the forest, or at the range.

A shell that has been used but once or twice with a heavy charge of powder, is often so much expanded that it will not hold the bullet true and firmly in position, when reloaded, unless the mouth or portion of the shell seating the ball, be somewhat reduced in size. It must be compressed or crimped, so as to hold the bullet firmly, with its center line, from base to point, *exactly* coinciding with the axis of the bore of the barrel. This little implement will meet this required exactness, and as is believed, with as little trouble and expense as any possible device.

It consists of a pair of pinchers with jaws formed to fit the shell, and a cylindrical tongue, or pin between them, over which tongue the shell is placed for crimping; the tongue having a slight depression in one side, into which the jaw compresses the shell, by a projection in the jaw, the opposite side fitting the diameter of the shell, preserves its circular form intact, while the end of the tongue acts as a gauge to show when sufficiently crimped. The shell will remain at the easy fit which the expansive power of the powder gave it, except so much of the mouth as the bullet occupies, and this (except a mere trifle at the mouth to fully admit the patch of paper or muslin), it reduces the shell all around with perfect uniformity. The bullet is therefore properly held, and starts straight on its course.

As to new shells, it is well known to Creedmoor experts and other observing riflemen, that they often do not *exactly* fit the chamber, and those which are irregular in shape never give uniform shooting. The Massey Crimper appears to answer to this want, and to correct or remedy these defects very satisfactorily. E. S.

ST. MARY'S WORKS,
St. Mary's Square, Birmingham, May 4, 1877.

The champion triple wedge fast gun has beaten 102 guns by the best makers at the London gun trials, and has made the best shooting at game ever known. It will stand 10 drs. of powder in the proper shell, and can be obtained in the States at from $150 to $250. W. W. GREENER,
St. Mary's Works, Birmingham.

PITTSBURGH, May 1.

EDITOR FOREST AND STREAM:

I observe in your issue of 28th ult., your correspondent "J. J. E." quotes from Jas. D. Dougall's work on "Shooting," etc., in reply to "T. Umbelius" discussing the relative merits of "breech" and "muzzle" loaders, in which "J. J. E." says "that the writer of the above book acknowledges superior durability and shooting of the muzzle loader, and says, "that the rapidity of loading and firing in the breech-loaders is only an offset towards those other qualities in muzzle-loaders." Now, I am not going to *argue* the question, but merely to say that I cannot find in the work referred to anything that would warrant such a conclusion in the matter. In the last edition of his work on "Shooting"—London, 1875—at page 74 Mr. Dougall says, "Possibly the inven-

tion of breech-loaders was *originally* more directed to facility and quickness in loading than to any other advantage; but whether or not, breech-loaders have only to be made upon sound mechanical principles to gain a manifest advantage on muzzle-loaders *in every respect*." The italics are mine. Again, on page 75, "If their mechanical fittings be correct they must surpass in shooting powers any muzzle-loaders of similar dimensions." Mr. Dougall *may* at one time have held such an opinion, as many others did, when the breech-loader was struggling for existence, but I think the above quotations show that he does not hold them to-day. W. C. M.

Rational Pastimes.

BERMUDA HUNT CLUB.—The *Royal Gazette* (Island of Bermuda) thus describes the last meet of the "Bermuda Hunt Club:"

The last meet of the season was on Tuesday, 1st May—Front street, Hamilton, presenting quite an animated appearance as the Hunt, by twos and threes, arrived in front of the Yacht Club, which was the rendezvous. Ten minutes law and we jogged off to the head of the Harbor, a large field, including some ladies' taking advantage of a fine day to see the last hunt of the season. Jumping a small stone wall out of the road and over the grass for a short distance, the scent, turning to the right, carried us over a wall, which proved a stumbling block to three or four, and we headed for the south shore.

Three pair of heels (two, at least, of which were shod with iron) on the landing side of the next fence made a man look "nowhere," though it is said that as he rose he gasped "ubique." Now the pace was checked a bit; we crossed a road, and climbing up a steep and rugged hill, got a good gallop along some grass, over some small stone walls and into a bit of country that required some doing. A big and stiff bit of timber was now negotiated; luckily for some, there was a way round, which was taken advantage of by a few, but a little further ahead two more stiff posts and rails appeared, at one of which some grief was seen, for at it a flighty "fairy "fell. Now along the shore close by a little creek we saw the paper lying. "Don't foul 'er," cried a soldier bold, as his mare, rising at a wall, was cannoned against. Forrard on, forrard; a Royal Welshman leads the way, the Master in the van, two South Devonians racing side by side; sand and spray, civilians, soldiers, sailors mingled in a cloud.

Over the Sand Hills and far away, along the coast, what crossed the line but a bullfinch, big and blind as blind could be; it was a case of both arms up as we charged the thorny fence. Now over the South road across a valley and some small walls and we came upon a wire fence right in the line.

"Ware wire," shouted the Master, and we made a considerable detour to get on the scent again. 'Tis said that one essayed to jump it, taking his coat off and hanging it on the top wire, his horse, however, did not seem to see it, or probably did see it but didn't like the look of it. A ring round, twice in and out of a road, through a wood, along some nice galloping ground, brings us close to the finish; two fences more and we shall be in the finish field, still, for many this was not to be just yet, for at a big stone wall which now faced us, it was a regular case of heels up, heads down—What! is Bomba down? No, it cannot be, yet struggling on the ground we see the gallant Chestnut roll, three other hunters, men and all, make a melee fit for any fighting men; a fifth now swells the surging mass. *Quo fas et gloria ducunt.* Men of science now looked on and said that heaps of living flesh began to heave and swell, and as the horses one by one got up and men felt down their battered limbs, then regained their seats, the heap was scattered to the winds (represented on this occasion by a pleasant mount close by). A rail followed the fatal wall, and then three pretty jumps on the grass gave the ladies an opportunity of seeing some fencing before the good things Mr. Harvey had provided for all were attacked.

I have often thought how sad it would be if the pretty smiling faces at these pleasant reunions, when all is joy and jollity, were made to quail, grow sad and pale at sight of broken bones. But no, that must never be.

Yoicks over, Polly, Oh, Captain, Captain, play at ducks and drakes, but spare that little gosling's bones—Ruby, Ruby, won't you jump till Bomba comes?—Paget, true and faithful to the last, knows how to take a post and rail, but the "seventeen hands horse" jumps sticky as of yore. The Fairy Queen flies o'er (or through) timber stiff, and Dandy pulls and yaws in vain—Old Dolly (how she led the field and jumped that four foot rail), has gone, they say, to get a wooden leg, and Skinner's sold his mount for twelve pound ten—Meg Merrylegs has got new feet and legs. A dark-eyed mare of gipsy strain has had enough to carry, and says she's glad the season done. Bombadier's to Europe bound for change of air. A silly camel doesn't care, he says it's all the same to him. A Wellhman says he's got a "nag," look out. The Doctor's sure the gray will jump. The runners say good-bye, but they would like another finish at Mount Pleasant. The farmers say, "Tomatoes, ride through them if you will, they don't pay *us* for the boxes in New York." The paper baskets in the Barracks say they cannot bear the strain. The little birds say, "Don't stop yet, we want the paper for our nests." The ladies say, "Oh dear! Oh dear!" The soldiers know they'll miss the chase—and yet the season is done. TALLY HO.

Hamilton, May 2, 1877.

A PLEA FOR WALKING.—Dr. Howard Crosby, in the *Christian Union*, entreats his fellows to go a-walking. He says: "Our country within 100 miles or so of New York city offers picturesque regions for such a summer foot excursion of a week or two. Ride to Port Jervis and walk through Sullivan and Delaware counties, where the bears are. Or strike southward from Port Jervis and visit the rare beauties, sylvan and fluminal, of Pike County in Pennsylvania. Explore the Catskill region—a world of loveliness; starting up from Saugerties and so up the Platterskill Clove, or from Catskill Landing and so up the Kauterskill Clove. The railroad traveler is an ignoramus. He learns as much geography at night in the sleeper as he does by day. The walker learns the people as well as the topography, and comes from his journey a wiser as well as a healthier man."

UNIVERSITY OF PENNSYLVANIA.—The Athletic Association of the University of Pennsylvania held their semi-annual contests on Saturday, May 26th, on the private track of Mr. Robert Steel, Philadelphia. There was a very large attendance of spectators, many of the lady friends of the contestants being tempted out by the fine weather, and the promise of exciting contests. The 100 yards dash was won by Horace H. Lee, '79; time, 10¼ seconds. The standing jump was also won by Lee; distance, 9 ft. 7 in. The 3-mile walk was a walk-over for E. S. McIlvain, '78; time, 26 min., 55 sec. The high jump was won by H. L. Geyelin, '77; height, 4 ft. 9 in. Putting 16 lbs. shot, won by H. H. Lee, '79; distance, 34 ft. 2½ in. Running broad jump, C. A. Currie, '77; distance, 17 ft. 6 in. One mile walk, Wm. N. Johnson, '78; time, 8 min. 25 sec. Hurdle race, H. L. Geyelin, '77; time, 15⅗ sec. Throwing base ball, H. H. Lee, '79; distance, 354 ft.. ¼ mile. Run, won by Bertram Hughes, '80; time, 56 sec. Running hop, step and jump, C. A. Currie, '77; distance, 36 ft. 10½ in. Mile run, A. L. Church, '78; time, 6 min. 10 sec. In the graduate's races, A. Hewson, '76, won 100 yards dash in 11 sec., and ¼ mile run in 58½ sec. The referee was Mr. J. Albert Hodge, of Harvard College. Judges, Messrs. W. R. Philler, '75; W. P. Blight, '78; Saunders Lewis, '79, and C. H. Castle, '80. Time keepers, Messrs J. Warner Yardley, '77, and J. Douglass Brown, '79.

—The parade of the Coaching Club on Saturday afternoon was the largest display of the kind ever made in this city, eleven four-in-hands turning out. A very large number of people assembled to witness the display. The coaches formed in line on the east side of Madison Square, and at 4:30 P. M. the signal to start was given. The route was around the south end of the square and through Fifth avenue to Central Park, taking the west drive to Mount St. Vincent; thence homeward down the east drive, through the Scholars' Gate and Fifth avenue to Washington Square, then back again to the Hotel Brunswick. All along the route the procession was received with hearty plaudits from multitudes of spectators. The line was headed by Colonel Jay, then followed in the same order as named: Messrs. Perry Belmont, Fairman Rogers, Augustus Whiting, Frederick Bronson, T. A. Havemeyer, Hugo O. Fritsch, Frederick Neilson, W. P. Douglas, Francis R. Rivers and Colonel Delancey Kane. After the parade the members of the club and their guests, including a number of ladies, sat down to a grand banquet at the Hotel Brunswick. It is only four years ago since the first drag was purchased; and but two years since the club was formally organized. It now numbers sixty members, and counts seventeen drags.

—In Brooklyn, Cable's coach line is likely to prove a great success, as the attractions at Coney Island, its terminus, are very great. Passengers are booked at the Pierrepont House, in Montague street, and make the eight-mile run to the Island in one hour. Fare for the round trip, $2.

CRICKET NOTES.

—The Ottawa Cricket Club, of Ottawa, Ontario, have invited the St. George's Club, of this city, to visit Ottawa about June 20. The invitation has been accepted.

—The St. George's Cricket Club played their second match of the season on their grounds at the west end of Ninth street, Hoboken, N. J., on the 30th inst., the visiting club being the Union, of Ardmore, Penn.

BASE BALL.

PITTSBURG, May 26.—The Hartfords, of Brooklyn, beat the Alleghanys here to-day by a score of 6 to 3.

NEW HAVEN, May 26.—The Yales beat the Harvard University Club by a score of 5 to 0.

PHILADELPHIA, May 26.—A game played by the Athletics and Philadelphias here to-day resulted in favor of the former by a score of 8 to 1.

CINCINNATI, May 26.—The Chicagoes beat the Cincinnatis here to-day by a score of 12 to 7.

SYRACUSE, May 26.—The game here to-day resulted as follows: Bostons, 2; Stars, 0.

AMHERST, May 26.—A game here to-day between the Amherst and Wesleyan Clubs resulted in a victory for the former by a score of 14 to 2.

SEAWANHAKA YACHT CLUB.—The seventh Corinthian race of the above club for second-class schooners and first and second class sloops, will be sailed over the usual regatta course on June 16.

The committee, in publishing the programme, call attention to the success of former races, and express the hope that the efforts of the club to promote seamanship will be recognized anew by all yachtsmen, and encouraged by a large entry for this race, which will be open to yachts of any duly recognized club. Three prizes, in all, are offered—one for each class in which two or more yachts start.

CLASSIFICATION—Schooners—All under ninety feet, mean length.

Sloops—First class, all over fifty feet in mean length; second class, all of fifty feet or less mean length.

Entries—Entries must be made in writing, and will be received by M. Roosevelt Schuyler, Chairman of the Regatta Committee, at 32 Pine street, until 3 P. M., of Thursday, June 14.

Crews—Yachts must be manned by amateurs exclusively, and each owner, upon entering his yacht, shall submit a list of the names, occupations and addresses of his proposed crew, which list shall be subject to the revision of the Regatta Committee, whose decision shall be final.

Yachts will be allowed one man for every five feet of length on deck, and one for any additional fractional part of five feet. This number shall not include the owner. A sailing master or pilot, cook and steward may be carried, but none of them shall in any way assist in the management or working of the yacht.

Each yacht shall be sailed, and, as far as possible, steered by her owner. Any owner violating this rule forfeits his claim to the prize.

Sails—Schooners will be restricted to headsails, foresail, mainsail and working-gaff topsails. Sloops will be restricted to headsails, mainsail and working-gaff topsail.

No two headsails of same name to be carried at the same time.

—At the regular meeting of the East Boston Yacht Club, held in their club-rooms on Border street, in the Island Ward, May 7, a committee was appointed by the club, with full powers to procure a charter. From the necessary demands of the Legislature a new election of officers was expedient, and the following board was chosen: Commodore, S. S. Goodwin; Vice-Commodore, W. S. Nickerson; Fleet Captain, Wm. McCormack; Recording Secretary, P. Goliff; Financial Secretary, E. Burnham; Treasurer, F. Brown; Measurers, C. C. Cooper and J. H. Pierce; Trustees, G. Palmer, C. C. Cooper, and J. H. Pierce. It was decided to call the club the East Boston Yacht Club, and by a unanimous vote the constitution and by-laws of the old club were adopted. Adjourned to May 28. A committee of five was chosen to confer with like committee of South Boston Club on union regattas and festivities. A cordial invitation was extended to the East Boston Club by Commodore T. A. Huchinson and members of the Duxbury Club to participate in the dedication of their club-house on Saturday, June 2. A cordial invitation was extended to the club by Commodore Riley and South Boston Club to participate in the regatta on Decoration Day and their festivity at the club-house in the evening. Yours, "KEDGE."

YACHTING IN FLORIDA.

JACKSONVILLE, May 17, 1877.

EDITOR FOREST AND STREAM:

We have established a yacht club in Jacksonville, and at its incipiency it is more than a success. Permanent officers will be elected on next Wednesday week. After the election I will give you a description of the club for publication. We propose erecting a boat-house 30 by 60 feet.

Last night I proposed your name as an honorary member, and you were unanimously elected. AL FRESCO.

[We wish the Jacksonville Yacht Club every success, and can only express our pleasure at the honorable compliment so kindly bestowed.—ED.]

HAMBURG INTERNATIONAL REGATTA.—We have received, through the courtesy of Mr. Wm. C. Brown, Secretary of the Schuylkill Navy, the prospectus of our International Regatta, to be held at Hamburg, on July 7th, to which a cordial invitation to compete is extended to the clubs of this country. The following is a list of the events:

1. Hammonia-Preis, cup, value 75 guineas. For outrigged-fours with coxswain. Entrance fee, £3. 2. Alster-Pokal, cup, value 15 guineas. For skulls. Entrance fee, £1. 3. Vereins-Preis, cup, value 25 guineas. For six-oared inrigged. Entrance fee, £1 10s. Length of racing course 2½ English miles with a turn, every boat rounding its own buoy. N. B. The committee will be most happy to comply with all requests made in regard to the above programme. Entries to close on Friday, the 22d of June.

UNDINES AND ANALOSTANS.—A four oared shell race between the Undine Rowing Club, of Baltimore, and the Analostan Boat Club, of Washington, was rowed upon the Potomac on Saturday last. The course was one mile down the river and return. The Undines had the lead at the start, but catching the wash of a passing tug were passed by the Analostans, who kept the lead to the finish, winning in 11 minutes 59 seconds, the Undines being 9⅗ seconds later. The following are the names of the crews:—Undine—B. K. Cross, bow; E. J. Whittlesey, No. 2; Dr. J. D. Eglehart, No. 3; J. H. D. Watts, stroke. Analostan—O. D. Hall, bow; E. S. Munder, No. 2; J. R. Marshall, No. 3; J. R. White, stroke.

—An exchange says that the students are not giving up boating at Wesleyan, but are selling their six oared shells, and will use four oared ones. They will have a spring regatta if three crews will row the whole course, and if the money holds out.

—The Excelsior and Zephyr Boat Clubs, of Detroit, Michigan, have their six-oared crews in active training for a match to decide which shall hold the championship of the river.

The Nereid Boat Club held their opening reception at their boat house, in Brooklyn, on Monday evening. Many leading citizens participated. The affair was very enjoyable.

FOREST AND STREAM.—A meeting of stockholders of the FOREST AND STREAM PUBLISHING COMPANY will be held on the 14th day of June, 1877, at 2 o'clock P.M., at the office of the Company, at No. 103 Fulton street, in the City of New York, to consider the proposition to increase the capital stock of the Company from the sum of $25,000 to the sum of $50,000.

Spratt's Patent

Meat Fibrine Dog Cakes.

GENUINE

STAMPED

From the reputation these Meat Fibrine Cakes have now gained, they require scarcely an explanation to recommend them to the notice of every one who keeps a dog. Suffice it to say they are free from salt, and contain "dates" the exclusive use of which, in combination with meat and meal to compose a biscuit, is secured to us by Letters Patent. For sale in cases of 112 lbs. each. F. C. De LUZE, sole agent, 18 South William street, New York. Special terms to dealers.

THE "FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries

OF NORTHERN MICHIGAN, VIA

Grand Rapids and Indiana Railroad.

(Mackinaw, Grand Rapids & Cincinnati Short Line.)

Sportsmen who have cast a fly or trolled a spoon in the waters of the Grand Traverse Region will come again without solicitation. All other lovers of the Rod are invited to try these waters, wherein

The fish named above, as also **Muscolonge, Pike** and **Pickerel,** abound.

In no other streams east of the Rocky Mountains is the famous **American Grayling** found in such numbers.

Brook Trout Season opens May 1st.

Grayling Season opens June 1st.

The sportsman can readily send trophies of his skill to his friends or "Club" at home, as ice for packing fish can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The **Hotel Accommodations,** while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st **Round Trip Excursion Tickets** will be issued to **Points in Grand Traverse Region,** and attractive train facilities offered to tourists and sportsmen; also, on and after July 1st, **Mackinaw and Lake Superior** Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, send to FOREST AND STREAM office, or address

MANUFACTURERS OF

UNITED STATES ARMS CO. REVOLVERS.

A VICTORIOUS INVENTION

The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game.

The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.

It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or, when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation.

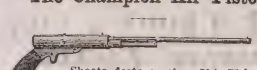
It is adapted for bait of any description, and, when, set, no Animal, Fish or Bird that touches the bait can possibly escape. It does not maugle or injure its victims in the slightest degree, nor need they be handled to free them from the trap.

PRICE LIST:

No. 1—For fishing and all kinds of small game and animals, sent by mail.....35 cents.
No. 2—For catching Mink, Muskrats, Raccoons, large Game, Fish, &c.....75 cents.
No. 3, or Rocky Mountain Giant, for catching Bears, Wolves, Panthers, &c. Can be easily set by a boy, and will stand a strain of several hundred pounds. Weight, 10 to 15 lbs. $10.

All goods sent, charges paid, to any address on receipt of price. Address

Chas. L. Coate,



330 Fulton St., Brooklyn, N. Y.

P. O. Box 214.

SHONINGER ORGANS.

PRONOUNCED UNANIMOUSLY AS THE

Best Instruments.

Their comparative excellence is recognized by the **Judges** in their **Report**, from which the following is an extract:

"The **B. SHONINGER ORGAN CO.'S** exhibit **as the best Instruments** at a price rendering them possible to a large class of purchasers, having a combination of Reeds and Bells, producing novel and pleasing effects, containing many desirable improvements, will stand longer in dry or damp climate, less liable to get out of order, all the boards being made three-ply, put together so it is impossible for them to either shrink, swell or split." **THE ONLY ORGANS AWARDED THIS RANK.**

This Medal and Award was granted after the most severe competition of the best makers, before one of the **most competent juries** ever assembled.

New styles and prices just issued, which are in accordance with our rule, the **BEST ORGANS** for the least money.

We are prepared to appoint a few new Agents.

Illustrated Catalogues mailed, postpaid, upon application to

THE
HAZARD POWDER CO.
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6¼ lbs, and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea shooting" FG is the standard *Rifle* powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER: ALSO, SPECIAL GRADES FOR *EXPORT*, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office,

88 WALL STREET, NEW YORK.

Orange Sporting Powder.

Orange Lightning Powder.

The strongest and cleanest powder made. Nos. 1 to 7. Packed only in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

Orange Ducking Powder.

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6¼ lbs. each, and canisters of 1 and 5 lbs.

Orange Rifle Powder.

The best for rifles and for all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6¼ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less residuum than any other brands made.

BLASTING, MINING AND SHIPPING POWDER, OF ALL GRADES AND SIZES, PACKED IN WOOD OR METAL KEGS OF 25 lbs.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

HENRY C. SQUIRES,

No. 1 Courtlandt Street,

(Third door from Broadway, New York.)

"Old Reliable"

ON

CHOKE BORES.

"HIGHLANDS, N. Y., Jan. 24, 1877.

"HENRY C. SQUIRES, ESQ.:

"SIR—It is a pleasure for me to inform you of my high appreciation of the ten-pound Greener breech-loader purchased of you last winter. I consider choke-boring, if skillfully done, as the greatest improvement in fowling pieces since the introduction of the percussion cap. It gives the maker complete control of pattern, and greatly increases penetration. To prove this I will give you the performance of this gun. The 32-inch, 10 gauge barrels, charged with 4½ drachms of powder and 1⅝ ozs. No. 6 English chilled shot, give pattern ranging from 285 to 330 pellets, in 30-inch circle, at 40 yards. The same charge of powder and 1⅝ ozs No. 4 American shot, gives 160 to 175 pattern with penetration, which kills ducks at 50 to 70 yards like a stroke of lightning. It is a characteristic of the choke-bore to show its greatest superiority in the large-sized shot. What I am about to say will perhaps surprise you as much as the performance surprised me. On trial of the 12-gauge, 28-inch modified choke-bore barrels, with 3½ drachms powder and 1⅛ oz. shot, I got about the same pattern and spread of shot at 25 yards as with the full choke, 10-gauge barrels at 40 yards, with tremendous penetration. This is just the performance required of a gun for thick cover, in which you generally find ruffed grouse, woodcock and quail, these birds being killed, with few exceptions, at from 15 to 25 yards. Yours truly, JOHN BODINE."

Long and Mid-Range Rifles

marked the PREMIER QUALITY.

First Prize Medal and Diploma, awarded at the Centennial Exhibition, for excellence of workmanship and material in their **Premier Quality** and medium grades. Their **New Patent-Triplex** Lever Grip Action and **Compensating Lump.** The attention of sportsmen is requested to the above new action. Its superior strength and solidity impart greatly improved shooting powers. Hard hitting being the desideratum required, is obtained by this powerful gun. Prices of the New Triplex Lever Grip, $175, $225 to $400. Marked the Triplex 10-bores extra. Our highest grade is as usual

[Extract from FOREST AND STREAM, New York, December 26, 1876. Contributed by one of the Judges of Awards of Guns at the Centennial:]

"This action (The Triplex Lever Grip) combines in the highest degree strength and simplicity, and must rapidly secure the favor of all who test its merits.

COMPENSATING LUMP. Strongly recommended. It is invaluable, and should be ordered on every gun. Costs about $10 extra. Choke-bores, medium or full. Our guns to be had of the principal dealers in the trade only.

PREMIER GUN WORKS, Birmingham, England.

Paper and Metallic Shells

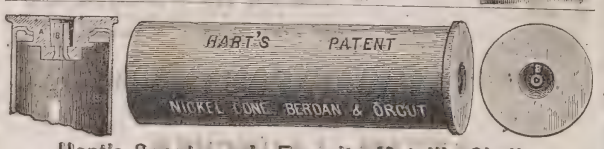
FOR

Breech-Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.



THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

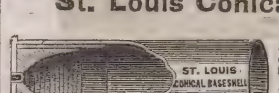
Not sold at retail by the manufacturers.

Hart's Sportsman's Favorite Metallic Shells,

FOR BREECH-LOADING SHOT-GUNS.

These shells are easily loaded, and the caps easily extracted from inside. Head solid and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing miss-fires. The Cone is made of nickel, and fastened solid in its place. Neither rusts nor corrodes fast, like movable anvil made from steel. The Nickel Cone also prevents miss-fire when a cap has been left on shell for a few days, which is liable to occur either in steel or iron. These shells are finely finished, and made any length ordered, from 2½ to 3½ inches.

Shells and Loaders and Descriptive Price Lists can be obtained from all the leading Sportsmen's Houses throughout the country.



GEORGE E. HART & CO., Newark, N. J.

FROM CAPTAIN BOGARDUS, CHAMPION WING SHOT OF AMERICA.

MESSRS. GEORGE E. HART & CO.: Gentlemen—The fifty shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly,

A. H. BOGARDUS.

"St. Louis Conical Base Paper Shell."

Having made important improvements in our Shell, we can safely recommend them as equal, if not superior, in quality to any Paper Shell manufactured in this country or in Europe.

Among the advantages claimed for these Shells, are: A saving of 25 per cent. in the use of powder; also the great decrease in recoil. The sizes made are No. 10—2⅝, 2¾, and 3 inches; No. 12—2⅝, 2¾, and 2⅞ inches. Longer Shells will be made at extra cost. They are not mailable. Sample, 100, sent by express on receipt of $1.15 for No. 12; $1.20 for No. 10.

TACKING SHIP OFF-SHORE.

The weather leech of the topsail shivers,
The bowlines strain, and the lee shrouds slacken,
The braces are taut, and the lithe boom quivers,
And the waves with the coming storm-cloud blacken.

Open one point on the weather bow
Is the lighthouse tall on Fire Island head;
There's a shade of doubt on the captain's brow,
And the pilot watches the heaving lead.

I stand at the wheel, and with eager eye
To sea and to sky and to shore I gaze,
Till the muttered order of "Full and by"
Is suddenly changed to "Full for stays!"

The ship bends lower below the breeze
As her broadside fair to the blast she lays,
And she swifter springs to the rising seas
As the pilot calls, "Stand by for stays!"

It is silence all, as each in his place,
With the gathered coils in his hardened hands,
By tack and bowline, by sheet and brace,
Waiting the watchword, impatient stands.

And the light on Fire Island head draws near,
As, trumpet-winged, the pilot's shout
From his post on the bowsprit's heel I hear,
With the welcome call of "Ready! About!"

No time to spare! It is touch and go;
And the captain growls, "Down helm! hard down!"
As my weight on the whirling spokes I throw,
While heaven grows black with the storm cloud's frown.

High o'er the knight-heads flies the spray,
As we meet the shock of the plunging sea;
And my shoulder stiff to the wheel I lay,
As I answer, "Ay, ay, sir! hard a lee!"

With the swerving leap of a startled steed
The ship flies fast in the eye of the wind,
And the dangerous shoals on the lee recede,
And the headland white we have left behind.

The topsails flutter, the jibs collapse
And belly and tug at the groaning sheets;
The spanker slaps and the mainsail flaps,
And thunders the order, "Tacks and sheets!"

'Mid the rattling of blocks and the tramp of the crew
Hisses the rain of the rushing squall;
The sails are aback from clew to clew,
And now is the moment for "Mainsail, haul!"

And the heavy yards like a baby's toy
By fifty strong arms are quickly swung;
She holds her way, and I look with joy
For the first white spray o'er the bulwarks flung.

"Let go, and haul!" 'tis the last command,
And the headsails fill to the blast once more;
Astern and to leeward lies the land,
With the breakers white on the shingly shore.

What matters the reef, or the rain, or the squall?
I steady the helm for the open sea;
The first mate clamors, "Belay there, all!"
And the captain's breath once more comes free.

And so off-shore let the good ship fly;
Little care I how the gusts may blow;
In my fo'castle bunk in a jacket dry—
Eight bells have struck, and my watch is below.

Mrs. Celia Thaxter.

Scandinavian Sport.

SKETCH, BY J. S.

IN beauty of rural scenery the Scandinavian Peninsula may fairly compete with the most favored countries in the old world or the new, while to the followers of St. Hurburt, or Isaac Walton, it offers attractions hardly to be equalled, certainly not surpassed, in any other country of Europe.

Pyramus and Thisbe may here stroll at will over flowery mead, through verdant grove, along the margin of murmuring rill, while the admirer of the grand and the sublime may wander through primeval forests, where the solemn stillness never was interrupted by the sound of the woodman's axe, or he may gaze on the roaring cataract as it leaps from cliff to cliff down the side of some mountain, whose snow-capped summit glistens in the light of the midnight sun.

The United Kingdoms of Sweden and Norway, extending from lat. 55 to 72 north, between the Baltic and the North sea, present an ever-changing panorama of hill and valley, forest and mountain, river and lake. The south and middle part is thickly settled and highly cultivated, but as you proceed towards the north, say beyond lat. 60, settlements gradually become smaller, neighborhoods farther apart, pine and birch, heath and rock assert more and more their dominion, until finally is reached the great unbroken wilderness, where the Lapplander and his herd of reindeer represents the last faint trace of civilization.

As diversified as is the scenery, are also the opportunities of the hunter. The modern Nimrod may here take his choice of stalking the wild reindeer amidst glaciers and precipices, or on swift sliding snow-shoes chasing the brown bear or the lordly moose through wild pine forests, or—if less dangerous and fatiguing sports are more to his taste—he may scour the moorland, the stubble field or the meadow in quest of black game, partridge or snipe.

As regards its forests, Sweden is divided in a certain number of districts, each under the supervision of a Chief-Forester with numerous subordinates. These public officers are educated for their profession at the Royal Forest Institute, in Stockholm, a public institution of learning, giving thorough instruction in forestry, surveying, natural history, botany and allied branches. The duty of these officials is not only to guard and attend to the proper use of the forest of the public domain (crown-forests) within the district, but also, on application of private owners of timbered lands, to survey and subdivide these in such a manner that a certain area of forest every year may be cut down and replanted, with a view to the permanency of the plantation. Another duty of these foresters is to guard that the game laws are observed, and to make complaint against all trespassers. In the performance of this duty they are energetically assisted by the Swedish Sportsman's Association, a society of nearly fifty years standing, with headquarters in Stockholm, and ramifications in every part of the country. The society counts several thousand members, and under its auspices is published, since the year 1832, the *Journal of the Swedish Sportsman's Association*, a monthly publication of great merit and talent.

The laws enacted for the preservation of game are very strict, and, what is more to the purpose, are supported by public opinion. The poacher and market hunter, particularly if out of season, will have a hard road to travel. The game and the privilege to hunt it in proper time belong by right of law to the owner of the land where it is found, but any well-behaved man, even if an entire stranger, in search of a few days recreation by hunting, will seldom apply in vain to the landowner for permission to pursue the wild game found on his premises, a permission which often is followed by an invitation to the applicant to become the guest of the farmer, in whose house he will find himself the object of generous hospitality, for that ancient virtue obtains as yet to great extent in old Scandinavia.

The following animals and birds are the most common objects for hunting. The nomenclature is after Linneus or Nilson:

MAMMALIA.

Brown Bear (*Ursus arctos*), Bjorn. Inhabits the large forests of the northern part of the country. It is much larger, stronger and more destructive on domestic animals than the black bear of America.

Wolf (*Canis lupus*), Swed. Varg. Is found more or less common in all timbered districts of Scandinavia, and is the most destructive beast of prey in the country.

Fox (*Vulpus vulgaris*), Swd. Raf. Is very numerous in every part of the country. In the most northern latitudes, it is supplanted by Canis lagopus.

Lynx (*Felis lynx*), Swed. Lo. Was formerly quite numerous, and is yet hunted with hounds and killed every year. When pressed by the dogs, it generally takes to some convenient tree. If wounded it often attacks the hunter with great fury.

Wolverin (*Gulo luscus*), Swed. Tilfras. Is very scarce, but now and then found in Lapland and caught in traps.

Moose (*Cervus alces*), Swed Elg. This magnificent animal, the pride of the Scandinavian forest, was nearly extinct fifty years ago, when the Swedish Diet, with a view to its preservation, passed a law forbidding its killing for a period of ten years. Since then the season for hunting elg has been limited to two or three months a year, in the autumn, and it is now quite numerous in all the larger timber districts in the middle and northern part of the country.

Red Deer (*Cero. elephas*), Swed. Kron-hjort. Inhabits at present only two small spots on the peninsula. It is found in some large beach and oak forest belonging to the entailed estates of the Counts Piper, in the utmost south-east corner of Sweden, and on an island on the coast of Norway. On both places it is strictly preserved.

Fallow Deer (*Cero dama*), Swed. Dof-hjort. As a wild animal the fallow deer is extinct, but is preserved in enclosed deer parks in a few places on some larger estates, and also in the royal deer-park at Stockholm.

Reindeer (*Cero ferandus*), Swed. Ren. Since time immemorial the reindeer has been kept domesticated by the Lapplanders, inhabiting the interior of the northern wilds from lat. 62 up to North Cape. With these people it supplants the horse, the cattle and sheep. Some families own as many as 1,000 reindeer. On that high chain of mountains, which constitutes the boundary between Sweden and Norway, the reindeer is found in a wild state in all the higher altitudes, bordering on the glaciers and the eternal snow.

Roebuck (*Cero capreolus*). This, the smallest but most beautiful of the deer family, has its habitations in the south part of Sweden, in the forests of which it is not so scarce. The season for hunting it is limited to October and November.

Hare (*Lepus timidis*), Swed. Hare. Among the animals which constitute sources of amusement and recreation for the Scandinavian sportsman, the hare must by no means be forgotten; in fact, it is entitled to a very distinguished place in the catalogue. It is very numerous all over the country, and provides more genuine sport than all the other animals taken together. In size it is about twice as large as the common American hare, (missnamed rabbit), and after being started by the hounds it often makes a bee-line of two or three miles before it turns on a circuitous route towards the starting-point.

BIRDS: GALLINACEA.

Capercailzie (*Tetrao uro-gallus*), Swed. Tjeder. This splendid member of the grouse family is found not only all over Scandinavia, at least as far north as the arctic circle, but also in Russia, Northern Germany and Bohemia. Its favorite habitations are deep and mountainous pine and spruce forests.

Black-cock (*Tetr. tetrix*), Swed. Orre. Is in Sweden and Norway more numerous than any other species of grouse, and is found in every part of the country. Its favorite haunts are heath-covered moors and such places in the timber and woodland-pastures, which abound in blueberries, upland-craberries and the like.

Ptarmigan (*Tetr. lagopus*), Swed. Ripa. Inhabits only the northern and mountainous part of the peninsula; in the summer the higher regions of the mountains beyond the belts of spruce and pine, among the scrubbery of the dwarf birch (*betula nana*) and the salix varieties, but in winter the lowlands, chiefly the birch forests, the buds of which constitute at that season its principal food. It is a mooted question (or at least was some years ago) whether there are not in Scandinavia two different species of ptarmigans. The hunters of the north make a distinction, calling one the ptarmigan of the mountain (*fjell ripa*), and the other, ptarm of the valley (*dalripa*). A distinguished English sportsman who had shot ptarmigans on the mountains of Norway, gave me as his opinion that such distinction exists, and that the latter variety is identical with the red grouse of the British Islands.

Hazel-hen (*Tetr. bonasa?*), Swed. Hjerpe. The name "Hazel-hen" I found given to this little grouse in a Swedish English dictionary, but if correct, it is certainly not expressive of the bird's habitation, for I doubt very much that it ever was found among hazel-bushes. The Scandinavian "Hjerpe" inhabits deep and wild pine and spruce forests, and is in such localities quite common in the northern part of Sweden and Norway. It is the smallest of the grouse family, not much larger than a tame pigeon, its flesh, resembling that of the ruffed grouse, is highly valued for the table.

Common Partridge (*Perdix cinerea*), Swed. Rapphona. Is not originally an indiginous bird of Sweden. History tells that this fine bird was first introduced to the country by order of Queen Christina in the middle of the seventeenth century, but probably some time afterwards became extinct, and was again imported under the auspices of that very in-

different King, but great hunter, Frederick the 1st, about the year 1740, after which time it has remained a permanent dweller in the southern and middle part of the country.

Quail (*Perdix coturnix*), Swed. Vaktel. The northern geographical limit of this bird is the south part of Sweden. It is migratory, arriving late in the spring and leaving early in the fall. It is a rare bird, not often found by the sportsmen.

WADERS.

Woodcock (*Scolopax rusticola*), Swed. Morkuka. This magnificent game bird is quite numerous all over Scandinavia. In the most southern part, however, it makes only short visits during its migrations in the spring and fall. It arrives in April and leaves in October. The woodcock of Europe is much larger than its American namesake.

Solitary Snipe (*Scolopax major*), Swed. Dubber Beccasin. The habitation of this bird is on low, wet, natural meadows, particularly such as are contiguous to larger water courses. It is a fine game bird, much larger than the American jacksnipe, lies well for the dog and is easily shot. You seldom find more than one at a time, and it is therefore in the British Islands called the "solitary" snipe.

Common Snipe (*Scolopax gallinago*), Swed. Enkel Beccasin. In habits and appearance this bird resembles very much the American jack (English) snipe (*Scol. wilsonii*). It is very numerous all over the country in all suitable localities.

Smallest Snipe (*Scolopax gallinula*), Swed. Half-enkel Beccasin, is probably the smallest of all game birds proper, but nevertheless, a game bird as much as any of them. It lies well for the dog and must give a strong scent, for any pointer or setter will mark them as readily as a woodcock or grouse. They are very handsome little fellows, swift on the wing, but not much larger than a sparrow. It is migratory like all its congeners, and quite rare.

This, we believe, ends the list of what we properly term "game birds." There is an endless variety of aquatic birds, which some may, but we don't, give the rank and title of game birds, however acceptable they may be for the table, or whatever pleasure the hunting of such may confer on the hunter. Of such birds may be mentioned: Two varieties of the swan, several of the goose, and an endless number of ducks, the mallard and teal conspicuous among the rest. Then there are two fine species of curlews: *Numenius, arquata* and *num phoebous* of plovers may be mentioned: *Cavadrius apricarus* and *cor marinellus*. Then the beautiful *recurvirostra avocetta*, and any number of shore birds, *totanus, tringa*, etc., etc.; but as our intention was not to write an Ornitalgia Scandinavica, but simply to enumerate the birds which a sportsman may find on the Scandinavian Peninsula while hunting with a setter or pointer, we believe the above will complete the catalogue.

HUNTING.

In the Scandinavian countries the moose, the stag, the roebuck, the bear, the fox and the hare are hunted with hounds. As the object is to shoot the game thus pursued, it is of more importance to have dogs with fine scenting power and good bottom than fleetness of foot. The domestic breed, probably indiginous to the country from time immemorial, is about the size of the English harrier, but of stouter build, in color mostly yellow or black-and-tan. Very few English fox hounds are seen. They are considered too fast, and fox hunting, as carried on in the British Islands is out of the question in Sweden or Norway on account of the brokenness of the country and the frequency and height of the rail fences, and to the damaging of the latter, and the trampling down of his winter grain by a field of horsemen. The Scandinavian farmer, generally a freeholder and a very independent fellow with all, would most assuredly object.

The *modus operandi* in hunting with hounds is about the same as that which is employed in hunting deer in the Southern States. The hunters, provided with shot guns or rifles, as the occasion may require, take their stations; one of their number follows the pack, encouraging them now and then with a bugle-note. After a while a single dog "gives tongue," then another; a moment later a sharp yell; the game is started and the music in full blast.

> "Yelled on the view the opening pack,
> Rock, glen and cavern paid them back."

After a while is heard the round boom of a smooth-bore, or the short, sharp crack of a rifle, then perhaps a loud repeated call—"See here, see here, see h-e-r-e!"—summoning the dogs to the track and to renewed exertions, for it was a miss. After a short interruption the chase goes on with full cry as before. Again the report of a gun resounds, then silence, followed by a merry peal of the bugle, announcing to the whole party that the game is conquered and the chase ended, and from their several stations they gather with rapid strides to congratulate the successful comrade. The hounds, generally not more than two to four brace, are coupled in their leashes, and the whole party either return home or proceed to some other locality to renew the hunt.

The bear of Scandinavia hibernates in a dormant state from the first snow-fall in October or November, until awakened by the soft air of spring. He prepares his comfortable winter-quarters in some convenient cave, or under the roots of some windfall or other suitable place. After the first fall of snow in the fall, every bear-hunter is out looking for the track of bruin. This found, he follows it cautiously until by the appearance of the track he suspects that the lair is not far distant. He then makes a succession of circles around the track until he has ascertained that the bear's winter-quarters are inside the last one. The circumference of this (in the language of the country called "ring") is then plainly marked out in the trees with a hatchet for the double object; first, that he may easily find the place at an intended later visit, and second, to notify other bear-hunters, that may happen to come on the same track, that this particular bruin is properly "ringed," and is the ring-maker's property. His right in this respect is unquestioned and never intruded on. The ring completed, bruin is left in peace for several weeks to enjoy his last nap.

Towards Christmas or New Year the hunter, followed by one or two trusty comrades and a couple of reliable bear-hounds, returns to the place. Every nook inside the circle is then carefully examined until the animal is found, and most frequently killed in its lair or, if startled unexpectedly, the hounds are put on his track and he is soon brought to bay and dispatched.

Snow shoes.—On these and similar expeditions during the winter the hunters always use snow-shoes which, however, are quite different from those used in this country. They are made of pine boards, six to eight feet long, five inches wide and one half inch thick. The lower side is made very smooth, and the fore-end is bent upwards. In the middle of the upper side is a leather strap fitting to the foot. The Swedish name for such a snow-shoe is *skida*. As a propelling power the skid-runner uses a long pole just as the fisherman propels his canoe. In the northern part of the country such snow-shoes are in general use and have been so from time immemorial, being often mentioned even in the old *Icelandic Sagas* and the most ancient chronicles. Using these implements, they slide over the snow with almost incredible velocity, and running thus through timbered lands it is astonishing to notice how skilfully they avoid stems, stumps and rocks in their headlong speed. The Lapplanders particularly are very skillful in the use of these snow-shoes, mounted on which they wage, all winter long, an incessant warfare against the wolves, which are the worst enemies of the reindeer. On such expeditions the Lapplander often leaves his gun at home, taking with him no weapon but his pole, one end of which is provided with a sharp steel point, and used as a spear to dispatch his enemy. In the same manner these daring hunters often kill the bear.

Bird Shooting.—For hunting the different varieties of game-birds in the southern and more open parts of the country, setters and pointers are in general use in Scandinavia. The majority are of English breed, but there is a good sprinkling of Russian setters, which are highly esteemed, and justly so. They are not handsome dogs, to be sure, nor very dashing rangers, but these shortcomings are more than made up by their fine noses, steadiness, untiring energy and excellent constitution. They are natural retrievers and easily broken. As water-dogs they cannot be surpassed, and using them on ducks, seems not to interfere in the least with their steadiness. They cannot be too highly recommended for introduction to this country, now when bench shows seem to be all the rage.

In the northern, mountainous and heavily timbered districts a quite different kind of dog is used for hunting the different variety of grouse which are found here in great abundance. The dog in question is a small animal with long hair, commonly black and tan, fine nose and very swift on foot. It looks very much like a small shepherd-dog, but goes under the name of "bird dog" (*fogel-hund*). His functions are to find the bird, flush, follow and tree him. The dog then remains under the tree and now and then gives a low yelp to attract the bird's attention and allow his master to approach. The great majority of grouse brought to the market from the north are shot in this way.

In former times it was a common practice in Scandinavia to shoot the capercailzie and the black-cock when at play in the spring. The former commences his solitary play from some of the lower branches of some large fir or spruce at break of day, and is then easily approached by taking care to move only three or four steps at a time, while the bird emits the hissing sound by which he winds up each play, for during those moments of supreme ecstasy he is perfectly deaf and blind. The latter, more gregarious and sociable in their habits, meet at early dawn in great numbers at certain places, generally a low meadow, a swamp or field, where they spend an hour or two strut ing around, playing and fighting. At such places the hunters used to dig holes in the ground and conceal themselves before the arrival of the birds, which then fell an easy prey to the ambuscade. But these proceedings are discontinued since long ago, it being forbidden under heavy penalty to shoot or in any other way molest any species of grouse from Jan. 1, until Aug. 15.

The capercailzie is sometimes shot at torchlight. The hunter, at sunset, in the fall, takes a stroll in such places of the forest where capercilzies are known to have their haunts, and, proceeding with as little noise as possible, he can easily hear these big birds rising from the ground and going to roost, the whole family mostly settling in the same tree. Guided by the sound he lays down on the ground a long straight stick, brought with him for the purpose, and which he points in the supposed direction of the roosting tree. Blazing his path out of the wood, he returns later at night with torches and assistants, and it is said that by following the direction of the stick the roosting-place of the capercailzies can easily be found by those experienced in this kind of hunting, and if only the precaution is taken always to shoot the undermost bird there is nothing to prevent the killing of the whole number, as the birds, bewildered by the torch-light, do not attempt to escape by flight, unless tumbled on by some of their falling comrades.

Black-game Shooting with Decoys.—Late in the fall and during the early winter the black game often congregate in large numbers in the birch-wood, the buds of which serve them for food. At such times a large solitary tree, or group of trees, in some adjoining field is selected, and a hole, large enough to hold one or more hunters, dug at a convenient distance and covered with a low roof of brushwood. In the top of the tree are then put up one or more decoys, representing black cocks. These are mostly made of black velvet, with large pieces of red flannel over the eyes, the whole a little larger than the real bird. After the hunter gets into his hiding-place early in the morning, one or more persons are sent out in the birch-wood to drive the birds in the direction of the decoys, which is easy enough, as they in most instances make a bee-line in an opposite direction from the driver. In this way quite a number of birds are often killed in a few hours.

Woodcock-shooting.—Early in the spring there is most excellent woodcock-shooting for a couple of weeks in the utmost southern part of Sweden. Returning across the Baltic Sea from their winter quarters, the flight of birds throw themselves down in the first brushwood or piece of timber they meet. Thickets of hazelbrush in low, moist ground are their favorite haunts, and the rural population in these parts therefore call them "hazel-hens." During this period they are shot over setters or pointers, just as here. Having rested for a week or two, they go farther north, and spread themselves all over the country. They are then for a month or two hunted on what is called "woodcock passes" (*morkull-streck*), pretty much in the same way as ducks are shot in this country; for it is the habit of the European woodcock to fly over the same range several times early in the morning and after sunset in the evening. Such ranges or passes are mostly found along the edges of timbered highlands, skirted by low, marshy ground, covered with brushwood. A little before sunset the sportsman takes a position somewhere on this range, selecting a place where the timber is not too high, and awaits the arrival of the birds. Soon is heard a snoring, nasal sound, something like "Ort, ort, ort," repeated two or three times, and followed by a sharp whistling. Now, look out, for very soon one or more woodcocks will be seen flying just over the tree-tops, giving a good chance for a shot. In this way, in an hour or two, until darkness sets in, one has an opportunity to bag several brace of birds. Their flight is always in the same direction, going and returning, and having once found the range you may repeat your visits two or three times a week for a month or more.

Skall-gang.—When the larger beasts of prey, the bear, the wolf, the lynx and the fox, have committed more serious depredations on the domestic animals of some district, the rural population is called out by the chief forester to a grand hunt for the extermination of the depredators. Every rifle, shot-gun and old musket is brought out, every known hunter is especially invited, and the men of the district assemble to the number sometimes of several thousands. Mustered in companies by the sheriff and constables, and guided by the foresters, they make a surround of such part of the infested district where the animals are supposed to have their haunts. The men are now formed into an isosceles triangle, the two long sides of which, generally made somewhat curvilinear toward the vertex, often are 20 miles or more each in length, with a proportionate base of four or five miles long. This base-line is occupied by the best hunters at short intervals, and in the intervening spaces are stretched nets, made for the purpose of strong cords, to prevent the inclosed animals from breaking through the line. All these arrangements are made the previous evening, and the drivers spend the short summer-night at their appointed places. Those not provided with firearms carry axes, spears or some other instrument of attack and defence. Along the lines fires are kept up during the night to keep the intended victims inclosed. At the break of day, and at a given signal, the men at the vertex commence moving towards the base. As they proceed the sides close in, driving the beasts before them towards the nets. The animals, finding themselves shut up on all sides, often make desperate efforts to break through the lines of drivers, and many a fierce and bloody combat is often fought on this part of the battlefield; for it is a noteworthy fact, that although perfect stillness reigns along the nets, while the wildest noise and tumult prevails everywhere else, particularly on such occasions when some animal shows itself and tries to break through, still the animals seem to know by instinct where the real danger threatens, and seldom come near the line of the nets until the last moment. The hunters occupying the posts of honor on the line have in the meantime made every preparation. In the time of the muzzle-loaders each man was provided with two or three firearms and the same number of assistants to reload his guns, and to kill with spears such beasts as might fasten in the nets. As the day wears on, and the enclosed space every moment becomes smaller, the excitement increases. The beasts now frequently show themselves, but the drivers are so close together that escape is next to impossible. The foresters, on horseback ride up and down the lines encouraging the people and correcting any mistakes that may occur. Now a she bear with her cubs makes a dash on the drivers, but is repelled, then a pack of wolves tries to break through, but is driven back; a family of lynxes takes to the trees, but is shot down from their supposed place of safety; foxes are seen every moment flitting through the bushes. Everything as yet is quiet at the nets. But now is heard the crack of a rifle in that direction, then another and another, then a perfect fusilade. The beasts at last throw themselves on the nets and are killed without delay. A halt of the drivers is now ordered, lest some accident may happen, for they are now nearly within range of the riflemen. After the firing has ceased a squad of the best hunters is selected to examine carefully the ground inside the circle, and to dispatch whatever beasts may yet have refused to show themselves at the nets. All the game is then gathered, and sold at public sale for the benefit of the "scalp-fund" of the province.

Such a grand hunt is, in Sweden, called "Skall-gang."

J. S.

RAMBLES IN PIKE COUNTY.

BLOOMING GROVE PARK, May 13, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

Leaving New York, via 23d st. ferry, at 8:45 A. M, after a comfortable ride in the Erie Railway drawing room car, we reached Lackawaxen at 1 o'clock, connecting there with the Hornsdale Branch train for Hawley, where we arrived at 3 P. M., after a charming ride up the romantic valley of the Lackawaxen River, passing Millville Station, where the far-famed Blooming Grove trout stream enters the Lackawaxen. A fine team of blacks easy, open wagon and pleasant weather make the ride through the woods to the club house delightful. At the club house Matt is waiting our arrival, and dinner is soon announced. From Hawley to the Park it is ten miles, partly on a fine turnpike. On the way the road skirts the edge of Jones' Pond, famed for large black bass. They were placed there about six years ago at the same time that Lake Giles, at Blooming Grove, was stocked. Messrs. Atkinson and Jones have neat fishing lodges on the margin of this fine sheet of water (Jones' Pond). We found Ned Quick, the veteran bear hunter, engaged in the peaceful occupation of plowing as we passed his modest home, but he says he will be on hand early on Monday for a trouting excursion.

Sunday.—Warm and sunny, with fleecy clouds; just the day for a walk-over to the breeding parks. The veteran game-keeper, John Courtright, has quite a model farm there, and while the ladies and children are resting, we inspect the deer and elk parks. The buck elk has horns in the velvet a foot long, having dropped a fine pair of antlers in March. These animals have begun to shed their light colored winter coats, and will soon have smooth glossy skins. They are quite tame, and eat grass and laurels from the ladies' hands. They have a habit of contracting the upper lip, grating the teeth and whistling, the only evidence of displeasure they show. More ground has been cleared and will be put in turnips and grass this season to furnish winter food for deer and elk.

Homeward through the woods we hear the ruffed grouse drumming. The Park abounds in wild flowers; thousands greeting the eye everywhere with their delicate beauty. Violets paling from the deepest purple, and more delicate lavender, to snowy white. Snowdrops in the greatest profusion; the ground nut with its starry white blossoms, millions of periwinkles dotting the green sward; and sweetest and loveliest of all, the Mayflower, or trailing arbutus, creeping in and out amongst the rough stones, half covered with leaves and mosses in a charming hide and seek, discovering itself by its own sweetness and delighting the senses by its exquisite waxlike pink and white flowers and delicious fragrance.

The June-berry trees are now in full bloom, with long drooping clusters of white flowers. The scarlet and green tassels of the maples stirred by every passing breeze, possess a grace and beauty peculiarly their own.

Next month the laurels and rhododendrons will be in full blossom along the roads and in the swamps by the trout streams, making a perfect wilderness of beauty with their soft pink flowers and giving a glow to the woods, as though the setting sun had left his departing glory there. Was ever name more rightly given or more justly deserved than Blooming Grove?

May 14–15.—After an early breakfast, ladies, children,

rods, creels, lunch baskets and wading boots are stored in an open wagon drawn by mules, with ribbons in their ear caps, and we are off for the Shoboka River. A three-mile drive brings us to Hatton's Bridge. Leaving the ladies and children and an escort, with their rods at the bridge, where a deep pool filled with trout gave them occupation, Ned and I followed a wood road down the Shoboka a mile before we commenced fishing. A few casts in still water were unsuccessful, but further on we reached the rapids, where fish were plenty and hungry. They were in swift water and in eddies. Wherever a trout could lie there he was, ready for fly, worm or grub. Wading the brook about two miles on, we reached the "Farms," now a deserted clearing, with heavy baskets, counting 47 fine fish—few of them weighing less than one-quarter of a pound. Below the "Farms" there is another mile of good fishing, until the stream spreads out into large still-water ponds, where the trout collect in winter.

It has been my experience that amateur fishermen cannot land as many fish in the same time and waters as the backwoodsman, and whether the amateur whips the stream first or last, the native has the largest basket. I must admit that Ned took two fish to my one, although in the matter of tackle I was provided with a light rod and reel and braided green silk line, while he was equipped with an ash pole, and about twelve feet of black horse-hair line made by himself. It was hardly a satisfactory explanation that he gave that it must be all in the "color of the line." With well-filled creels, afternoon saw us on our homeward march. We found our party at the bridge, anxious to compare notes, for they had caught some trout, and are ready for home. And having added a basket of fresh eggs, a live sucking grunter to our stores we are soon jogging along behind the patient mules, reaching the club house before sunset, where an ample meal is discussed with that relish and zest that only open-air sports can give.

On the following day, only one of the party was in the mood for fishing. Ned was ready and impatient to be off for the Blooming Grove stream. There was rowing on the lake for ladies and occupation in the house.

There are about seven miles of good fishing on the Blooming Grove, from Millville, where the stream enters the Lackawaxen up to the falls at Waddell's. A rough path strikes the stream above the falls about two miles from the Park, where one can wade across and fish down the opposite bank; the other side is rocky and precipitous. After several miles of quiet winding through Westbrook's meadows the stream makes a bold plunge of about 30 feet over a projecting ledge, falling into one of the best pools on the stream. Ned was anxious to get down and try the pool under the falls before the water was raised by the flow from Kleinbam's tannery, while I cautiously dropped a fly from above into the foaming pool below. At the second cast, well over towards the opposite shore, a greedy fellow rose and was landed by careful management and some hand-over-hand work at the top of the falls. Then descending over rocks and fallen timber we fished the deep pools, taking eight good sized fish in going about one mile. Having secured trout enough with those before captured, and with due regard to future sport for other members, we reeled up and retraced our way by a good road to the old clearing at the Falls, where we ate our "pieces," and after a short nooning took the path home. This stream has furnished many full baskets this season to native and visiting fishermen. It will long be a never failing source of pleasure for trout fishing. There is a dam of about twelve feet high at Millville, and two high falls in the seven miles, so that what fish are in the stream must have grown in its pools without running up from the Lackawaxen. A few fish, weighing from one-half to one pound, are ample reward for the reasonable trout fisherman, and with ordinary protection this fine stream will afford good sport for many years. With some care, a good basket of fish may be taken to the city after a few days' fishing, and are a welcome treat to friends at home, but, as a rule, the city sportsman should capture only enough for present use, and be satisfied with sport for sport's sake. J. A.

Rational Pastimes.

WARRENTON RIDING CLUB.

MONTCLAIR STOCK FARM, Orange Co., Va., May 30.

MR. EDITOR: Allow me to add my congratulations to the hundreds I know you have already received in reference to the great improvements in our favorite weekly. I have just returned from the spring meeting of the Warrenton Riding Club. The meeting was a success, although the entries were not as numerous as we should have liked to have seen. In the evening there was the club supper, and a very enjoyable one it was. Gen'l Payne, the president of the club, graced the head of the table; on his right sat Gen'l Fitzhugh Lee, a prominent candidate for Governor. On Gen'l Payne's left was another prominent candidate for gubernatorial honors, the brilliant Col. Daniels, of Lynchburgh. Then there was Gen'l Robinson, the 1st Colonel of the Black Horse, 73 years old, as hale and hearty as a man of 25, Charley Payne, Charley Greene, Slidell (an ex-officer in the Union army, and a great favorite), old Sheppard Bartel, and lots of others.

Next October they are going to have a fall meeting, and I want you to come down. We will be able to give you some good shooting, and I hope a jolly time. B.

ORION CLUB ATHLETIC SPORTS.—The first public meeting of the Orion Rowing and Athletic Association, since their consolidation, took place on the 30th ult., at the West Side Driving Park, Jersey City.

That it was a grand success, the enthusiastic expressions of favor of the large audience—composed of the best citizens (a large number of whom were ladies) of the city and country—amply testified. Full delegations were present from the principal athletic clubs of New York City. Great credit for the admirable manner in which the arrangements were carried out is due to the genial president of the club, Alderman Frank C. Fry, Executive Officer Captain D. W. Lawrence, and Committeemen Robert Packer, John Van Gelder, George E. and J. H. Van Loan, C. Hoe, and W. F. Meyers.

The following gentlemen acted as officers of the day: Messrs. M. T. Newbold, J. F. Luther and F. W. Mitchell, as judges—the latter also as time-keeper. Mr. E. Plummer, referee. Prof. Smith, starter, and Mr. James Robottom, scorer.

The exercises consisted of contests in walking, running, jumping, etc. A fine band was in attendance. The games commenced, on schedule time, 3 P. M., and were carried out to the letter until 4:20, when a heavy thunder storm broke on the scene, which delayed matters for an hour, leaving the track exceedingly heavy—and all know that Jersey mud "sticketh closer than a brother." And though the boys showed commendable pluck, it is hardly fair to have their time go on record under the circumstances; but they showed conclusively what they could do under more favorable auspices.

Among the particulars to be noticed, where all were so good, was the warm encomiums on Mr. Conner, for his admirable style of walking. The artistic and splendid running of Mr. Hough, and the feat of Van Loan in making 120 yards and ten hurdles on a heavy track in twenty seconds.

A notable feature of the occassion (not down in the bill) was the running race of Judge Newbold with the contestants of the one mile walk. After running at the top of his speed in the hot sun to the 1st quarter-pole the erudite judge gave it up in great disgust, and came across lots to the judges' stand, saying (while the perspiration poured from his heated face), that if they wanted him to keep up with the long legs of Conner or the nimble ones of Van Loan he wanted Mitchell's trotter or Dudley's 3 minute colt. No more of that for Judge Newbold.

The prizes, consisting of nine gold and eleven silver badges, were simply elegant. They were original and unique in design, of pure metal, and elicited great praise.

The whole exhibition was a great and very flattering success to the boys of the Orion, not the least matter of gratulation was the fact that the club retains three of the prizes, though having but four entries.

The Scottish-American Athletic Association of New York with forty entries carried off eleven, showing what superb athletes they are.

The following received prizes from the hands of Capt Lawrence, bestowed with appropriate remarks, interspersed with music by the band:

One Hundred Yards Dash.—First prize, H. B Wilson, Scottish-American Athletic Club, N. Y.; second, H. B. Griffin, same club.

One Mile Walk.—First prize, T. A. McEwen, Scottish-American Athletic Club, N. Y.; second, Chas. Conner, same club.

One Hundred and Twenty Yard Hurdle Race.—First prize, J. H. Van Loan, Orion Rowing and Athletic Club, Jersey City; second, W. F. Meyers, same club.

Running High Jump.—First prize, John Knox, Scottish-American Athletic Club, N. Y.; second, A. H. Oakes, Young Men's Christian Association, N. Y. City.

Half-Mile Run.—First prize, F. E. Hough, Hudson Boat Club, Jersey City; second, W. F. Banham, Harlem Athletic Association, N. Y.

Quarter-Mile Run.—First prize, J. H. Ferguson, Yonkers Athletic Club, N. Y.; second, W. O. Wilkinson, Young Men's Christian Association, N. Y.

Three Mile Walk.—First Prize, Chas. Connor, Scottish-American Athletic Club, N. Y.; second, J. H. Van Loan, Orion Rowing and Athletic Association, J. C.

Running Broad Jump.—First prize, Geo. McNichol, Scottish-American Athletic Club, N. Y.; second, H. E. Wilson, same club.

One Mile Run.—First prize, James Christian, Scottish-American Athletic Club, N. Y.; second, C. Rowland, same club. JACOBSTAFF.

UNION ATHLETIC CLUB.—The annual spring games of the Union Athletic Club, of Massachusetts, came off on the grounds of the Boston Baseball Club, on Saturday last. The following is a list of the winners:

Putting the shot—J. G. Lathrop (U. A. C.), 31 feet 4 inches; P. Johnson, 31 feet.

Standing high jump—J. G. Lathrop, 4 feet 5½ inches; C. E. Come, 4 feet 2 inches.

One mile walk—J. B. Dennie (U. A. C.), 7m. 42¼s.; J. A. Kelleher (U. A. C.), 7m. 56½s.

Running high jump—H. E. Ticken (N. Y. A. C.), 5 feet 4 inches; George H. Carver (U. A. C.), 5 feet 1 inch.

Throwing heavy hammer—P. Johnson (U. A. C.). 73 feet 2 inches.

Three-legged race—J. C. Bibber and G. F. Kingman (U. A. C.), 18 seconds.

One hundred yards run—Edward Merritt (N. Y. A. C.), 10¼ seconds.

Potatoe race—Frank Burgess (U. A. C.)

Half mile run—T. H. Simmonds (Harvard College), 2m. 12s.; J. T. Williams (U. A. C.), 12m. 18⅘s.

Three mile walk—O. C. Wokech (U. A. C.), 24m. 48s.

Hop, skip and jump—P. Johnson, 41 ft. 4 in. (best on record in this country for an amateur).

Quarter mile run—E. Merritt (N. Y. A. C.) 57¾ sec.; A. S. Brackett (U. A. C.) 58s.

Running broad jump—P. Johnson, 17 ft. 3 in.

One mile run—G. F. Kingman (U. A. C.) 4m. 40⅗s.

BOSTON, June 3, 1877.

The first regatta of the Quincy Yacht Club took place Saturday, June 2, off the Pine Point House. Appended is a summary:

FIRST CLASS START—2:40 P. M.

	Ft.	in.	Ac. time. H. M. S.	Cor. time. H. M. S.
Secret, J. Binney	23	3	2 08 33	1 38 22

SECOND CLASS START—2:50 P. M.

Water Lily, P. Grant	19	7	2 07 53	1 33 04
Wild Fire, H. A. Kietel	18	1	2 12 16	1 38 33
Masie, J. H. Stade	19	9	2 24 47	1 50 27
Nattie,				
Enigma, capsized.				

THIRD CLASS START—3 P. M.

Imp, W. F. Maybury	16	9½	1 20 26	0 54 11
Dandelion, Q. Adams	17	5	1 29 45	0 55 15
Red Lion, G. W. Morton	16	8	1 28 01	1 01 43
Undine, G. W. Mefton	17	0	1 42 14	1 16 14
Elmer, P. Chubbuck, Jr.	16	8	1 43 53	1 17 35
Annie, P. B. Turner	16	8	1 48 15	1 22 35

The first of the series of championship regattas was sailed January 2 by the Duxbury Yacht Club, the yachts being divided into two classes, the first consisting of sloop and cat rigs and the second of sprit-sail yachts. The breeze was very strong from the southward. Summary of the time:

FIRST CLASS.

Name.	Owner.	Cor. time. H. M. S.
Idle Hour	L. H. Keith	
Clara B	T. A. Hutchins	51 40
Mollie	J. H. Simonds	1 03 20

SECOND CLASS.

Little Charley	E. Ransom	1 28 44
Cock Robin	Austin Keene	Not taken.
Sadie C	B. P. Williamson	1 25 29
Gladiator	F. Symmes	1 25 58
Hornet	A. M. Watson	1 23 54
Bridal Wreath	H. Loring	1 25 29
Meteor	S. Richards	1 25 29
Dexter	Geo. Delano	1 28 29
Smuggler	R. A. Winsor	1 29 18
Nautilus	G. A. Green	Not taken.
Zephyr	W. J. Wright	1 25 29
Annie Clark	W. Ransom	1 27 50

(*Regular Yachting Matter on Page 290.*)

Fish Culture.

PROTECTION OF FISH CULTURISTS.—Both Houses of the Legislature of Michigan have passed a law whose object is to protect persons engaged in fish culture, and it is to be hoped it may receive the Governor's signature. We append a copy of its provisions. It is entitled "A bill to encourage the propagation of fish in the State of Michigan:"

SECTION 1. *The People of the State of Michigan enact*, That it shall be unlawful for any person or persons to kill or take speckled trout or other fish from any private lake, pond or stream, used for the propagation of such fish (except by the consent of the proprietor of such lake, pond or stream).

SEC. 2. Any person or persons violating Section 1 of this act shall be deemed guilty of a misdemeanor, and upon conviction shall pay a fine of not less than ten dollars, and not exceeding one hundred dollars for each offense, and shall, on conviction thereof, stand committed to the county jail until such penalty is paid, provided that such imprisonment shall not exceed three months.

SEC. 3. A prosecution may be brought in the name of the People of the State of Michigan, against any person or persons violating the provisions of this act, before any justice of the peace of the county in which such violation is alleged to have taken place, or before any court of competent jurisdiction; and it is made the duty of all prosecuting attorneys in this State to see that the provisions of this act are enforced in their respective counties, and they shall prosecute all offenders on receiving information of the violations of this act.

SEC. 4. It shall be the duty of the proprietor of any such private lake, pond or stream, who is engaged in the propagation of fish as contemplated by this act, to post or cause to be posted, in a conspicuous manner at places not more than twenty rods apart, commencing on either side of such private lake, pond or stream where it enters the premises of the owner sought to be protected and extending along or near either bank to the place where such waters leave such premises, public notices painted on boards in large plain letters that the owner, naming him, is engaged in such business, and all persons are prohibited from killing, taking or catching any fish in the waters within the limits of such notices.

Every State in the Union should have a similar law, whose penalties should be rigorously enforced against the miscreants who net, poach and plunder the ponds and hatching houses of fish culturists.

ACCIDENTAL POLLUTION OF A RIVER IN CONNECTICUT.—For a considerable time the fish in the Park River at Hartford were found floating dead upon the surface as if drugged. It has since been ascertained that the destruction was occasioned by the washing of a lot of electric battery jars, formerly used on the New York, New Haven and Hartford Railroad in connection with the electric signals. The batteries were removed some weeks ago from along the line of the road, and deposited in one of the company's buildings in Hartford. The jars had all been emptied, but the washing of them had not been attended to, and on Thursday a number of men were set at work cleaning them. Without knowing that they had contained dangerous fluid of any kind, the men took the whole lot, about 100 jars in all, to the river, and threw them into the water. Small quantities of vitriol remained in them, and on washing floated away on the surface of the water. The stream being low, it was thoroughly impregnated with the vitriol, with fatal results to every fish that came in contact with it. Probably four or five hundred fish were killed. Many of them are still lying on the edges of the stream. The slaughter of the fish was purely accidental. Several years ago the fish were in a similar condition, and a number of people were made sick from eating the poisoned fish.

—Genuine Tennessee shad, some of the fruits of a deposit of 80,000 young shad that was made at Knoxville in July 1875, have been caught out of the Tennessee River at that place.

EXAMINATION OF THE FISHWAY.—C. G. Atkins, of Bucksport, Superintendent of the U. S. Breeding Works at that place, and the designer of the fishway at the dam at Treat's Fall; E. M. Stillwell, State Commissioner of Fisheries, with L. H. Eaton, the constructing engineer of the works, visited the fishway again Saturday evening, the tide being at its lowest stage, in order that Mr. Atkins might go through and examine the entire work, to effect which the water had to be shut out. When this was done two salmon of large size were found, evidently surprised at not finding the gates open. A gentleman living near the works jumped into the fishway and lifted one of the salmon out, weighing some 18 or 20 pounds; but it was thought best to restore him to his native element, that he might pursue his way to the head water. Mr. Atkins and Mr. Stillwell expressed themselves satisfied with the efficaciousness of the structure, having had, with others, ocular demonstration that fish passed through, and the citizens of Bangor and those interested in maintaining the supply of fish in our river, may feel assured that the bar to this interest, created by building the dam at Treat's Falls, has been well overcome by the admirable designs of Mr. Atkins. The fishway is the largest and most thoroughly constructed of any in the New England States, and, taken altogether, is superior to any in the United States. It will probably be the type of the most important fishways hereafter to be constructed in the country.—*Bangor Whig, May 28.*

—The Abingdon *Virginian* says that Mr. Joseph Sprouls, near Mendota, has a very large black perch in his spring, and which he has had in there for five years. He can go to the water's edge, pick it up, rub it, feed it, and play with it, all of which it seems to enjoy, as would a dog, horse, or other animal. We tried it, and it was as playful with us as with Mr. Sprouls. He caught it five years ago out of the North Fork of the Holston with a hook and put it into his spring, and has fed it there and made a special pet of it ever since. It is about twenty inches long and from four to six wide.

GENUINE WHITE SHAD IN THE OHIO.

WASHINGTON, May 15, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

I have now very great pleasure in informing you that I received to-day a fine specimen of a *four-pound genuine white shad*, taken at Louisville, Ky., a few days before, and forwarded to me by Pack. Thomas, Esq., and Mr. Griffith, of the Kentucky Fish Commission—a direct result from the efforts made by the U. S. Fish Commission, in accordance with a law of Congress, to stock the western rivers with shad.

You will observe, by referring to the Report of the U. S. Commission, that in June, 1872, Seth Green, by order of, and at the expense of, the U. S. Commission, planted 30,000 young shad in the Alleghany River at Salamanca, N. Y., and 25,000 in the Mississippi River near St. Paul; and that in July Rev. Mr. Clift, of Poquonnoc, Conn., also in behalf of the U. S. Fish Commission, placed what he estimated at 200,000 young shad in the Alleghany at Salamanca, and a small number in the Cuyahoga, as well as a supply in the White River at Indianapolis, 2,000 being carried as far west as the Platte, at Denver.

In the following year, 1873, about 160,000 shad were placed in Greenbrier and New rivers, in West Virginia, and about 55,000 in the Monongahela in Pennsylvania, and the Wabash in Indiana; and these may or may not have contributed toward the supply met with at Louisville. The latter is possible, if the assumption of a four year period be correct. If five years be required, then we must look to the stock of about 260,000 in 1872, exclusively.

In view of what is now believed to be an anxiom, that fish always return for the purpose of spawning to the places whence they started as young fish, it is to the Salamanca and White River supply of 1872, and perhaps to that of tributaries of the Ohio, just mentioned, or between four and five hundred thousand in number that we must look for the Louisville fish. According to the reports of Messrs. Thomas & Griffiths, for some considerable time forty to fifty shad have been taken daily at Louisville by a drag seine, said not to exceed thirty or forty yards long, and that, in the shoaler water of only three or four feet, while the regular steamboat channel is ten or twelve yards deep and two hundred and fifty yards wide.

I do not overlook the fact that the Tailor shad, *Pomoolbus mediocris*, is a native of the waters of the Mississippi valley, as it is to those of the Atlantic coast; and have more than once been disappointed in the receipt of specimens from different parts of the West, believed to be the genuine white shad, but which proved, on examination, to be nothing but the miserable Tailor; and when the announcement of the present transmission was made from Louisville, I hardly dared expect to see, as I did, the genuine *Alosa sapidissima*.

It is extremely probable that this stock of shad may be detected higher up the river, and it is to be hoped that special inquiry will be made for them toward Salamanca and in the White River. Very truly yours,

SPENCER F. BAIRD,
Commissioner.

[The capture of these shad by seines, and the destruction and annihilation of such bountiful promises, cannot be too highly deprecated; and those who have been guilty of the act should not only suffer the legal penalty for the crime and folly, but be made to eat every one of the fish taken, bones and all.—ED.]

SHAD VERSUS BLACK BASS.

PLEA: NOT GUILTY.

MIDDLETOWN, Conn., May 18, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

Permit me to say a word in your columns in reply to the article on page 223 of FOREST AND STREAM copied from the Hartford *Times*.

In the first place, it is not true that the Fish Commissioners have introduced black bass into the Connecticut River. Their work was confined entirely to ponds in different sections of the State, as appears from their reports, made annually to the Legislature. How they got into the Connecticut, no one can tell. One thing is certain, the Commissioners did not place them there.

In the second place, there is not a particle of evidence that the black bass has had any effect to diminish the shad this year, or any other year. It is sheer guess-work to charge them with any such results; the observations of the United States Fish Commissioners and the experiences of the Connecticut commissioners have led them to no such conclusions. Indeed, not a single reason assigned in the *Times*' letter is probably the true cause of the apparent scarcity of shad. We say "apparent" because we have reason to believe that if the captured shad could be fairly counted this year, the number would be quite up to the average of the past seven years. The river fishermen have not caught as many perhaps as usual; but the pounds have caught more. It is not generally known that during the past two or three sessions of the Connecticut Legislature, the owners of three pounds have made special efforts and incurred great expense to be ably represented in the House and in the Senate; and they have succeeded in getting the law so altered that they are now virtually without restraint or regulation. Formerly they kept close time, and the shad had free access into and up the river from Saturday night until Monday morning. The season of fishing has also been prolonged, and now the pound men have it all their own way; with pounds larger, more efficient and more numerous, and with continuous fishing, is it any wonder that river fishermen are drawing light drafts? Is it not a wonder that any fish escape to get into the river at all? The Fish Commissioners have struggled against this condition of things, and they have been seconded by intelligent men throughout the State, but the hard work and money of the pound men effected their object, and the result is beginning to appear. The river fishermen were fairly warned of this; but they did not believe it, and so failed to co-operate with the Commissioners. No nation, even in the earliest times, ever allowed continuous fishing. Search the oldest law books, and you will find close time provided for under heavy penalties. And yet never in Connecticut has there been so little protection to the fish as to-day. The ultimate result can easily be foretold. The river fishermen suffer this year—the pound fishermen next year, and ultimately the spawners will be so scarce at Holyoke that artificial hatching will be abandoned, and the shad of the Connecticut be among the fish that were. This is no fancy picture; it will come as sure as the season returns, and we tell the river fishermen if they will not look out for themselves, no one can look out for them. R. G. P.

LAKE TROUT AND WHITEFISH HATCHING IN WISCONSIN.

WISCONSIN FISH HATCHERY, MILWAUKEE, May 19, 1877.

I wish to explain to your many readers my experience in hatching the lake trout and whitefish of our lakes.

It has been the practice of a large portion of the States engaged in fish culture to locate their hatching establishments contiguous to some springs, using the water from the same for the purpose of hatching the different varieties of fresh water fish, and especially those above mentioned. You are probably aware of the fact that the temperature of spring water is usually from 44 to 48 degrees, Fahr. The ova of the lake trout or whitefish placed or kept in water of that temperature would invariably hatch at from 80 to 100 days' time, and, after the absorption of the sac, the young fish would be planted in the waters of the lakes intended to be stocked.

Now, Mr. Editor, let us suppose that the spawn of the lake trout or whitefish is taken in the early days of November, brought to the hatching house and placed in a Holton trough or box, the water turned on, at a temperature of 44 degrees, and that under such a temperature until the fish are hatched, say in 100 days, would we not have them on our hands as early as February? And if hatched in 80 days would we not have them to dispose of in the month of January? Would it then be practicable to plant them in the lakes still frozen over with ice?

Now I am satisfied with my experience in hatching lake fish, that in hatching them in 80, 90 or even 100 days we make a very grave and serious mistake, and also that it is not in conformity with nature, which, I contend, we must follow as closely as possible to insure a genuine success. The young fish, especially whitefish, feed for a time wholly upon the animalculæ contained in the water, and, as it does not exist to any extent in water while frozen over, I have but little faith that young fish deposited at such a season of the year would be able to find sufficient food to sustain life.

I will give you my experience in hatching the two varieties spoken of in the natural water (namely lake-water) during the season now drawing to a close, so that you will be able to judge of the truth of my remarks and the virtue of using lake water in hatching the different varieties of fish of our lakes, especially the trout and whitefish.

I was employed by the fish commissioners of the State of Wisconsin as Superintendent of the State Hatching House. The rooms are located in the basement of the engine house, or, as it is called here, the Pumping Works of the City of Milwaukee, which supplies the city with water from Lake Michigan, and which also furnishes the water for the fish-hatching department direct from the lake.

The first lake trout eggs of the season were placed in the house on the 20th of October, and nearly every day from that date until the 10th of November eggs were each day placed in the house. They are now all hatched out, the last of them hatching to-day. Now supposing those eggs that were hatched to-day were the ones taken on the 10th of November, that being the last day that trout eggs were placed in the house, we find that the period of incubation has been 182 days. There was also a large quantity of the ova of the whitefish placed in the house between the 18t and 25th of November, the incubation period ranging from 140 to 165 days, and that it requires at least the same length of time to hatch the same species deposited naturally by the parent fish in the lakes there can be no doubt. Therefore, we find by our experience in using water of the same temperature that the fish live, breed and prosper in, that it takes from 145 to 170 days to hatch the lake trout, and from 135 to 165 days for the whitefish or thereabouts.

Now, what I claim is this, that lake waters are the only proper waters for hatching lake fish, and that a long period of incubation is most essential and necessary to produce good, healthy fish. Also, by hatching the ova in water at a low temperature, and the consequent duration of incubation, it brings out the young fish in the spring months, when the bright, warm days of April and May have removed the icy coat from the lakes and streams and the waters every day increase in warmth, and when the waters abound in sufficient food for the maintenance of the schools after they have absorbed the supply nature has provided them with. Under such conditions their survival is placed beyond a doubt. This is my experience of two successive seasons in hatching lake fish in lake water. The average temperature of the water from November 1, 1876, to May 1, 1877, was 35 1-20 degrees.

H. W. WELSHER, Supt.

Milwaukee Sentinel.

Natural History.

DURATION OF LIFE OF ANIMALS.—The following table of the duration of life in certain animals is translated from an old German work: The elephant, 150 to 200 years; camel, 50 to 60; ass, 30 to 50; horse, 20 to 30; deer, 20; bull, 30; ox (draught), 19; cow, 20; lion, 60; bear, 20; wolf, 20; dog, 25 to 28; fox, 15; sheep, 10; hog, 20; cat, 18; squirrel, 7; hare, 7 to 8; goat, 10. Of birds—parrot, 110; eagle, 100; swan, 100; goose, 50; sparrow hawk, 40; canary (if it breeds annually), 10; do. if it does not couple, 24; nightingale and lark, 16 to 18; peacock, 24; turkey, 14; hen, 10; quail, 6 to 7; duck, 25; the alligator and crocodile, 100; tortoise, 100; carp, 100 to 150; pike, 40; cricket, 10; spider, 1. A similar statement, made upon a basis of more recent observation by American naturalists, would be interesting in connection with the above. J. M. B.

A STRANGE FISH.—The following was clipped from a copy of *Porter's Spirit*, of Nov. 13, 1858, and as it describes a fish we never have heard of, piscators are requested to give us what information they may be able to, in relation to it.—KEUKA.

A singular looking monster of the deep was captured the other day by Hiram Tweedy, a boatman at the foot of Christopher street, North River. Mr. T. was in his boat a short distance from the pier, when his attention was attracted by a monstrous head protruding from the water. In an instant he seized his boat-hook and succeeded in capturing the fish, which was found to be about four feet in length and weighed twenty-five pounds. The head was similar in shape to the rim of a man's hat, the body resembling the body of a codfish. On the top of the head, about six inches from the snout, were two eyes as large as a cent, while just beyond were two small horns, surrounded at the base by long hair. The mouth of the monster, set around with sharp teeth, was of sufficient capacity to take in the head of a child six of eight years old, and its great tongue seemed to be covered with little prickles. It had no gills, and the only breathing apertures were two holes in the snout. On each side were two great fins, while protruding from its belly were two hands with five fingers, and almost as perfect as a human hand. In its mouth were found six or eight small fish, and the probability is that the monster was taking his dinner when Mr. Tweedy hooked him from his native element.

TAME WILD GEESE.—More information on a subject which has interested many of the readers of the FOREST AND STREAM is given in the following clipping from the St. Louis *Republican*:

Dr. Lankford, who returned a day or two since from the southeastern part of the State, mentions the following curious fact in history. He gives the statement on the authority of Mr. W. R. Smith, a leading farmer and miller living near Morley, in Scott county, Missouri. About a year ago Mr. Smith captured two young wild geese, and raised them with his domestic goslings. The wild ones became quite tame and took kindly to the changes of civilized life. They adapted their habits to the ordinary delights of the barnyard, and swam in the pond with the tame geese, without showing a disposition to go on a wild goose chase. At length, about the 4th of November, the weather began to change, and after being domesticated some eight months, the wild fellows, prompted by an instinct to seek a more sunny clime on the approach of winter, spread their wings to the breeze and started on a migratory tour, flying southward. Their departure was natural and to be expected. After an absence of two months, early in January, great was Mr. Smith's surprise to find, on getting up one morning, that the two wild geese had returned to their old haunts on his farm. They not only returned, but eleven wild geese came with them as visitors, whom they piloted safely from some southern bayou. The newcomers made themselves at home, and were fed and fondled by the children. They come to the mill at feeding time to get their rations, and gabble all together, and put on all the airs of civilized geese who have had a good moral training.

A FISH THAT BEARS ITS YOUNG IN THE MOUTH.—The *Chromis paterfamilias* has the gills disposed in simple lamiæ; it is unprovided with any special apparatus for retaining the eggs or the young ones, and yet it brings up about two hundred young in the mouth and gills. It is always the male that performs these functions of incubation. After the female has deposited the eggs in a depression of the sand or between the tufts of the reeds, the male approaches and takes them by inhalation into the cavity of the mouth. From there, some movement, the mechanism of which we have not been able to observe, sends them between the leaflets of the gills. The pressure exerted on the eggs by the branchial lamiæ suffices to keep them in place. There, in midst of the organs of respiration, the eggs undergo all their metamorphoses. The young ones grow rapidly, and soon appear much inconvenienced in their narrow prison. They leave it—not by the gills, but through the opening by which the branchial cavity communicates with the mouth. Here they remain in great number, pressed against one another like the seed in a pomegranate. The animal's mouth becomes so distended by the presence of this numerous progeny that actually the jaws cannot meet. The cheeks are swollen, and the animal presents the strangest aspect. Some of the young, arrived at the perfect state, continue to live in the gills. All have the head directed toward the buccal opening of the father, the protecting cavity of which we have not seen them leave even for a moment. Though so numerous, they hold their ground very firmly, but how they do so we have not discovered. Neither can we understand how the nursing father avoids swallowing his progeny; we are also ignorant at what period of their life the young ones leave the paternal mouth to live independently.—*Popular Science Monthly.*

A QUESTION FOR ZOOLOGISTS.

LEESBURG, Va., May 9, 1877.

EDITOR FOREST AND STREAM:

Dr. Morse, in his first book of Zoology says, speaking of snail-shells: "Left-handed shells (aperture on left when spire points up) are not so common." Now, my little boys collected some shells for me, and *all* are *left-handed*. Can it be that latitude has any effect on the way the snail puts on his coat, in Massachusetts twisting to the right, in Virginia to the left? T. W.

[Will some of our conchologists give us their views on this point.—ED.]

THE RUBY-THROATED HUMMING BIRD.

(Trochilus colubris.)

PHILADELPHIA, April, 1877.

EDITOR FOREST AND STREAM:

This sprightly little bird is one of the smallest species of the feathered tribe, and is a summer inhabitant of New England. It arrives here about the tenth of May, and it seems to me that they come on in pairs, as I have often watched them darting and caressing each other about the second week in May, as I rambled through the fields and woods collecting specimens for my cabinet. As soon as they visit our gardens they commence building. The nest is composed of a down taken from stems of ferns, and is covered entirely with lichens which are glued on with the saliva of the tiny bird. The nest resembles a knot on a tree. Its nest is about an inch and a half in diameter, and nearly the same in depth, and is lined with soft downy substances from dying seeds. The eggs are two in number, pure white and nearly elliptical in shape. Length of eggs about .45 inch, and breadth about .31 inch. They raise but one brood in the season. The food of the humming bird is almost entirely composed of insects, although when kept in confinement they will subsist on sweetened water for a few weeks.

On the 8th of June, 1873, while on a visit to my brother's, in Maryland, it being very warm on the above day, I strolled down by a stream at the end of the field to recline 'neath the shades of a gigantic button ball tree, and after I doffed my coat and hat, listening to the rippling of the brook and the sweet songs of different feathered minstrels, and as old Sol was smiling down with his majesty, I almost fell into dreaming, when suddenly I heard a buzzing sound like that of a bee. In an instant

I noticed a pair of these beautiful little creatures darting around my head in a frenzied manner. After watching the different manœuvres for a few minutes, I saw one of the birds alight on a bough just above my head. There I noticed one of these beautiful birds' nests. In it was closely packed a pair of young birds, about two weeks old. I severed the nest from the limb, and carried my prize home, and mounted the pair and replaced them again in their downy nest. They now grace my cabinet, and are considered quite a curiosity.

GEO. BOUDWIN, *Taxidermist.*

THE FAUNA OF MICHIGAN.

BY ARCHER.

(*Continued*).

FAMILY VIREONIDÆ.

GENUS VIREOSYLVIA.

Vireosylvia olivaceus. Bonap. Red-eyed Greenlet.

Vireosylvia philadelphicus. Cass. Philadelphia Greenlet. Very abundant in southwestern part of State.

Vireosylvia gilous. Cass. Warbling Greenlet.

GENUS LANIVIREO.

Lanivireo solitarius. Bd. Blue-headed Greenlet. An occasional April or May visitant.

Lanivireo flavifrons. Bd. Yellow-throated Vireo.

GENUS VIREO.

Vireo noveboracensis. Bonap. White-eyed Vireo.

FAMILY AMPELIDÆ.

GENUS AMPELIS.

Ampelis garrulus. Linn. Bohemian or Northern Wax Wing.

Ampelis cedrorum. Bd. Cedar bird. Southern Wax Wing.

FAMILY LANIDÆ.

GENUS COLLURIO.

Collurio borealis. Bd. Great Northern Shrike, or Butcher Bird.

Collurio excubitoroides. Bd. White-rumped Shrike, or Western Loggerhead.

FAMILY TANAGRIDÆ.

GENUS PYRANGA.

Pyranga rubra. Vieill. Scarlet Tanager.

Pyranga æstiva. Vieill. Summer Red Bird.

FAMILY FRINGILLIDÆ.

GENUS PINICOLA.

Pinicola enucleator. Cab. Pine Grosbeak.

GENUS CARPODACUS.

Carpodacus purpureus. Gray. Purple Finch.

GENUS CHRYSOMITRIS.

Chrysomitris tristis. Bonap. Yellow Bird. Thistle Bird.

Chrysomitris pinus. Bonap. Pine Goldfinch.

GENUS LOXIA.

Loxia americana. Bd. Red Crossbill.

Loxia leucoptera. Gemel. White-winged Crossbill.

GENUS ÆGIOTHUS.

Ægiothus linarius. Cab. Lesser Red Poll.

Ægiothus canescens. Cab. Mealy Red Poll.

Ægiothus brewsteri. Ridg. Brewster's Linnet. Supposition only, as it associates with *Æ. linarius*, which are abundant.

GENUS PLECTROPHANES.

Plectrophanes nivalis. Meyer. Snow Bunting.

Plectrophanes lapponicus. Selby. Lapland Longspur.

Plectrophanes pictus. Swain. Smith's Bunting, or Painted Long Spur.

SUB-FAMILY PYRGITINÆ.

GENUS PYRGITA.

Pyrgita domestica. Cuv. European House Sparrow. Introduced from Ohio and England.

GENUS PASSERCULUS.

Passerculus savanna. Bonap. Savanna Sparrow.

GENUS POOCÆTES.

Poocætes grandævus. Bd. Bay-winged Bunting. Grass Sparrow.

GENUS COTURNICULUS.

Coturniculus henslowi. Bonap. Henslow's Bunting.

Coturniculus passerinus. Yellow-winged Bunting. Abundant in Huron and Sanilac Counties near the lake.

GENUS CHONDESTES.

Chondestes grammacca. Bonap. Lark Sparrow.

GENUS ZONOTRICHIA.

Zonotrichia leucophrys. Swain. White-Crowned Sparrow.

Zonotrichia albicollis. Bonap. White-Throated Sparrow.

GENUS JUNCO.

Junco hyemalis. Selater. Snow Bird.

Junco oregonus. Selater. Oregon Snow Bird. On the authority of Prof. Fox, who obtained a specimen at Grosse Isle, Mich.

GENUS SPIZELLA.

Spizella monticola. Bd. Tree Sparrow.

Spizella pusilla. Bonap. Field Sparrow.

Spizella socialis. Bonap. Chipping Sparrow or Chippy.

GENUS MELOSPIZA.

Melospiza melodia. Bd. Song Sparrow.

Melospiza lincolni. Bd. Lincoln's Finch.

Melospiza palustris. Bd. Swamp Sparrow.

GENUS PASSERELLA.

Passerella iliaca. Swain. Fox-Colored Sparrow.

GENUS CALAMOSPIZA.

Calamospiza bicolor. Bonap. White-Winged Black Bird. Lark Bunting. Several specimens killed in Eaton and Calhoun Counties, 1870, by Dr. Kemp and myself. Never before seen in the State.

GENUS EUSPIZA.

Euspiza americana. Bonap. Black-Throated Bunting.

GENUS HEDYMELES.

Hedymeles ludovicianus. Swain. Rose-Breasted Grosbeak.

Hedymeles melanocephalus. Swain. Black-Headed Grosbeak. Authority of Prof. Chas. Fox.

GENUS GUIRACA.

Guiraca cærulea. Swain. Blue Grosbeak. Rare visitant to the most southern parts of the State.

GENUS CYANOSPIZA.

Cyanospiza cyanea. Bd. Indigo Bird.

GENUS CARDINALIS.

Cardinalis virginianus. Bonap. Red Bird. Cardinal Grosbeak. Accidental.

GENUS PIPILO.

Pipilo erythrophthalmus. Vieill. Ground Robin. Cheewink.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR WEEK ENDING MAY 29.—Seven Macaque monkeys (*Macacus cynomolgus*), purchased; one pig-tail monkey (*Macacus nemestrinus*), purchased; one rhesus monkey (*Macacus erythræus*), purchased; seven entellus monkeys (*Semnopithecus entellus*), purchased; one bonnet monkey (*Macacus radiatus*), purchased. ARTHUR E. BROWN, General Supt.

ARRIVALS AT CENTRAL PARK MENAGERIE FOR WEEK ENDING JUNE 2, 1877.—Two brown hyenas, *Hyæna brunnea*—hab. South Africa—the first of the species ever brought to this country; one collared peccary, *Dicotyles tajacu*, presented by Mr. John M. West, Petersburg, Va.; three lions, *Felis leo*, bred in the menagerie; two wild geese, *Bernicla canadensis*, bred in the menagerie; five cygnets, hybrids between trumpeter swan, *Cygnus buccinator*, and Hooper swan, *Cygnus ferus*, bred in the menagerie; one setting of prairie chicken eggs, presented by Mr. Wallace Gilchrist, De Dalb County, Ill.

W. A. CONKLIN, Director.

Woodland, Farm and Garden.

NEW YORK HORTICULTURAL SOCIETY'S SPRING EXHIBITION.

THE spring exhibition of this flourishing society was held at Gilmore's Garden, on Tuesday, Wednesday and Thursday of last week, and was one of which the society may justly feel proud. The interest taken in horticultural pursuits was well exemplified by the large attendance, especially during the evenings, when the garden fairly put on its summer aspect, and, with sweet music, beautiful flowers and gay promenaders, the scene was one in which there was a decided predominance of brilliant and pleasing things. In some of the collections were many rare and beautiful plants, some of them exhibited for the first time, all clean and well grown, and reflecting great credit on the skill and perseverance of the exhibitors.

In the competition for the premiums offered by the society, the principal prizes were carried off by Mr. Taplin, gardener to George Such, Esq., South Amboy, N. J. It is needless to say that Mr. Taplin's plants were all grown and staged in perfection, though the fine collection of Pitcher plants he exhibited last season were missing and often inquired for. He took first premiums for the best 10 Orchids in bloom, the best single specimen ditto., 6 stove and green house plants in bloom, single specimen do., 10 variegated leaved plants, single specimen do., 12 varieties of Ferns, single specimen do., single specimen Ixora, 10 Palms and Cycads, etc. The most notable plants in his collection were Allamanda schottii, Phormium tenax fol. var., Aralia crassifolia, and Elegantissima. A noble plant of Anthurium scherzerianum and another of Adiantum farleyense, 8 varieties of Cyprepediums, including the rare C. Stonei and C. Lowii, a number of Orchids, over 12 varieties of well grown Ferns, a number of finely grown Palms, and Artocarpus cannoni, a reddish brown leaved variety of the bread fruit tree—which took the first premium for the best new and rare plant, never before exhibited here. Mr. Isaac Buchanan, Astoria, L. I., showed a nice group of well grown plants, and was awarded the first honors for the best single specimen Orchid, in bloom (a fine plant of Vanda tricolor), the best 3 Orchids do., and for 12 Agaves. He also took the second premium for a new and rare plant, with a curious little herbaceous plant from Brazil named Penguicula orchioides. The premium for a group of stove and green-house plants was awarded to Charles Zeller, Flatbush, for a small but well grown collection, while that for 6 Ericas, or Cape Heaths, and for the best single specimen of the same was taken by Edwin Symes, gardener to Mrs. Mitchell, Tarrytown, with the best plants seen in New York for many years. The premiums offered for Zonal Pelargoniums, double and single, Tricolor, and Show do., Verbenas Primulas, etc., brought out a number of competitors and well grown plants, in their several classes. The principal premiums were awarded to John Henderson, Flushing; Peter Henderson, Jersey City; H. Reynolds, Flatbush; W. C. Wilson, Astoria, and William Ball, Spuyten Duyvill, while Walter Reid, 1286 Broadway, carried off all the honors in the classes for Wardian cases, Ferneries and hanging baskets. By far the showiest, however, and perhaps the most admired exhibit in the garden was made by Messrs S. B. Parsons. & Sons, and R. B. Parsons & Co., Flushing. This consisted of fine specimens of Rhododendrons and hardy, or Ghent, Azaleas in full bloom, the plants being taken from the open ground, and the roots carefully matted up. Of the former, the plants were large and thrifty, the colors varying from the palest pink to the deepest crimson, while among the latter, every shade of this season's fashionable colors could be found, from red and crimson to bright yellow. S. B. Parsons & Sons took the first premiums in all the classes as well as for the best collection of Ornamental Evergreens. The same firm also were awarded special premiums for a collection of hardy variegated shrubs and trees, another of new and rare Conifers, and for a fine collection of Japanese Maples, many of them with beautifully colored leaves, others more like the Oak, Tulip tree, or Linden, than veritable Acers. These Maples, being deciduous and therefore perfectly hardy, are destined to be a wonderful addition to our list of hardy shrubs and trees. A special premium was also deservedly awarded to William Bennett, Flatbush, for an extraordinarily fine group of store and green-house plants. This exhibit filled one of the large tables near the fountain, and as usual, were finely grown and well staged. The most deserving of notice were fine plants of Dracaena Amabilis, Splendens, and Hendersoni, Maranta, Makoyana, Regulis and Roseapecta Croton Irregulare, Weismanni and Undulatum, Dieffenbachia Bausie, Pandanus Veitchii, Ananassa Sativa Variegate, Areca Lutescens and Rubra, Cocos, Weddeliana, Thrynax Argentea, and many others. He was closely followed, however, by John Bush, Tremont, who, though he has only lately started growing plants, shows his love for their culture in the masterly way he manages them; some of his Dracaenas being marvels of horticultural skill. His collection, though not so large as the foregoing, contained pretty much the same assortment, and was deservedly awarded a special premium. Like awards were also given to W. C. Wilson for a neat group, including the new drooping Phegopteris, from the Sandwich Islands; to Jas. Riddle, gardener; to Wm. Elisha Brooks, Inwood, N. Y., for a large vase made up of thousands of growing plants, very artistically designed and neatly executed, a lovely group of Caladiums, another of Palms and foliaged plants, and one of Adiantums, or Maiden Hair Ferns. William Ball, Spuyten Duyvill, also received like awards for a group of bedding plants, a good plant of Hoza Carnosa, Caladiums, and Petunias; F. Roenbeck, Bayonne, N. J., for a group of seedling Begonias of the "B. Rex" section; to John Cadness, Flushing, for a group of 130 plants of the new white Hydrangea; "Thos. Hogg," one of the most showy and interesting groups in the exhibition; and to John Henderson, Flushing, for groups of Pelargoniums of various sorts, Pansies in pots, Lantanas, Coleus, and a fine collection of Verbenas.

Owing to the extremely dry and hot season the supply of cut flowers, and consequently of floral designs, was not so large as last season, but all that was exhibited was fully up to the standard—Peter B. Henderson, Jersey City, taking the premium for cut flowers and Pansies; R. B. Parsons & Co., for Azaleas; William A. Burgess, Glencove, as usual, taking all the prizes in roses, his Marechal Neils being especially fine. Mr. Thomas Hogg was awarded in this class a certificate of merit for the new Japanese Magnolia hypolenca, which promises to be a great acquisition.

In floral designs the principal premiums were awarded to Fred Gordon, 26 Broad street, for the best basket of flowers; to A. McConnell, 733 Sixth avenue, for hand bouquets; to J. G. Bechamps & Sons, Eighty-fifth street, and E. River, for design in cut flowers, and to Mr. W. J. Davidson, 258 Fulton street, Brooklyn, for the best funeral design and for six button-hole bouquets.

The grapes on exhibition would have done credit to the fall season, the premiums for the best six bunches, two of a kind, going to J. Finn, Tremont, and that for the best two bunches of any variety, first and second being awarded to John Eagan, gardener, to Mr. Garnee, Irvington, for noble bunches of Black Hamburg and Chasselas Musque. Edward Huckins, West Mt. Vernon, took deserved honors for forced peaches and nectarines, and S. Henshaw, New Brighton, S. I., for a fine dish of figs and a beautiful brace of telegraph cucumbers. A certificate of merit was also awarded to B. K. Bliss & Sons, 34 Barclay street, for their new varieties of potatoes, the "Snowflake" attracting special notice by its fine, white appearance, good shape and excellent keeping and cooking qualities. The other varieties were "Centennial," "Improved Peach Blow," and "Superior," sent to Bermuda two months ago, where they were planted and returned in a fit condition for the market.

W. J. D.

STRAWBERRIES.—During this week and next the strawberries will be in the prime of their abundance and quality. Several stations on the Eastern Shore Railroad of Maryland are expected to ship to market from six to ten carloads daily. It is estimated that there will be sent over this road, which is only 38 miles long, more than 3,000,000 quarts of strawberries this summer. Estimates from numerous other roads which act as feeders to this and the Delaware railroads have not been received, but the quantity of berries sent over them will be very large.

GOOD LAYERS.—John B. Brooks writes from Jacksonville, Florida, May 29:

My mother, Mrs. Emily Brooks, of Bridgeport, Conn., has three pullets, hatched after June 25, 1876, which had laid, up to May 9, 1877, 200 eggs, and one was then sitting which has since come off with 11 chicks out of 13 eggs—one having been broken in the nest. Who has any better pullets?

THE ORCHIDS OF CENTRAL AMERICA.

NEW YORK, May 29, 1877.

EDITOR FOREST AND STREAM:

In an article on orchids, in your issue of Feb. 1, the writer, in referring to Capt. Dow, has, from inperfect knowledge of that gentleman's field of operations, assigned him to the trade between New York and Para, and credits South America with being the place where he made his collections of those interesting and curious plants.

Capt. J. M. Dow, to whom the writer undoubtedly referred, has been for twenty-five years and more connected with the Pacific Mail Company on the Pacific, and is now the company's general agent in Central America. It was on the Pacific Slope, and in the interior of Central America, that he made, in leisure hours, his collection of plants and animals, and also gathered from the waters along the coast, from Panama to Mexico, those other valuable contributions to natural history, which have made his name familiar to men of science throughout the United States and Europe. E. K. D.

WHY PLANTS SHOULD NOT BE KEPT IN BEDROOMS BY NIGHT.—About one-half the dry weight of plants is carbon, and this is all obtained from the carbon dioxide—or carbonic acid—of the air, which constitutes only .0004, or 1-2500 of its volume. It was once scientifically, and is still popularly believed that plants, in respiration, reverse the process of animals—that is, they inhale carbonic acid and exhale oxygen. It is quite true that vegetation as a resultant of its processes of life, does evolve oxygen and absorb carbon dioxide, but this is not in consequence of respiration. Plants, like animals, inhale oxygen and yield up to the air a nearly equal volume of carbonic dioxide, this chemical decomposition is performed by all the growing cells and at all times alike. In addition to this, the chlorophyl cells have the property, under the controlling power of sunlight, of absorbing carbon dioxide from the outside air, of decomposing it into its constituent elements; of appropriating the carbon for the building up of tissue, and of liberating the now free oxygen. This is a process of assimilating rather than that of respiration. The formation of carbon dioxide at the expense of the atmospheric oxygen, like our breathing, goes on continuously and gently, while the reverse process analagous to the feeling of animal life, though continuous and powerful under the influence of light, ceases instantly when that is withdrawn. During the

day, the assimilative process by which carbon is absorbed and oxygen obliterated is so powerful as to mask completely the gentler process of breathing, but at night, when assimilation ceases, respiration may be easily detected. For this reason, plants by day purify, and by night vitiate the air. A number of experiments made by the French scientist, Bousingault, prove that as a final result of vegetation, far more oxygen is liberated than consumed.—*[Mrs. S. B. Herrick, in Scribner's Monthly for February.*

WHALE OIL A CURE FOR SCALE.—Here is an item of great interest to many. Especially our Floridian and Californian friends, who find the Scale insect such a pest.

Many years ago I had under my charge, among others, a very large Ribston pippin apple tree on a wall facing the south, which somehow or other got so affected with scale that it ceased bearing fruit, and afterwards almost gave up producing foliage. At this time I was visited by an old gardener, who advised me to paint the tree all over with whale oil. I thought at the time the cure an extreme one; however, I had it painted about the middle of December, and waited patiently for the result, when, to my astonishment, by the following autumn the tree had much more healthy foliage than it had borne for several years previously. The second season the tree was covered with fine healthy foliage, and made shoots from 6 to 9 inches long, and there was not a trace of scale to be seen, and the tree afterwards continued to bear fine crops of fruit. Two years ago we received into our nursery 400 standard apple trees from the South of England, which were literally covered with scale. On discovering this I had them planted in a quarter by themselves, and every one of them painted all over with the oil, as above, and I must confess they were a shining lot. However, this process cleared them wholly of scale, and the second season after the above dressing a healthier set of trees could hardly be found. Some months ago I received from a gentleman in this neighbourhood a few camellias of a pretty large size, but not in very good health, and to my surprise I found them very much affected with scale. I confess I had my doubts about applying such a remedy to such plants, but at length I made up my mind to either kill or cure them, and I set a young man to paint the stems and branches all over, but he went further than I had bargained for, as he painted the foliage also, and I must say they have had rather a sombre look all winter. I had them placed in a gentle heat for about four weeks, and I find they are beginning to push out young wood as freely as the others, which gives me hopes that I have cleared them of the scale without killing the plants. Should any one be tempted to try the above remedy, care must be taken that it is not any kind of mineral oil that is used.—*John Downie, in Gardener's Chronicle, London.*

PANAMA HATS.—*Carludovica palmata*, the young, unexpanded leaves of which are so largely used at Moyobamba and Guayaquil in the manufacture of Panama hats, is called a palm, but it is more properly a screw pine. It has no stem; the leaves are long and on slender petioles, springing from the ground. They are about two feet long, fan-shaped and four-parted, each segment being again ten-cleft; so that when folded in venation, each segment on its own rib, there are eighty layers in a young leaf. It occurs only on the slopes of the Andes.

SPLIT BAMBO RODS.

To our customers and the public:—In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

The Kennel.

THE RHODE ISLAND BENCH SHOW.

The "National" Bench Show of Dogs, which is now in progress in Providence, R. I., promises—although wanting in attention to detail—to be a local success. It has shared, however, the fate of most previous shows, in finding the managers unprepared on the opening day to receive visitors, the carpenters being, as usual, the black sheep upon whom the blame is to be cast. On Monday morning, when the show was to have opened, the preparations were still so far incomplete that it became a necessity to exclude the public. By night, however, everything was in readiness and the capacious Howard Hall thronged with interested visitors. As no list of entries has been furnished to the press, we are unable in this issue to give it. The show is, comparatively speaking, local in its character, there being but few dogs owned outside of the State entered. The judging was not complete at the time of our going to press. In the sporting classes, our correspondent writes us, the entries are only fair. The pointers are probably best represented, the English setter class showing but few fine specimens. The same remark applies to the red Irish, of which there are scarcely half a dozen fair entries. The display of fox hounds is good, and, strange to say, the non-sporting classes are, relatively, better represented than at any previous show. There is a large exhibit of Newfoundlands, bull-terriers, etc., and among them some remarkably good dogs. The show was to have remained open until to-morrow, and in our next issue we will give list of awards, etc. W. M. T.

NAMES DISPUTED.—The following letter has been laid on our table:

NEW YORK, June 4.

MR. EDITOR—In your issue of last week I saw that the Westminster Club claim the name of Dutchess for a liver and white pup out of Whisky, by Sensation. I make a prior claim, having claimed the name of Dominie and Dutchess for a dog and gyp, liver and white, out of Dilley's Dell and Champion Ranger, whelped Feb. 15, 1877, and accorded to me through paper. I have forgotten date.

I am, with respect, W. A. COSTER.

THE DOG QUESTION.—While the action of the Mayor and Common Council of our own city appears to have had the effect, at least, to make owners of dogs pay some attention to them, inasmuch as when even two dollars is paid for a license the dog increases in value in the eyes of his owner; yet, in other cities the authorities appear to have become affected with a species of rabies themselves, and are waging unrelentless war upon every variety of the canine race. In Boston it is proposed that all bitches, whether muzzled or not, shall be killed at once when found at large. Why this distinction in sex should be made, we are at a loss to imagine. Probably the city fathers have some remarkable ideas on the subject of heredity, and are bound to exterminate the race. In Connecticut matters are even worse, and our correspondent Von G. writes us from West Meriden as follows:

The excitement here is intense in regard to dogs, and the police and constables are ordered to shoot every unmuzzled dog found running at large.

Of course it is perfectly right that people should be protected against mad dogs, and that the owners of dogs should be compelled, by heavy penalties, to take care of their pets; but it seems as though the authorities might invent (we are a very inventive people) some thing or means by which the poor brutes might be killed without any unnecessary torture.

I read in a paper the other day how they do it in a town near by. In the rear of the lock-up the dogs are gathered, and a clumsy fellow, who probably never handled a revolver before in his life, fires, or rather practices, on the poor animals until they are dead—cutting off a toe in one instance, and often inflicting painful wounds before hitting a vital part.

What a field for a Bergh! It may be necessary, and perhaps it is soothing to the nerves of timid and sensitive people to see man's "faithful friend" slaughtered in the streets; but it was, nevertheless, a painful sight to see a large, noble looking Newfoundland dog staggering down a street in Hartford the other day, the blood flowing from his mouth, caused by a policeman's bullet.

The poor dog, weak and dying, trying to reach home, finally fell down and died.

Complaints are made about the dead dogs left lying about the streets, and the papers are calling upon the authorities to remove them. VON G.

THE KENNEL REGISTER.—Following is a list of pedigrees received for registration in the Kennel Register since the list was last published:

THE NEW YORK BENCH SHOW. The Committee of the Westminster Kennel Club have prepared an official report of the awards made by the judges at the late bench show in this city. It contains the names, not only of the prize winners, but of those that were in any way noticed by the judges. It makes a pamphlet corresponding in size with the catalogue. Copies will be sent on receipt of twenty-five cents, forwarded to Wm. M. Tileston, at this office.

—Mr. Wm. J. Connor, of Marlboro, N. J., claims the name of "Ole" for his red and white setter puppy, by Echo out of Flora.

SYRACUSE BENCH SHOW.—Mr. Charles H. Raymond, importer of "Pride of the Border" and "Fairy" and one the most liberal and judicious amateur breeders of fine dogs in this country, offers a double eagle as a special prize for the best native bred setter at the Syracuse Bench Show.

—Mr. S. J. Bestor's female Cocker spaniel, of Hartford, Ct., presented him with seven pups, on Saturday, of which number two only were dogs. The dogs sell for $50 each, and the females for $25 each, making the litter worth $225.

—Mr. A. D. Warren, of Worcester, Mass., has purchased a Blue Betton setter, from an English breeder. The dog is a full brother of James Gordon Bennett's dog, which took the first prize in its class at the recent New York show. It is expected to arrive about June 20th.

THE SYRACUSE BENCH SHOW.

We have received the following letter from Mr. Lincoln, Superintendent of the coming Dog Show at Syracuse. We cannot afford space for the railway correspondence which he refers to, but the companies named are the Pennsylvania, Michigan Central, Erie, and the United States Express Company:

SYRACUSE, June 2, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

I send you copies of letters which have been received from various railroads, all of which will carry the dogs free, when accompanied by their owners. There are several additional special prizes. Messrs. Tiffany & Co., of New York, have just written saying they will give a silver cup, value $50, to be given to the best setter dog or bitch in the show. This, no doubt, will cause a spirited competition.

F. O. de Luze, agent for Spratt's Dog Biscuits, has very generously presented a handsome silver dog whistle, manufactured by Tiffany & Co., to be given to the best native English setter dog or bitch.

Chas. H. Raymond, Esq., prize to be given as per letter.

The judges for pointers and non-sporting classes have not yet been appointed.

Everything will be done to make the show a success, and in return the committee hope to receive a large number of entries, as Syracuse is so centrally situated that a large show should be held here. Entries close June 14. Yours truly, CHAS. LINCOLN, Supt.

We learn from our special correspondent that the 18th of June will find everything in readiness for a royal welcome to sportsmen far and near.

Nothing definite has been received from the Central & Hudson R. R. R., yet the association are assured that orders will be issued for transportation of dogs free, when accompanied by their owners.

The Erie, Delaware, Lackawanna & Western, and all its branches; Canadian roads, Pennsylvania Central, Rome & Watertown, Oswego & Syracuse, Syracuse & Binghamton, Michigan Central, and, in fact, all roads have responded favorably to the letters from headquarters for free transportation.

The greatest annoyance at present is the supply of birds, which seem loth to nest this season. The association have quite a number of parties out who are using due diligence, and encouraging news was received from Wisconsin that they had nested but took to flight again, and must settle soon, as they were dropping their eggs.

In the event of not obtaining birds, the convention will perform its labors. The bench show of dogs will be given, fly casting, rifle and pistol shooting will be contested for, and the pigeon shooting tourney postponed until birds can be obtained, at which time a tournament, open to the world, will be given in connection with it.

PNEUMONIA IN PUPPIES.

VALPARAISO, Ind, May 29, 1877.

EDITOR FOREST AND STREAM:

There are so many sportsmen who are ignorant concerning the diseases of dogs, that I am prone to give you my experience of last week.

I had a beautiful litter of pups out of my Bismark—Lavarack bitch—by Burgess' Rob Roy. They had done so well and were doing so well I dreamed of no danger. About two weeks ago we had a sudden change of temperature, peculiar to the lake regions. Next morning found the pups shivering with cold. I removed them to a warm place, and that day discovered in the stools the presence of worms. I also noticed that the pups were dumpish and gave evidence of pain, lack of appetite, etc. I concluded of course that I knew the difficulty, and administered to those who appeared worse 1½ grains of santonin, repeating the dose in 3 hours. Four hours afterward I followed it with a tablespoonful of castor oil. Both pups died in a few hours, apparently in great pain, as they moaned and were very uneasy. No evidence of distemper; nose hot; pulse quick and irregular; no stool after the oil was given them. Two more were down, and I thought I would try "areca nut." I gave half the powder prepared by "Stedman," which I had recently received from "Holberton," repeating the dose as directed, and following, as directed, with castor oil. Result—pups died that day. Symptoms same as the others. At the urgent request of my family physician we had a *post mortem*. Of the result I cannot give you medical names or terms but will try and tell the result, so that any sportsman can examine and tell something of the cause of death in his "kennel."

The intestines were perfectly healthy; no signs of inflammation, which would be noticed very quickly by the difference in color; worms were found—quite a quantity—but they did not cause the death. The left lung was healthy, but the right lung was like a piece of *liver*. "Here," said the doctor, "is the trouble—your pups have all died of *'pneumonia.'*"

Now, during the time they were sick, I was visited by all the owners of sporting dogs in our city (for the pups were much admired). The general impression was that they died of worms, until the examination was made. All had passed them. To the remaining pup I gave 2 grains of quinine, 3 times a day. She began to improve. I followed it up 3 days, and now she is as well as could be desired. My advice is, when your pup or dog shows signs of ill health, instead of dosing and vomiting with oil and salt, give a 2 or 4 grain quinine pill, follow it up at regular intervals, and I am sure you will meet with best of results.

My attention was called a moment ago to "Blanche," the mother of these pups. She was in my yard stiff as a stick, pointing something. I watched her a long time. She never wavered. I slipped a shell into my gun, and, stepping out to where she was, discovered a large rat, which I shot. W. H. HOLBIRD.

As worms are so almost invariably to be found in puppies, and, except in rare cases, without injury to the dogs health, as far as immediate danger is concerned, it would have been better to have ignored them for the time being and treated the puppies for cold caused by the sudden change of temperature.—ED.]

NOT A BAD IDEA.—The following is not a bad idea, particularly adapted, in fact, to the dog kept "for a friend to use":

"An intelligent Burlington hunting dog that had a rather busy time last season, went down to a tinshop one day last week and had his hind-legs and back plated with sheet iron And now, when he sees his master looking at the gun he smile, and remarks that he is ready to hunt in front of the best fancy shot in Burlington."—*Burlington Hawkeye.*

THE NEW YORK BENCH SHOW.

THE following letter, coming from one of the most distant exhibitors at the late show, and moreover from an unsuccessful one, we print with pleasure, as giving the frank impressions of a looker-on:

That great interest would be taken in the bench show of dogs was foretold by the large number of entries, but the result far exceeded the anticipations of every one. Gilmore's Garden was literally thronged with visitors each day and evening of the show, and the large proportion of ladies among them showed that the interest in dogs is not confined to sportsmen alone. Indeed the sporting dogs received rather more attention from the ladies than any other class—the setters and pointers apparently appreciating and enjoying the many caresses bestowed upon them by the fair ones, although some of the dogs must have suffered with headache, if being patted several thousand times daily would produce it.

Many of the owners of the more favored dogs witnessed with jealous eyes the affectionate attentions, even kisses and embraces, bestowed upon their pets by the ladies; and in thinking of the saying, "Love me, love my dog," longed to repeat it transposed to "Love my dog, love me."

To the liberal patronage of the ladies was due in no small measure the success of the show financially, for where the ladies go for amusement there will all the world go; and bench shows promise to be a more fashionable resort than the opera, if one may judge by the precedent just given in New York. No doubt there will be some improvements made another year, but the managers of the New York Bench Show are to be congratulated upon the perfection of arrangements obtained at this their first exhibition, especially as the dogs were in their respective stalls, and the doors opened to the public at the advertised time—Tuesday morning—after but twenty-four hours time for preparation at the Hippodrome. The primary cause of success, however, was the fact that the exhibition was given by gentlemen whose names alone were sufficient guarantee to both the exhibitors and the public that everything connected with the show would be as it should be, and no one had cause to be disappointed in their expectations. Of course absolute perfection was not reached in every respect, but much praise is due for the near approach to it that was made.

As is usual there was a certain amount of grumbling among the exhibitors and those interested in competing dogs, and there were a few awards made upon such apparently inexplicable grounds as to give color to some of their complaints.

Yet no charge of unfairness or favoritism could be made, the judges discharging their onerous and extremely difficult duties in a most commendable manner. If there be cause for sore heads, I feel that I might be included in that class, for I had eight dogs on exhibition, with entries in both special and regular classes, yet not one of them was awarded a prize; and why should not I, as well as any one else, believe that my own dogs are superior to any others? I will, however, acknowledge that there were finer dogs on exhibition, although no one would expect me to think that any in the same class with my own were finer or more worthy of winning a prize.

I think that nearly all of the awards were very just ones, although in some instances differing from the judges in opinion on points of which I feel competent to speak, I think it no cause for launching forth in condemnation, nor for making invidious remarks which are likely to be unjust, but ascribe such variances to errors of judgment, either of the judges or myself. In the larger classes of sporting dogs particularly were the duties of the judges most difficult, as in a class of fifty-five dogs there would be many deserving ones. I ought not complain that the one selected by the judges from all of these was not the most deserving, simply because not the one that best pleased me. Only the owners of sporting dogs and those who have seen them in the field know their real worth. A dog may show well on the bench and be comparatively worthless in the field, or a fine field dog be worthless for exhibition or breeding purposes.

Still the chances are greatly in favor of the well-bred dog proving the most useful one, the difference in qualities being as great with dogs as it is with horses or other live stock. The superior intelligence of high-bred animals renders possible the development of qualities never attained by those of more common stock. There may be some striking individual exceptions, but they are exceptions only to what is a well-established rule.

Among the many fine dogs exhibited at Gilmore's Garden were some that might cause the beholder to wonder why they were exhibited, unless it were for contrast. An *apropos* reply to the query, "Do you call that a good dog?" asked in regard to one of the sporting dogs, was that "It depends for what purpose you wish him. I should think he'd be a very good watch dog."

None of the few retrievers that were exhibited would compare very favorably with the fine specimens that were exhibited at the Centennial Bench Show at Philadelphia in September, 1876, on which occasion there was a fine display of this class of dogs, especially of the Chesapeake Bay dogs and Irish water spaniels. There were quite a large number of cocker and field spaniels exhibited at the Hippodrome, but there was not one thoroughbred Clumber spaniel among them. Indeed this latter breed seems now to be quite scarce; the only ones I have seen in America that come up to the standard were those owned by the late Benj. Smith, Esq., of Nova Scotia. This accomplished gentleman and sportsman had a kennel of thoroughbred clumbers that were very well broken, and the writer has had the pleasure of shooting over them. Can any reader of FOREST AND STREAM tell me what has become of these dogs?

[One was purchased by Mr. Watters, of this city.—ED.]

Busy little fellows they were, and when in cover with them, the woods seemed to be full of them. Having fine noses, not a bird would be overrun. At the sound of the gun they would come to heel to await orders to retrieve, and if the shot had been fired by their master they would not seek "dead bird" in vain. Much sport may be had shooting snipe over clumbers where the birds are so plenty that dogs are useful only for flushing and retrieving. They are superior to the cockers in strength and endurance, and their straight hair is better adapted to wet dirty work. There was an excellent exhibit of that recently imported breed, the dachshunds, but unless the dachs be also imported here they will prove to be of little use for shooting purpose, unless it be in hunting the festive woodchuck. There were several fine couples of beagles and harriers, and these little fellows might afford sport in winter in the Northern States, where hares are abundant, and at a time when there is no other game in season. There was a fine exhibit of fox terriers, a breed that is as yet but little known here but seems to be rapidly coming into favor, although for any sporting purposes they must be classed with the dachshunds.

Of the coach dogs, once a fashionable breed, there were but five entries.

The class of Newfoundlands was poorly represented. One of them was entered as of the same stock as "the dog that was presented to the Prince of Wales;" but if that refers to the same dog that attracted so much attention whenever exercised ashore in charge of a mariner at the time of the visit of the Prince of Wales to the United States in 1861, the specimen exhibited is not a credit to his noble ancestor.

There were a number of collies, or shepherd dogs, exhibited, and if the "Little Boy Blue" had kept one of this useful breed of dogs the sheep would have been minded while he was "under the haystack fast sleep." Many persons have had cause to regret owning "sheepdogs," but their dogs were of the mutton-making breed and not collies. There was a dog entered in the miscellaneous class as a "cross between a St. Bernard and Russian setter." This provokes the question, what is a Russian setter? There is a well-known class of setters, of headstrong dispositions that will repeatedly rush in upon the game at the sound of the gun, if not before; wide ranging rabbit-chasers that are almost uncontrollable, and these might be appropriately termed *Rushing* setters, but there is no recognized breed of setters peculiar to Russia.

In noticing the dogs entered among the champions, those classes being of especial interest, I would mention Snapshot, the winner of first prize for champion pointer dogs. One might well ask why he was given the preference over Flake or Shot. Snapshot is a powerfully built dog, but throaty; and was entered as lemon and white, but the color is that of a decayed lemon, being decidedly brownish. In the same class was a dog of quite a mastiff like appearance. In the class for imported English setter puppies, the prize was won by Safe, a beautiful white and lemon dog, with dark eyes, pink and black lips and nose, and fine form and coat. Rose, an own sister to Safe, won the prize in the same class for bitches, but she was white and black ticked. They were entered as ten months old, but are very mature in form.

In the native English setter class, the curly-haired orange and white dog Lark, won first prize. In this class there was a large setter of a rare color, it being an iron gray. I allude to Blue Dash, of the Edina Kennel, entered as "blue black roan." There were several fine red dogs in this class, their brilliant color being much more beautiful than the very deep Irish red. The bitch Kate, winner of first prize for native Irish bitches, is of a similar shade of red, and a beautiful color it is. One might think the bitch Belle, in the latter class, to be the result of a cross with an owl, from the length and profusion of hair on her feet.

In the native or imported Gordon setter class, the black white and tan dog Sancho was awarded first prize. This award was protested on the alleged ground of his not being a Gordon setter. Sancho is a snubnosed dog, with a pinched or docked tail. In the class for native black, white and tan bitches Nellie, of the Harrison Kennel, was awarded the prize. Nellie is a black bitch, with rather curly hair and spaniel-like form, the little tan color upon her being very dull. She was out of Rentz's Nellie by Rodman's Dash, the sire of so many red and white setters. This award was, however, won without competition. Docked tails were considered no detriment, and there were a great number of pinched tails—even among the champions.

There is room for improvement in classification. As the avowed object of bench shows is not only the improvement of breeds, but also the important one of instruction for the public in respect to the animals exhibited, the respective classes for well-known breeds should be exclusively for pure-bred animals. Until this is done, the uninitiated beholder is likely to form some erroneous opinions. Some of the finest dogs are cross-bred, and for them there should be suitable classes, but they should not be admitted as representatives of a class of which they have but one half, or, perhaps a quarter blood. The progeny of a pure-bred Gordon setter dam and a pure-bred Irish sire should not be exhibited in the same class with either parent, however great the resemblance might be. I would here ask if tan is a color recognized in England as belonging, in any degree, to the pure English setters? It is a legitimate color among the "Blue Beltons," and under the name of this modern variety, are entered setters of various crosses that have a good proportion of Gordon blood in their veins, whether the blood be "blue" or "red." In the class for champion English setter bitches, the first winner, Dart, is white with black ears and black-and-tan ticks. In the imported English setter, the first prize for dogs was won by Paris, white with black-and-tan ticks, while Nina, first of the bitches, is white, black-and-tan ticks, and the head marked with tan. The unprecedented success of the N. Y. Bench Show proved the increasing interest in sporting dogs, not only with sportsmen, but also the public generally. As a class, there are no dogs of greater intelligence, or more amiable disposition than the setters and pointers, and therefore are they desirable as pets. Much credit is due the committee for the vigilance exercised in preventing thefts of dogs, there having been an organized gang of dog thieves, who endeavored by various methods to carry off living plunder, but were thwarted. AMICUS CANUM.

LETTER FROM CAPT. JACK TAYLOR.

BELLEFONTE, NOTTOWAY CO., VA., May 26, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

Will you allow me space in your journal to express my thanks through you to the members of the Westminster Kennel Club, and my steward, Mr. Wagstaff, of Babylon, L. I., in particular, for the kind and courteous attention I received from one and all during the many hours of arduous duty in my official capacity as one of the judges at the recent grand New York bench show. JOHN. M. TAYLOR.

THE SETTERS AND POINTERS OF THE SPRING FIELD TRIAL SEASON IN ENGLAND.

[BY A CORRESPONDENT.]

IT is difficult to obtain a season of any length in England for the purpose of field trials, as the crops are not forward enough to afford sufficient cover until the second week in April, and the birds are nesting in the first week in May. These three meetings could be held every spring, and just for one year, 1874, such a series of meetings occupied the attention of English sportsmen, namely, the Devon and Cornwall, the National trials at Shrewsbury and the Kennel Club trials. The first of these owed its origin to a member of the kennel club, and of course he was supported by his fellow members; but private family affairs obliging Mr. Chappel Hodge, the member in question, to abandon the honorable secretaryship of the Devon and Cornwall trials, and no one coming forward to take them up, they fell though ere another season came round, and for the last two years there has only been the meeting at Shrewsbury and the Kennel Club reunion at Horseleaft. There will be a considerable influx next year, as the Devon trials are to be revived, and autumn trials will again become regular fixtures, to commence this year in connection with the Shrewsbury Society; and there is every likelihood that the Kennel Club will hold a meeting next October in the neighborhood of Swansea. Field trials are therefore on the rise in England, and considering the demand there is for good dogs for the moors there is every reason why they should increase in importance, as it is now generally acknowledged that the only good dogs to be found are those bred specially for field trials. The shows have done much to spoil pointers and setters in many particulars, as really good stud dogs have never been broken, but kept merely to look at, and it is well known that if dogs are not used to the work which is especially associated with their kind and instinct they will lose the latter qualification in a generation or two. Hence it is that we hear of so many disappointments—as regards the Laverack setters for instance. The pure breed has been in a few hands, and consequently the price for whelps has been very high. Like most high-bred animals, also, they are difficult to rear, and the possessor of one that has come to maturity has so prized his acquisition that he has not dared to let him go into a breaker's hands—or hardly into a field, for fear of some accident, and the result has been a show dog with no more idea of hunting than a tame monkey. Bitches reared in the same sort of way are mated to him, and then it is wondered at that the puppies cannot be broken to be any use in the field. They are kept in turn, however, for the shows, or exported to America as pure Laverack. Very different was the old breeder, Mr. Laverack, to those who have endeavored to copy him as the exponents of his breed. He only kept a few, and these were thoroughly broken for his own shooting, the old gentleman being only too anxious that any one who came to see his kennel should try his dogs, and he was never tired of descanting on the peculiar field merits of "Blue Dash," "Blue Prince," "Pride of the Border," "Fairy" or "Cora," and I know from personal observation that he did not exaggerate their worth in the slightest degree. It was, therefore, always safe to breed from his stud dogs, and it is very easy to perceive their success in comparison with other so-called Lavercks. Old Blue Dash got no fewer than ten field trial winners, and Blue Prince is the sire of the day as regards winning stock. Pointers were somewhat in advance of setters, thanks to Mr. Whitehouse and Mr. Samuel Price. They possessed the strain which obtained the greatest success on the show bench, and they never feared to let the best specimen their kennels produced go through the full ordeal of breaking for field trials and for ordinary use to the gun. We find, therefore, that Mr. S. Price's Bang has won ten prizes on the bench without a single defeat, and likewise ten field trials out of fifteen stakes for which he has started, and Mr. Whitehouse's Hamlet won three field trials and twice as many champion prizes on the bench. This is just as it should be, and there is nothing the least surprising to find the best pointers of the day are descendants of Bang or Hamlet. Setter breeders have been coming round to the above idea also during the past three or four years, and the consequence is that the most marked improvement has been visible in the setter ranks, more particularly in the Spring Field Trials of the present season. Such a lot as appeared at Shrewsbury, the oldest sportsmen declared have never been seen together before at one time, and when pedigrees were examined it was seen that breeders had evidently made a close study of field trial form and show performances so as to get happy combinations. Mr. George Brewis soared over every one with his magnificent Dash II., for whom he gave 180 guineas at Aldridge's last year, and the credit of breeding this dog is due to John and Edward Armstrong. These brothers owned the first field trial celebrity, namely, Duke, a black and white dog by Sir Frederick Graham's Duke, out of Sir Vincent Corbet's slut. They sold this dog to Mr. Barclay Field, and after being a champion at Shrewsbury, he was mated to Mr. Statter's Phœbe, the produce being the extraordinary number of nineteen puppies, ten of which were kept on the bitch, and they were sold by Mr. Statter for 1,000 guineas. The armstrongs, unknown to every one, however, kept a sister to Duke, a bitch called Kate, and they sent her to Mr. Laverack's old Blue Dash, there being only one puppy from the latter, namely, Kate II., who, in turn, was sent to Blue Prince, and the produce was Mr. G. Brewis' Dash II., and Daisy. Naturally after getting such a brace, the Armstrongs sent Kate to Blue Prince again, and the result was Dash III. the best looking puppy at Shrewsbury, but only half broken. This is merely the raw material, however, he was good enough to catch the eye of Mr. Cunnington, an old sportsman and good judge of a setter, and commencing with £50, he kept adding on £10 until £100 was reached, whilst John Armstrong was uncoupling Dash for his first trial, but still the answer was, "No, Sir, I cannot take it." In breeding between the Armstrongs, Duke sort and the Lavercks, it was a case of combining size and quality, for Duke was a very big dog; so is his son, Mr. Llewellin's Dan, certainly the largest setter in England, and so Dash II., and Dash III., being twice the size of their sire, Blue Prince, is easily accounted for. The Lavercks, on the contrary, though small, are full of quality, and there never was a happier combination than that which is seen in Dash II. Next to the Armstrongs, I think the Bishops have been most successful. They owned, some six years ago, a setter also called Duke, but got by Don out of Bess, by Sir H. Dryden's Don, out of Bishop's Nell, by Sir Richard Garth's old champion Major. This dog Duke they crossed with a bitch called Doss, a Gordon by Kent, and the produce was Judith, a winner of several

field trials, and chosen by the Bishops to cross with the Laverocks, their chosen sire being Jock, by old Blue Dash, and to him Judith produced two puppies—Brackley and Belfast, both extraordinarily good ones in the field; the latter getting second in the field trial Derby. This season, J. Bishop brought out two beautiful puppies, by Brackley in Bonny Gal, a Brave Boy, and as soon as Mr. Barclay Field saw the performance in the setter puppy stake at Shrewsbury, he gave £100 for them specially for his own shooting in Scotland, so they must be something out of the common. Mr. Llewellin's Norna is a beautiful bitch, bigger than her Laverack dam Nellie, but with the same quality and style of going. Danger is a small bitch of no great pretations to look at, and she strains to the Ranger sort, being a grand daughter of the champions out of a bitch by Major. It is curious how Sir Richard Garth's Major is connected with most of the best setters. He was by Bishop's Major, son of Lord Barrington's Major. A black and white dog was Major, and he was a field performer, as he ran at Stafford, and he was also the champion dog of his day on the bench. He was the sire of Madge, the dam of Quince II., the sire of Ranger. American sportsmen were very fortunate in getting Pride of the Border, as nothing in England is better than his descendants, through Blue Prince, as shown by these Spring Field trials. Amongst the best breeders in England at the present time, are Mr. George Brewis, with his Dash II. sort, and that gentleman will not breed from bitches unless they have won at field trials. Mr. T. B. Bowers is another breeder of good ones. Mr. Daintry Hollins has the best stud of Laveracks in England. The Rev. J. C. Macdona with his Ranger and Laverack bitches, Mr. T. Pilkington, the breeder of Jock and Rock, and the Bishops and the Armstrongs, as above stated. There are others, also, such as Mr. Llewellin, Major Platt, Mr. Statter and Mr. Cunnington, who go in for field trial form entirely, so that in future there should be no scarcity of good dogs, only there is such a demand for them on the eve of every shooting season. Turning to the pointers, the season has not been quite so productive of good ones as previous years, for some of the best kennels appear to have been unfortunate in rearing puppies last season. Mr. Whitehouse had only three, and they were too backward to break; and Mr. Lloyd Price, with all his stock of young Drakes, could not bring one to the scratch, but was obliged to rely upon a purchased one from Mr. S. Price's kennel, by the champion Bang. This Bang sort is the hardest pointer strain in England, bar none. They are a bit harsher in their coats, are all of them noted for their tremendous bone, and they are all hardy constituted dogs, capable of standing any amount of work. Some of the pointer families, such as Lord Sefton's and Lord Derby's, have been so jealously bred for the last fifty years that they have been got a little too fine, though they are still full of pointer character, and out crossed now with the Bang sort (which is really Edge of Strelly's sort, through Brockton's Bounce) we shall get the most perfect pointers. Mr. Edge, of Strelly, had his breed of pointers for fifty years. They were big, powerful dogs, all liver and white ticked—the liver ticks were a characteristic of his breed, and they were very much esteemed. Mr. Edge was one of the most noted sportsmen of his day in England, and the hardest rider over Leicestershire. A famous hunter belonging to him once attracted the attention of a well-known dealer, who, commencing at 400 sovs., kept endeavoring to tempt Mr. Edge, until he reached 1,000. "It must be for a tremendous swell," said Edge. "Yes, it is," was the reply; "it is for a crowned head. "Sell them," was the rejoinder; "you can tell his Royal Highness that I can afford to keep a good horse as well as he can."

About the most likely pointer kennel for the future will be Mr. George Pilkingtons, of Stonclegh, Lancashire. He has been for the last two years carefully buying up all the Sefton bitches that he could find in the market, some of them at tremendous prices, and he is now going to cross several of them, as I have mentioned above, with Mr. S. Price's Champion Bang. By doing this, he will beat such a kennel as Mr. Statter's, for instance, as they want new blood, though the latter gentleman has some very pure Seftons.

The best puppy, in my opinion, that has been brought out amongst the pointers was Mr. Pilkington's Garnet, by Lord Sefton's Marquis, son of Mr. Statter's Major. Garnet was dead amiss at Shrewsbury, or he would have beaten Bow Bells.

I have no doubt that English sportsmen will take a deal of interest in your field trials to be held next autumn in Iowa, and provided stakes are thrown open to them, it will not surprise me if several will take the trip over, and take their dogs. The English do not believe for a moment that you have had the best of their representatives at your trials yet, and they would like to see some of the setters that were seen at Shrewsbury and Horscheath take their chance over your fine prairie grounds. The great London dog show this year under the auspices of the Kennel Club, will be held at the Agricultural Hall, where Weston has been of late performing. It is expected that nearly 3,000 dogs will be exhibited, or the largest number ever known. The dates are the 3d, 4th, 5th and 6th of July.

Sea and River Fishing.

FISH IN SEASON IN JUNE.

FRESH WATER.	SALT WATER.
Trout, *Salmo fontinalis.*	Sea Bass, *Centropristris atrarius.*
Salmon, *Salmo salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo amlnis.*	
Land-locked Salmon, *Salmo glover.*	Striped Bass, *Roccus linneatus.*
Black Bass, *Micropterus salmoides;* *M. nigricans*	White Perch, *Morone americana.*
Muskanonge, *Esox nobilior.*	Weakfish, *Cynoscion regalis.*
Pike or Pickerel, *Esox lucius.*	Bluefish, *Pomatomus saltatrix.*
Yellow Perch, *Perca flavescens.*	Spanish Mackerel, *Cybium maculatum.*
	Cero, *Cybium regale.*
	Bonito, *Sarda pelamys.*
	Kingfish, *Menticirrus nebulosus.*

For list of Trout Flies in season for June, see issue of May 31.

FISH IN MARKET.—The first salmon of the season were brought into Fulton Market last Monday. The run was twenty days earlier than usual this season, and the price demanded is very low. The fish were taken in the Restigouche River, near Cambellton, by Mr. Blackford's agents, and reached the market within forty-eight hours after their capture. These are known as green salmon, and are intended for immediate use. The demand for salmon is very large outside of the city this season, the Grand Union Hotel at Saratoga having contracted for about 20,000 during the season. Our quotations for the week are as follows:

Striped bass, 15 to 20 cents per pound; bluefish, 12 to 15 cents; salmon, green, 50 cents; mackerel, 12 to 15 cents each; shad, Connecticut River, 50 cents; white perch, 15 cents per pound; Spanish mackerel, 50 cents; green turtle, 15 cents; terrapin, $12 per dozen; halibut, 15 cents; haddock, 8 cents; kingfish, 20 cents; codfish, 8 cents; blackfish, 15 cents; herrings, 6 cents; flounders, 8 cents; porgies, 10 cents; sea bass, 15 cents; eels, 18 cents; lobsters, 8 cents; sheepshead, 15 cents; soft clams, 30 to 60 cents per 100; pickerel, 15 cents; Long Island trout, 50 cents; Canada do., $1; hard shell crabs, $3 50 per 100; soft crabs, 75 cents per dozen; weakfish, 10 cents; Restigouche salmon, 25 cents.

—Weakfish of large size are being caught now at Lower Quarantine.

—The Alexander House at Goose Isle, fourteen miles from Detroit, can be reached by rail or steamboat several times a day. The house has every modern convenience, and is much resorted to by sportsmen and tourists. The fishing for bass, perch, pike and pickerel is excellent. There is also good shooting for woodcock, snipe, quail and ducks of all kinds in season.

SALMON FISHING.—A gentleman having the lease of a salmon river in Canada wishes a companion for the month of July. Would prefer an old trout fisherman, who loves camp life, and wishes to make his first attempt at salmon fishing. For full particulars address D., care FOREST AND STREAM Publishing Co.—*Adv.*

—Mr. Frank H. Swett, of *Bancroft's Messenger*, San Francisco, has his taken Greener choke-bore, his Remington rifle and fishing rod, and gone East for the summer. He is a good sportsman, as well as bookseller.

—The cod fishing on the northern shore of Newfoundland is reported prosperous. Off Fogo the prospects are better than for twenty years.

RANGELEY LAKES.—A letter from Upper Dam Camp, dated June 1, says:

The trout have commenced rising finely to a fly, and about fifty fish have been taken in that manner in the last twenty-four hours. Part of these were taken at the mouth of the river below the Upper Dam, and part at the head of the upper Richardson Lake. Quite a party of sportsmen returned to Boston to-day via Andover. They carried out three hundred trout. The fishing at the Upper Dam, and in fact all through this region, has been splendid for the past ten days, and will be still better in the next three weeks, as part of the sluice was cut away to-day, and the water has commenced running through the dam. RANGER.

—The following parties are at the Rangeley Lakes: Messrs. Hood and Reynolds at a private camp on the eastern shore of Upper Richardson, above the mouth of the river; Messrs. Barker and Haines, Col. Henry Smith and T. P. Jordan, Esq., of Boston; J. P. Whitney and party are at Whitney's Camp, Upper Richardson Lake, at Mosquito Brook. Camp Kennebago at Indian Rock, and the Mountain View House at Rangeley Outlet, have all been well filled for the past ten days. The steamers on all the Lakes are now making their regular trips.

HEADQUARTERS OQUOSSOC ANGLING ASSOC.
CAMP KENNEBAGO, RANGELEY, Me., May 26, 1877.

EDITOR FOREST AND STREAM:

Your enlarged, *wedded* and unrivalled weekly is a welcome visitor at Indian Rock. The season opens finely. The old time "*guide*, philosopher and friend," Mr. C. T. Richardson, still presides as host at Camp Kennebago, giving to every new comer, be he member, guest or stranger, a cordial reception. Among the visitors are Messrs. Hull, of Boston, and H. B. Harrison and nephew, of New Haven. The former had an exciting experience with a monster brook trout *weighing over seven pounds*, which he safely landed. Several have been taken weighing over five pounds—indeed an unusually large number for so early in the season. But the largest capture yet recorded in these waters, famous as the home of giant *Salmo fontinalis*, was that of a *two year old mouse* to-day, while swimming across Cupsaptuc Lake.

He also was "safely landed," and then liberated near Camp J. Proctor Knott (you forget yourself Knott), the romantic woodland home of Hon. Wm. P. Frye, of Lewiston, Me.

The latter gentleman is now here, enjoying the rest he so nobly earned during the recent long and exciting session of Congress.

Hon. H. O. Stanley, commissioner of fisheries, arrived yesterday with 10,000 lively young landlocked salmon. One half were placed in Rangeley Lake, the balance in Kennebago Stream, near the camp. This consignment makes the number deposited in these waters within four years nearly 50,000. Several have been taken weighing from one to four pounds. A large proportion of the young were from the eggs of the Sebago Lake landlocked salmon, that attain a weight of *twenty pounds*. Visitors to Camp Kennebago two or three years hence can anticipate as royal sport as is afforded upon the famous salmon rivers of Canada.

After June 20th the hospitable regulations of the Oquossoc Angling Association permit the reception of gentlemen and ladies without the necessity of a letter of introduction from an officer or member. The "latch string always hangs out" for *you*, Mr. Editor, and the members of your staff.

RANGELEY.

10 WARREN STREET, New York, May 25.

EDITOR FOREST AND STREAM AND ROD AND GUN:

A correspondent in your issue of the 24th, "L. R. M.," of Bethlehem, Penn., inquires "If any of your readers have visited the Rangeley Lakes to escape 'hay fever?'" In reply, permit me to say that "Camp Kennebago," Indian Rock, the headquarters of the Oquossoc Angling Association, is visited annually by gentlemen afflicted with that distressing complaint, and always with benefit. It gives me pleasure to extend the hospitalities of "Camp Kennebago" to "L. R. M.," or any other poor mortals who desire to exchange "hay fever" for a genuine *eight-pound brook trout fever*, at any time between June 20 and September 10. By communicating with me by letter or in person I will give them a letter of introduction to our Superintendent, Mr. C. T. Richardson, which will assure to them the same attention and accommodations experienced by members, at a charge for board of $2 per day. I will add, by way of conclusion, that gentlemen desiring to sojourn at "Camp Kennebago" must not necessarily be possessed of a "hay fever."

GEO. SHEPARD PAGE.

CONNECTICUT.—A fine trout was taken by Mr. Geo. E. Merriman, in the Bantam river, Litchfield Co., Ct., a few days ago. The trout measured 17¾ inches in length, 10 inches in girth, and weighed 2 pounds and 9 ounces.

Several salmon have been taken in the Connecticut river during the past two weeks. Besides the 12 pounder mentioned in FOREST AND STREAM, three more have been caught in the shad nets off Lynn, and their weight was 8, 12, and 11¾ pounds, respectively. Of course many are taken that are never reported.

MASSACHUSETTS.—*New Bedford, May.*—The past week our trout fishermen have been very successful, Dr. Sweet hooking the largest, of 1¾ pounds weight. Bluefish have arrived in quantities, and the clubs on the Pasque and Cuttyhunk are preparing for the bass season. CONCHA.

MOVEMENTS OF THE FISHING FLEET.—Sixty fishing arrivals have been reported at this port the past week, 5 from the Banks, 45 from Georges, 9 from southern mackerel trips, and 1 from Magdalen Islands with herring. The receipts have been 900,000 pounds Georges codfish, 90,000 pounds Georges halibut, 430,000 pounds Bank halibut, 1,550 barrels mackerel, and 500 barrels herring. About 95 vessels are engaged in fishing on Georges Bank and the neighboring shoals, and about 25 on Cashe's, Jeffry's and others.—*Cape Ann Advertiser, June 1.*

CANTON, N. Y.—We have had some very fine trout-fishing on the head waters of the Grasse and Oswegatchie rivers during the past two weeks. J. R. H.

Kingston, May 23.—Truman Preston had at his stand in the Ulster Market this morning, a bass that weighed 28 pounds. It was caught in a seine in the river abreast of Pell's dock, Esopus.

L. G. Dimmick brought down from Dry Brook, town of Hardenburgh, the other day, a fine mess of brook trout. The largest one measured eighteen inches in length, and weighed one pound ten ounces. Plenty of just such speckled beauties coming from Dry Brook now.

Two Ellenville men have caught during the past week about a dozen copperheads, a hissing adder and several black and green snakes, all alive. OUR HARRY.

—Trout fishing has been very fair near Hornellsville. S. C. Jilson has just returned from a four-day trip to Pine Creek, Potter Co., Pa., and brought back about a bushel, from ¼ to 1½ lbs weight. STEUBEN.

—Commander L. A. Beardslee returned last week from Pisco Lake, where he had fine sport fishing. In his two weeks' catch were a ten-pound and a six-pound salmon, and several magnificent "brookers," weighing from two and a half to three pounds.

—Messrs William G. Stimson and S. J. Barry recently had some fine trout fishing at "Powley's." Mr. Stimson caught in Ferris Lake a handsome "brooker" that weighed three pounds eight and a half ounces.

—C. J. Palmer and Frank Burgor had fine luck last week fishing at "Powley's."

NEW JERSEY.—*Red Bank, May* 30.—The fishing season has fairly opened. The bluefish are on the beach. Small messes of bass (striped) have been caught trolling. WILD.

SEVERAL shares in Black Hawk Club Lake, Koshkonong, are advertised for sale in another column. The club has a fine house located on the finest canvas-back duck shooting grounds in the West. *Adv.*

PISECO'S BIG TROUT.

LITTLE FALLS, N. Y., May 28, 1877.

EDITOR FOREST AND STREAM:

I told you that I had captured a *fontinalis* this year, which was nearly up to our Adirondack standard of perfection, weighing when dressed, two pounds three ounces. I want to tell you *how* I caught him, and in doing so, gratuitously advertise a little of the virtues of the prettiest combination of ash and lancewood I ever saw or handled—my Orvis No. 7. I promised when you sent it that you should hear of its first work, and that for your rod you should have a line, and fortune so favored me that I can keep my promise, and not inflict upon your readers the ordinary and twice thousand told tale of how he dived and darted, and how I gave him but, etc. All those things happened and more, and it is about the more which I will tell you.

Hiram had lifted the gates, and Piseco Lake was emptying itself in a perfect torrent over the dam's foundations, and the south part of the big pool was boiling and foaming with the amber-hued masses of solid and snowy summits of broken water.

At the north side there was an eddy perhaps fifteen feet in diameter, where the water, set back by a bend below, whirled and tumbled like a witch's caldron, and great spruce and hemlock logs that had passed through the sluice and failed to strike the channel were circling and plunging about in a way that seemed without method; but there was a method in their madness, and well for my success it was that I found it. So far could they come and no farther; here they could shoot and first with speed, then roll over and over, preparatory to a fresh dart in the other direction.

I had walked three miles that morning to fish that pool, and as I heard the roaring of the flood I put away my hopes, for their foundation was, I thought, gone.

As I stood on the bridge, full sixteen feet above the pool, and watched the great giants come plunging through, I gave up trouting, and whittled.

"Yer might try it, Cap.; 'twon't cost much if you don't get one," said Hiram—and I thought I would. I set up my rod and sent a couple of flies skipping over the troubled pool, with no response; but it was capital practice, and I kept on till Hiram disappeared to attend to some other business.

Left by myself, I tired of fly-fishing, and, removing my flies, put on a small kinsey and a pair of split shot; then dropping my *worm-ed* hook into the eddy, and letting it sink, I got into business almost instantly. All of the usual performances were gone through with, and in addition I shouted frantically for Hiram. His wife at last heard my shouts, and saw from my actions what was wanted, and soon came running to the rescue. Fortunately for me the trout sulked, and, keeping just a little spring on him, I let him lie quietly while waiting. As soon as possible Hiram spliced an extra

handle to his gaff, and climbing down the side of the mill, hanging on by atmospheric pressure, I should judge, he lowered his gaff into a creamy foam which there covered a quiet corner, and said, "Now, Cap!" I stirred up my captive, who had recovered new strength, but at last led him into the foam, and directly over Hiram's gaff. One upward jerk and the trout impaled was in our power, and from the well-worn hole in his jaw fell out the little kinsey, so sure to hook and hold if treated fairly.

My little eight-ounce Orvis never once failed to lead him clear of logs and eddies, and I had never once cause to wish a thing about it different. With an eleven-foot pole of same weight I would have lost that trout, and with flies alone he would have remained unallured. PISKCO.

EASTERN TOWNSHIPS OF CANADA.

MONTREAL, May 27, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

Large catches of trout are now being made here. Last week *Salmo fontinalis* of three and four pounds weight were taken from Lake Nick, Hopp's Pond, and from other small lakes in the same vicinity. The Waterloo Fishing Club are now in camp on Brompton Lake, and will report catch when they return. To parties who intend visiting the Upper Connecticut Lake, I would advise them to go by the Sawyerville route, as there is now a fair wagon road from that place to within a short distance of the lake. The way to reach Sawyerville is by the Grand Trunk Railroad to either Sherbrooke or Remonxville, P. Q., then take the afternoon train on the Megantic Railroad to Birchton, then stage for three or five miles to either Mallory's, at Eaton Corners, or down to Taylor's Hotel, Sawyerville, where mine host will rig you out with a team, etc., for a drive of twenty miles to the end of the road near the lake. By the way, don't go to North Branch, for last summer the writer caught there one afternoon over 150 fine trout, so there may be none left, though if you are fond of seeing a beautiful little river that rambles round amid deep, dark woods, and flows sparkling and bubbling over bowlders, stones and short rapids into pools and stretches of clear transparent water, occasionally bridged with huge, old moss covered logs—the pleasure of beholding such a stream may repay you for your trouble in visiting it; but don't expect to get many trout unless you take your rod and tackle with you. A medium dark-bodied dy is the best to use there. STANSTEAD.

THE LEONARD SPLIT BAMBOO FLY RODS.—These rods have long had a most extended reputation, and are always admitted to be equal to the best, even by rival makers. Mr. Leonard has manufactured a great many rods that have been sold by leading tackle houses who have earned a reputation for dealing in superior goods. He has recently added considerable capital to his business, and has greatly extended his manufacture of rods at Bangor, Maine, not only making work superior to any that he has done before, but adding important improvements in ferrules, which secure greater strength and more uniform elasticity. The best testimony to Mr. Leonard's workmanship is his handiwork. *Adv.*

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

E. K.—Please let me know, through your paper, where the sporting paper *Der Waidmann* is printed in Germany; and in what city? Ans. At Gohlis, Leipsic, Prussia, by Fr. Von Ivernois.

A. B. H., Lynn, Mass.—Is there any good patent decoy (duck) in the market, and if so, what is it, and what price and where? Ans. Herman Strater & Co., Sudbury street, Boston, Mass., sell metal decoys and other patent devices.

E. E. P., Boston.—Where will I be likely to find the best beach shooting in either Maine or Massachusetts during the first part of August? Ans. On Cape Cod, at Plymouth and Cohasset.

J. M. E., Lake City, Minn.—I am desirous of obtaining a plain, comprehensive work on taxidermy. Can you give me name and price of some good work? Ans. Get C. J. Maynard's "Naturalist's Guide," at the Naturalist's Agency, Salem, Mass. Price $1 50.

W. H. H., Aurora.—Please send me game and fish laws of the State of New York. Ans. If you order it we can send you "Fur, Fin and Feather," containing the game laws of all the States. The price is 50 cents.

F. F., New York.—Will you please inform me if yellow-legged snipe and coots are protected by law in this State? Ans. They are not, except on Sunday. Coots come under the head of wild fowl, which are protected until October 1st.

J. M. P., Johnstown, N. Y.—I have a pair six months beagle hounds; one of them has a swelling over his eye and under his throat. What shall I do for him? Ans. Give us the cause of the swelling, the general condition of the dog, etc., and we shall be happy to prescribe for him.

W., Philadelphia.—I see the word "gyp" frequently used in your columns to designate a female dog. Can you give me the authority for its use? Ans. There is no authority for its use beyond a desire to soften a word that has become a synonym for something harsh.

W. W. K., Louisville, Ky.—Please give me the directions of the following papers: *Land and Water*, *Sporting Gazette* and Thomas Manley's "Yachting Circular?" Ans. 176 Fleet street, London; 135 Strand, London, and No. 318 Broadway, this city.

R. F. S., Lawrence, Mass.—I note from the New York daily papers an account of Maj. H. S. Jewell's champion long-range score. Please inform me, if convenient, the kind of rifle he used? Ans. Remington Creedmoor rifle, cal. 44.

HAY FEVER.—For the benefit of "L. R. M.," who asks in your last issue about "hay fever" at the Rangeley Lake region, I will say that two years ago I escaped it entirely at Moosehead Lake. With that exception, and two seasons passed in Colorado, I have been an annual victim for about twenty years.—W. G.

OREGONIAN, Portland, Oregon.—Where can I get information in detail as to size and build of the yacht Amaryllis, of which you gave a notice on page 194? I would like to be able to get details sufficient to build one like her, if cost was not too great. Ans. By writing to Messrs. Herreshoff Bros., Bristol, R. I. you can get estimates and all particulars.

GLEE, St. Paul, Minn.—I have an imported spaniel; a friend of mine wishes to cross her on a good pointer. What kind of a cross would it make? Ans. A mongrel of the meanest kind. If you can do no better try a setter. We have seen some noble field dogs from such a cross, but do not advise it if a well-bred spaniel is to be had.

Q. E. D., New York.—Would you be good enough to inform me, in your next issue, whether the game law allows the shooting of all kinds of birds (exclusive of game birds) for a taxidermist who desires to make a collection for a group; if not, whether he can procure a permit to do so? Ans. If the proper authority is satisfied that the birds are shot in the interest of science you can blaze away.

W. A. N., Dayton, Ohio.—At the age of about three weeks my pointer pup had a swelling on each side the neck which grew to the size of a pigeon's egg. With this swelling was a slight running from the eyes, but he was not otherwise affected. What treatment would you advise? ANS.—Your query is answered in our issue of May 24. Best let the swelling alone, it will disappear of itself.

H. L., Greenville, Mich.—I have a hound pup that will not eat. He has got very poor; was never a very hearty eater. I have given him oil and mandrake. Some worms come from him. He seems a little better, but does not take hold of the food as he ought. Please let me know what to do for him? ANS.—Give three times daily a pill of one grain of sulphate of quinine, one grain of sulphate of iron, and three grains extract of dandelion.

INQUIRER, Montreal.—Can you or any of your correspondents kindly inform me if the writings of Mr. Barton Wallop, who contributed some spirited sporting papers to the *American Turf Register* many years ago, have ever been published in a connected form? One of them was reproduced in "Frank Forester's Field Sports." Ans. We cannot learn that they have been published in book form.

C. E. D., N. Y.—Would you please advise me what food in the best on which to feed puppies about ten weeks old? I have two pointer pups who refuse all kinds of food except meat, and as I have fed them rather sparingly on that diet, they have become very thin. Ans. Feed on thick mush made of maize or oatmeal and shin soup. See if the pups have worms.

H. B. S., Chestnut Hill, Mass.—1. Please give me the address of any person you know of that can tell me anything about the headwaters of the Connecticut River, and whether there is any fishing? 2. Is there any such thing made as a "pressed tin camp kettle," and price (not a preserving kettle)? Ans. 1. See letter from Stanstead, in Sea and River Department, this issue. 2. There is a patent sportsman's kit, which is furnished by the Union Company, Syracuse, N. Y., price $17.

W. W., City.—Probably from the middle of this month to the latter part of August the bay will be swarming with weakfish. Catches of fifty and eighty have been of frequent occurrence. The best baits are shrimps and soft-shell crabs. Take Staten Island ferry at foot of Whitehall street to Vanderbilt Landing (fare 10 cents), thence by Staten Island railroad to Princes Bay station (fare 30 cents), thence a ride in a nice-cushioned wagon down to Wm. Sanbeg's at the beach (fare 10 cents). Boats, $1 a day. Fish about 200 feet off the lighthouse.

C. E. H., Boston.—1st. Can you furnish information as to how and when the trout peculiar to Lake Winnipissiogee can be taken with hook and line? 2d. Also, in selecting from a litter of puppies, would one that partook of the color and markings of the father be more likely to partake of his qualities than one of the same litter that partook of color, etc., of the mother? Ans. The Winnipissiogee trout is caught in great quantities with hook through the ice in winter. 2d. Yes.

AQUA, Troy, N. Y.—Will you be kind enough to give your opinion whether striped bass would live in fresh water lakes if placed there when small? Ans. Striped bass of all sizes and ages are found in the fresh water lakes and the tributaries of the Mississippi River, as far from Salt Water as St. Louis, notably at Moredock Lake. They are the genuine *Morone lineatus*, and apparently never go to salt water. Al striped bass spawn in fresh water.

A READER, Schenectady, N. Y.—What would be the probable cost per man, including outfit, to a party of four or five proposing to make an overland trip on horseback, from Omaha to California, via Salt Lake City; and could the outfit, including horses, be procured at Omaha as well as at any part east of there? Ans. An overland trip would cost you a dollar and a half per day for man and horse; multiply the sum by your rate of progress. Horses can be bought for $40 from Indians and traders, but are more expensive the farther East they are purchased.

F. W. D., New York.—I wish to leave the city for the next three months to go to some locality where there is excellent fishing, and gunning for duck, geese, partridges, and especially deer. If there is such a hunter's paradise known to you, please inform me of some one living there to whom a letter can be sent for particulars? ANS.—There are very many localities which afford the pleasure which our correspondent asks for, but we fear if he goes to hunting too much during the next three months, as he proposes, he will find himself in limbo, and not in a "Paradise" at all. For fishing we would recommend northern Michigan above most other places.

COCKER SPANIEL, Indianapolis.—Will it injure my cocker spaniel (except in appearance) to clip the hair off his tail, ears, legs and throat before the shooting season opens, as the burrs are a great annoyance to him, or will it prevent his coat from growing out again as handsome as before? Can I get the areca nut, whole and not prepared, in New York, and what are they worth each? Ans. 1. Would not advise it done. There are several objections. 2. Yes.

B., Webster, Mass.—In issue of 2d instant, you assert the use of "fine powder" in shot guns to be "nonsense; also the coarser grades costing one dollar per pound. What make is the Ducking brand and mark, that you recommend as "good enough for ordinary shooting, at 40 to 50 cents per pound," Ans. Fine powder is generally too quick for breech-loading shot guns, causing the shot to scatter too much. Dupont's Ducking can be bought by 6½-lb. can, or keg, at the price we mention.

C. S., Rock Island, Ill.—1. In your last issue you make mention (in your editorial on education) of laboratories, etc., for object teaching displayed at the Centennial by some Canadian. Can you tell me through your columns who to write to to get further information concerning them? 2. Do you know if the descriptions of Western scenes given in Mayne Reid's novels are true to nature? He tells of the "prairie traders" going back and forth between St. Louis and Santa Fe. Are there any such trains of traders going that way nowadays? ANS.—The necessary information might, we think, be obtained by addressing the Ontario Education Department, Toronto, Ontario, Canada. If such inquiry proves unsuccessful let us know. 2. Twenty years ago the wagon trains made their three months' journeys across the plains to the trading and fur posts on the eastern slope of the Rocky Mountains, but the day of the white-tilted Conestogas has gone by since the railroads have superseded them. Mayne Reid is reliable.

RURAL, Hagerstown.—1. In ordering a gun with two sets of barrels, 10 and 12-gauge, 28 and 30-inch barrels, the 10-gauge barrels to be full choked, the 12-gauge bored after the manner of the Greener gun described in FOREST AND STREAM of Dec. 28, would there be any advantage in having the 10-gauge barrels made 32 inches long instead of 30 inches? 2. Would the increase of two inches in length of barrel make any or much difference in the sporting qualities of the gun? 3. What would be the cost of one of W. W. Greener's finest guns if bought in London where there is no duty to pay on it? 4. Is there any possibility of the duty on guns being removed within the next four or five years? ANS.—1. We should prefer the heavy 10-gauge barrels, 32 inches. 2. The shooting would probably be better for the reason that, as larger charges would be used, there would be more metal in which to turn it. 3. We do not know the London price; probably £40 to £50. 4. No.

F. S. S., Pittsburgh, Pa.—1st. Can you please inform me when the close season for quail and grouse expires in this State? 2d. Where could I procure a copy of the new game law of this State? Ans. 1st. The close season for quail expires in Pennsylvania on October 15; for grouse, on October 1. 2d. You can procure the game laws of all the States in "Fur, Fin and Feather;" to be had at this office.

E. D. W., Dover, N. H.—1st. Can you give me the address of a firm that manufactures or deals in musical instruments? 2d. Can I obtain Dr. Jasper's work (at any time) entitled "Birds of North America?" 3d. Shall you publish the schedule of base ball games to be played during the month of June as you did in May? Ans. 1st. Batchling & Co., 177 Bowery; H. W. Mocking, 309 Bowery; or E. A. Zoebisch & Sons, 44 Maiden lane. 2d. Published by Robert Clark & Co., Cincinnati, Ohio. 3d. Probably not

A. P., Boston.—Will the forthcoming "Sportsman's Gazetteer" give a description of game birds as to markings, etc., so that a novice can tell what he has shot—that is, if he should not be familiar with the species shot? Ans. Yes, the book gives specific information in regard to more than two hundred varieties of game birds. Price $3.

I. D., London, Ontario, Canada.—Can you inform me where and at what price I could obtain some English house sparrows? We have none in our "Forest" city, and I wish to get them introduced. Ans. They can probably be obtained from any of the park keepers in our larger cities; at all events Reiche Bros. of Chatham street, New York, could get them for you.

J. H. S., Brooklyn.—Will you please inform me, through your paper, if there is good hunting and fishing near Franklin or Downesville, Del. Co., N. Y., and what kind? Ans. We cannot speak from personal knowledge of these places, but we know that the tributaries of the east branch of the Delaware River contain many trout, and that within a dozen miles of Colchester are ponds with trout, bass and pickerel.

G. A. H., York, Pa.—1st. Who are the best makers of air guns in this country? 2d. Is there any air gun manufactured that is not liable to get out of order, and can be relied on for accuracy at thirty feet? 3d. Whose make of rifles are generally used in rifle galleries in New York? Ans. 1st. Decline to answer. 2d. Do not know of any. 3d. Ballard, Wesson, Stevens, Allen and Zettler's.

C. S. P., New Haven, Conn.—I desire to know the names and addresses of the winners of prizes on coach dogs at the bench show in New York? Ans. The Westminster Kennel Club have had prepared a pamphlet carefully compiled from the judges' books, giving the winners, and those dogs noticed by the judges in each class, making an official report of the show. The pamphlet, which is prepared to correspond and be bound with the catalogue, may be had, postpaid, on sending the cost, 25 cents, to Wm. M. Tileston, at this office.

J. B., Cleveland, Ohio.—I have an Irish setter dog whose coat is very harsh and staring, and is very poor; his appetite is middling good; there is no appearance of worms, as his breath is not at all offensive. I have given him areca nut, but failed to see any signs of worms. He has plenty of exercise, and a good, clean bed. Ans. There is no doubt but that your dog has worms. Try the areca nut again, following it with a good dose of castor oil. Change the diet entirely, and give him a raw egg night and morning for a week.

J. H. K., Menomone.—1st. Where can Scotch coolies *alias* shepherd dogs—whelps or grown dogs—be obtained of pure breed? If grown, the dogs should be trained. 2d. In fly-fishing, should the reel be habitually carried on the upper side or under side of the rod? 3d. Which is the best reel for brook trout fishing? Ans. We know of no one who deals in collies; you will have to advertise. 2d. In fly-fishing it is customary to have the reel behind the hand, and on the under side of the rod. 3d. A German silver or nickel plated click reel holding 30 yards of linen line.

J. Z. K., Bethlehem, Pa.—I have two liver puppies of the pointer breed; one is very fully coated and sleek, while the other's hair seems as though washed with resin soap, and is of a sickly, dirty yellow color, and seems sore to the touch. I do not think this should be, as both puppies were the same at eight weeks old; they are now twelve. Ans. It is probable that the puppy has worms. Give him a piece of garlic two or three times a day for several days, or three doses of five grains each of areca nut two hours apart, to be followed by a teaspoonful of castor oil.

W. W. A., Brooklyn.—1st. Is there any fishing at Fort Hamilton; if so, what kind? 2d. Is it time to catch bluefish at Canarsie; if so, what kind of bait must I use? 3d. Is there any shooting near Brooklyn? Ans. Yes; in a few days there will be good weakfish and bluefishing; these fish have made their appearance at Barnegat, and will soon be here. Troll with squid in the bay and out of the bay. The boatmen will tell you where; they provide lines and squids. Good snipe shooting in season along the beach at Canarsie and Rockaway.

J. E. S., Sunbury, Pa.—I have a pup three months old (from a setter dog and pointer bitch) that seems to have some disease of the eye. The eyes seems to be clear enough, but there is a continual discharge of water from them, which I fear may end in some permanent disease. He seems to see well enough, but within a day or two have noticed a sort of scum over the corner of one of his eyes. I should be very sorry to lose him, as he is good stock and very promising. Ans. We cannot agree with you as to the value of a dog bred from a pointer and a setter, but we would suggest to you to try the remedy recommended to J. S. in our last issue.

REX, New Hamburg.—1st.—I have a valuable setter dog that has been sick some little time, and don't know what to do for him. He is seized with coughing spells; when he coughs he gags; sometimes raises froth and sometimes not. How shall I treat him? 2d. Can you tell me whether Webb's amended game law has passed the Assembly at Albany, and is there to be any change in the game law, or is summer woodcock shooting to be continued or abolished? 3d. What is the close season for black bass in New York State? Ans. 1st. Give him a Dover's powder night and morning for two or three days. 2d. The bill as amended, has passed, and only awaits the Governor's signature. The close season for woodcock expires August 1, except on Long Island, where it remains as before. 3d. Expires May 20.

WALTON, New York.—I understand that there is a law in New Jersey forbidding the catching of fish in any of the waters of that State, except by a hook and line; and I am informed that New Jersey fishermen have spread their nets upon the Staten Island shores of Raritan Bay, and at or near Princess Bay. They have taken a few weakfish already. I desire to ask whether weakfish run up in our waters to spawn; if they do, this pound and fyke fishing must make a serious inroad upon their numbers if it is continued. Is there any reason why the taking of game fish by pounds or fykes, in salt water, should not be, prohibited by law? Ans. There is no such law as that you mention nor are the weakfish that come into the estuaries to spawn protected in any manner, except in certain localities. In Barnegat Bay, for instance, pound and drift net fishing have been abolished by local enactment, and the result is a great increase in the number of fish.

—Undoubtedly one of the best and cheapest stocks of Carpetings, Oilcloths, Mattings, etc., to be found in the United States is that of Messrs. JOHN H. PRAY, SONS & CO., Washington street, Boston. I. W. Adams is the sportsman of the firm, and will take special pains to please any of our friends calling upon him, or with any orders sent him. It is a good, reliable house.—*Adv.*

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

No advertisement or business notice of an immoral character will be received on any terms.

☞ Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JUNE 7, 1877.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

☞ Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

T. C. BANKS, Business Manager. S. H. TURRILL, Western Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Thursday, June 7.—Trotting: Parkville, L. I.; Pittsburg, Pa.; Mystic Park, Boston; Pottstown, Pa.; Dayton, O.; Belmont Park, Philadelphia; Pittsfield, Mass.; Hudson, N. Y.; Utica, N. Y.; Medina, N. Y.; Muskegan, Mich.; Dubuque, Ia.; Maryville, Mo. Base Ball: Cincinnati vs Chicago, at Chicago; Louisville vs St. Louis, at St. Louis; Alleghany vs Hartford, at Union Ground; Clinton vs Marshalltown, at Marshalltown, Ia.; Tecumseh vs Rochester, at Rochester; Buckeye vs Cricket, at Binghamton; Indianapolis vs Lowell, at Lowell; Auburn vs Mem; his Reds, at Auburn; Enterprise vs Hoboken, at Jersey City; Mutual vs Keystone, at Brooklyn; Washington vs Hudson, at Prospect Park Red Caps vs Fairbank, at St. Paul; Athletic vs Boston, at Boston.

Friday, June 8.—Trotting: Parkville, L. I.; Pitt-burg, Pa.; Mystic Park, Boston; Pottstown, Pa.; Dayton, O. Base Ball: Athletic vs Boston, at Boston; Harvard vs Princeton, at Cambridge; Indianapolis vs Manchester, at Manchester; Buckeye vs Hornellsville, at Hornellsville; Springfield vs Cincinnati, at Springfield; Chelsea vs Enterprise, at Jersey City; Star of Syracuse vs Hartford, at Brooklyn; Auburn vs Erie, at Auburn.

Saturday, June 9.—Trotting: Dayton, O. Rowing: Morris and Schaff, Pittsburg, Pa. Base Ball: Cincinnati vs St. Louis, at St. Louis; Louisville vs. Chicago, at Chicago; Boston vs Hartford, at Brooklyn; Indianapolis vs Fall River, at Fall River; Hornells vs Buckeye, a Hornellsville, N. Y.; Enterprise vs Randolph (late Starr), at Newark; Keystone vs Hoboken, at Jersey City; Whitoka vs Hudson, at Brooklyn; Tecumseh vs Star, at Syracuse. Regatta of the Schuylhill Navy at Philadelphia.

Monday, June 11.—Regatta: Atlantic Yacht Club.

Tuesday, June 12.—Trotting: Syracuse, N. Y.; Chatham Village, N. Y.; Catskill, N. Y.; Massilon, O.; Beacon Park, Boston; Kalamazoo, Mich.; Cedar Rapids, Ia.; Chicago, Ill.; Peru, Ind Regatta: Brooklyn Yacht Club. Base Ball: Louisville vs. Chicago, at Chicago; Cincinnati vs St. Louis, at St. Louis; Boston vs Hartford, at Brooklyn.

Wednesday, June 13.—Trotting as above. Regatta. Devil's Lake, Wis.

SWINDLING COLLECTORS.—We are again obliged to warn our subscribers and advertisers against paying money to unauthorized persons who represent themselves as our collectors and agents. We are victimized so constantly, and to such a pecuniary extent, that the losses we are obliged to bear are more than serious—they are embarrassing.

We wish our Philadelphia patrons could be made to understand that the consolidated FOREST AND STREAM AND ROD AND GUN journal has no Philadelphia office, and no Philadelphia agents. Our business manager, T. C. Banks, Esq., will this week wait upon all firms in Philadelphia who advertise with us.

THE INTERNATIONAL TEAM SELECTION.

IT may fairly be assumed at this time, before the arrival of complete mail explanations, that the United Kingdom team will be such in nature as well as in name. In private correspondence preceding the receipt of the cablegram the settlement of a basis of operations by which the Scotch, English and Irish small-bore men were to unite their forces in one grand effort to overthrow the American experts, was foreshadowed, and upon the completion of the negotiations the dispatch was no doubt sent. The aim and object of this journey will be the triumphal carrying off of the Centennial trophy, and to checkmate this move to treat their friends (the enemy) to a fair, square repulse by mere force of good marksmanship is now the task before the American long-range men.

If everything goes on smoothly without hitch to either side it cannot be far from a nip and tuck match. The winners should be such merely "by the skin of their teeth." The imperial team will contain the cream of a dozen or more renowned ranges; men who have carried off honors before the butts for a score of years past. Their drill as individuals has been perfect, the competitions through which they have fought their way keen and exacting. Their arms are well tried, and for uniformity of work excell even our American made weapons. The strangers will come whetted to their work by the recollection of the uniform run of luck which the young shooters of America have thus far struck. Those defeats have been lessons, hard, sharp hints that the victors possessed methods or means which they did not. Team shooting to the British marksmen meant merely the working simultaneously of a number of individually expert shooters. To the Americans it meant the merging of the individuals into the compact organization of the team. In place of relying upon chance-help from his fellows each member of an American team was one of a bundle of fagots resisting a common foreign foe. It was to this mutual helpfulness that the success of Dollymount is alone due. There never in the short history in international rifle shooting was a more perfect team movement than that shown by the visiting team upon that Irish sand-bar range. Our success next fall, if we are again to meet it, is to be gained by a strict adherence to the team idea. It is not enough that the best men be picked, but they must pull together, must shoot in a bunch, with no weak member lagging far behind, a dead weight on his fellows. The foreign shooters have learned our secret of success, but to them, accustomed to single-handed efforts, the yoke of team drill and discipline will sit at best uneasily; but the house team must have everything reduced to clock-like certainty as respects method in the match. With the acknowledged general superiority of our rifles, handled as they are with heavy charges of carefully made up ammunition and with a scrupulous regard to cleanliness in use, with a perfect team system and with marksmen, individually not one whit less skillful than those to be brought against us, the victory is ours.

But there is a world of work to be traversed first, and upon the first movements made will depend whether this path of labor be agreeable or otherwise. The team is to be a representative one, American, as we understand it, and not sectional. The N. Y. Amateur Club have not been challenged, nor have the National Rifle Association. The fixing upon Creedmoor as the place of conflict does not carry with it the entire control of the match by the local organization governing and owning that range. Not only is the fighting team to be chosen from the best skill the country can afford, but the entire management of the match should be equally representative. There is abundance of work to be done outside the actual team men, and this preparatory and secondary labor should be diffused as far as may be to this end, as time is not pressing. It would seem a wise initiatory step for the gentlemen to whom the intimation of the visit has been sent to invite a meeting of representatives from the several clubs, or ranges, where long-range shooting is practiced, or from where help may be expected, and allow the body so convened to assume entire direction of the interests of America and American riflemen in this match. The meeting might be called at St. Louis or any other central point within ten days; invitations by letter or telegraph having previously been sent out. Practice could at once open upon the several local ranges over the country, and upon Creedmoor, the best and oldest range we have, the final tests could be applied. It seems very well settled now that the selection of the entire team by competition alone is not wise, and the fixing upon the selection of the nominated members would be one of the important tasks of the committee. The raising of the necessary funds, the reception of the comers and the thousand and one details would give the united committee ample opportunity for displaying its efforts. Of course with the advantages possessed by the marksmen of New York and Brooklyn a lion's share of the places on the team would fall to them, but this should not lead the N. R. A. to either ignore the other growing associations of the country, or in a perfunctory manner as the self-appointed spokesmen for American riflemen generally to call upon long-range shooters to come on individually and try their luck in a general scramble for places at Creedmoor. Upon the first step will depend whether we shall have anything like the growling and grumbling which marked the choice of previous teams, and which even to this day has not been entirely silenced in the hurrahs over American successes.

THE GREENWOOD LAKE REGATTA COURSE.—There is likely to be some fine sport on this excellent course during the summer, as preparations for several events are being made. Last Friday, by invitation of the president and officers of the Montclair and Greenwood Lake Railroad Company, an excursion party was run up to the lake, where they were most hospitably entertained at the Brandon House. The party included Rev. Dr. Hall, of Holy Trinity, Brooklyn; Hon. Erastus Brooks, Cyrus W. Field, the President; Remington Vernam, Vice-President; Gordon L. Ford, Horatio C. King, and a large number of other well-known gentlemen, occupying two passenger cars, which were run over the road and back in quick time. The whole excursion, including the delightful steamboat sails on the lake and the dinner, occupied but seven hours. The sail was enlivened by pleasant addresses, in which all the speakers made special mention of the attractions of the lake and its surroundings, and of the delightful country through which the railroad runs, occupied, as it is, with the beautiful residences of many gentlemen transacting business in New York. With such liberal management as has been shown since the present company bought the railroad, suburban settlement of New York business men is much encouraged and facilitated. The policy adopted by the managers must prove remunerative to the company; while the company will certainly contribute much to the wealth and resources of the region through which the railroad runs. It is a sort of mutual benefit association, whose advantages have been felt from the beginning.

One of the future resources of this company is the crystal water of the lake, which will afford an inexhaustible supply of purest ice on demand.

THE YALE EIGHT.

In the summer of 1873, Cook, the Captain of the Yale crew, after much discouragement, and the encounter of difficulties before which a man with less determination and will power would have quailed, succeeded in bringing his crew in No. 1 out of thirteen contestants. Not only this, but the Freshman crew, and the single sculler, both using his stroke, won their respective races with great ease. The following year at Saratoga came the unfortunate foul between Yale and Harvard. Yale at the time thereof, was leading, pulling quietly at their long 32 to the minute stroke while all about her 36, 38 and even 40 was being pulled. Well, the two boats came together, got smashed up, and in a few moments Harvard pulled away, leaving her rival crippled and helpless, while Columbia stole in and carried away the prize the two lions had been battling for. Harvard came in second, beaten by 8½ secs. By the foul she lost 31 secs. In '75, Yale was badly beaten, outrowed by six out of twelve colleges. Poor quarters, poor food and lack of sleep had done their work upon the men, and the day of the race found them weak and out of condition. Then came the withdrawal, and in 1876 Yale beat Harvard by a clean furlong at Springfield. Then Harvard went to Saratoga and nearly beat Cornell, and would have done so too, the best judges say, had the course been a trifle longer. The world attributes their defeat to the poor stroke they used. Well, now the thing is going to be fairly tested. Both crews are pulling the same stroke. Both crews will use the same boat, made by Waters, of paper, and built from the same lines and measurements, and the men will be pretty evenly matched in physique. Now we are to see which is the better boating college of the two, Yale or Harvard. The English stroke was last year so splendidly vindicated that no one can further cavil at it, particularly as the Harvard men were as fine physically as were the Yale men. This year, then, is to see a tremendous contest, a meeting of Greek and Greek. Two great universities, the one smarting under defeat, and the fact that she has not won a race for years, while her rival has won six (two university races, a freshman race and two single scull races), and the other jubiliant with satisfied pride, and determined to maintain her position at the head of American college boating (did not Philadelphia place her there?), are bringing their every resource into the field to defeat each other. Such rowing will be done as will far surpass anything ever witnessed in American waters. Yale men have been disposed this spring to be very confident over the result of the coming race and because their men are doing finely, have been apt to look upon it as already theirs. A greater mistake could not be made. They should remember that with few exceptions Harvard has never been badly beaten. She always does well. Even last year she went to Saratoga, and in a measure retrieved herself. A glance at the list of men making up her eight will show the excellent material, backed by real pluck, which she has in her boat. "Old" Bancroft, with his bull-dog tenacity of purpose, and gritty, hard set face, is again stroke, and his presence alone is enough to ensure Yale that after last year's lesson she must not expect another walk over.

The Yale crew is a younger and less muscular one than that of last year. What they lack in strength, however, they more than make up for in good form. They are rowing finely together, and the boat gets through the water at a very lively rate. Of course the loss of such men as Cook, Kennedy and Kellogg is keenly felt. It is a loss which cannot be remedied. Cook's mind is as much missed from the boat as his body. Yet, though by no means gigantic in size, his back and loins were unapproachable. Kennedy was the most powerful man that ever pulled in a Yale boat. Kellogg was an unusually wiry fellow, closely knit and nervous, and was always looked upon as the hardest worker in the boat. The new men are Hart, Livingstone, Hyde and James. Though not as good as their predecessors, they are fine oarsmen and rank with the rest of the crew. Collin, E. C. Cooke, Wood and Thompson, all of whom rowed last year, fill up the boat.

At a distance of a couple of miles from New Haven there is a pretty little body of water called Lake Whitney, from the fact that the celebrated Eli Whitney's first factory derived its motive power from it. Here the crew took their boat about four weeks ago, and have kept it there until three or four days ago, in order to avoid the rough water of the harbor. Cedar eight oars are very expensive articles, and it is a very simple matter to ruin one by taking it out into a rough sea. It becomes "twisted," and immediately loses all stiffness. It then is practically valueless, and though it may be a pretty thing to look at and sentimentalize over as "the dear old thing so many jolly (?) hours have been spent in," etc., it is worth little else.

Lake Whitney, aside from its advantages of smooth water, was a very good place for the crew to work, inasmuch as they always had the stimulus induced by the presence of the fair sex to incite them to do their prettiest. A better stimu-

lus than this cannot be imagined. The coach is unsparing of his criticisms, and, as at this late period most of the faults are apt to be those of carelessness, men are less liable to be guilty of them when they are rebuked before strangers. This is why it is so desirable that the college men should frequent the boat house in greater numbers in the afternoon, that their presence may encourage the toilers of the sea, and in a measure lighten their labors by the feeling that their best efforts are seen and appreciated. Now that the paper shell has come it is kept at the boat house, where it is daily used by the crew in the shelter of the inner harbor. When too rough to row there the men go to Lake Whitney and use the other one. The long rows have not yet begun, for the reason that high winds have been the rule so universally this month that not one day has gone by when a row to the lighthouse and back would have been a possible, much less a safe, achievement. Mr. Cook, of last year's crew, is studying law in town. He is coaching the crew, and is doing it very thoroughly. I read in Monday's *Herald* the very vernacular statement that his position is "a tremendous grind." So it is. Let him who doubts it pass a half hour by his side, as it has been my fortune to do, and listen to his patient iteration and reiteration of the same directions and corrections, dozens of times over, till the outside listener even becomes weary of hearing him, and marvels at the patriotism and *esprit de corps* which can sacrifice so much time and care to such a thankless position. The course of the race will be the old one at Springfield. It is Yale's choice, Harvard having made a decided stand in favor of New London. This latter place certainly has one great advantage in its accessibility from New York by boat. If the race were rowed there hundreds of men, who otherwise could not afford it, would witness the race. The affair would become more national in its character than it has ever been or ever will be when pulled inland. Still, the constant rough water on the Thames is an objection in the eyes of Yale men, which no amount of argument can do away with. It must be owned, however, that the broad, deep river stretching miles inland without a bend, affording such a splendid opportunity for steamers to follow the race from start to finish, is a great temptation to one disposed to look only at the surface of things, without weighing the possible contingencies of interrupted practice, owing to rough water or a crowded course. I think the Yale boys have chosen wisely in pitching upon New London. One thing is certain, however, if the Crimson should once more come to the front this summer, Harvard will go to New London next year. She being the victor will be the challenged party, and will thus have the right to name the course. Of Yale's chances in the coming contest I shall say nothing; this I leave till my next letter. I will give the crew as they sit in the boat, with their weights and ages. The weights are rather stale, being the ones which were taken four weeks back. I will give them again in my next, when I will give also an extended criticism of the men:

Name and Position.	Age.	Weight.
Bow—G. W. Hart, '78, S.S.	20	150
No. 2—H. Livingston, '79, A.C.	20	165½

FLETCHER HARPER—*Deceased.*—In lamenting in common with the brotherhood of publishers the death of one so prominent and so long known among them as Fletcher Harper, Esq., the sole survivor of the noble four whose house has long been known the world over, we must not fail to recognize the prominent part he has taken through his publications in disseminating a taste for travel and out-of-door recreation, and in giving vigor and manhood to our people. It was at his suggestion in 1851, that *Harper's Magazine* was started. At first, a venture, the new periodical was issued only after long hesitation on the part of the elder members of the firm. But the Monthly speedily became an assured success, and has maintained its position as the most widely read and best known of all our magazines. Making for itself a field by gathering spicy narratives of travel and adventure, *Harper's* soon became the recognized medium for the writings of intelligent travelers and tourists, and by its illustrated sketches it has done more than any other publication to illustrate the physical scenery and resources of our own and other lands, and to inspire and nurture a taste for healthful out-of-door recreations. It now has a circulation of 140,000.

It was at the urging of Fletcher, also, that the *Bazar* and *Weekly* were started. The income from the three is now about $400,000 annually, while the house has a capital of $2,500,000. The firm still bears the name of Harper Brothers, being composed of the sons of the original members.

—The earthquake in South America on the 10th of May, which destroyed the towns of Iquique, Arica, Tambo de Moro, Antsfagasta, Ilo and Pabelion de Pica, was accompanied by a tidal wave which, among other freaks, took the wreck of the United States steamer Wateree, which was carried inland a couple of miles by the tidal wave of 1868, and floated it a mile or two further up the coast. The sea in some places is said to have risen over sixty feet.

—Florida water has always been a desirable toilet article, and at no time in more request than during the hot weather. Escalantes' Florida Water, advertised in our columns this week, has been a standard preparation for a number of years, and can be found at all respectable druggists.

—The shortest, quickest and most pleasant route to the White Mountains, Newport, Vermont, etc., is via New Haven steamers. These elegantly equipped steamers, for the convenience of travelers living in the upper part of the city, commence landing next Monday at Twenty-third street, E. R. Passengers taking the 11 P. M. boat from Peck Slip can reach any point in Vermont or New Hampshire early next evening, thus avoiding any topping over on the journey.

GAME PROTECTION.

BUTCHERING DEER IN THE ADIRONDACK REGION.

In February we published the following note, which has just called out an answer:

An Albany correspondent sends us the following letter from a well-known Northwoods guide, for whose veracity he vouches. It is time that vigorous measures were taken to stop the wholesale slaughtering of deer out of season. In this instance there could have been no difficulty whatever in obtaining evidence, and the matter should be brought to the notice of the Legislature:

LONG LAKE, February 9, 1877.

The snow is very deep in the Adirondacks, and thinking that perhaps you would be glad to hear how we are getting along, thought I would drop you a line and let you know. There is nothing to do only to take notice of those that claim to be guides. Some of the first-class guides are having a very nice time killing deer on three feet of snow, among whom are Mitchell Sabbaties, Charles Sabbaties, J. D. Plumly, Alba Cole, Justin Larros and several others. Now, if you sportsmen wish to have the deer all killed off on snow shoes and out of season, I have nothing to say. If not, please publish them in the sporting papers. I is my request that you should do so. The Sabbaties and J. D. Plumly killed twelve in two weeks, and for proof please address L. Hall, Long Lake, Hamilton, Virginia. L. M. H.

The communications which follow raise an interesting question of veracity between our correspondents, and while we do not propose to allow any controversy to be carried on in our columns, we should be glad to know who is to be believed.

EAGLES NEST, NEW YORK, May 16, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

As a subscriber and frequent contributor to the ROD AND GUN, I respectfully ask a place in your paper for the enclosed communication from Charles H. Bennett, one of the trustiest guides in the Adirondack region. I know all the men of whom he speaks. Personally and *especially well* do I know Bennett, Plumly and the Sabbatics family, and I vouch for the truth and honor of those I have named.

Yours faithfully, E. Z. C. JUDSON.

BLUE MOUNTAIN LAKE, May 5, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

I have noticed an article in one of the February issues of your paper bearing the signature of one L. Hall, of Long Lake, in regard to the violation of the Game Law by killing deer during the past winter on the "snow crust" by various well-known guides; in reply to which I would like to make a few statements and corrections. In regard to the case of Mitchell Sabbaties and J. D. Plumly, they openly and boldly deny the charge of killing any deer since the expiration of the season fixed by law for the killing of deer, and denounce the statements of Mr. Hall as a wilful and malicious slander, of his own invention. They admit of having been interested in the killing of several deer for the market last autumn, but have receipts to show that they were killed and disposed of within the limits of the season provided by law for the killing of deer. And they also assert that it was not for the preservation of game that Mr. Hall made the statements, but it was through selfish motives.

There is a sort of rivalry among guides, as in all other vocations, but the statements so largely circulated about the wholesale butchery of deer during the months of January, February and March have been greatly exaggerated, although there are some who are unable to kill deer at any other season, save when the deep snows and sharp crust renders them comparatively helpless, and then a few fall a prey to this class of ruthless destroyers; but such men cannot be classed among hunters and guides. It is inconsistent to even think that any one endowed with natural reasoning powers would wilfully destroy that from which they derive a livelihood. But in regard to your informant, who has so basely misrepresented the case in regard to the above named and other well-known guides, allow me to state that it was not them, but was himself who stocked the waters of Long Lake with pickerel, a few years since, and by so doing destroyed the trout fishing, not only in that lake, but in the entire Racquette River below, and also in Stony Creek ponds and Big Tupper Lake, which included some of the finest fishing grounds in the Adirondacks. Furthermore, John Plumly—a man whose veracity is fully as unimpeachable as Mr. Hall's—states that he saw him (Mr. Hall) using a gill-net on a trout spawning bed no longer ago than last fall; therefore, if it is his object to preserve game, why does he violate the game law? Verily, Judas betrayed his Master for paltry gain, and the same motive induces Mr. Hall to circulate unfounded rumors detrimental to his fellow guides.

If any proof is required as to the above, refer to either Mitchell Sabbaties, Charles Sabbaties, J. D. Plumly, Alba Cole or Justin Lamas, or all of them. Yours respectfully, C. H. BENNETT.

HARTFORD, Conn., May 29, 1877.

MESSRS. EDITORS:

I heartily clasp hands with your correspondent in San Diego Co., Cal., although a stranger and many miles away; but the theme of his letter in your issue of a fortnight ago, touches a subject which cannot be too often alluded to in your valuable paper. While in the Rangeley Lake regions camping, in 1874, I witnessed the useless destruction of three hundred and fifty brook trout, weighing from ¾ to 1¼ lbs. each, although the party was cognizant of a superfluity of food in camp at the time, and I have known of like occurrences in other fishing regions in the past few seasons.

In striking contrast to this was the action of a party I met in the Adirondacks last year, who repeatedly put aside their rods each day when there was a sufficiency of fish caught for the next day's consumption, although the trout were breaking the surface of the pond in all directions.

Game, and birds of bright plumage also fare in like manner, and visitors to Florida are often pained to see the wanton destruction made along the banks of the beautiful Ocklawaka and St. John's rivers. With the incoming of a taste in this country for life in the woods, either inculcated by a love of nature or a desire for recreation, let us one and all, as we tramp forth through the forests of the Adirondacks or Maine, see that not a fish or bird is captured but that is put to good use. God's creatures were made for us to enjoy, not to abuse; and let it be our sole desire, as lovers of the gun and rod, to elevate these sports and further the interest of the papers whose object is the preservation of our game and fish. Another thought, viz: Is not the pure, exhilarating effect of the atmosphere, the lovely cascades, the gorges, and other beautiful bits of scenery which we sportsmen alone witness in our meanderings through the streams and forests sufficient *stimulant* to our bodies without any other addition to our camp equipage? We think it is. T. SEDWICK STEELE.

DEER SHOOTING OUT OF SEASON.

SAN FRANCISCO, CAL., May 9, 1877.

MR. EDITOR:

In your issue of March 29 is a communication dated North Milford, Nov. 29, which has excited in my breast the liveliest feelings of alarm and concern. Having passed the best part of a half century in the State of Maine (during which time the most expert hunter would as soon think of catching a deer on snow shoes in July as November), and, as the writer of the article mentioned, not only caught a large buck in the latter month on snow shoes, but also had ample time previously to perfect himself in the use of them, it is evident that a fearful change has come over the climate of that State; and, unless means are at once taken to rescue its unfortunate inhabitants, they must all ultimately perish. As it is well known that all the commercial enterprise, erudition and wealth of New England culminates in Boston, I would suggest that an expedition, provided with all the modern appliances for supporting life in the Arctic regions, be fitted out immediately to proceed to that desolate State, and remove the few inhabitants who are fooling around there among the icebergs; and the writer alluded to above should be chosen as its leader—the courage, fortitude, and endurance displayed in his wonderful deer hunt fully qualifying him for that position.

The great Agassiz visited that region a few years before his death, and was greatly interested in a remarkable moraine (called by downeasters a "horseback") which extends for miles in that vicinity, and considered it one of the strongest evidences he had ever seen of a former glacial period; but if even that eminent scientist had predicted that the State was soon to return to that frigid condition from which ages ago it emerged, the idea would have been scouted. It is idle to speculate on the possible causes which have produced such a result. Perhaps the tremendous efforts of the British expedition to reach the north pole loosened a glacier which has descended upon the hapless State; or it may be that they found the north pole, and, actuated by malice engendered by the battle of Bunker Hill, brought it down and stuck it up in the vicinity of Milford—in Argyle, just across the river, probably, as the oftness of the soil there renders it well adapted to receive it.

In reading the article, I was particularly struck with the writer's magnanimity in refraining from squirting a charge of shot into the buck, in order to "give him a chance." Noble youth! Where but in the modern Athens could such admirable qualities be fostered and brought out! The Spartan boy can hereafter take a back seat. It is probable, in view of the climate, that he will never have a chance to repeat his exploit; but let him not despair. Cooped up in one corner of that noble Common, the pride of the Bostonian's heart and the wonder of all the rest of New England, are six or seven deer. Armed with his faithful shot gun and trusty snow shoes, he can swoop down on them some bright morning, and, as their chances of escape are not much greater than they were in Maine, he can probably kill one or two before his sport is interrupted. It is true that he will be obliged to spend a short time in jail, but he will have the consolation of knowing that he deserves it no more than he does for his Brandy Pond hunt; and the silence and solitude of the lock-up, will be favorable for the writing of "My *Second* Deer." And, with his happy disregard of time and place, he can date it from the Adirondacks.

It is true that as I write, a letter is lying before me written by an intimate friend in that vicinity, which states that the first part of last winter was one of the most open ever known in the State. That at no time was there over four inches of snow on the ground till the middle of January. That there then fell three feet of snow in two storms, with only one day between; that it remained perfectly light, increasing in depth by other storms for four weeks, during which time "a deer could go further in one hour than the best hunter in the State could get on snow shoes in an entire day." That there then came a rain storm creating a tremendous crust, in which the deer were helpless; and that the deer spoken of were killed after that time—that is, after February 15. But the severe cold of that benighted region has evidently turned the writer's brain.

I see that the daring young hunter has transferred his operations to the classic regions of Pammedumcook Lake, on the west branch, and evinces a spirit of inquiry, wonderful in one so young. As there isn't a trapper in the State but knows that a mink can climb a tree with as much ease as a cat, and as his companion was probably the distinguished guide he so kindly advertises in his first article, it is strange he did not obtain the necessary information from him.

"Whom the Gods love die young," and, in the interest of the few remaining deer in Maine, it is to be hoped that "Jove & Co." entertain for this young man a sincere affection. PENOBSCOT.

TENNESSEE GAME LAW.—A correspondent says: "My communication on the subject of our game law, published in your paper a week ago, turns out to be a little precipitate. It was based upon information received from our representative; but since the acts of the Legislature have come out it seems that the bill did not pass the Senate, through some mistake. The law as to taking fish was correctly reported, but the close season for game birds extends from February 1 to September 1. We shall make another effort at the next session to have the matter arranged."

PERSONAL.—It is with great regret that we announce that, owing to a necessity for rest and recuperation, we lose for a time the services of our Associate Editor, Mr. Wm. M. Tileston, who will take a vacation of a month or two during the hot weather. Mr. Tileston's address will still be at this office.

OBLIGED TO STOP ADVERTISING.—Mr. D. Louis Bodge, of Bald Mountain, N. Y., writes as follows:

BALD MOUNTAIN, N. Y., May 23, 1877.

FOREST AND STREAM PUB. CO.:

Please discontinue my "ad." My trouble is the letters of inquiry! They are pouring in from all quarters, and I could sell a score of guns if I had them. I never knew before what multitudes there are in want of a rifle, or the excellence of your columns as an advertising medium. But I have been convinced now. Enough! Please stop it ere my ream of "commercial note" gives out replying to applications, and accept the thanks of D. LOUIS BODGE.

THE FOREST AND STREAM AND ROD AND GUN, which is a sportsman's journal of a high character, appears this week in an enlarged and very attractive form.—*Evening Post, May 24.*

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grilse and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from $15 to $150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining, to imitate the genuine article) without letting our customers know just what they are getting.

P. O. BOX, 1,294.—*Adv.* ABBEY & IMBRIE, 48 Maiden Lane.

The Rifle.

—To the small-bore cracks who go down to Creedmoor
And shoot and shoot till their shoulders are sore:

Come, reserve your shots and listen awhile
To a nice bit of news that will make you smile.
Last Saturday, hawk! haw! you must think it strange,
For there were bears and bulls at the 200-yards range,
Contending for *Gold*, our president the donor,
In the matches to come, "look out for a corner." F.

CREEDMOOR.—The spring meeting on the Creedmoo, range, occupying Thursday and Friday last, was a success gauged by the standard of the prize list, but a failure considered in the light of what should be expected from the National Rifle Association, with so many years of experience in its aid. Nothing venture, nothing have, is true almost beyond a doubt in the management of rifle meetings. Liberal prize lists make long entry lists, and the reverse holds equally true. The first day opened with poor weather promise. Soldiers in uniform were glad to slip into their overcoats, and officers drew their cloaks close about their bodies before they had strolled about the range much. Rain showers came and went at irregular intervals, while the wind from the 9 to 11 o'clock quarters blew gustily, making altogether a wretched shooting day, and accounting for the rather average shooting done. Gen. Wylie made a business-like executive officer, while Captain Story, in the statistical line, was exact if not extra rapid. Major Moreau Morris, Surgeon of the Seventh Regiment, was duly quartered in a hospital tent, with yellow flag overhead, waiting for what luckily did not come—a call for his services. For the opening act in the two days' shooting drama, the thirty targets on the range were set for third-class practice, the directors' and short-range matches opening simultaneously at 200 yards. In the first named there were thirteen entries, a very liberal turnout indeed of the "Grand Moguls" of the range. The only remarkable thing about the match, beyond the free and easy way in which it was fought, is the good scores shown. Only two of the directors actually managed to miss the target, and the prize goes to Sanford over two tieing scores only on the arrangement of shots. The scores stood:

Lt. Col. E. H. Sanford, Rem. Sport	4	4	4	5			5—22
Gen. D. D. Wylie, Sharps Mil	4	4	5	4			5—22
Major H. Fulton, Maynard	5	5	4	5			3—22
Col. G. D. Scott, Rem. Mil	5	4	4	4			4—21
Gen. T. S. Dakin, Rem. Sport	4	4	4	4			4—20
Major J. Holland, Sharps Mil	3	5	4	4			4—20
Gen. A. Shaler, Sharps Mil	5	2	4	4			5—20
Col. H. A. Gildersleeve, Ballard	4	4	4	3			4—19
Col. G. W. Wingate, Winchester	4	5	4	4			4—19
Capt. J. G. Story, Rem. Mil	3	3	4	3			4—17
Gen. J. B. Woodward, Rem. Mil	3	2	4	4			3—16
Hon. N. P. Stanton, Maynard	3	3	0	3			4—13
G. S. Schermerhorn, Jr., Rem. Sport	0	4	4	2			3—13

The short-range match was for all comers, with any rifle, and it will be noted, with 113 entries, was not won with a better average score than that of the winning director, who appears here as the fourth prize man, I. L. Allen, of long-range fame, showing himself as well a proficient at short-range by taking first place. Eight prizes were won, scores standing:

I. L. Allen, Rem. Creed	4	4	5	4	5	5	4—31
H. W. Gourley, Rem. Sport	4	5	5	4	4	4	4—31
J. C. Simmonds, Sharps Sport	5	4	4	5	5	4	4—31
E. H. Sanford, Rem. Sport	4	4	4	5	4	5	4—30
S. Sergeant, Sharps Mil	4	4	5	4	4	5	4—30
J. I. C. Clarke, Rem. Sport	4	4	5	5	4	4	4—30
C. A. Belzman, Sharps Sport	5	4	5	4	5	4	3—30
J. L. Boutillier, Rem. Mil	4	3	5	4	5	5	4—30

The team match at 200 yards opened at once upon the finish of the other off hand competitions. Thirteen teams were in for the three prizes offered. Ten of the teams were drawn from the National Guard of the First and Second Division, N. G. S. N. Y., and three from the companies of U. S. Engineers stationed at Willett's Point. Volunteers and regulars were thus pitted; the Springfield army musket against our Remington State arm. It was a close rub, but to B Co., U. S. E., fell the first honors with a score of 127, or a little over 25 points per man in the possible 35. The engineers were highly elated over their success; their first team victory at Creedmoor, where they are frequent and welcome visitors. The scores stood:

First Prize, Co. B., United States Engineers.							
Private C. Bennett	4	5	3	4	4	4	4—28
Lieutenant E. A. Grimin	4	4	3	4	3	5	5—28
Corp. J. Lees	4	3	3	4	4	4	4—26
Private O. R. Prindle	3	4	5	5	5	3	2—25
Private A. M. Miller	3	3	3	4	0	3	4—20—127

Co. D, 71st Reg't	125	Co G, 23d Reg't	125
Co. A, 14th Reg't	122	Co. B, 23d Reg't	115
Co. A, 23d Reg't	121	Co. G, 71st Reg't	110
Co. H, 8th Reg't	120	Co. H, 7th Reg't	109
Co. A, U. S. E	119	Co. I, 7th Reg't	101
Co. C, U. S. E	118	Co. I, 14th Reg't	94

The cavalry match at the same distance, but with carbines, was easily won by the Washington Gray team, and this, too, with three misses in their score, as follows:

Sergeant O. A. Fuller	4	3	4	4	4	4	4—27
Sergeant D. Wilson	2	2	4	4	3	3	5—23
Private E. Pasco	3	4	3	3	3	4	3—23
Sergeant J. F. McHugh	4	3	3	0	4	4	3—21
Private Miller	2	0	0	3	4	4	5—18—112

Third Cavalry Team.....95 Separate Troop, First Division..74

This closed the off-hand shooting, and after luncheon 20 targets were found in place, ready for the military and carton matches. The military contest, as before, was for teams of five men each, all the teams coming from the National Guard, and all using Remington .50 cal. rifles. The poor scores made give some idea of the poor character of the day. The Scotch lads from Co. D, Seventy-first Regiment, carried off the first money, and, with the second money in the morning team match, they managed to make a very fair day's work. Their scores were:

H Co., 71st Reg't.		H Co., 7th Reg't.	
Priv. Robertson	5 4 3 4 4—20	Capt. Price	5 5 3 5 2—20
Priv. Stevenson	3 4 5 5 3—19	Priv. Price	3 2 3 5 4—17
Capt. Clark	4 2 4 4 4—18	Sergt. Holland	2 5 3 2 5—17
Priv. Lindsay	4 3 4 3 4—18	Priv. Waterman	2 3 3 4 0—12
Priv. Pyle	0 0 0 5 5	Sergt. Le Boutillier	3 0 4 0 4—11
Total	89		77

H Co., 8th Reg't	76	A Co., 23d Reg't	55
I Co., 7th Reg't (senior team)	75	I Co., 14th Reg't	41
G Co., 23d Reg't	69	I Co., 7th Reg't (junior team)	33

The carton match drew out 54 marksmen. It was somewhat of a novelty, but the carton count prevented what might have been a string of ties at this easy mid-range with any rifle allowed. At the last meeting where this match was on, Major Jewell carried off first with 50 in the possible 50. The carton match, however, with a possible 60 in the ten shots, went to Gen. T. S. Dakin, with 52 points and four cartons, as follows:

T. S. Dakin, Rem. Creed	5	4	6	6	5	5	4	6	5	5	6—52
N. Washburn, Rem. Creed	6	5	5	4	6	6	4	6	5	5	5—51
E. H. Sanford, Rem. Creed	5	5	6	6	6	4	5	6	5	4	4—51
Wm. Hayes, Ballard	6	5	6	4	5	5	5	3	6	6	6—51
W. M. Farrow, Ballard	4	6	5	5	6	5	6	4	4	6	5—50
F. Hyde, Sharps Creed	6	4	4	6	3	5	5	5	6	6	4—50
C. W. Minor, Sharps Sport	4	6	4	6	6	3	5	6	5	5	5—50
J. A. Lowell, Pea. M	5	4	4	6	5	5	5	6	5	4	4—49
H. Fisher, M. L	5	6	3	6	5	5	5	4	4	6	6—49

The second day of the meeting was very nearly a duplicate of the first so far as weather matters were concerned. The Leech-Cup match, for the championship of America and the cup, was the only competition called, and its shooting occupied the entire day. Thirty-five entries were squadded over seven targets. The 800 yards firing had an unlucky experience, and over three hours were spent in its completion. Several hard showers came down, the marksmen getting the best protection possible from the canvas sun-shades erected over each firing point. The posts, however, were not deserted, and the firing kept on when the targets could be distinguished through the maze of drops. The wind during the day danced about from the 11 o'clock to 2 o'clock quarters, but during the 1,000 yards firing kept very steady from 9 o'clock. Candor compels the assertion that the shooting as a whole was poor, very mediocre, indeed, excepting of course the two leading scores. Before the 800 yards firing had been half completed, the match had narrowed itself down to a competition between Maj. Jewell and Col. Sanford. At the first distance they were tie on the very excellent run of 71 each. At 900 Col. Sanford passed his opponent a couple of points, and the 1,000 yards work was watched by all with the keenest interest. Sanford on one of the inside targets received such coaching as Col. Gildersleeve, who shot on the same target, was able to give him, while the Brooklyn boy, Jewell, went it alone. It was nip and tuck, until Sanford lost his chances in a miss. Amid the rush of counsellors he omitted to note the change of elevations which comes with the change of light as twilight approaches, and scored a miss, while Jewell, giving all his attention to the work in hand, changed a point and a half, keeping on with only the lapse to a centre, and coming out with the magnificent score of 213 points in the possible 225, better than which has never been shown in an individual match at Creedmoor, nor, so far as the official records show, at any other range. Higher scores have been reported from private practice, but never in match shooting; but a few days before (Tuesday, May 22,) Major Jewell had virtually accomplished the same feat, though from lodging one of his bulls on the wrong target but 209 was scored.

The third Leech-Cup match was witnessed by a good number of spectators. Fourteen of the competitors finding their scores running low, preferred discretion to fight and backed out. In the case of Rathbone the retirement was compulsory, he having been taken with a chill. Some of the old experts were about with other distinguished visitors, among them the Count Ballardino, Duke de Vonkers, who encouraged the "dear boys" with points and hints on how to do it. The leading scores stood:

H. S. Jewell, Rem. Creed.

800	5	5	5	5	5	5	4	5	5	5	4	3	4	5—71
900	5	4	5	4	5	5	5	5	5	5	5	4	4	5—69
1,000	5	4	5	5	5	5	5	5	5	5	5	4	5	5—73—213

E. H. Sanford, Rem. Creed.

800	4	5	5	5	5	5	4	5	5	4	4	5	5	5—71
900	5	5	5	5	3	3	5	5	5	5	5	5	5	5—74
1,000	5	5	5	4	5	0	3	5	5	5	5	5	4	4—65—297

C. E. Blydenburgh, Rem. Creed.

800	5	3	4	5	5	4	5	4	5	4	5	5	5	4—63
900	4	5	5	5	5	5	5	5	5	5	4	5	5	5—70
1,000	2	4	4	3	5	R	5	5	4	5	5	4	4	5—59—197

I. L. Allen, Rem. Creed.

N. Y. STATE ARM IMPROVEMENT.—Circular No. 5, from the office of the General Inspector of Rifle Practice, S. N. Y., permits the following changes in the rifles used by infantry (Remington .50 cal.):

1. The rear sight to have the shoulders of the leaf (the part which is raised for long-range shooting) cut away to within one-eighth of an inch from the base, so as to permit the bar to be lowered to that extent. The opening between the bars of the leaf to be correspondingly lowered.

2. The steps of the rear sights to be altered into an inclined plane, so as to permit elevations to be obtained without putting anything under the sight.

3. Scales of any kind may be marked upon the rear sight.

The lowering of the shoulders of the rear sight was precisely the terrible crime which, in the eyes of the N. R. A. directors, was sufficient to deprive the Forty-eighth Oswego team of the several prizes won by them at the last fall meeting. Then it was an offence, now it is an improvement.

STATEN ISLAND.—The Rossmore clubmen were out on their range at Huguenot Heights, on Wednesday, the 30th ult., and enjoyed a very good day's sport, a large assemblage of ladies and gentlemen overlooking the sport. Sheriff B. Brown won the Wright Medal, making a score of 22 at 200 yards, and a like score at 400 yards. The contestants were: Messrs. H. Mason, Jr., George W. Ellis, W. M. Wright, J. R. LeRoy, W. T. Elliott, C. C. Ellis, J. Segwine, G. C. Dean and S. Ellis. The rifle badge was won by H. Mason, Jr., and the lieutenants' badge by W. T. Elliott, with a score at 200 yards of 19. Mr. George W. Ellis won the cup by making the best aggregate score during the day, counting 74 out of a possible 125. The club grounds will be open for shooting every Saturday. The present officers of the association are: Mr. Henry Mason, President; J. Rutgers LeRoy, Secretary and Treasurer, and George W. Ellis, Captain.

—The Lawrence, Mass., Rifle Club had a prize shoot at Merrimack Range Saturday afternoon. Out of a possible 50 at 500 yards the best scores were:

Names.	Total.	Names.	Total.
R. F. Sargent—Maynard	50	C. L. Austin—Sharps	49
H. H. Brann—Maynard	49	A. Richmond—Maynard	48
O. M. Jewell—Maynard	49	H. F. Lord—Remington	46

—The dates for the spring meeting of the Massachusetts Rifle Association have been definitely fixed for Monday and Tuesday, June 18 and 19. There will be seven matches on the programme, three of which will be open to all comers. One will be confined to members of the State militia. The total amount of the prizes will be nearly $1,000.

The friendly match between teams of the Massachusetts and Walpole Rifle Associations took place at the Walpole range on May 30. The rules allow each member of the respective teams ten shots in firing at 800 and 900 yards, and 15 shots at 1,000 yards. The following is a summary of the match:

MASSACHUSETTS.	800	900	1,000	Total.
J. A. Lowell	37	47	65	149
W. H. Jackson	42	44	60	146
A. P. Clark	40	42	52	134
William Poland	34	37	49	120
C. C. Hibbard	34	44	35	103
Totals	187	214	261	662

WALPOLE.				
T. H. Gray	44	24	63	133
W. Glover	33	37	63	133
R. S. Gray	41	36	51	130

J. E. Mann	34	35	44	103
Totals	192	172	272	636

WILLOWBROOK, May 26.—The semi-monthly shoot of the Connecticut Rifle Association at the Willowbrook ranges today was a successful gathering. Shooting opened at 11 A. M., the principal matches being the second contest for the champion's long range, 1877, at 800, 900 and 1,000 yards. The top scores were:

Orange Judd, Remington Rifle.

800	4	5	5	5	4	5	5	5	5	5	5—48
900	4	3	4	4	5	5	5	5	5	3	3—43
1,000	4	4	2	4	3	5	3	4	3	4	3—34—125

N. Washburn, Remington Rifle.

800	5	5	5	5	5	4	5	3	5	4	4—46
900	3	4	2	5	2	3	5	3	5	4	4—37
1,000	5	4	3	5	4	4	4	0	5	5	5—39—122

The Middletown sage beating the weighty Hartford champion by three points.

The champion mid-range badge, 500 yards, was taken by C. Smith, as follows:

C. Smith, Sharps Creed	4	4	4	5	5	5	5	5	5	5	5—45
J. L. Woodbridge, Sharps Creed	4	5	4	4	4	5	4	5	5	4	4—44
N. Washburn, Rem. Creed	5	5	4	5	4	4	4	5	4	4	4—43
Orange Judd, Rem. Creed	5	5	5	5	5	5	4	4	5	5	5—44
Henry Woodward, Sharps Creed	4	5	3	4	5	5	5	4	4	4	4—41

* Bad cartridge.

Sec. Studley took the 500-yards all-comers' badge for rifles of any weight or trigger pull of .40 cal. or under. The wind was variable and fish-tally, and at 1,000 yards a shower of rain fell.

Mr. T. Sedgwick Steele, of Hartford, donor of the "T. Steele & Son Silver Cup," which was won by Middletown last year and will be contested for some time during the present season, was made an honorary member of the association by a unanimous vote.

THE AMATEUR RIFLE TEAM OF HORNELLSVILLE.—On Monday a rifle team was organized at Capt. Shaal's rifle gallery on Broad street. The score was very fine. The distance fired was sixty feet, the center of the target being three-quarters of an inch in diameter. B. Fellows hit the center ten times in succession, and all of the shots can be covered with a dime. Possible 100. The following is the score:

F. M. Loomis	97	H. A. Todd	98
R. Hawley	93	J. H. Rodgers	95
B. E. Rolenson	98	H. E. Spafford	97
J. O. Fellows	97	F. A. Barnham	96
B. Fellows	100	A. Hackett	89
D. Gardner	97	STEELES.	

RIDGEWOOD, N. J.—The championship badge at 200 yards was competed for by members of the Ridgewood Sporting Club on Wednesday last, the scores running:

G. W. Jones	4	4	4	4	5	4	4	5	4	4	5—42
W. J. Walton	5	5	3	4	4	4	4	3	4	3	4—39
N. A. Calkins	4	4	4	5	3	4	3	4	4	4	4—39
C. W. Walton	3	5	3	4	4	4	3	3	4	4	4—37
James Gayler	2	4	4	5	4	4	4	4	4	4	4—37

CALIFORNIA.—In the first of the competitions to discover the marksmen to send to Creedmoor, held at San Bruno, Cal., May 23, Sergeant H. Hook won the match by a score of 160 over his competitor, Corp. C. Nash, whose score was 157, in a possible score of 200, and the number of shots fired by each, 40.

OGDENSBURG, N. J., June 1, 1877.—On May 30, (Decoration Day, a few members of the Ogdensburg Rifle Club visited their long range for the third time this season for the purpose of decorating their target from a distance of 800 yards, Creedmoor rules, 15 shots per man. The following-named rifles were used and scores made:

Remington Creedmoor	5	5 5 5 5 5 5 5 5 4 5 5	5—74
Ballard	"	...Bottle-neck shell,	—73
"	"	" "	—64
"	"	...New style, straight shell,	—71

Wind strong, nearly down the range from firing point. The club has but recently commenced practice at long range.

HELLWIG'S RIFLE GALLERY, 695 Sixth Avenue.—The Centennial Rifle Club held their eighth and last competition for the gold badge given them by Mr. Hellwig, June 4, 1877, Mr. A. E. Long being the lucky winner the third time, making the badge his personal property.

FROGMOOR, NEW ORLEANS, May 27.

There was a good attendance of the long-range marksmen at Frogmoor to-day. A new rule was adopted in regard to mark ing at the targets, if the shot did not count, the location was shown, the boys therefore had to bring their wits to work. The day was not a favorable one. Before the completion of the 800 yards score a rain came up, and after finishing at this range, instead of opening at 900 yards, they retired to the house to shoot their 1000 yards score. At this range the wind was very troublesome, fluctuating from 11 to 7, going all around the dial. The following are the leading scores:

Maj. Wm. Arms.

800	4	5	5	4	5	5	5	5	4	5	5	4	5	5	4—70

GUSSIE.

THE GLEN ALGER.—Our Rifle Association of Harrisville, Michigan, was organized on May 28, and elected officers as follows:

D. McGregor, President; Geo. W. Colwell, Vice President; Dr. D. W. Mitchell, Secretary; R. E. Roberts, Treasurer. Our Range is called "Glen Alger," in compliment to General R. A. Alger, of Detroit, who gave us the right of using his land along the coast. They expect to have their short-range, and running deer targets erected by the middle of July. D. McG.

MILWAUKEE, May 25.—The club were out practicing to-day at 900 yards, making scores as follows.

Turner	2	5	4	3	5	4	5	5	5	4	5	4	4	4	5—64
Hill	4	5	4	2	3	4	3	4	4	3	2	5	5	5	5—61
Danes	5	2	3	5	3	2	5	3	5	4	5	4	2	5	3—56
Johnston	4	3	5	4	5	4	3	5	0	5	3	4	3	2	5—56
Meunier	3	3	5	5	2	4	4	4	5	5	0	3	4	5	4—56
Yale	0	4	5	4	5	4	0	5	2	3	3	4	5	5	5—54
Fielding	4	5	0	4	5	2	3	4	3	5	3	3	4	5	5—48
Welles	2	3	0	4	3	0	4	4	5	0	0	3	5	5	3—41
Drake	3	0	2	4	2	0	0	3	5	3	3	3	4	3	3—38

It is understood that the club and the Chicagoans are soon to test their skill at the range. The Milwaukee range is one of the most difficult and treacherous in the United States. They shoot across a valley from one hill to another, and the valley sweeps down to Lake Michigan and is the sporting ground of every wicked breeze that old Michigan stirs up. In all matches at the club's own ranges, the Milwaukees have rather a hard row to hoe.

THE REMINGTON RIFLE.—The following has been received by the Messrs. Remington:

CREEDMOOR, New York, May 26, 1877.

Hon. N. P. Stanton, President National Rifle Association:

At a meeting held this P. M. by the members of the New York Stock Exchange Rifle Association, the undersigned were appointed a committee to express, through you to the National Rifle Association, their appreciation of the courtesies extended to them on this their first visit at Creedmoor, thanking you and your co-directors, Gen. Shaler, Col. Alford, Capt. Story and Mr. Geo. Crouch, for the kindness and attention received at their hands. Also our sincere thanks are tendered to Messrs. E. Remington & Sons for the gratuitous and liberal provision of rifles and ammunition furnished the competitors.

Committee—J. M. AMORY, A. A. Drake, I. W. Hughes.—*Adv.*

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME.

ADVANCED VIEWS ON GUN CALIBRE—SMALL-BORES vs. LARGE BORES.

NEW ORLEANS, La., May 3, 1877.

It is surprising what ignorance exists, even among good shots and ardent sportsmen, about their favorite weapon. It has been the fashion of late years, especially in the States north of Mason and Dixon's Line, for sportsmen to use shot-guns of large sizes, 12 and 10-gauge and even larger; and amongst the most common errors about shot-guns prevalen amongst northern sportsmen, is the idea that a 10-gauge shot-gun will kill a wild duck farther than a 14 or 16-gauge.

Whenever I hear an assertion like the above I am satisfied at once of the ignorance of the speaker. It has been my fortune to have traveled a good deal over this globe, and to have hunted in many different countries, and I have noticed that the use of the larger bore shot-guns was confined generally to the English-speaking people of British and North America. I would like to call the attention of the advocates of large bore shot-guns to the following facts:

1. The United States is not the only portion of the world where game is shot, and where first-class sportsmen are to be found.

2. In France, Spain, and generally outside of the English-speaking nations, nine tenths of the game killed with shot-guns is killed by guns less than 14-gauge. In Brizil, for instance, I found that most of the guns used for shooting wild fowl (ducks and geese) were less than 18, some being as small as 36. In France 14 is considered large, and French sportsmen have often told me they considered the large sizes good only for bad shots, who had to have a gun that scattered to hit.

3. Sixty years ago as much game was killed as now, yet it was mostly done with 18, 20 and less sizes. The Latin races, and also the Germans, use small bore shot-guns with coarse shot. I am an advocate of large shot. The effectiveness or killing power of a projectile is in direct proportion to its diameter (I refer to spherical projectiles), all statements in modern American sporting books to the contrary notwithstanding. For the same reason that I believe in large bores and spherical bullet for the hunting rifle, I believe in large shot for the shot-gun, which can be better used in the small bores, as they scatter much less and shoot much closer than the modern blunderbusses. Of course pot-hunters and market-hunters would prefer the large bore shot-gun, whereas a sportsman who is truly a gentleman would rather kill one duck dead at forty yards, than half a dozen at 25 yards out of a flock.

The statement I wish to make is, that a 16-bore, properly loaded and held straight, will kill a duck as far and as well as a 10-bore, and my experience as a hunter has proved this o me over and over again. Some of your readers may doubt this perhaps, but in the fall of '66 I hunted prairie chickens and ducks in Edgar county, Ill., with a little 16-bore, and I could not have been more successful, and your Western sportsmen know what November prairie chickens are. Of course many statements in this article may seem strange to many American sportsmen, for as a general thing they are not as well posted as they ought to be on guns and game outside of their immediate sections. But there is nothing in this article except what I've learned from years of experience in field sports. It's true I prefer, and am more accustomed of late years to that noblest of all sports, big game hunting with the rifle; but yet I'm also an ardent lover of the dog and shot-gun.

Now, a few words to "Recapper," whose admirable articles have done much to render interesting our papers. I agree cordially with "Recapper's" opinion of snap-action guns—that, as a rule, they are an abomination. I also agree with him that the only breech-loading shot-guns that will last like the old muzzle-loader are guns with *positive actions*. But I must find fault with "Recapper." In an article which appeard a short time ago, though advocating small-bore guns, he makes a sort of compromise by saying that if he intended using a gun on such game as woodcock, snipe, etc., he would get a 14-bore, but for general shooting a 12-bore; thereby implying that for ducks, etc., 15 is too small, which is a mistake. A 16 properly loaded will kill the biggest wild goose that ever was shot, and as far, too, as one was ever killed by the 10 or 8-bores of the gunners of the New England or New Jersey coast. It is a common mistake to think that because a large bore carries twice as much powder it will kill twice as far as a small bore. In shot-guns the range is by no means proportional to the charge of powder. Again, I think "Recapper" is in error about the weight of shot-guns. I agree with Bogardus that a man who can't use an 8-lb. gun had better stay at home. The recoil is much less felt in a heavy gun than in a light one. "Recapper" sneers at the gun of all work, but some of the best shots I ever knew used but one gun at all game.

A 14-gauge, 30 in., 8 to 8½ lbs. weight, loaded with 3 drs. coarse powder and 1⅛ ozs. shot, is the gun for all shooting, from a snipe to a wild goose or partridge (I mean the partridge of the Southern sportsmen, *Ortyx virginianus*, not the partridge of the North) to a wild turkey.

BONNIE BLUE FLAG.

LINCOLN'S GALLERY, Boston.—The match for the Smith & Wesson new model revolver, held at this gallery on May 31, with 9 entries, distance 150 feet, each marksman being allowed 9 shots; possible 40. The following is the record:

C. P. Smith, Rem.	38	S. E. King, Rem.	35
D. F Small, Rem.	37	I. N. Calvalho, Rem.	35
E. H. Spofford, Wesson	36	J. A. Brown, Rem.	34
J. F. Filmore, Wesson	25	J. A. Nickerson, Wesson	34
H. G. Bixby, Wesson	35	E. BENNETT.	

CLYDE, June 2, 1877.—The following scores were made at a sweepstakes shoot of the Wayne County Sportsmen's Club, at Clyde, N. Y., on the 2d inst., at smooth glass balls, Bogardus' traps, 18 yards rise, 10 birds each; $20 to first, $13 to second, $7 to third.

F W Dunham	9	C S Van Ostrand	5
L A Dayton	10	J M Burghduff	9
H K Compson	9	Benj Catchpole	5
Silas Damewood	10	Jake Wurts	7

Dayton and Damewood divided first money.

Ties on nine for second money—21 yards, 5 balls.

Dunham	1 1 1 1 1—5	Burghduff	0 1 1 1 0—2
Compson	1 1 1 1 1—5		

Second tie, 21 yards, miss and out.

Dunham		Compson	0

Dunham, of Albion, second money; Van Ostrand, third money.

Second sweep; $9 to first, $6 to second, $3 to third. Conditions same as above:

Silas Damewood	10	L A Dayton	6
J M Burghduff	7	H K Compson	10
F W Dunham	8	Benj Catchpole	4
J M Streeter	3	O M Helmer	8
Jake Wurts	9		

Damewood and Compson divided first money; Wurts took second money.

Ties on eight for third money, 21 yards rise, 5 balls each.

Dunham	1 1 1 0 0—3	Helmer	1 1 1 1—5

Helmer, third money.

Third sweep; $5 to first, $3 to second; five double rises, 18 yards.

L A Dayton	11 11 01 10 10—7	Van Ostrand	10 11 11 11 11—9
S Damewood	00 10 10 11 10—5	O M Helmer	11 10 01 00 00—4

Van Ostrand first money, Dayton second money.

JAS. M. CURRY, Sec.,
Sec. Wayne Co. Sportsmen's Club.

PORT RICHMOND, June 1, 1877.—I send you the scores of some sweepstakes shooting we had in our town on the 30th ult., Decoration Day, at glass balls. Although they are better to practice at than the Gyro, still I am opposed to them, as I consider the broken glass dangerous to both ca tle and dogs. I should never allow a dog of mine to run in a field where they had been shot at, and moreover I think a person makes himself liable for any damage that may occur.

Match at 5 balls each for price of same.

Rathyen	1 1 1 1—5	Palmer	0 1 1 0 1—3
Conroy	1 1 0 0 1—3	Johnson	0 0 0 1 1—2

Match at 5 balls each, $2 entrance.

Rathyen	1 0 0 1 0—2	Palmer	0 0 0 1 1—2
Conroy	0 0 1 1 1—3	Johnson	1 1 1 0 1—4

Same as last match.

Rathyen	1 0 1 1 1—4	Palmer	0 0 1 1 1—3
Conroy	0 0 1 0 1—2	Johnson	1 1 1 1 1—5

Same as previous.

Rathyen	1 1 1 1 1—5	Rath	0 0 1 1 1—3
Palmer	0 1 1 1 1—4	Dissway	1 0 1 1 0—3
Conroy	0 1 0 1 0—2	Gale	1 1 0 1 0—3
Johnson	0 1 1 1 1—4		

Several outside matches took place, and quite a little sport was occasioned. MORTIMER.

PENNSYLVANIA, Greenville, June 2.—A champion glass ball shoot was had on Thursday among the members of the Sportsmen's Club. The prize was the club's gold badge. Below is the score, each contestant 20 balls, 18 yards rise to rule:

J F Nelson	19	Lon Stinson	14
W P Leech	19	M E Camp	15
D Derby	18	John Waugh	11
J C Hobaugh	18	John Holmes	8
S S Hewett	18	W J Sutton	8
Chas McNally	17	C R Beatty	13
M H Brooks	16	J H Phillips	12
Dr F Herrick	15		

Ties on 19 at 10 balls.

Nelson	10	Leech	5

GERMANTOWN, Pa., June 2.—Summary of trial shoot at glass balls, using Bogardus' trap. The gentlemen present were highly pleased with the working of the trap, while the swift flight of the balls puzzled not a little the gentlemen shooters. The introduction of glass-ball shooting is destined to revive much the lagging interest in trap sport in this section. Fifteen single rises each at 18 yards, with the following score:

Pressel	6	Roop	5
Emory	11	Katsner	11

—We were favored this week with a call from Mr. Schaefer Jr., son of the celebrated gunsmith, of Boston, who came over the Old Colony Line with his mother and sister en route for Europe.

BOGARDUS BEATS BOGARDUS.—On Sunday, May 26, at Cincinnati, Ohio, the great champion shot, in the presence of more than a thousand astonished and enthusiastic witnesses, more than carried out the following programme:

First Match, at 11 o'clock A. M.—to break fifty balls in five consecutive minutes. Balls to be sprung from Bogardus' Patent Spring Trap, one ball to be sprung at a time, and to be broken in the air to count; to use one gun and load it himself.

Second Match, at 12 o'clock, Noon.—To break forty-five balls out of fifty, eighteen yards rise, one ball to be sprung at a time.

Third Match, at 4 o'clock P. M.—Twenty-five double balls, or will shoot a match with any man, and give him twenty-five broken balls in fifty.

Fourth Match, at 5 o'clock P. M.—One hundred glass balls in ten consecutive minutes. Conditions same as in first match.

TENNESSEE.—*Clarksville, May* 31.—While the birds are busy raising their broods for our fall shooting, we are amusing ourselves and cultivating our skill with Bogardus' Glass Ball Trap, which affords really fine practice at a small expense. The balls fly much more like quail than do the pigeons from a trap, and, consequently, are harder to hit than pigeons. They give a target about the size of a quail's body, and if sprung at 18 yards will reach 30 to 40 yards before shot at. The scores published in the papers show that the work of breaking them is by no means easy. Poor wing shots should begin by standing 10 yards from the trap.

At our last meeting the best scores were as follows: Two tied on 7 out of 10, three on 5 in 10, and the dozen others sprinkled all along down to 0. After shooting off ties, we allow the foot boys to practice on five or ten balls (as they can't hurt them much), so as to stand some chance of turning somebody down next time. EDISTO.

DITTMAR POWDER.

Please direct all letters for the above powder to Neponset, Mass. Capt. Bogardus and Ira Paine, are using my powder. CARL DITTMAR. —*Adv.*

ACCORDING to Shakespeare: "To be honest, as this world goes, is to be one man picked out of ten thousand." Rare as honesty is, you may believe in the claims made in behalf of B. T. Babbitt's Toilet Soap, that it is the absolutely highest possibility in toilet soap. Made of the purest and best elements, and exceedingly agreeable to the sense, it fills all requirements, not only for babies, but for those that beget them.—*Adv.*

ATLANTIC YACHT CLUB REGATTA.

The yachting season was well opened by the Atlantic Yacht Club on Decoration Day, which time it has for many years celebrated by its first review and informal regatta of the fleet. At a meeting of the yacht owners the yachts were placed at the disposal of the club for the day, and invitations issued to all the members; besides them, there were a few guests, probably invited to spend the day on the water.

Orders having been issued by Commodore Thayer, the following boats, at 10 A. M., were at anchor off the Club House at the foot of Court street, brooklyn:

Triton, Commodore Thayer; Peerless, J. Roger Maxwell; Meta, Mr. Wayland.

Sloops.—Orion, Vice-Commodore Cooper; Kaiser Wilhelm, Rear Commodore Field; Do phin, J. W. Cooper; Sadie, Warren E. Greenleaf; Nimbus, L. H. Bigelow; Genie, Mr. Fiske; Myra, C. J. Ulrich; Lizzie L., Dr. Johnson; Hope, F. C. Swan; Mab, Mr. Arnold.

Open Boats—Nomad, Mr. Hogins; Wind, Mr. Peet; Lapwing, Sec. Morgan; Louise, Treas. Knowles; Barbara Frietchie, Mr. Rhodes.

As it drew near the hour to start, which had been set for 10 A. M., upward of one hundred and fifty members and guests were speedily conveyed to the different yachts by the yachts in readiness. Sails were hoisted, cables were shortened and all stood by for the orders to "go." The yacht Mystic, of the Brooklyn Club, and the sloop Peerless had accepted the invitation to sail with the club for the day.

The orders issued were that the open boats should start at the first gun, and after turning buoy No. 13 on the west bank should go into Gravesend Bay, and anchor off Bath Hotel. First in to take the time of all boats, and report to Commodore.

That the rest of the fleet, upon signal of gun, should star

for S. W. spit buoy, and then return to Gravesend Bay, and after time taken by timer all yachts upon same signal should sail for home.

No prizes were offered, but the rivalry always felt by yachtmen was sufficient to make a contest, and the fact that the open boats had just had a race for the champion pennant, under adverse circumstances as to weather, excited more than usual interest in that contest, if, as it proved, the breeze should be favorable.

Just before eleven o'clock, with a very light wind blowing, at the signal the open boats flitted by, and before reaching Bay Ridge dock the Wind lead, followed at different distances by the Nomad, Louise, Lapwing and Barbara F.

Ten minutes afterwards all were off. The Orion got a good send off, and passing the Myra, soon took the lead, which she kept. The Genia, Hope, Lizzie L., Mab and Nimbus closely following.

The Meta lead the schooners, followed by the Triton, Peerless, Sadie and Dolphin. These last four were a long time reaching Bay Ridge, and the Peerless getting her centre board in the mud, lost some considerable time, but by noon the breeze hoped for had arrived, and all the boats flew over the water in fine style. The Triton, having passed the Dolphin, Sadie and Peerless, went for the Meta, which by this time had a lead of about fifteen minutes. Off the West Bank, the open boats were met, having rounded their buoy, and were making easy speed for Gravesend Bay. The yacht Wind was well ahead of the Nomad, which was about the same distance ahead of the Louise, which was very much further from the Lapwing. The Barbara was somewhere astern. The Wind winning the race, leading the Nomad some two minutes, and the Louise about four minutes, not counting time allowance which was in favor of the winner. The yachts now were skimming over the water in beautiful style to the S. W. spit, which was turned (by all but the Myra) as follows:

Name.	Time.	Name.	Time
Orion	1:59	Peerless	2:12:10
Genia	2	Hope	2:13:20
Lizzie L	2:05	Kaiser Wilhelm	Time
Nimbus	2:06:30	Sadie	not
Meta	2:06:50	Dolphin	Taken.
Triton	2:11	Mab	

Squaring away before the wind for Coney Island point and Graves End Bay all kites were set and the sight of fifteen yachts in a line pressing on each other was a beautiful one. The Triton passed all but the Orion, Meta and Genia. The Myra, which turned back, having anchored under Coney Island dock, the Orion, Ema and Genia came there to anchor also. But the flagship Triton, seeing that the open boats had followed their orders and were in Gravesend Bay, off the Bath Hotel, continued her course to that place, when all the fleet soon followed in about the same order that they passed the spit.

The temporary separation of the fleet was a mistake that could have been avoided by more explicit orders.

The better way in such matters, if printed orders cannot, as is often the case, be provided, is for the Flag-officer to write his orders on a single sheet, and by a messenger, send it to each yacht to be read or signed by the person in charge. Then no excuse of misunderstanding orders can be made, for the Commodore will have at hand the evidence that it had been read.

However, the mistake was of little consequence, and after an hour spent at dinner the fleet started, upon signal, for home at 4½ o'clock. The Meta, Triton and Peerless on that order, got off, and for a mile the bowsprit of one lapped the stern of the other till when they arrived off Fort Lafayette, the Peerless had fallen a little astern, but the Triton and Meta each held its own. A squall of wind and rain coming up drove the small boats to anchor, and caused all to reduce sail. The Meta dropped her foresail, and the Triton, which carried her three lower sails, passed her and arrived home first, at about half-past five, followed by the rest of the fleet. The Mantic, Mr. Huntley's yacht, which he had expected would be there the day before, arrived during the day.

In all respects the day was delightfully passed. Three of the yachts had some ladies on board, and it would be pleasant if the club, on Decoration Day hereafter, would invite, with its members, the ladies of their families. The subject was much discussed, and as the Atlantic Club has always, on its cruise, had the wives and daughters of some of its members, it may be that another year will see this suggestion carried out.

The Atlantic Yacht Club has never gone into a season in better condition as to number and size of yachts, character of its members, and financial condition. It has no debt, has property, without an encumberance, of about $3,000, besides over $1,000 in Treasury.

WILLIAMSBURGH YACHT CLUB.—The 7th annual regatta was sailed on Tuesday; five classes; thirteen entries. Took several tacks to bring the fleet past the finish. The time of arrival was as follows: Pluck and Luck, 4:30:10; Cricket, 4:41:32; Inspector, 5:05:52; Rosina, 5:11:20; Amaryllis, 5:12:11; Mary Gibson, 5:18:52; Katie, 5:20:04; Maggie, 5:42:04; Pidgeon, 5:44:55; Endeavor, 5:46:06; Nettie, 5:47.

The Pluck and Luck wins the club pennant for being the first yacht in, and also the prize in the second class.

A CHALLENGE.—If the following challenge from Mr. Cheever is accepted by any considerable number of competitors, the prospect will be good for sport and a very lively race, if the wind is fair.

NEW YORK, June 4, 1877.

EDITOR FOREST AND STREAM:

I hereby offer to sail any or all open yachts, between 25 and 30 feet in length, on the twelfth day of June, 1877, Brooklyn Yacht Club course and rules, for a purse of $150 per boat. If more than two boats start the second boat saves her entrance money. All entries to be made and money deposited with John M. Sawyer, No. 85 South street, by noon of Saturday, June 9. It is my opinion that my yacht, the William T. Lee, can, under favorable conditions, outsail today any boat of her size in the world. It is not my habit to race my boat for money, and I am, therefore, averse to accepting challenges for large sums. The sum here named will suffice to pay the crew, leaving a balance for the purchase of a small cup or other memento of the race.

CHAS. A. CHEEVER,
Room 32 Tribune Building.

BOSTON, May 30, 1877.

The second regatta of the season was held under the auspices of the South Boston Yacht Club, May 30. The day was very calm and fair, and the hopes of many were dashed, as the hour of starting drew near, at the lack of wind. This club still keep to the practice of shifting ballast, consequently many took advantage of the weather, and thus derived a decided advantage during the race over those who disprove of such business. The first class comprised all yachts measuring 25 feet water line and over, with separate prizes for centre-boards and keels. The second class was for yachts under 25 feet, with prizes for keels and centre-boards. There was a separate class for schooners, but as none answered to the gun the prizes were withdrawn.

At 1:45 P. M. the preparatory gun was fired from the schooner Welcome, which was anchored off the club-house, City Point. The sloops Magic, Lillie, Triton, Erin, Gael, and Emily, immediately got into line. The wind was about S. SE., and very light. At 1:58 the gun was fired to start; anchor-lines were cast off and springs hauled aft, to give the proper point for the buoy. The Magic was the first to show out clear of the crowd, with her balloon jib drawing finely. The weather just suited her, with her large spread of canvas and light draft. The Lillie was second, and looked a thing of life. She was closely followed by the Triton and Gael; the little Emily was bringing up the rear. Her play was in a strong breeze, as she is a keel boat and draws 6 feet aft.

The gun that started the first class was to be the signal for the second to get into position, and we got under way. The wind kept growing lighter and lighter, until we hardly had steerageway on, but after some time had elapsed we managed to get into line. We had hardly got her head payed off and the spring taught when the word was passed that all were ready. The gun was fired, and we felt a little provoked at the hurry, and almost determined to give up and go back to the moorings; but we felt strong-hearted, and kept on. When the balloon jib sheet had been properly trimmed, we overhauled the rest of the fleet ahead, composed of the cat Eugenia, sloops Imp and Nattie, cat Ripple, and sloops Ivy, Rebie, Posy, Unknown, Clide and Sunbeam, and cat Niagara in the rear. The course was to lee-ward round Cow Pasture buoy, Dorchester Bay, leaving it on port; when we got there all in a bunch, we ran into a calm. The first boat to get the wind again was the cat Eugenia, and she seemed to fly away from the buoy after she got round; she was followed by the Nattie, Rebie, Imp, etc. Every one was carrying their balloons flat aft, and skipping along pretty fast.

The 1st class had now got round No. 7 so'-east of Fort Independence, and were close hauled for Sculpin Ledge; no material change was noticed in the position of yachts, with the exception of the Triton being a little nearer the Lillie.

Again the wind fagged out on the second class, and left some of the boats still; others were getting the cats'-paws and slipping along towards No. 7. The Eugenia still kept the lead, and got round the buoy followed closely by the Rebie, Posy and Imp. From this time until the finish, there was very little difference in positions.

The Magic won the first prize in her class, and the Triton second, beating the Lillie on allowance. The Gael took first prize for keels in the same class, only one prize being given as there were but two competitors.

The Posy won the first prize in the second class, on allowance from the Rebie, and the Rebie got second. The Imp took first prize for keels in the second class, and the Unknown got second prize from the Sunbeam on allowance. Appended is a summary:

FIRST CLASS STARTED 1:58 P. M.

NAME.			H.	M.	SEC.
Magic,	centre-board,	Capt. Neal	4	6	40
Lillie,	"	Com. Babb	4	9	31
Triton,	"	Capt. Foster	4	11	3
Erin,	"		4	16	20
Gael,	keel,	Capt. McCormack	4	15	00
Emily,	"	Capt. McManus	4	26	51

SECOND CLASS STARTED 2:14 P. M.

Rebie,	centre-board,	Capt. Phinney	4	44	9
Posy,	"	" McKee	4	44	33
Nattie	"	" Nicholson	4	47	00
Imp,	keel,	" Pond	4	48	10
Sunbeam,	"	" W. S. Nickerson	4	49	30
Unknown,	"	" Chambers	4	50	2
Niagara,	centre-board,	" Dean	4	50	10
Eugenia,	"	" West	4	49	32
Clide,	keel,		4	53	12
Leda,	centre-board,	" Webster	4	51	00
Gracie,	"		4	56	52

Ivy broke her topmast.

Taking the lightness of the wind into consideration, the race was a success; everything passed off pleasantly, and the occasion wound up with a dance at the club-house. As this is the inauguration of Union Regattas this season, we hope that many pleasant occasions will greet brother yachtsmen.

Boston, June 2.—The Union Boat Club races came off here this afternoon. The single scull race for the championship, two miles with a turn, was won by J. H. Houghton in 16m. 17s. The four-oared shell race, with coxswains, one mile straight away, was won by half a length in 6m. 30s. by the Neptune crew, composed of C. A. Prince, stroke; F. Seabury, A. B. Ellis, J. E. R. Hills, bow, and D. Smith, coxswain.

Boston Yacht Club.—The meeting of the Boston Yacht Club was held in their club-house, City Point, May 30, Commodore Arthur Cheeney in the chair. Treasurer Aug. Russ, Esq., announced the payment of $500 on mortgage, which was greeted with applause. The Regatta Committee deemed it inadvisable to hold a regatta June 7 for the large yachts, as many of them would not be ready. On motion, the race was accepted for June 7, for second and third class boats. Commodore Cheeney notified the committee that he would present the prizes to be sailed for on that day. The House Committee notified the club that the first picnic would be held at Downes' Landing, June 23, and asked for an appropriation of $125, which was granted, to defray expenses. Several new members were elected. The meeting adjourned to June 20.

KEDGE.

At New Bedford, Mass.—the sensation of the past week has been the departure of Thos. Crapo and his wife on their foolish attempt to sail across the Atlantic in a small boat of twenty feet length, built something on the model of our common whale-boats, but ten feet shorter. He, at last report, had arrived at Chatham, Cape Cod, and is staying there for a few days to arrange his cargo for his final departure.

PHILADELPHIA WATER NOTES.

PHILADELPHIA, June 4, 1877.

The second annual spring regatta of the Quaker City took place on the Delaware to-day. Starting from moorings opposite Shackamaxon street wharf, sailing around Chester buoy and return, the course being eastward of all islands except Windmill Island, where the course was optional. The turn was from west to east. The entries were:

First Class.—Cabin yachts between 30 and 38 feet water line measurement—Columbia, Coquette, Kingston, Goddard, Minerva, Nina, Phantom, William Tell, and White Wing.

Second Class.—Cabin yachts between 20 and 30 feet water line—Gypsy, Sam Josephs, Lillie Stella.

Third Class.—Open boats between 20 and 30 feet—Ella.

The start was made at 10:30, the Minerva and Sam Josephs being first off, with the others all together. Above Smith's Island the Kingston, Goddard and Coquette fouled. The boats rounded Chester Buoy in the following order:

	H.	M.	SEC.	P. M.
Minerva, Class 1	1	09	..	
Lillie, Class 2	1	11	½	
Stella, Class 2	1	17	½	
Wm. Tell, Class 1	1	18	¾	
Columbia, Class 1	1	26	..	
Kingston Goddard, Class 1	1	29	..	
Coquette, Class 1	1	34	..	
Phantom, Class 1	1	35	..	
Nina, Class 1	1	35	..	
White Wing, Class 1	1	40	..	

The yachts crossed the line as follows:

Minerva, Class 1	3	31	½
Lillie, Class 2	3	35	..
Stella, Class 2	3	40	..
Columbia, Class 1	3	41	½
Coquette, Class 1	3	52	½
Kingston Goddard, Class 1	3	54	..

Handsome prizes were presented to the 1st and 2d boats of each class, and the Geo. W. Basson Challenge Cup to the yacht making the fastest time over the course; the Minerva winning in 5 hrs. 1 min. 30 secs.

The Vesper Boat Club held their annual Regatta on Saturday afternoon on the Schuylkill, the course being from Laurel Hill to Rockland, 1 mile. The double scull race between Venture—H. Hutchinson and H. M. Evans; Village Vaggle—C. T. Godshall and H. W. Peacock, was won by the Venture in 7:48. The single sculls had the Vision, W. B. Wood; Vox, A. L. Beck; V. W. H. Conrow. This procession was won by Conrow in the slow time of 10:38. The double scull gig race between the Vamos—T. H. Dougherty, G. S. James and W. J. Kerr (Cox), and the Vim—R. M. Scott, Harry Rue and Thos. Hudson (Cox), was won by the former in 8 minutes.

The closing race of the regatta, and the most prominent one was the four-oared shells. The entries were: Victim—H. Hutchinson, bow; W. T. Corson, F. B. Evans, H. M. Evans, stroke. Viper—J. B. Mengus, bow; J. B. Leibert, C. T. Godshall, H. W. Peacock, stroke. The Victim finished by about two lengths in 7 minutes. Viper's time 7 minutes, 4 seconds.

SCULLS.

—The salmon fishermen on the Columbia River, Oregon, in the height of the fishing season, demanded fifty cents for every salmon taken, and the owners of the canneries were obliged to accede to their demand. Over six hundred boats, it is said, are now employed in taking salmon along the Oregon front of the river.

FOREST AND STREAM.—A meeting of stockholders of the FOREST AND STREAM PUBLISHING COMPANY will be held on the 14th day of June, 1877, at 2 o'clock P.M., at the office of the Company, at No. 103 Fulton street, in the City of New York, to consider the proposition to increase the capital stock of the Company from the sum of $25,000 to the sum of $50,000.

CHAS. HALLOCK, }
WM. C. HARRIS, } Trustees.

Dated New York, May 2, 1877.

Tiffany & Co., Silversmiths, Jewelers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their Timing Watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. TIFFANY & CO. are also the agents in America for Messrs. PATEK, PHILIPPE & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Bronzes and Artistic Pottery is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Union Square, New York.

—It is said that this is the best year for cod-fish since 1836.

—Deal gently with the herring—the shad is constructed as to take care of itself.

—If you are going to raise shad, plant them in roes.

—Seventeen year locusts are swarming in portions of New Jersey, and on the Port Stanley railroad in Ontario, Canada, the caterpillars are so numerous as to seriously impede travel.

—A. S. Horseley, editor of the Columbia *Herald and Mail*, has been presented with one of the feet of a large bear recently captured near Auburn, Arkansas, after a chase of five hours' duration.

—The Russians have less trouble in calling up the gobblers in Europe than our correspondent "Guyon" has in Mississippi. Spring shooting for turkeys may be all right, but when one goes after the breed they raise around the Golden Horn, he don't have to yelp much. W. H. G.

We have received from the Smithsonian Institution "Part Third of the Report of the United States Commission of Fish and Fisheries for the years 1873-4 and 1874-5." The first part of the report comprises an inquiry into the decrease of the food-fishes, giving the results of the investigations at Portland, Me., in 1873, and at Noank, Conn., in 1874. The second part is an exhaustive report on the propagation of food-fishes, with a great variety of interesting and valuable matter in connection with that subject.

THE "FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries

OF NORTHERN MICHIGAN, VIA

Grand Rapids and Indiana Railroad.

(Mackinaw, Grand Rapids & Cincinnati Short Line.)

Sportsmen who have cast a fly or trolled a spoon in the waters of the **Grand Traverse Region** will come again without solicitation. All other lovers of the rod are invited to try these waters, wherein

The fish named above, as also **Muscalonge, Pike and Pickerel,** abound.

In no other streams east of the Rocky Mountains is the famous **American Grayling** found in such numbers.

Brook Trout Season opens May 1st.
Grayling Season opens June 1st.

The sportsman can readily send trophies of his skill to his friends or "Club" at home, as ice for packing fish can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st **Round Trip Excursion Tickets** sold to **Points in Grand Traverse Region,** and attractive train facilities offered to tourists and sportsmen; also, on and after July 1st, **Mackinaw and Lake Superior** Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, send to FOREST AND STREAM office, or address

This is a publication that should be in the hands of every lover of shooting, fishing and trapping. It contains the

GAME AND GAME FISH LAWS

of every State in the Union and the Dominion Provinces, and also gives a description of all the best places for shooting and fishing in the United States and Canada, tells how to reach them, and what kind of accommodations you will find when you get there. It tells you what kind of tackle to use for the various kinds of fish, and where the best can be procured, and also where you can get the best of every description of shooting apparatus. It contains a number of interesting sketches of hunting and fishing adventures, and a vast fund of useful information on field sports and angling that renders the work indispensable to all who use either gun or rod. It is, in fact, a complete

Hunting and Fishing Directory

and no matter how much or how little recreation you take in the woods and along the streams, you will find *Fur, Fin and Feather* worth many times its price to you. It is a bi-monthly (every two months) publication of from 176 to 208 large octave pages, 50 cents a number, or $3 a year.

CHAS. SUYDAM, PUBLISHER,
Je7 1t 149 Chambers st., New York City.

SAPONOID.

Mosquito & Black Fly Repellent.

This Composition contains no ingredients injurious to the skin, is saponaceous and removed at once by the application of water, possesses great healing and cooling properties free from all grease. Certain and instant cure for the bite or sting of insects, mosquitoes, flies, wasps, bees and other insects, removing all inflammation, neutralizing the poison and allaying the swelling at once.

DIRECTIONS.

For repelling flies and mosquitoes rub the Saponoid on the exposed parts freely with the hand. One application to the sting or bite of the insect, in most cases, is certain relief.

Sold in collapsible tubes, mailed to any address on receipt of 50 cents by

SHONINGER ORGANS.

PRONOUNCED UNANIMOUSLY AS THE

Best Instruments.

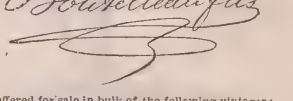
Their comparative excellence is recognized by the Judges in their Report, from which the following is an extract:

"The H. SHONINGER ORGAN CO.'S exhibit as the best Instruments at a price rendering them possible to a large class of purchasers, having a combination of Reeds and Bells, producing novel and pleasing effects, containing many desirable improvements, will stand longer in dry or damp climate, less liable to get out of order, all the boards being made three-ply, put together so it is impossible for them to either shrink, swell or split." THE ONLY ORGANS AWARDED THIS RANK.

This Medal and Award was granted after the most severe competition of the best makers, before one of the most competent juries ever assembled.

New styles and prices just issued, which are in accordance with our rule, the BEST ORGANS for the least money.

We are prepared to appoint a few new Agents. Illustrated Catalogues mailed, postpaid, upon application to



H. SHONINGER ORGAN CO.,

A VICTORIOUS INVENTION

The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game.

The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.

It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or, when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation.

It is adapted for bait of any description, and, when set, no Animal, Fish or Bird that touches the bait can possibly escape.

It does not mangle or injure its victims in the slightest degree, nor need they be handled to free them from the trap.

PRICE LIST:

No. 1—For fishing and all kinds of small game and animals, sent by mail..... 35 cents.
No. 2—For catching Mink, Muskrat, Raccoons, large Game, Fish, &c..... 75 cents.
No. 3, or Rocky Mountain Giant, for catching Bears, Wolves, Panthers, &c. Can be easily set by a boy, and will stand a strain of several hundred pounds. Weight, 10 to 15 lbs. $10.

All goods sent, charges paid, to any address on receipt of price.

Address

Chas. L. Coate,
330 Fulton St., Brooklyn, N. Y.
P. O. Box 214.

AGENTS WANTED.

JAMES MEYER, JR'S.,

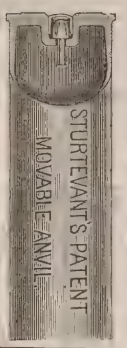
TRIPLEX.

First Prize Medal and Diploma, awarded at the Centennial Exhibition, for excellence of workmanship and material in their **Premier Quality** and medium grades. Their **New Patent Triplex** Lever Grip Action and **Compensating Lump.** The attention of sportsmen is requested to the above new action. Its superior strength and solidity impart greatly improved shooting powers. Hard hitting being the desideratum required, is obtained by this powerful gun. Prices of the New Triplex Lever Grip, $175, $225 to $400. Marked the Triplex 10-bores extra. Our highest grade is as usual marked the PREMIER QUALITY.

(Extract from FOREST AND STREAM, New York, December 26, 1876, Contributed by one of the Judges of Awards of Guns at the Centennial:)

"This action (The Triplex Lever Grip) combines in the highest degree strength and simplicity, and must rapidly secure the favor of all who test its merits.

COMPENSATING LUMP. Strongly recommended. It is invaluable, and should be ordered on every gun. Costs about $10 extra. Choke-bores, medium or full. Our guns to be had of the principal dealers in the trade only.

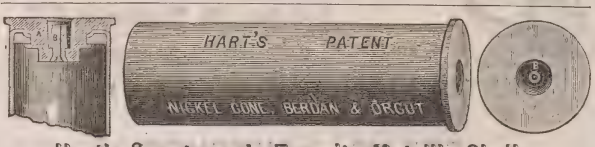


PREMIER GUN WORKS, Birmingham, England.

Paper and Metallic Shells
FOR
Breech-Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,
BRIDGEPORT, CONN.



THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers.

Hart's Sportsman's Favorite Metallic Shells,

FOR BREECH-LOADING SHOT-GUNS.

These shells are easily loaded, and the caps easily extracted from inside. Head solid and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing miss-fires. The Cone is made of nickel, and fastened solid in its place. Neither rusts nor corrodes fast, like movable anvil made from steel. The Nic el Cone also prevents miss-fire when a cap has been left on shell for a few days, which is liable to occur either in steel or iron. These shells are finely finished, and made any length ordered, from 2¼ to 3¼ inches.

Shells and Loaders and Descriptive Price Lists can be obtained from all the leading Sportsmen's Houses throughout the country. GEORGE E. HART & CO., Newark, N. J.

FROM CAPTAIN BOGARDUS, CHAMPION WING SHOT OF AMERICA.

MESSRS. GEORGE E. HART & CO.: Gentlemen—The fifty shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly, A. H. BOGARDUS.

"St. Louis Conical Base Paper Shell."

Having made important improvements in our Shell, we can safely recommend them as equal, if not superior, in quality to any Paper Shell manufactured in this country or in Europe.

Among the advantages claimed for these Shells, are: A saving of 25 per cent. in the use of powder, also the great decrease in recoil. The sizes made are No. 10—2½, 2¾, and 3 inches; No. 12—2½, 2¾, and 2¾ inches. Longer Shells will be made at extra cost. They are not for No. 12; $1.30 for No. 10.

UNDER THE SOD.

Respectfully dedicated to a favorite brace of setters, owned in his boyhood,
BY RECAPTER.

FAREWELL to the setters, so loved in my boyhood,
They have "dropped to the charge" that death calls to us all;
O'er their graves the flowers bloom, by the edge of the wildwood,
They have left me for aye, I still mourn o'er their fall.

O'er the green meads the snipe sails at pleasure,
From field and from forest the quail pipes his call;
In the thicket and marshes the woodcock is feeding,
But they fear ye no more, you have done with them all.

Brave Monk and fleet Nellie, you live but in memory,
Yet how much of the past your old names now recall,
Of cheerful companions and hours then so happy,
That have passed from the scenes round my childhood's old hall.

From far o'er hill-top, the meadows and river,
The winds whisper low of the days that are down
Under the sod Monk and Nellie lie sleeping,
While I am left mourning to wander alone.

Under the sod Monk and Nellie lie sleeping,
Never more in this life will they rouse to my call;
Under the sod must *we* find our resting
From the cares and the sorrows that weary us all.

Then why should I mourn for the friends that have left me?
It is but the will of a merciful God—
"A rest for the weary." Our cares all are ended
When we are sleeping under the sod.

Farewell, then, brave dogs, ye but rest from life's labors,
I shall see you no more in this life's fitful dream;
But, when wandering in thought through fond memory's chambers,
Ye shall live with me then until death ends the scene.

For Forest and Stream and Rod and Gun.

A Trip to the N. Fork of Navarro River, Cal.

ON the morning of Tuesday, Aug. 29, 1876, I started for the wilds of Mendocino, accompanied by my uncle, E. J. Hooper, and friend, F. B. I rose early, *i. e.*, 5:20. A wagon conveyed us with our guns, rods and baggage to the steamer "Donohue." We much enjoyed the trip along the bay of San Francisco, for the morning was bright, with an invigorating breeze to refresh us. Arriving at Donohue Landing, 35 miles from the city, we found the train awaiting us, which carried us up the pretty Sonoma Valley to Cloverdale. We arrived at Cloverdale, distant from San Francisco 90 miles, at 11:30, and there at the depot mounted the coach which conveyed us to the United States Hotel, quite an important establishment for so small a country town. There we took lunch, and a very poor apology for a meal it proved, being much out of keeping with the importance of the surroundings. After several ineffectual attempts on the part of our pet "buck grinders" to masticate the meat placed before us, we fell back on vegetable diet and fruit. At 12:30, "All aboard" was the cry of the stage driver, Mr. Getz, the proprietor of the line, and one of the crack whips of the country. The stage was packed a little too full to be pleasant, indeed full or not full, the word pleasant, as applied to stage travel, is rather inapplicable. Our first stopping place on the road was "Whitehall," a small roadside inn, where we took our dinner. This establishment can hardly be considered as possessing any great attractions in itself, or the building for any architectural beauty. But how can I pass by without a word or two of comment upon, at least, one of the inmates of that lonely dwelling? Our little waitress, a girl of about 18, is the one to whom I allude. The weary traveller greatly needs refreshment by the wayside inn, and a few drops of interest, of the right sort, are truly acceptable, and in an outlandish place like the little inn in question, one expects no more. But how were our hearts gladdened by the sight of a damsel of most surpassing loveliness to wait upon us at table! Her raven locks hung carelessly on her shoulders, her bright, rosy cheeks betokened the full bloom of youth and robust health. The laughing bright hazel eyes, which peeped from out those flowing tresses, were well calculated to impress the traveller with admiration for the country maiden. And greatly as we desired to get through the fatigues of our somewhat wearisome journey, we could not help lengthening over that meal, if only to ask our fair waitress for just *one* more slice of that nice apple pie, or only *half* a cup more of that refreshing tea. But greatly was our pleasure marred by the overwatchfulness of the fond mother, who, through an opening in the wall, surveyed the crowd with maternal suspicion. The effect of a smile from the daughter was quickly dispelled by the angry frown of the old lady through the aforesaid aperture; and the musical voice of the maiden by the deep growl of the old she-bear in the kitchen. The paternal member of the family, too, attending to things without (including the sale of poisonous whiskey and Chinese cigars), was by no means a person to be sneezed at: over six feet in height, one-eyed, and generally very colossal. We continued our journey through Anderson Valley, through groves of beautiful trees of great variety of growth, form and foliage. Some ominous-looking clouds had been gathering around for some time, and at length a sudden storm arose, quite rare in these parts of California. It had quite the character of a hurricane for a brief space of time. As the breeze approached, the leaves became agitated; then, as the wind increased, the limbs commenced to crack, and the branches to wave, until the storm burst upon us with alarming force, prostrating quite a number of the smaller trees and one of gigantic growth, uncomfortably near where the stage was. The lightning became intensely vivid, and the bursts of thunder quite grand. A heavy shower of rain fell, refreshing the air, which, until then, had been very sultry and oppressive. The storm passed away as suddenly as it came, and soon the evening was clear and tranquil. Darkness set in, and passing through the tall and dense redwood forest, one could barely distinguish the stems of the trees. After a terrible bumping, the rumble of the wheels over the bridge, which crosses the "North Fork" stream, announced to us our arrival at the little Hotel. How great was the relief; for after nearly twelve hours of almost uninterrupted staging over an exceedingly rough road, and partly in darkness, who would not gladly welcome the termination of such a journey. At the Little North Fork inn, where we arrived at 11:30, we found Mrs. Averill, the hostess, ready to receive us; for we had taken the precaution to advise her of our coming some days before. After disposing of our numerous packages, B. and I taking one room, and Uncle another, and, after washing off some of the stage dust, we descended to enjoy an excellent supper, prepared, like all the meats of which we partook under her roof, with excellent taste, by our good landlady. A most indefatigable, energetic lady, she came unmistakably from a New England State—always on the *qui vive*, head level, eyes always open (I shouldn't wonder, too, when asleep) she seemed to possess that extraordinary faculty peculiar to few, of being able to attend to everybody and everything at the same time, without distraction or confusion. Such is a brief description of the Madam to whose tender care we committed ourselves, our guns and our rods during our stay at the North Fork. Requiring a good night's rest after our long stage journey, we did not rise much before 8 next morning. On that day, the 30th of September, Uncle and I started up the stream, capturing a few small trout, but we found the water sluggish and disturbed a good deal by the wood-choppers, whose camp is situated about three-quarters of a mile from the hotel. I managed, however, to kill a beautiful trout of fully a pound in a deep pool near the logging camp. B. took his gun and brought down a few quail for our supper. At about 4 o'clock, he and I started on foot for the hills in search of deer. We followed the stream for a mile, then proceeded along a trail through the wood, ascending a range of bald hills, which proved extremely steep and hard to climb. That evening we saw but two deer, at one of which I got a long shot, but apparently without effect. The next day, Uncle on horseback, B. and I on foot, ascended the same hills, and sitting under a fine grove of oak and Madronio trees, we devoted an hour or two to sketching. B. made a study in water-colors of a group of oaks, while I sketched B., with Uncle sitting under a big tree, with an umbrella over them to modify the light for drawing. In the evening, B. and I repeated our climb on the open hills along the edge of the woods; this time riding on horseback to the edge of the forest, and there tying the beasts to trees. Once more our hunt proved "no go." We saw two or three deer, but entirely out of range. On returning to our horses, we unhitched and mounted. My horse, from some unknown cause (unless from natural devilment), commenced the most frantic circus performance, bucking with such violence as to cause me greatly to doubt my ability to remain longer in that elevated and precarious position. I am indebted to my friend F. B. for a graphic description of that scene. Being one of the actors in the comedy, I can hardly be considered a judge of the manner in which this wayward and bucking beast and I conducted ourselves. The scene was laid in a small open spot at the edge of the forest. The surroundings consisted of wide-spreading oaks and Madrionios, whose branches hung, unfortunately for me, very low. The miserable brute's ultimate intention was, no doubt, to dash my brains out against one of these limbs. The bucking part of the performance took place immediately in the midst of a confused mass of overhanging branches, to any of which, Absalom-like, I might have been suspended, but that my hair lacks the growth of that King David's Son. B. described the scene as one confused heap of branches, horse, rider, rifle, etc., assuming no definite shape. The thoughts which were hastily flashing through my mind, were these; Which fate shall I choose? Decapitation or concussion from the trees, explosion of cartridges in my belt, accidental discharge of rifle, kick from horse, or broken neck? None of these appearing to me as sufficiently enticing, and as at this moment the animal made a dash for a huge limb, under which he alone could have passed, I deemed it prudent to spring from his back, breaking my fall with the butt of my rifle, which unluckily broke off at the stock! However, beyond a bit of a shake and a few scratches, I was unhurt. As I fell, the horse, in kicking, struck the sole of my boot with great force, but without, in any way, hurting my foot. The animal escaped into the woods. B. proceeded home on his horse; I followed ingloriously on foot, and after passing on a mile or so, we heard the horse coming through the woods at a gallop. We had no difficulty in effecting his capture, and arrived home shortly after dark without further mishap.

The next day, B. and I having secured the assistance of an old hunter, proceeded down the river for about three miles, and then ascended a tremendously steep gorge. Thompson, our guide, showed us a spot, where, a day or two previous, he had killed two deer. We found bears had been feasting on the remains, there being bear signs in every direction. We saw no large game. We then returned to the hotel, packed a few provisions, taking with us a horse, riding in turns. We retraced our steps, but followed the creek down some four or five miles. While tying the horse on the ground we had selected for our camp that night, we saw a magnificent buck and doe walking slowly up the distant wooded hillside. Thompson threw himself down to get a rest, exhibiting great excitement for so old a hunter. In the meantime the deer passed behind some trees, and were lost to view. The countrymen around there seem all to prefer firing with a rest, indeed, seldom firing in any other way. We separated, B. and Thompson going in different directions with their rifles, while I took my fly-rod, and fished down stream, killing a dozen fine sized trout. The stream generally at this season about these parts, is sluggish, but here and there there are some pretty pools and eddies. At dark, B. and I met at camp, and lighting our fire, awaited the return of our guide. He, however, worked his way through the forest after some deer, and finding himself close to his home, remained there for the night. The spot chosen for our camp was just above the creek, in an opening in the woods—a very pretty place, but too cold and damp at night to be agreeable. We contrived to rig up a fairly comfortable bed, consisting of a large heap of "broken ferns," with our blankets above. A great part of the night was taken up in endeavoring to keep the fire alive, as the cold entirely prevented a lasting repose. We rose next morning extremely early, and after a cup of hot coffee, proceeded in opposite directions with our rifles. Soon after leaving camp, I saw a large panther darting off, but not affording a chance for a shot. Although we worked diligently, we saw nothing of any large game. In my ramble, I passed through several extremely lovely valleys, rich with the most prolific undergrowth, and covered with masses of broken rocks, around which clung a variety of ferns and mosses. We returned to camp, and for a change, I took my fly-rod in hand. B. mounted the horse to ride over the trail. He had but turned the bend of the stream, when he came suddenly upon three deer drinking. As ill luck would have it, the beast wouldn't stand fire. One of the deer darted up the hillside, about where I stood. I was, at the moment, above my knees in a deep pool, my fly-rod in hand. I made several plunges to secure my rifle, which was on the bank, and had a snap shot,

but without effect, and no wonder, considering my position in the water. We soon after met Thompson. He and B. continued to hunt, while I captured two dozen splendid trout, following the stream to the point where it flows into the main Navarro River. Apart from the sport my fly-rod afforded me I greatly enjoyed the beautifully wild and romantic scenery. The vegetation along the banks of the stream is very lovely. At every bend of the stream some new peep, some fresh attraction presents itself to the view, and on that day the bright sunlight played through the branches. The pebbles in the shallow ripples, glistened, and all nature in that sweet sylvan landscape was calm and tranquil. Thompson, during the day, killed two fawns, which we packed on the horse. On the way home that evening, B. and Thompson being in advance, I on horseback in the rear, a fine doe and fawn, frightened by our approach, left the bed of the stream, running up the side of the hill on the opposite bank. Thompson fired and missed. B. then had four shots, killing (in splendid style) both the deer. My horse became almost unmanageable from fear at the firing, and I had no small difficulty in keeping the animal from bolting over the cliff into the river.

(To be continued.)

OLD CAZADOR'S PEARL.

STOP, my boy, I've got something to tell you.

She's a girl any man might be proud of, my little blonde darling; but I ain't her father. Won't smoke, eh? Well, take a seat on that chair, and out here on the veranda I'll reel the yarn off. No, she won't come out, for she told me to tell you: don't be restless! This city has changed since I've knowed it. Gas lamp was scarce here in '60, an' we mostly depended on moonlight an' what lanterns we toted.

Bears my name? why of course she does, an' she's welcome, for she don't know a better to carry.

T'was in August; I just had returned from the desert, an' the shade ov these gardens and orchards was pleasant. I had sold all my cattle at Prescott; had considerable money; had friends here, and wanted to settle, but had no particular reason; knowed the place, liked its people and climate; had no kin in the world for to bother or love me. My life hed been rough, more like fighting than quiet. Sometimes I felt lonesome an' tired, an' I thought I would settle. So I bought me this orchard an' vineyard, an' for a while thought I was perfectly happy, but somehow I found that a man kud get lonesome with plenty an' quiet jest as easy an' more so than out in the rough on the desert. I got into sorter bad habits, used to hang round saloons an' card tables, play poker an' monte—maybe more'n I hed orter.

One night I was goin' home late from Dona Tomassa's. This street was then only a road, an' well shaded, while over there in the bend ov the zauja war quite a big thicket of *salceda* and *guatemote*. I kept the middle ov the road with my six-shooter handy, for in them days it was not very healthy to walk too much in the shadow closs to the hedges. I was passing the thicket when ther' kum a rush through the bushes, an' a man an' a woman ran plum up against me. She was crying an begging, bare-headed, an' es he struck at her with one ov them long knives the Mexicans calls *machetes*, bent over as if to purtect somethin' she was totin' wrapped up in a *serape*, I shot before the knife reached her, an' the blade stuck in the sand half way to the handle. At the crack ov the pistol she fell at my feet; it seemed like neither ov them seen me, bein' lookin' only at one another. He war shot through the neck, es dead es dead timber; es for her, I thought she hed fainted, till stooping down to raise her I found her dress was all bloody. After considerable calling (I didn't like for to leave her) Chapo came down with a lantern. She was cut, perfectly sickned, in the bosom, an' hed a stab in the back 'tween the shoulders, which last didn't seem to be bleeding. I made Chapo fill one ov my boots with water from the zauga, an' started him off for the police and a doctor. While he was gone I bathed her face, raised her head up, folded my coat for a pillow, an' tried to get her to swallow a mouthful of water, but couldn't.

Young fellow, I never saw a face more beautiful, in spite ov a pallor, which by the light ov the lantern I could see war increasing. Wrapped up in the *serape* war a little girl baby, sleeping es peaceful in spite ov the racket es if it war home in a cradle by the bed ov its mother. I laid thur faces together, an' when that little baby, half waking, nestled close up to its mother, drawing one ov her long yaller curls crost a cheek like a blossom, it slept quiet an' happy. I felt mitey soft-hearted, an' kivered them up with the *serape* to keep off the light ov the lanterns. Several of the boys kum down with the doctor, and, sending to the house for a mattress, we brought mother and child to that little room at the corner. She moaned once or twice es we lifted them up, tho' the boys was tender and careful, but must a died on the way, for when we turned down the coverlid old Chapo hed laid over them, only the baby was living. At the inquest next day we found they was strangers. Nobody knew them. The man an' the mother an' the baby kum down on the last steamer from 'Frisco; staid one day at the hotel. The register showed the name ov Odon, but, at request, it was wrote by the clerk. The next day rented rooms in a doby. The mother gave the name of Almona; said she came from Tepic, in Sonora; was Spanish; Odon was her husband, the child's father, but she was in every way perfectly English in ways, looks an' manners, according to the old woman, who swore at the inquest that she swept out thar rooms and went errands; that Odon didn't act much like a husband and father, an' wanted to get rid ov the child, offerin' the old woman fifty dollars in silver to steal it. Es fur being its father, Odon was nearly es dark as old Chapo, while the child—well, the child is es fair es white lilies. On the day before the night ov the murder, after a long time of crying, she commenced writing letters; had wrote an' burnt up two or three when Odon, comin' sneakin' into the room, looked over her shoulder, read what she was writing, grabbed the letter, pen, ink an' the rest ov the paper, threw everything in the fire, cursed and swore and went on lik e a mad man; asked if she wanted him hung and her hanging with him; said she could never go back.

Here the old woman got frightened, ran off an' saw them no more till the inquest. With their things there was no scrap ov paper to show who they were, where they came from, no old letters nor nothing. There was a small sum of money, a knife (the knife and a pistol which was on him). In a trunk with her clothing, an' some things ov the baby's, was a 'piscopal prayer-book, with the name-leaf torn out. The book lays in there on the table. There was no wimmin's trinkets nur jewlry—not even a weddin' ring. I did all I could to find out who they were; found the place they stopped at two days in 'Frisco, giving the name of Chabolla, from Cadiz. There the trail broke short off, an' I've nuver sence struck it.

Young man, Pearl wur that baby. She nuver knew all ov this story till to-night, when she told me you were coming. She's all ov my life to me. God gave her to love me. No harm shall ever come nigh her, if I can prevent it, and if you don't love her before every thought ov your life and relation, an' know after calm thinking that you can lend every day ov your life to keeping her's holy an' happy— What! my dear boy, God bless you! You make an old man's heart very happy! She's in the little room at the corner, our darling, and any day, after to-morrow, come and hang up your hat in our hallway.

EL CAZADOR.

LAKE TROUT FISHING ON LAKE GEORGE.

EDITOR FOREST AND STREAM:

Tourists on their annual round of pleasure seeking in their passage through Lake George admire its magnificent scenery and clear waters, but seldom stop, except at Caldwell, where, perforce, the peculiar arrangements between the landlords and steam boat proprietors oblige them so to do. Sportsmen traveling this thoroughfare to and from the Adirondacks, occasionally do stop at the principal fashionable resorts, where the fishing is of no consequence, and they test it long enough to become disgusted. Therefore, it may cause surprise to some to state that Lake George teems with trout, both lake and speckled, of the finest quality and extraordinary size. At times, on a soft, still, hazy May morning, immense numbers of Lake trout, into process of schooling, will break a large surface of the water in foam with a noise like the falling of a roller on the sea beach, so loud one can hardly hear his companion speak; then they sink, and not a ripple disturbs the calm expanse until the same or another school suddenly break again in their mad sport. I well remember the ecstatic thrill that struck to my very marrow when first my eyes saw and ears heard this. But, alas, the cast of the fly wins no response; the danticst hues bring no speculation to those eyes; monsters roll their graceful forms on every side, heedless of all efforts to ensnare, I never knew them to take the fly. With exception of still fishing at baited buoys, which is always more or less successful, if one cares for that method, these "lakers" can be caught only by trolling—scientific trolling, not the happy-go-lucky way by which the careless urchin, with clumsy rig, snags the fierce and voracious pickerel, but one straining all the knowledge and skill a sportsman can boast. You must suit the humor and understand the freakish habits of the gentleman below, for he is a finickey fellow, and will have things just as he wants them, otherwise he metes out quiet disdain to the unskillful angler and his clumsy contrivances.

Two trolling rods and reels, one hundred yards of small braided ran silk and leader for each, and, with swivels, gangs of four sets and a lip of the truest hooks, put together in the most artistic manner, long sinkers having holes at smaller ends, weighing from one ounce to half pound, to be fastened to the main line with short lines attached to them so as to swing clear, and a gaff complete the implements of death. The large shiners caught at Ti, the lower end of the lake, make the best bait, and next, brook trout; or in lieu of these, large minnows. You use only one line for surface fishing and the other deep. A hand line is quite as successful as the rod, but don't, of course, afford the sport. The gang is hooked to the bait so as to give it a slow rotary motion in moving through the water. The proper management of the lines, intuitive to the practical fisherman, preserving the proper speed of the boat, very slow and steady, usually, to know accurately where your bait is running, a thorough knowledge of the bottom and familiarity with the changeful habits of these trout are the requisites to secure a strike, and then if you don't handle things well, that is as far as you will get.

These lake trout (those of this lake) are as tricky and sullen, as ugly and unmanageable as any *Salmo fontinalis* that ever spoiled a fly, and the man who strikes his gaff inside three-quarters of an hour is lucky—that is, into a large one. You quick'y discover there is a sentient being at the other end who understands the matter quite well enough, and although he won't leap, yet will try all the known, and some unknown, dodges. Like the fisherman, he won't stand much snubbing; should you try it, yourself and tiny hooks or leader quickly part company; he must and will have his own sweet way, and when, as is occasional, he gets tired and concludes to go into the sulks in some fifty or seventy feet of water, you have taken a contract of considerable magnitude. Then is the time to relight your cigar and take a long breath, still mindful, however, of possible breakers.

With fresh determination you send word by the line down to our friend to come up, but in stern obstinacy he swims back and forth a few feet, intimating his refusal in sullen bearing down jerks, somehow reminding one of an ugly toothache. At last, fretting, he may slowly rise, or, concluding to try his fortune in the upper regions, he cleaves for the surface with the rapidity of light, that in my opinion is the supreme moment—the higher sense of seeing abrogates that of feeling. Those waters are as clear as crystal, a fit setting for so graceful fish, and lends a radiance to his beauty. You toil and coax him within reach, and your hand slowly settles on the gaff; but be careful, his gleaming eyes will catch your quick motion and he will disappear as the shooting star in the firmament. Let not a nerve shake a muscle. Strike, and strike sure! You have him; he is in the boat! The face flushes and eyes beam approval. You forget you are a sinful man and conceive yourself a God. You are the very incarnation of triumph. You are rich in possession of a priceless jewel. After weighing, measuring and generally admiring you gently and tenderly deposit him in his box.

It was just one year ago to day (May 25) when in the morning I drew up before Phœnix Hotel, Hague, Lake George, and received a warm greeting from Rising, the landlord, and as soon as my stomach cried "enough" to the trout and other delicacies on the table I took my seat in the stern of the boat and Clifton the oars, and away we glided over the calm surface of the lake. The air was soft and pure, and as my eyes roved from the top of Anthony's Nose along the range of mountains dividing George and Chaplain to the summit of Black Mountain, and then caught the ripple of the water, broken by the trout in their playful circles, I forgot the past, felt heedless of the future in the delights of the present. Not being well, I fished that day only five hours, in which time I caught five lake trout, one of one pound; three, seven pounds each almost to an ounce, and one of ten pounds. Nearly two hours passed and we drifted before a light breeze, suddenly sprung up more than a mile before the largest was safe. That day I saw a trout caught weighing sixteen pounds, perfect in all respects. These trout in this lake are more delicate and finer eating, in the opinion of competent judges, than the speckled trout. The best time of fishing is from now, May 25, to last week in June, and is fair still later, even to middle of July. The surest ground extends the width of the lake, from Rogers Slide to Sabbath Day Point, and Hague lies on the westerly side about midway between those points. I cannot but feel that the opportunities of this region have been much neglected, and I desire to add this to the contributions made through your sheet by sportsmen of the many places where one can obtain pleasure and health.

BOSTON.

PIGEON SHOOTING IN NEW JERSEY.

MARLBORO, N. J., June 1, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

Last summer, about the last of August, I had an afternoon's sport with wild pigeons perhaps worth relating. It is of the rarest occurrence to see these beautiful swift flying birds in this part of the State nowadays. Many years ago I am told by old sportsmen, wonderful tales of their abundance and the great amount of shooting they afforded, during their usual migrations. Occasionally in the northwestern part of the State a few scattering birds or flocks may yet be seen in the spring, stopping long enough to rest and feed in their northern flight to their nesting-grounds. But to my story. I was informed that the birds were feeding upon a wheat stubble in considerable numbers, about five miles from my home. I must confess I did not credit the story, thinking my informant had mistaken doves for pigeons. However, if the former is true, they give the finest wing practice, equal, I think, to Captain Bogardus' glass balls, and I therefore resolved to try it at all hazards. I consulted with a friend and a very enthusiastic shootist, and it was not long before we were *en route* for the scene of the anticipated sport. We arrived upon the ground at 1 o'clock P. M., and what was our delight to see a large flock of the biggest doves we had ever seen alighting upon a tree in full leaf, in a distant part of the field. This fact satisfied us at once that they must be pigeons, as doves scarcely ever alight upon a tree of this kind, preferring leafless deadwood. Our "blinds," or as we call them "bush houses," must now be arranged in the most desirable localities, likely to give us the most shooting, a matter requiring no small amount of good judgment. I concluded to make my "house" near the tree from whence the flock had flown upon our stealthy approach, and which was the only one in a large field. I had to go a long distance to get suitable bushes, and the ground being hard and dry it took some time and hard work to get them to stay in a proper position. My friend selected his position upon an opposite side of the field, near an old snag of deadwood, and not far from a pine of standing timber. From two o'clock until five o'clock is generally the best time for the flight. Everything being in readiness now, we made ourselves "beautifully less," and awaited their coming. I soon found doves and pigeons were both feeding in the same field. A single dove gave me the first shot, and soon after a flock of fine pigeons came swiftly by me in good range. I took the head one with the first barrel, and it tumbled out, and the second barrel followed in quick time, and I found three fine fat, large wild pigeons to gather up, and one dove the result of three shots. Ah! here is where the breech-loader stands pre-eminent. Quickly inserting my cartridges, which were handy by my side, and glancing over the bushes I saw a large flock of pigeons coming like lightning from the timber almost directly for my tree. I must say just here this is the kind of shooting for a lazy man on a warm summer afternoon. I was in my glory. Situated upon an eminence I could see and enjoy all the shooting of my friend. I was disappointed in getting a shot at the large flock, but they went down by him, and he killed several of them in fine style. How keenly your eyes scan the horizon in every direction, and if, perchance, looking one way too long you find a good "shot" has escaped you on another side, how you are chagrined. In your eagerness and excitement, how easily the smallest flying insect is magnified into a bird of wondrous size. My friend said he was annoyed by the incessant flight of potato bugs, which he mistook for pigeons or doves. It was certain he wasted considerable ammunition at something. I was fortunate enough to have my place in the shade the most of the afternoon, and took it coolly, and did not get excited. I made one very fine double shot, killing two birds with each barrel out of a passing flock of a dozen. I have a pair of these elegant birds mounted, and I love to look at them and look back upon the fine enjoyed in getting them. We returned home and counted out twenty-three pigeons, six doves and one gray squirrel. Being thirsty and hungry, the feast of peaches and watermelons we had on the way back was like what my friend, Judge Vanseyckle, says of shooting, "that the man who knows nothing about it losses one half the pleasure of living." I must add, I fervently trust the worthy sportsmen of Michigan and other places where wild pigeons are so ruthlessly destroyed in nesting time will be eminently successful in putting a stop to the barbarous practice.

M.

TURKEY WEEK IN TEXAS.

AN old contributor, C. L. J., has been hunting turkeys with eminent success in the "piney woods" of Trinity County, Texas. In some places the noble birds were to be heard on all sides of him, and he had abundant chance to display his "turkey-generalship," nerve and marksmanship. One old gobbler in particular has defied the efforts of a whole district to secure his scalp, and had thus acquired a reputation for invulnerability similar to that which the late G. Washington had among the Indians some years ago. Him our correspondent especially sought, and, after an hour of awful suspense, waiting for his turkeyship to come within range, was rewarded by shooting him dead in his tracks. Although in poor condition, he weighed 23 pounds, which is certainly a very heavy turkey.

C. L. J. is kind enough to send us a circumstantial account of his exploits on this expedition, but our space will not allow us to print more than a single one of his adventures, as a type of the sport he and his friends had during that eventful second week of April:

"After listening a few minutes to those gobbling all about us, we selected one which, from his tongue, we imagined to be 'full of grass' and cunning, and prepared to 'yelp' him up. We bowed and crept along until within 150 yards of him, when we sat down with our backs against a brace of trees, and I began to call. He gobbled and strutted extravagantly. Here we waited an honest hour, but he did not come. I suggested to Will that I crawl to a knoll just in front of us and see what he was doing. I did so, and looked. There he was, in full strut, apparently the size of a 'buggy-top!' Three hens were with him. I lay prostrate upon the ground and watched them, with what interest and anxiety one can only feel from experience. He was a splendid bird, with his full, black, shimmering breast gleaming in the rising sun, his large

rust red tail spread to its fullest tension, and his beard, a foot in length, dragging in the dew-wet grass at his feet. The snow-white scalp on the top of his head seemed like a ball of cotton when brought into relief against the dark mahogany plumage of his back, as he strutted and performed his vain-glorious gyrations among the hens, inviting his overtures and caresses. Then I took out my 'call' and began a series of yelpings. He would go off at first, then sway forth and back, as if undecided whether to come to me or to remain with the hens, and kept this up for some time until within range of my rifle, when, all my endurance failing, I drew a bead upon him, as he stood quartering in full strut, and fired. He fell to his breast, fluttered along a few feet, then got upon his wings and started in a difficult flight in the direction of Will, who by this time had crept around the hill and was opposite me. The gobbler was within fifteen feet of his head, flying with both legs hanging down, when Will fired one barrel and missed. The turkey, already mortally wounded by my rifle, came to the ground as Will pulled the other barrel and broke his wing. On examination we found that his back was broken entirely in two by my bullet, which paralyzed his lower extremities, but he could still get along on the wing for a little way. This was a noble bird, and we were greatly pleased with our capture."

Fish Culture.

FIRST ANNUAL REPORT OF THE OHIO STATE FISH COMMISSION, FOR THE YEAR 1875 AND 1876.

WE have been in receipt, from as many of our friends in Ohio, of no less than six different copies of this highly interesting and valuable report, but have been unable before this week to publish a summary of the same. The report, which is a model in its way, makes up an attractively printed pamphlet of nearly one hundred pages, and comprises the report of the Commissioners, which is followed by a supplementary paper by Supt. of Hatchery, Mr. E. D. Potter. A History of the Toledo and Sandusky Fisheries occupies a dozen pages, and the remainder is devoted to a catalogue and Scientific Description of Ohio Fishes, by J. H. Klippart. The scientific descriptions are taken from the forthcoming Report on the Zoology of Ohio, by Prof. D. S. Jordan, and the letter press is illustrated by admirable wood cuts of each fish described; thus enabling any person to readily identify any fish caught. The course pursued in the preparation of this report cannot be too highly commended, nor can there be any doubt as to the advisability of thus popularizing scientific knowledge by distributing it in an attractive form among the masses. The first work of the Commission was to establish four experimental hatcheries, one at Cleveland, one at Castalia, near Sandusky, one at Kelley's Island, and one at Toledo. There were placed in the Toledo hatchery, in Dec., '75, 600,000 whitefish eggs; at Cleveland, 500,000; at Castalia, 300,000; and a very considerable number at Kelley's Island. The yield from these, including 300,000 fry brought from Northville, Mich., was an aggregate of over two millions of young fish, which were safely planted in the lakes. When large enough to be captured in pound nets, the estimated value of them will be $200,000. From information, ostensibly reliable, though not officially received by the Commission, there were upwards of 10,000,000 of whitefish fry deposited in Lake Erie and Detroit River, early in 1876. Besides the very successful culture of whitefish, there were also hatched at Toledo 6,000 eggs of the land-locked salmon from Maine, and 60,000 eggs of *salmo salar*. Of these 10,000 of the fry were placed in the Maumee Bay, 10,000 in the Sandusky River, near Fremont, and the remainder in the lake near the islands.

For the propagation of black bass and other spiny-finned species, the use of what was once a limestone quarry on Kelley's Island is given, where the parent fish are to be placed, and whence the fry will be shipped to all parts of the State. During the summer of 1876, the Commission, having decided upon Toledo as the most suitable place for a permanent hatchery, erected, upon the grounds of the water works of that city, a substantial hatching house, after the model of W. W. Clark, of Northfield, Mich., and with a capacity of 20,000,000 of whitefish. The principal other work of the year was the planting of over 500,000 shad eggs and 75,000 salmon eggs, which had been furnished to the State free of charge by the United States Commissioner of Fisheries. These were distributed among the Cuyahoga, Maumee, Ashtabula, Groud, Sandusky, Miami, Huron, Olentaugg and Sciota Rivers, Sandy Creek and Castalia Springs. The capture of shad of mature size has been effected in the lakes; and at Cedar Point, near Toledo, in October, 1876, a salmon was caught which was thirteen and a half inches in length, and was presumably one of those planted in the river Raisin, Mich., in 1874. These facts *may* go to prove that these species may become so acclimated as to lose their anadromous habits. There were, at the time of the report (Jan, 1877), six millions of whitefish eggs in the Toledo hatchery, all of them in healthy condition.

In the supplementary report of Supt. Potter, the writer states his belief "that when the waters of Lake Erie are properly farmed, they will be found as beneficial in the production of cheap food as so much surface of the best agricultural lands of the State." The stocking of Lake Erie with salmon is both feasible, and, as the writer thinks, only a question of time. For the interior streams of the State, however, the prospect is not encouraging. "The scarcity of fish in the upper waters of our streams has by many been attributed to the erection of dams which prevent them from 'running up.' There are causes behind all that for the scarcity of fish in our streams. Many waters have been strengthened and obstructions to the rapid transit of the water removed, destroying the necessary hiding places of the fishes. Drains and ditches have been made all over the State, drying up the swamps and small streams, the natural breeding grounds of most of our river fish. * * * It has been found everywhere that the fish as well as game recedes before the march of civilization. Fishes must have cover as well as game, and when the white man destroys this he must not expect either to remain with him long."

McCLOUD AND SACRAMENTO RIVER TROUT—DOLLY VARDEN EGGS—A CHOICE REGION FOR SPORTSMEN.—Mayor Green of Lower Soda Springs informs me that he has procured about 2,000 eggs this season from the native trout of the McCloud River. These trout average in weight about two pounds, and in eggs 1,200 each. The egg is peculiarly transparent. You can see the shape of the fish from seven to eight days after the egg has been placed in the hatching-trough. After nine days more the eye of the fish can be seen. They are a very hardy fish, Mr. Green having only lost about three per cent. of the number he has taken. So far as heard from, all the lots shipped by him are doing well. He has sent some to the Sandwich Islands, one lot to Professor Baird, and another lot to New Zealand. Mr. Green within the past week has taken a few thousands eggs from Sacramento River trout at Lower Soda Springs. The Sacramento trout do not average in size those of the McCloud River, but they are a very gamy fish. Some of them weigh over two pounds. Mr. Green intends making a specialty of taking Dolly Varden eggs next October, and parties who would like to try their hands at raising the finest trout in the world can procure the same by communicating with Mr. Myron Green, United States Fishery, McCloud River, Shasta County. He will charge $10 per thousand for the eggs. The Dolly Vardens, when fully grown, will weigh from twelve to fifteen pounds each.

The propagation of fish at Berkeley is likely to receive a check, in consequence of the scarcity of water, many of the streams in the Contra Costa Mountains being perfectly dry. On the 26th ult. men were engaged in removing the young trout from the aquarium, at the University, to San Leandro Creek, below Lake Chabot, where water will be supplied from the reservoirs. Among the rare fish which Mr. Throckmorton, the gentleman in charge, has on hand, is a golden trout, found in the streams in Utah, which grows from the spawn, in one year to six inches in length, and is very prolific. These trout will be utilized to replenish the streams throughout the State in which the trout have all been caught out, and will be an important accession to the fine food fishes of California. Mr. Chabot, President of the Contra Costa Water Company, is raising European carp, which, next season will be placed in Lake Chabot. As these fish feed almost entirely on vegetation, their presence will have the effect of purifying the water.—*San Francisco Pacific Life.*

LAND-LOCKED SALMON IN RANGELEY LAKES.—A land-locked salmon weighing five pounds was captured at Rangley Lakes on June 2d below the old dam on the "outlet." It is supposed that this noble specimen of the *salmo* family made his appearance in these waters in 1873, when the Commissioner of Fisheries, Hon. Henry O. Stanley, first introduced the young fry. His growth has been marvellous.

NEW HAMPSHIRE.—Land-locked salmon have been placed in Bocky and Long Ponds in Hollis, and in the Pennichuck Ponds. They were a gift from Mr. Brackett, one of the Fish Commissioners of Massachusetts, to Dr. Edward Spaulding of Nashua. Smelts have been introduced into Mink Pond, Lisbon.

WISCONSIN.—The Fish Commissioners of this State, in compliance with the request of Senator Barden, sent to this city, on Friday last, some 40,000 Mackinaw or Lake Trout, 24,000 of which were deposited in Silver Lake, and 16,000 in Swan Lake. They were sent from the Milwaukee branch of the State hatchery (the main institution being at Nine Springs, near Madison,) and they arrived here in capital condition, scarcely one having died on the road. Of course the placing of these fish in the lakes named must be regarded in some degree as experimental. That the lakes themselves are admirably adapted to the growth of lake trout need not be doubted. Their waters are clear, cool, of great depth and perfect purity. But they are also tenanted by pike, pickerel, bass, etc., and they will convert just as many of them to their own use as they can possibly capture. How many of them they can gobble is the unknown problem; many of them they will surely swallow; all of them they can hardly expect to capture—indeed, we do not think they can destroy a very large percentage of them, and so we shall expect to see good lake trout fishing in these lakes in about three years, when they should have attained a weight of four or five pounds each.—*Milwaukee Sentinel, May 26.*

ILLINOIS.—One of the most useful bills which has passed the Illinois legislature is the Pratt bill for the protection and preservation of fish. The bill provides for the restocking of our almost depleted waters, and makes the taking of food fish by any other method than the hook and line a misdemeanor. Such a bill has been wanted for a long time in Illinois.

—The report of the Canadian Commission of Fisheries for the year ending Dec. 31, 1876, shows that the gross value of the produce of the fisheries for 1876 was $11,147,590, or $661,917 in excess of that of 1875. From the *Toronto Globe*, of May 31, we extract a part of the abstract of the report:

There are now seven government fish breeding establishments in the Dominion, situated as follows: In Ontario, Newcastle and Sandwich; in Quebec, Tadousac, Gaspe Basin and Restigouche; in Nova Scotia, Bedford, and in New Brunswick, Miramichi. The deposit of vivified salmon eggs at Newcastle amounted to 1,500,000; at Tadousac to 1,000,000; at Bedford to nearly 1,000,000; at Gaspe to 920,000; at Restigouche to 720,000; and at Miramichi to 640,000. Added to these at Sandwich are 8,000,000 of white-fish eggs, while at Newcastle were 10,000 of California salmon ova and 150,000 white-fish. The total distribution of ova that would be hatched in the spring of 1877 would amount to close upon 14,000,000. The California salmon are to be placed in the river Escoumain, about twenty miles east of Saguenay, once celebrated as a salmon river, but which through the want of protection for many years does not contain a single fish. It is there well adapted for the experiment of acclimatizing the salmon of the Pacific to the Atlantic waters. The necessity for further measures being taken for the preservation of the oyster and lobster fisheries is strongly enforced by the Commissioner, meantime the efforts made for some years past by Mr. Wilmot, and persons trained under his direction to replenish the rivers of Canada by means of artificial fish culture have been attended with a very fair measure of success. The parent establishment for this purpose, under the immediate superintendence of Mr. Wilmot, has now arrangements and appliances of the most complete character. The additional number of grown fish returning to the spawning-beds every year is a proof of the gradual increase in the supply of fish obtained by Mr. Wilmot's labors. In the fall of 1876 no less than 200 salmon entered Grafton Creek at one run. Salmon were also found in the stream at Bowmanville, in Duffin's Creek, and in the Humber, Rouge and Credit Rivers, formerly favorite resorts for these fish, but for many years entirely depopulated until restocked by the agency provided by the government. Between four and five hundred grown salmon were caught in Lake Ontario last season, the fish being in fine condition and from 8 lbs. to 18 lbs. each in weight. The prospect is held out of the salmon fisheries in British Columbia attaining increased importance. Fresh energy and capital are being applied to this important branch of industry, for which the supply of fish is practically unlimited.

Natural History.

NATURALISTS IN UNIFORM.—We have received, through Dr. Coues, a copy of the *Walla Walla Union* of April 14, 1877, containing the sound and sensible inaugural address of Surgeon George M. Sternberg, U. S. A., delivered on the occasion of his election to the presidency of the "Walla Walla Association for the Advancement of Science." We are glad to see that new societies of this character are rapidly increasing in number, as it indicates a healthful spirit of scientific inquiry all over the land. We understand that nearly all the army officers stationed at Fort Walla Walla are members of the society, and the selection of one of them to be its first president shows the esteem in which they are held for their ability and interest in such matters. No other body of men, perhaps, has so much unemployed talent and, we may add, unused opportunity for scientific inquiry as the officers of the army, who, if they will take the proper means, can add largely to the stock of scientific knowledge, and reflect great credit upon the corps to which they belong. There are probably few of them whose official duties do not leave much time at their own disposal—time which might be profitably occupied in the investigation of the faunal and flora of the regions where they are stationed. They may make themselves excellent and trustworthy observers, and do much toward silencing the reproaches sometimes thoughtlessly brought against them of their uselessness except as soldiers. We believe that the spirit of scientific inquiry is surely, if slowly, spreading among the gentlemen composing this class, and trust that it may become the rule rather than the exception.

NOTES ON MAMMALS OF CANADA.

BY WM. COUPER, ESQ.

[COMMUNICATED BY DR. COUES.]

67 BONAVENTURE ST.,
MONTREAL, Canada, May 1, 1877.

Dear Dr. Coues:

I received a circular from the Medical Department U. S. Army, relative to the preparation of a "History of North American Mammals," to be published by your government. We want a book on this subject, and the government of the United States deserves the best thanks of the Commonwealth, and, indeed, of Canadians, for their liberality in advancing human knowledge in the various branches of natural science.

In regard to the mammals occurring in this province, I send you the following remarks:

MOOSE (*Alce americana*).—I have no positive knowledge how far this species ranges north of Ottawa, but in the wild woodland districts northwest of the latter city they are abundant. It rarely occurs north of Montreal, and during a residence of nine years in the city of Quebec, I did not see nor hear of a moose having been killed in that part of the province. On the south side of the St. Lawrence, that is to say between Canada and Maine, this animal is common.

WOODLAND CARIBOU (*Rangifer caribou*).—This deer appears to me to replace the moose on the north of the St. Lawrence. It ranges from northeast of Montreal to Labrador and Newfoundland, where it is more generally replaced by a form called the Barren Ground caribou, and it is said that an occasional specimen of the latter is shot in the *Jardin des caribous*, northeast of Quebec city. During the residence of British troops in Canada, moose and caribou were becoming scarce on account of the demand for moccasins and snow shoes. The Indians of Lorette, near Quebec, having the contract to supply these requisites to the troops. Now that this demand is less, the animals have had a chance to increase, and in a few more years, I have no doubt, they will be prolific and abundant. In regard to the existence of two distinct species, I have some doubts. There is, however, a great difference between the form of their horns—the main branches of the woodland being round, while those of the Barren Ground are palmated, and it is said that the latter animal is much smaller in size.

VIRGINIAN DEER (*Cariacus virginianus*).—This species is more abundant in the Province of Ontario. Its northern

range terminates northeast of Montreal, and it is never seen in the Laurentian mountains north of Quebec. It occurs in the mountain region on the south side of the St. Lawrence adjoining the State of Maine.

Black Squirrel (*Sciurus niger*).—Not found north of Montreal or Quebec. The northern range of the black squirrel terminates in the woody region near Ottawa. A gray variety is abundant in the townships south of Montreal. When I resided at Toronto a number of years ago, I remember having black squirrels spotted with white.

Red Squirrel (*Sciurus hudsonius*).—This is the common species in the north. I met with it 150 miles north of Montreal.

Ground Squirrel (*Tamias striatus*).—Common, and occurs as far north as forests extend.

Flying Squirrel (*Sciuropterus volucella*).—This province is probably in northern range.

Ground Hog or Woodchuck (*Arctomys monax*).—This animal is found far north in this province. I met with it in Labrador. There are two varieties, one being black but rare.

Beaver (*Castor fiber*).—Occurs north of Quebec. This animal has been greatly destroyed of late, on account of the demand for its fur.

Musk Rat (*Fiber zibethicus*).—Plentiful along the water courses north of Quebec. A white variety is met with occasionally in the vicinity of Quebec. It is not an albino, as the eyes are hazel.

Jumping Mouse (*Zapus hudsonius*).—Numerous on the Island of Montreal, abundant north of Quebec and in Labrador. It evidently enjoys grassy spots in woods and along the northern rivers where the openings are surrounded with trees of stunted growth. When collecting butterflies in Labrador I have frequently caught this mouse in my net.

Porcupine (*Erethizon dorsatus*).—Abundant in the woods north of Quebec. It extends to Southern Labrador. Its flesh is eaten by the people of the latter region.

Common Hare (*Lepus americanus*).—Abundant everywhere as far as forests extend. It forms the principal flesh food of the people of Labrador during winter. They produce two young ones on the surface of the ground.

Cougar (*Felis concolor*).—Rare. One large specimen was killed north of the city of Ottawa. This is the only record of the occurrence of this animal in Canada.

Black Bear (*Ursus americanus*).—Common in the mountains north of Quebec, extending into Labrador, where they are rare. Abundant on the Island or Anticosti, where it is said there are two varities, the white nosed and the red nosed.

White Polar Bear (*Ursus maritimus*).—Occasionally seen on Labrador and Newfoundland.

Wolverine or Glutton (*Gulo luscus*).—This animal inhabits the mountain regions north of Quebec. It is met with in the *Jardin des Caribous* in winter. The Indians call it Carcajou or Indian Devil. They say it is impossible to trap in the neighborhood where it occurs, as the Wolverine follows the trapper and cunningly ejects a fluid or leaves its *ejectmenia* either on the bait or around the trap, preventing any other animal from approaching it. Its fur is valuable for sleighrobes.

Skunk (*Mephitis mephitica*).—Common throughout the Province, but not found in Labrador. The *habitants* make pets of this animal, in fact they domesticate it for the purpose of destroying rodents frequenting their out-houses. The scent glands are cut out; it is then tamed for the above use, and it is said to be more expert and superior to a cat.

Red Fox (*Vulpes fulvus*).—Plentiful, but the black and silver-gray varities are only to be met with in prime order in Labrador, Newfoundland and Anticosti.

Arctic Fox (*Vulpes lagopus*).—Occasionally seen in Labrador, Newfoundland, and on two occasions on Anticosti, which island it reached probably on ice.

Wolf (*Canis lupus* var. *occidentalis*).—The Province of Quebec is not much annoyed by wolves. It seems curious that Newfoundland is greatly infested by wolves of large size. I suppose they have increased on account of the Government having ceased to pay the reward for their destruction. It is rarely met with in Labrador. During my last visit to the South Coast I saw the skin of a large wolf which was killed at Sheldrake River. This is the only instance of its occurrence on Labrador. One was once seen on the Island of Anticosti about eight years ago, but it is supposed to have reached the island on an iceberg from the neighborhood of Belle Isle Straits.

Mink (*Putorius vison*).—Found throughout Canada. The fur of this animal demanded a high price a few years ago. Now, it is out of fashion. The price paid for skins depended greatly on the locality in which it was taken. (I mean as regards our market.) For instance, an experienced fur-collector could determine the locality in which the animal was taken, on tanning the pelt. A "North Shore Mink" would sell for twice the value of a "South Shore" skin. Although the St. Lawrence is the only barrier between the *habitat* of the two animals, yet the pelage presents so great a difference that the value of the north shore skin is worth at least two of the one taken on the south shore.

Marten (*Mustela americana*).—The best marten occur in Labrador, but Anticosti is reputed to be a good hunting ground for this animal. It is found in the woods north of Quebec, but they do not attain the large size of the specimens found on Labrador or Anticosti.

Otter (*Lutra americana*).—Not common, excepting in the wild mountain lake region north of Quebec. More abundant in the vicinity of the lakes in Southern Labrador. Rare in Anticosti. Its fur has been very fashionable for some years past.

Fisher (*Mustela pennti*).—Uncommon in the Province of Quebec.

Starnosed Mole (*Condylura cristata*).—We have this animal here, and it is found occassionally at Quebec, but it is rare.

Shrew Mole (*Scalops aquaticus*).—This species is abundant here, but not common at Quebec.

Yours truly, Wm. Couper.

P. S.—I may as well state further that the following animals do not occur on the Island of Anticosti: Caribou, beaver, porcupine, wolf (accidental), lynx, squirrels. I am informed that rats reaching the island from wrecks generally die shortly afterward. Whether they are destroyed by other animals or not, it is a fact that although thousands of the European rat have reached the island, not one has been seen in any habitation, nor anywhere else. W. C.

Vennor's Birds of Prey.—The Toronto *Mail* says: "Mr. Vennor's recent work, entitled 'Our Birds of Prey; or, The Eagles, Hawks and Owls of Canada,' has been very favorably received by the scientific press in England. The accounts of the habits, as also the descriptions of the various species are pronounced excellent, a commendation of which Mr. Vennor may be proud, as the accounts and descriptions were, in the large majority of cases, from the personal observation of the author. On one point one of his critics decides against him, the balance of the evidence being decidedly on the side of the former. Mr. Vennor states that there is no authentic record of the occurrence of the barn owl in Canada. The reviewer quotes, *per contra*, a paper of Mr. Bowdier Sharpe on the 'Geographical Distribution of Barn Owls,' published in Mr. Rowley's *Ornithological Miscellany*, in which it is stated 'that the British Museum contains a specimen from the neighborhood of Toronto, collected near that city by Mr. James Whitely, who has resided there for some years, and has sent many interesting birds to this country.' There is no doubt, therefore, that the barn owl has been seen in Canada, but so seldom that Mr. Vennor may be excused for not having heard of an authentic case."

We should much like to hear more respecting the distribution of the barn owl in the northern United States and Canada.

Ospreys Taking Dead Fish.—Many thanks to "Dom Pedro", for his succinct reply to my queries, and I regret very much that "S. C. C." should have thought them captious. My interest in Ornithology, and the desire for further information, solely prompted me to make them. "Dom Pedro" says in regard to the rare incident he observed of an Osprey retaking a fish that had been dropped into the water, "that when it fell into the water it came to the surface, and while struggling around in a circle the bird made his second plunge, taking the same fish." Having studied Ornithology from the standard works, as well as from nature, I was desirous that any hitherto unobserved incident should be verified and recorded. "Dom Pedro's" explanation corroborated my surmise that the fish was not dead when taken. Roamer.

[For some information on the other side of the question, however, we would refer "Roamer" to Vennor's "Canadian Birds of Prey," pp. 88 and 89, reviewed in last issue of Forest and Stream.—Ed.]

BLACK BASS AND OSWEGO BASS.

Ferrisburg, Vermont, June 4, 1877.

Editor Forest and Stream:

Why is it so many disciples of the rod fail to distinguish between the black and Oswego bass? their differences are marked both in shape and table qualities. I wish the American Sportsmen's Journal, for the benefit of our doubting brethren who hold that they are identical, would describe the points wherein they differ.

[The specific characteristics of both fish are fully given and compared in Forest and Stream of Feb. 28, 1874. We will endeavor to republish them shortly.—Ed.]

We had a very good run of black bass this year, thanks to our law which protects them from May 15 to July 1, and the good effects of which we already see in the increased number and size of the fish. I think it might be improved by putting the close season a week earlier, but it does very well as it is. The spawn are already hatching, and the beds are black with little bass. One offender, caught with a bass in his possession, was brought to the rack a week ago through the influence of the Sportsman's Club, and paid his fine like a little man. Others are under surveillance, and terror reigns in the ranks of the law breakers.

Pike should have taken the spoon two weeks ago to have verified the old rule—

"When apple trees blow
Pike nishing go,"

but they didn't, and won't even now in any numbers. Those that are taken are small, and the largest I have seen this year was a three-pounder, caught by your correspondent, "Awahoose." The season is very dry, and the water low in consequence, which, perhaps, has something to do with it. But few are being caught in seines. Verd Mont.

AUDACITY IN HAWKS.

Chicago, Ill., May 19, 1877.

Editor Forest and Stream:

Seeing in your issue of the 19th inst. an article on the audacity of hawks, I thought I would give you my testimony regarding the incomparable checkiness of that bird. While quail shooting in Florida last winter my dog had just come to a point. I walked in, getting a right and left. The bird which I dropped with my left-hand barrel was a long shot—full forty yards. However, almost before it had reached the ground, and before the smoke had fully cleared away, a large hawk swooped down and quietly carried him off to a neighboring tree. Calling Dick in "to heel," and changing my No. 9s for an Ely's No. 5, I thought I would settle with that hawk, and so, creeping cautiously along, I got within about sixty yards, and brought down the robber and the quail with him. Hawks are very numerous in Florida, and destroy large numbers of quail, as do the negroes, who pot them on the ground and trap them summer and winter. Yet with all this war waged against them they thrive wonderfully. I could leave camp any day and go in any direction and be sure of finding four or five coveys in less than half an hour. Florida.

Woodland, Farm and Garden.

FLOWER SHOWS.

We suppose that a garden affords the most innocent and perfect of pleasures. Lord Bacon thought so, and unphilosophical people, who never trouble their heads about the inductive method, are at least Baconian in this system. We are all supposed to trace down from "the grand old gardener and his wife," and therefore have an inherited tendency towards flower shows. The man who does not love flower shows, is like Shakespeare's wretch, who does not love music. The love of flowers is often the finishing grace of a noble character, the redeeming virtue of a debased one. Given the love of flowers, you may in the long run work out the love of many higher things. Moreover, these flower shows do a great deal to cement and elevate provincial life. The general tendency is to be metropolitan, or rather cosmopolitan, and every thing that adds to the vigor, healthfulness and independence of country life cannot be spared in these days. Of course people approach the matter of flower shows from various points of view; some are terribly in earnest about the prizes. Indeed there is a fashion much to be reprobated for special cultivations, which shall earn monetary prizes and paragraphs in

the newspaper, while the general beauty and entirety is seemingly disregarded. Such gardens are unlike Armiela's or even Corisande's. The final sentence of "Lothair" occur to us, "I have been in Corisande's garden, and she has given me a rose." The sweet human roses in their white and red, blossom at our flower shows. Amid the beauties of animated nature, there are those which honest Goldsmith never classified. Unquestionably there is a good deal of honest criticism on roses and geraniums, on cut flowers and designs, and the show of azalias, orchids and the multicolored foliaged plants is always a strong point at a spring flower show. Moreover, there is a great deal of scientific interest in homely vegetables, and even non-scientific eyes can view with suggestive complacency, green peas and early potatoes. Still, as one watches the gay crowds promenading the paths, or sipping ices, or listening to the music, it is easy to see that the people who come to the show, really make up the largest part of the show itself. It is the opportunity for friendship and flirtation, for the intelligent study of fresh variegated toilets, for counting up our friends who are present and discussing those who are absent. It is a matter of general congratulation if one of our friends has succeeded in winning a prize, or we praise his kindness in sending ferns, palms or orchids to aid in the ornamentation of the scene. From what we can learn the forthcoming exhibition of the New York Horticultural Society at Gilmore's Garden (Tuesday, Wednesday and Thursday of this week) will be by far the best ever brought before the public of New York, and we trust the Society will be encouraged by the increased attendance and the interest manifested in the beauties exhibited, to renewed efforts to make their June and Fall exhibitions even more of a success.

THE PRICES OF NURSERY AND GREEN HOUSE PRODUCTS ABROAD AND AT HOME.

BY PETER HENDERSON.

WHILE the price of labor is from one-third to one-half more in this country than in Europe, nearly all the products of the nursery, greenhouse, or garden, are sold lower here than there—not merely lower, but in a majority of cases at less than half the price. In nursery stock, I have the authority of Messrs. Ellwanger & Barry, of Rochester, N. Y., for stating that, in many leading articles in fruit trees, the differences in prices in favor of this country are as follows: In England, "Standard" apple trees are quoted at $18 per 100; the same quality are sold here at $12 per 100. Dwarf pear trees there sell at $35 per 100; here, at $15 per 100. Standard pear, plum and cherry trees average in England $18 per 100; here $15 per 100. Apricots and nectarines are sold for about the same price here as in England, but peach trees which are sold here at an average of $70 per 1,000, are there sold at $150 per 1,000. The general assortment of ornamental trees and shrubs show a corresponding average in favor of lower prices here. In greenhouse or bedding plants, the difference in favor of our lower rates here is even greater, both at wholesale and retail. Roses, for example, which are sold lower in Europe than almost anything else, can rarely be purchased at less than $15 per 100; here the same quality averages $12 per 100. Carnations, or pinks, which are quoted in England as specially low at $20 per 100, are sold here at $12 per 100. Ferns sold here at $8 per 100, are offered at $12 there; tuberoses and gladioluses that are sold here at $4, are quoted there at least double these rates, while to take the average of bedding or greenhouse plants, that may average here $10 per 100 to the trade, are offered to us by the wholesale English houses as specially low, at $12 per 100.

Owing to the unusually dry weather of last summer, nearly all our stock fuchsias were destroyed, so that we had to import from London; the price paid was $25 per 100, the very same quality that we sell at $12 per 100. In prices at retail, particularly for new plants, the prices paid in Europe are fully four times more than what we charge here. For example, a new rose, when first offered, is sold in London at £1 1s., the plant; about $6; here the first sales of the same are at from $2 to $3 each. New fuchsias or geraniums are rarely sold in London at less than $3 each; here we think we are getting well paid if we get one-fourth of that sum. In addition to the greater price paid for the article itself, they invariably saddle us with the expense of boxes and packing, often no small item, which here is rarely charged by the florists. If we add to these, our 30 per cent. duty, which our government in its wisdom exacts for these perishable commodities, it may well be wondered that Europe can ever sell to us at all, particularly when it is known that at least one half of the imported plants are lost by injury sustained in transit. The question arises, how can our nurserymen and florists sell so much lower, and make the business pay?—for that they do make it pay quite as well as European growers do, there is but little doubt. The answer to this is, the known fact that the high cost of labor, has long ago forced us to use our ingenuity in simplifying our work. What we do with the plow, the English gardener still thinks it necessary to do with the spade. What we do with our horse or hand cultivator, he still does with the hoe, and often a very primitive sort of hoe at that. Where we use stakes and labels that are made by machinery, they, in many cases, yet make them by hand, when a single one, actually, costs as much in labor as do a hundred when made by machinery. When it comes to the manual operations, necessary in the propagating and growing of greenhouse plants, the same waste of labor is apparent. Our average propagator will take off, make, and set in bench, 1,000 cuttings per day; at the rate I saw the propagators of two of the leading establishments in London working, when there a few years ago, I doubt if the average was 200 a day, and when we tell them that some of our crack workmen can place 10,000 rooted cuttings in pots in 10 hours, they honestly think it false, for probably not more than one-third of that number has ever been done in the same time there. I do not wish to be understood that the English gardener can not move as rapidly as the American, but custom there clogs his hands with unnecessary work to accomplish the object desired. The other day a man of 40 years of age presented himself to me, with credentials from a long established Edinburgh firm, stating him to be experienced propagator and cultivator of plants. To test his capabilities, I handed him a lot of rose cuttings to prepare, every one of which he cut at an eye or joint, in the approved orthodox style of a quarter of a century ago; all propagators of experience here have long known that this is not only a great waste of material, but a still greater waste of time, and we never do it unless in particular cases that very rarely occur. I might mention scores of similar operations, which are performed abroad in a manner which seem to us as primitive as this.

[The foregoing article, taken from the "American Agriculturist," is so pertinent and to the point that we have much pleasure in giving it all the publicity we can. Mr. Henderson would not be himself, if not statistical, and here he brings his statistics to bear with unusual force. We trust his article will receive a careful perusal from our readers, as it has already awakened much attention both in and outside of the horticultural profession.—ED.]

BLUE GLASS FOR VINES.—In these days of scepticism in the horticultural world as to anything good originating in this country, it is refreshing to come across the following endorsement of General Pleasonton's theory, copied from the Dundee (Scotland) *Advertiser* into the pages of the *Gardener's Chronicle*, London. The effects of blue glass on vegetation are pretty well known to physiologists, at least so far as laboratory experiments are concerned, and they are not yet such as to induce a practical man to grow his plants under a blue ray. Numberless experiments must be tried, ranging over a series of years, to convince the sceptic that the excessive growth alleged to have taken place is that of nature, which results in well-ripened wood, well-colored grapes, and a sound constitution. Here is what the Dundee *Advertiser* has to say on the matter, however:

"Some time ago a copy of General Pleasonton's book came into the hands of Mr. Spence, of Coventry Bank. It so happened that Mr. Spence was erecting vineries at the time, and he resolved on satisfying himself as to the effects of the blue-violet ray. Mr. Spence's vineries are built against a lofty wall, and have a fine southern exposure. There are two forcing-houses, each 30 feet by 15, separated by a transverse section of about the same dimensions running out from the wall. This construction necessitated a modification of the American plan, and Mr. Spence has, by an ingenious arrangement of the glass at the top of the wall, made sure of the violet ray travelling over all the plants. One of the houses—the westmost—is glazed in the usual fashion with white glass; the other is fitted up with rows of blue glass, casting a violet ray in the manner described by General Pleasonton. With the exception of the rows of colored glass, the two houses are exactly the same in every respect. As to soil, it may be mentioned that in the course of the summer Mr. Spence took a large quantity of turf off his lawn, which was allowed to rot, and in the fall of the year it was appropriated for the purpose of vine growing. It was placed in both houses, and in both cases bones and bone-meal from Rosemill were used as manure. On January 13th last the two houses were stocked with vines of equal age and of the same variety—Black Hamburghs. On the same day, in order further to test the influence of the blue-violet ray, potatoes were planted in both houses. The vines and potatoes were placed so as to ensue the same conditions, the color ray excepted. These operations were gone about with the advice and under the superintendence of Mr. Lawrie, an intelligent and experienced gardener. Heat was put on in both houses on February 8, and the temperature has since then been kept equal, the white house from position having if anything the advantage. On visiting the vineries we found the potatoes which have had the advantage of the 'blue light bath' standing 3 feet above the surface, and so vigorous is the growth, although carrying the full strength of the stem, they will require to be staked. In the white house they stood only 2 feet high. The vines, again, which are bathed in violet, have grown 3 feet 4½ inches, and have a strong vigorous look. Those in the white house, on the other hand, are only 13 inches. Those acquainted with vine culture will be able to estimate the different results by the following details. A regular note of progress has been kept, and the results have been given as follows: At first the progress made under the color ray averaged fully an inch every twenty-four hours. On March 8, exactly a month from the date of forcing, the potatoes under the white glass stood 14 inches above the ground, while under the blue glass they stood 25 inches. The vines, again, at same date, had only grown 4 inches under the white glass, while under the blue they had attained a height of 16 inches. Asa further instance of the stimulating influence of the ray it may be mentioned that a camellia was pointed out to us which had been removed into the 'blue' house because of the sickly look, but which in its new quarters had grown 3 inches in two days. Mr. Lawrie, who has had a life-long experience, says nothing like it has before come under his notice.

—We understand that we are likely to have a visit in this country in the course of the summer from Dr. J. D. Hooker, president of the Royal Society and director of the Royal Botanic Gardens at Kew, London. He will be accompanied by his wife, whom he married last summer, and who was the widow of the well known naturalist, Sir William Jardine. Dr. Hooker's first wife, his coadjutor in so many of his botanical labors, whom he lost a few years ago, was the daughter of the celebrated naturalist, Professor Henslow.

INQUIRER.—The plants received are a small specimen of Trillium grandiflorum, the large flowered white Wake robin, Mitcella nuda, the smaller Mitrewort or Bishop's cap, and Ribes aureum, the Buffalo or Missouri currant, remarkable for the spicy fragrance of its yellow blossom in early spring. The other three plants received later—next week.

SPIRÆA JAPONICA, A. N.—Divide the crowns after flowering, and plant them in rich, sandy loam. They require plenty of moisture when growing. In Holland this plant is grown in great quantities for foreign markets among their hyacinths, in rich sand.

THE LEONARD SPLIT BAMBOO FLY RODS.—These rods have long had a most extended reputation, and are always admitted to be equal to the best, even by rival makers. Mr. Leonard has manufactured a great many rods that have been sold by leading tackle houses who have earned a reputation for dealing in superior goods. He has recently added considerable capital to his business, and has greatly extended his manufacture of rods at Bangor, Maine, not only making work superior to any that he has done before, but adding important improvements in ferrules, which secure greater strength and more uniform elasticity. The best testimony to Mr. Leonard's workmanship is his handiwork. [*Adv.*

The Kennel.

For Forest and Stream and Rod and Gun

HYDROPHOBIA.

Rabies canina, or canine madness, is a disease of a nervous order, natural to the dog family. Consequently, wolves, foxes, hyenas, and all the canine tribe from the least to the greatest, are occasionally subject to attacks of this fatal malady. The disease, without the slightest doubt, is specific in its character, just as much so as diphtheria, small pox, vaccinia, etc.; and when it is developed in human beings and other animals, it generally communicated to them by bites, or the lodgment of portion of the vitiated saliva of the suffering animal upon wounds, or otherwise, so that the poison is taken up by absorption into the system. Until the introduction of the spitz dog fortunately it was a disease comparatively of rare occurrence and but a very small proportion of the dogs now killed purporting to be rabid really labor under that difficulty. Dogs having worms, pups getting second teeth, and some cases of distemper in the early stages are attended with fits or spasms; and sometimes the animal thus affected will run about in a bewildered condition, froth at the mouth, and excite general alarm. If seen by persons not acquainted with the symptoms of hydrophobia, at once the hue and cry is raised "mad dog," the unfortunate cur is dispatched (which is the only safe plan where the cause and symptoms are not understood), and the public is treated to an article in the newspapers detailing the horrors of this disease and its prevalence. The saliva of a healthy dog is among the most innocuous agents that can be applied to a wound. It is his own panacea for every injury, and his licking of sores of human beings has been regarded salutary from almost the earliest history of the world. Recently there has been conveyed, through the public print, the idea that the bite of a dog not suffering with rabies is capable of communicating that disease. One might just as well say to shake hands with a man that had not the itch will give the itch, or to scratch a man with a point not charged with vaccine virus will produce kine pock; and to argue that a man bitten by a well dog, if that dog goes rabid six months after, the man is liable to be attacked, is more preposterous than witchcraft. It is true a wound from a dog's tooth, like wounds from other instruments, sometimes, weeks after, may be the means of causing spasms, *trismatic tetanus*, etc., which may so strongly resemble rabies as to mislead the experienced; but surely rabies must exist in the dog in order to produce it in the man, and just as surely the dog having the virus of rabies developed in him will die in a short time. Small dogs are more dangerous than large ones, being more inclined to snap. I have seen several dogs laboring with this disease; two of them I owned, and had full opportunity to note their early symptoms. One was a Scotch terrier, the other a setter, both amiable house dogs, greatly attached to the family, and under good subjection. The symptoms were as near alike in them as they are in any disease that afflicts mankind.

The symptoms for the first twenty-four to forty-eight hours is a feverish, doggy smell, a great deal more so than usual in dogs that are not constantly chained to a kennel, quite marked swelling of the salivary glands, which no doubt are the first organs of the system that suffer. On the second and third days they seem languid, their eyes have a weak or liquid look, mouth slightly parted, tongues protruding a little, a very short, dry loll; if they move during this period, it is with a tired or sickly drooping of the head and tail, and the first quiet place they reach they throw themselves down, always with this short panting. About the latter part of the third day, they begin to grow restless, becoming easily annoyed with real or imaginary flies; will often get up suddenly and cross the room to catch or snap at them, and, if naturally illnatured will snap at persons if teased; generally eat and drink; will usually obey their masters, and, if accustomed to hunt, will make an effort. But their behavior will certainly excite suspicion, either at home or in any other place. About the fourth day they will become so restless, that, if not secured, they will leave home and travel about, bite other animals and occasionly persons; if tied are more inclined to bite. During this period the saliva begins to flow, sometimes copiously, at other times sparingly; they remove it from their mouths by violent shakes of the head. Sometimes it appears ropy, at others frothy. When the saliva begins to flow they are unable to swallow liquids, and often solids. When they attempt to swallow anything solid it is returned heavily coated with this ropy saliva, which seems to be the cause that prevents the swallowing. I have seen them when attempting to drink start back with a sort of suffocating or choking, which I ascribed to drawing the tough saliva into the glottis. Have thrown water over them, which they dislike, and which causes them to shrink away, but I have never seen it produce convulsions. By the fifth day their eyes become blood-shot and delirious looking, mouths more flowing and frothy, extremely restless, bite at everything within reach; in a word, all their symptoms become aggravated to the highest pitch, except a very slight hack or cough, which they have at the commencement of the disease, and which subsides with the flow of saliva. In this condition they worry until they become exhausted, and being unable to free their throat from the accumulation of these secretions, breathing is impeded, the brain and nervous centres irritated or congested, convulsions ensue, and by the seventh or eighth day death closes the scene. The first dog I saw with rabies, to note any of the symptoms, was a bull terrier owned by a Mr. Jas Durie in 1855. Probably on the third day of the disease, while chained, this dog bit Mrs. Durie through the bare hand, also during the same day bit a pig and a cow, and was killed on the fourth day without having reached convulsions. Mrs. Durie escaped the disease, but the pig and cow went mad inside of two weeks. The second case was a Scotch terrier owned by myself. This dog was extremely good-natured for one of his species, was accustomed to be caressed and tended by comparative strangers, and was a great pet with acquaintances. About the 10th of May, 1861, I observed he was a little indisposed, and on taking him up I found enlargement of the parotid and submaxilary glands which I ascribed to cold, and a smell considerably strong for a dog that went loose and was kept with tolerable care. He always slept in the house, and during the night could be often heard tracking around on the dining room oil cloth or digging in the corners of the room. During the

following day he lay around under chairs etc., and during the night was again restless. The third day was worse, and on an old and intimate friend snapping his fingers at him he jumped and tore his vest. I now chained him securely in a horse stall in the stable and barricaded the stall. Convulsions came on on the latter part of the fifth day, and he hung himself across the partition of the stall the morning of the sixth day. This dog had pups born to him on the 27th of June following, and, so far as we knew, developed the disease spontaneously.

In August, 1868, a little mongrel black and tan dog came in my office and seized a fine, well-trained setter dog I had lying under a settee and bit him in the nose. I was nearly sure the cur was rabid and followed him around a block, when a number of boys gave chase to him and finally killed him. My dog was scratched a little in the bulb of the nose, being saved from a more severe wound by a wire muzzle. I washed the nose with a solution of chlorid of ammonia, also wiped him all over with the same, and gave him internal prophylactic treatment, and kept him well muzzled. In October, seven weeks after, I noticed the symptoms. On the third day the symptoms were so manifest that I concluded to shoot him, and took him down to the meadows with that intent. On letting him loose he at once struck out for a hunt, and in five minutes made as fine a point on an English snipe as a man ever saw. I shot at and missed the snipe, took the dog home, cleared out a bed-room, put down a heavy doubled rag carpet for him to lie on, chained him to an old settee frame and concluded I would be sure he had rabies, but on the morning of the fifth day of the disease he had a convulsion. After the convulsion, though he was obedient to me, he exhibited signs of derangement and would have bitten a stranger without doubt. I killed him with strichnine. And this killing with strichnine developed a fact that I had not before observed and that was, that the dog did not swallow at all at this stage of the disease. At command he came the length of his chain, and took into his mouth a flat piece of iron, on which I placed ten grains of the drug; in twenty minutes I gave him fifteen grains more, and after again waiting twenty minutes I gave him another fifteen grains, and from the time he took the first dose he lived two hours, seeming to grow better under the influence of the poison until within a few seconds of his death. The drug was good, and after death the dog's tongue and roof of his mouth were white with it.

Mild dispositioned dogs that have a master to whom they are greatly attached will often warn them of their danger by snapping short—their masters being the last things they will respect, and they will often exhibit a regard for them until nearly unconscious. They are not very much inclined to attack strange persons in the street if undisturbed. Dogs in the early stage of rabies exhibit their likes and dislikes; will bite one person and not another; will go some distance out of their way to bite one animal and not another. Their sense of smell continues until the disease is far advanced. Persons owning dogs should secure them on observing the feverish smell, swelling of the kernels or glands in the throat, short lull, languor, drooping of the head and tail, and easy disposition to be annoyed by the buzzing and sight of flies; and when they become restless and the saliva begins to flow no time should be lost in destroying them, as delays are dangerous. There is no season of the year, or climate, where dogs are exempt from this disease, and I am told in Hudson's Bay, in mid-winter, the fur hunters are annoyed with their dogs becoming rabid. The dogs used there are large and intelligent animals, and not inclined to bite those with whom they are acquainted until the disease is well developed. In this climate there is very little difference in the number of the occurrences of this disease in the seasons. The impression has gone abroad that more occur in summer; but the records of actual cases where persons and animals have been bitten and developed the disease, will give the preponderance to cool weather STRAIGHT BORE.

THE WEBSTER SETTERS.

We print with pleasure the following letter from our old friend, Ethan Allin, regarding the Webster setters. Perhaps another valued Connecticut correspondent, "Senex," can throw further light on the subject:

POMFRET CENTRE, May 28, 1877.

EDITOR FOREST AND STREAM:

In the issue of the FOREST AND STREAM of the 10th of May I notice a letter from George W. Blunt, in regard to the Webster setters, Rake and Rachel, in which he speaks of them in glowing terms as something superior and desirable. Now, what I have to say is all in reference to Rachel. She was in my possession through the shooting season of 1847 and part of 1848. I had abundance of opportunity to test her in the field on quail, woodcock and ruffed grouse, as this species of game were then abundant here. The term handsome, that Mr. Blunt uses, I can appreciate; but what he infers by the term steadier, as applied to Rachel, I cannot fully understand, unless it is that she hunts diligently, with nose raking the ground, and steadily flushes each and every bird she is fortunate enough to find, without showing the least inclination to point them. I never saw her make but one point during her stay with me, and that one on a bevy of quail, when she stopped, and gave a long, anxious look before springing in on them. I can imagine a well-bred setter becoming unsteady by bad usage, but I never saw what was originally a first-class dog, however badly he had been managed, but that would occasionally forget his wildness and make a staunch point. I have seen plenty of fox hounds, without a drop of either pointer or setter blood in them, that would make mere decided points than Rachel, and make them oftener on quails than she would.

Either Mr. Blunt is not well posted on the requisites of a good setter, or else Rachel must have deteriorated rapidly after she left him.

I bred Rachel to a steady, staunch dog, and her progeny did not compare with the sire, and not until the second or third cross did her stock prove of any value. We had then several native setters far ahead of either her or her progeny. My present kennel has a slight admixture of her blood, but I do not attribute any of their good qualities to the Webster cross. I go in for first-class field qualities, and if a dog does not possess these qualities, it matters not by what titled nobleman he was bred or how ancient his pedigree. I want none of *his blood*. It is much easier to get up a reputation on paper than in the field. The former may have a short run, but the latter is of the only public value. Thirty years is a long time to look back on, and very few are now living that can testify to the field qualities of the original Webster dogs. Yet, I am so fortunate as to be able to prove the above assertions by living witness. ETHAN ALLIN.

ENGLISH SPORTING AND KENNEL NOTES.

[FROM OUR OWN CORRESPONDENT.]

SINCE I sent you an account of the large and excellent bench show held in the Scottish capital, we have had a busy time of it on this side the "herring pond;" about a dozen shows, a good many of them important ones of 300 to 400 entries, have been numbered with the past. Add to this our annual setter and pointer field trials at Shrewsbury and under the auspices of the Kennel Club at Horseheath, Cambridgeshire, and it will be seen there has been no idle time for exhibitors, breakers, judges or reporters, and the sporting British public have had their choice of treats.

As I think it more than likely that some one of the numerous friends of FOREST AND STREAM more capable than I am have already sent you an account of the field trials, I will confine myself to brief remarks of a general character respecting them.

These two sets of trials are conducted in different places which has caused and still causes much wordy war.

The Kennel Club adopts the plan of running in heats or rounds as in coursing. This plan is staunchly advocated by numbers of sound practical sportsmen, who argue that it is in the highest degree improbable that a faulty, imperfectly trained dog, or one indifferent in nose, range and style, should get through a stake undefeated. No doubt this is true as far as it goes, but at best it is but a one-sided view of the question, for, on the other hand, the two best in the stakes may be drawn against one another in the first round, when, as a matter of course, one—and through ill luck it may be the best—is at once *hors de combat*. I remember a notable instance of this at a Waterloo coursing meeting, where Bendimen and Bed of Stone, both public favorites for the cup, were the first couple drawn, and ran there undecided, when the noble owner of Bendimen drew him in favor of the little bitch; and at Horsehcath we had a glaring instance of the injustice of this rule, where Mr. R. Purcell Llewellyn's Norma, a first-class puppy that ran up to Ranger at Shrewsbury the week before, was, with Ranger, the first brace down, and her chance put out in a trial in which both performed well under the great disadvantage of little or no scent. Now, under the system on which the dogs are run at the Shrewsbury trials, Norma's chance would not have been put out. She would have been put down again with another competitor, and if she performed well might possibly again have been run with Danger. At Shrewsbury the dogs' merits are reckoned on a scale of points originally drawn up by Mr. Brailsford, and are as follows: Pace and range, 20; obedience, 20; style in hunting, 15; merit in backing, 10; game finding, 20 style in pointing, 15; total, 100, and the winning dogs are placed in the order merited by their average performance. For instance, if a dog has run three times, making totals of 70, 80 and 90 points, he would be credited with 80 points. This system, too, has the advantage of permitting the judges to call out and run together any brace whose individual performances have been so near that it is desirable to pit them against each other, the better to compare their style and general merits.

Of dog shows, as I have already observed, we have had quite a platter, and it would be wearisome to more than briefly refer to the principal feature of the best. Swindon is a new aspirant to fame, but the Wiltshire town promises to become popular. Although we have been at the game of dog showing for many years in this country, we are still a long way from perfect; and it is very noticeable that whenever a show is started in a neighborhood new to it, a large proportion of rubbish makes its appearance, until the owners of the mongrels learn, by repeated failure, that it is needless to show half breed curs—and many of them very wisely go in for good ones, finding them quite as easy to keep and much more creditable companions.

Thus, at Swindon, one-half the exhibits were utterly worthless; but Swindon is in its infancy, and will do better—even now we had such an array of bloodhounds as, I venture to say, was not to be seen at the great international at New York. The winner here (Rival) is by the famous Regent, out of Sylvia. As in all good dogs of the breed, his splendid head attracts the eye and commands our admiration; his high, domed skull, deep jaws and capacious nose; his thin, deep flews hanging down below the under jaw, while round the deep set eye the plentiful supply of loose skin lies in wrinkles; and the long, thin ears and abundant dewlaps fall far below his ample throat like folds of gracefully arranged drapery.

Rival is not, you must understand, our best bloodhound; he would not stand a chance with Brutus, Rollo and others. Still he is a good one, and his head, although truly grand, is not to be compared with that of Mr. Ray's St. Hubert, so excellently portrayed by Mr. Baker, the artist in *The Field* of May 12. St. Hubert's head far surpasses that of any bloodhood I have seen. It is simply magnificent.

Wolverhampton, situated in the heart of the "black country"—as the mining districts of South Staffordshire is called—is a very old and favorite show, and one of the best managed ones we have; but there was an unaccountable falling off, both in numbers and quality, this year. Above all things visitors were disappointed by and could scarcely realize the fact that there was only one bull dog and a very common lot of bull terriers—the latter class being, I may say, indigenous to the locality. Jim Hinks, of Birmingham, Mr. Godfree and a few others being the most successful breeders of this variety, and from them have emanated the whole army of Pusses, Victors, Princess, etc.; and, moreover, the Staffordshire miner is incomplete without his dog, and he must have one that can box. The fighting dog, par excellence, is the terrier—with enough bull dog to give courage and endurance, and not too much, or the truncated muzzle appears and destroys their punishing powers. The great interest taken by the miners and ironworkers in these dogs is shown in an exaggerated fashion in the story of the Dudley man who went to Gornal, a neighboring village, to inform his brother of the death of their mother, when he saluted him with "Ah, Bill, t'ood woman's decad." And then, as a happier and more important thought flashed across his mind, he added, "An', by gosh, lad, bitch has whelped nine on 'em, and ne'er a Dudley faced un." It is not that dog fighting has ceased that there was a paucity of bull terriers at Wolverhampton; but the fact is the show is so much more carefully bred and reared, and, consequently, so much handsomer, the animal used in this debasing sport (?) would have no chance with him in the ring. Our show bull terriers are by no means wanting in courage, but rather too full of it, and many of them are uncertain in temper.

Among other special clubs lately formed here I may name the Bull Dog Club, the Dandie Dinmont Terrier Club (of which I have the honor to be one of the secretaries), the Skye Terrier Club, and last, though not least, the Fox Terrier Club. These have been each and all called into existence by the highly unsatisfactory awards of prizes, each judge doing what seemed right in his own eyes, and consequently indulging in absurd vagaries and contradicting each other and themselves after the most approved fashion. To remedy this evil these clubs have drawn up a standard of excellence and valuation of the several points of the breed they take under their protection, and as the club's description and points may interest American readers I give it.

This club held a special show of fox terriers in London on the 2d and 3d of May, when over 300 of the best of the breed in the world competed, and the whole affair was a great success, the grand challenge cup, a truly magnificent trophy of great artistic merit, executed by Elkington & Co., being won by Mr. Benbidge's unapproached Nettle. This cup is of £50 value, and will become the absolute property of the fortunate exhibitor who wins it five times.

Our great summer show will not be held at the Crystal Palace this year, but a month later than usual—that is, the first week in July—at the Agricultural Hall, late the scene of the match between the American pedestrians, O'Leary and Weston. It is sure to be a large affair, but it will not be so popular with our country cousins, who are large supporters of our London shows, and who glory in a week in that nearest approach to fairy land, the Palace of Crystal and its beautiful grounds.

In concluding this rambling letter permit me to say that I will be pleased to give information through your columns to any of your dog clubs, or on any subject connected with kennel matters which lies in my power, and my facilities for gaining information are great, as I am in constant communication with a great majority of our most noted breeders and exhibitors.

Permit me to say there has been a widespread feeling of regret among English exhibitors that the short announcement of the International Show at New York did not permit them to send specimens, and I feel certain that should a great international show be held next year, and transit facilities secured, it would be largely supported from this country. H. D.

THE PROVIDENCE DOG SHOW.—The following is a list of the prize winners at the dog show held in Providence last week. Mr. Tileston judged all classes.

PROVIDENCE BENCH SHOW.—REPORT OF THE JUDGE.—

Class 1.—Champion English setters—No entries.

Class 2.—Champion Irish setters—Thomas Adcock, the only entry.

Class 3.—Champion Gordon setters—No entries.

Class 4.—Champion pointers—Isaac Campbell, the only entry.

Class 5.—Imported English setters or their progeny of the first generation—No entries.

Class 6.—Native English setters—41 G. M. Randall, 1st prize; 45, T. H. Hedley, 2d prize; 47, Wm. Tallman, highly commended. Bitches—29, T. Aldrich, 1st prize; 31, W. H. Wales, 2d prize. Puppies—Wm. Tallman, best dog puppy; Wm. Tallman, best bitch puppy.

Class 7.—Imported red or red and white setters or their progeny—49, C. A. Davis, 1st prize; 51 John See, 2d prize 50, Thos. Adcock, very highly commended. Bitches—51, C. A. Smith, 1st prize; puppies—190, G. W. Lee, 1st prize.

Class 8.—Native red or red and white setters—54, W. H. Sheldon, 1st prize; 56, P. E. Day, 2d prize. Bitches—52, L. H. Cutler, 1st prize.

Class 9.—Black and Tan, or Black, Tan and White Gordon Setters—No awards made. Bitches—W. Tallman, 1st prize; Frank Gay, 2d prize.

Class 10.—Pointers over 50 pounds weight—20, W. W. Austin, 1st prize; 15, Gordon Reid, 2d prize; 3, H. G. Russell, very highly commended; 14, Frank Carpenter, highly commended; 13, C. E. Hart, highly commended; 11, A. L. Mason, highly commended; 10, T. Aldrich, highly commended. Bitches—R. Eaves, 1st prize; 2, H. G. Gardner, 2d prize.

Class 11.—Pointers under 50 pounds—Dogs, no entries. Bitches—16, W. T. Start, 1st prize; 23, J. W. Cox, 2d prize.

Class 12.—Pointer puppies. 28, B. Pinder, prize for best Dog Puppy.

Class 13.—Retrieving and Field Spaniels, other than pure Irish. 3. Arthur Gardner, 1st prize; 66, Thomas Miller, 2d prize.

Class 14.—Cocker Spaniels. E. W. Davis, 1st prize. T. Aldrich, 2d prize.

Class 15.—Fox Hounds—75, Charles Burlingame, 1st prize.

Class 17.—Mastiffs—E. Carrington, Jr., 1st prize.

Class 18.—St. Bernards—C. D. Wieper, 1st prize.

Class 19.—Newfoundland—J. Clancy, 1st prize. 90—Wm. Clancy, 2d prize.

Class 20.—Coach Dogs.—Joshua Hoyle, 1st prize; D. Curran, 2d prize.

Class 21.—Scotch Collies.—114.—I. W. Snow, 1st prize; 115—J. Hoyle, 2d prize.

Class 24.—Skye Terriers.—W. B. Mathewson, 1st prize.

Class 25.—Yorkshire Terriers.—E. F. Huger, 1st prize; J. Gordon, 2d prize.

Class 28.—Bull Terriers.—128—Mrs. L. A. Davis, 1st prize; 132, Josh Hoyle, 2d prize.

MISCELLANEOUS DOGS.—The judge suggests that the $15 given to this class be divided between Mr. H. Phillips, for his remarkably fine greyhound, Rover; Mr. James T. Potter, for his Japanese bitch, Bijou; and Mr. A. J. Hopkins, for his greyhound, Ned.

SPECIAL PRIZES.

The Smith & Wesson revolver, presented for the best setter in the show, is awarded to the red Irish setter Limerick, owned by C. A. Davis. The fly rod, for the best pointer, is awarded to Dan, owned by W. W. Austin.

The most prominent sale made is that of the Irish setter Limerick, owned by H. A. Davis, to a member of the Westminster Kennel Club, of New York, for $300. Limerick will be sent to Syracuse, N. Y. Mr. Grant, of the Westminster Kennel Club, offered $500 for Mrs. L. A. Davis' thoroughbred English bull terrier (Goldsmith stock), but the dog was "not for sale." Ned, the St. Bernard-Newfoundland dog, owned by the Adams Express Company, who is only thirteen months old, is a very valuable dog. He weighs 100 pounds, and is of

the celebrated "Chief" stock. He was purchased by the company for $250. Two new features of the exhibition are the famous setters Start and Peg; $500 has been offered during the week for the former and refused. She is a native English setter. Peg is an imported setter and a fine animal, and took the first prizes at the Springfield and New York Bench Shows.

THE NEW YORK BENCH SHOW.—The official report of the Awards of the Judges at the late dog show at Gilmore's Garden is now printed, and can be had at this office upon receipt of the price, 25 cents.

—E. S. Wantmaker, of Hohokus, N. J., claims the name of Leaf for his red Irish bitch puppy, born Jan'y 13, 1877, by Dr. Goldsmith's Plunket, out of W. E. Hudson's imported Stella.

—Our friend Dudley, of Poughkeepsie, has sent us a new loader, which is advertised as usual. It is not as ornamental as it is handy, cheap and very useful.

VON CULIN'S FORCE COLLAR.—We have received from the maker one of these necessary implements for dog breaking, of which a correspondent in Rockland, Maine, says:

"I would like to express through your paper my gratification in using one of Mr. Von Culin's spike collars. I saw them advertised in your paper and sent for one, and am very much pleased with the working of it. My setter bitch, which would not retrieve, now not only retrieves nicely, but seems to enjoy it. Yours respectfully, JAMES WIGHT."

—Mr. Chas. F. Bancroft, of Baltimore, writes us that on the 29th ult., he received from the kennel of Mr. John M. Niall, Killaloe, Ireland, the red Irish setter bitch Lilly, in whelp to the world-renowned champion Irish setter Palmerston, the litter being due on the 22d inst. Lilly is 22 months old, thoroughly trained, and in color she is a deep rich mahogany. In appearance she fully comes up to my expectation, and exceeds by far Mr. Niall's description of her. She arrived in splendid condition on the steamship Caspian (Allan line). Lilly is by Capt. Leigh's Flash (1st prize Crystal Palace, London) out of his Luna; Luna by Marvel, out of Brosna; Marvel by Plunket out of Min—all in the K. C. S. B.

—Mr. P. H. Morris has purchased the Laverack bitch Mag from Dr. Strachan. He has also purchased from Mr. L. H. Smith two Leicester Dart puppies, a dog and bitch, marked like Paris, for which he claims the names of Startle and Pocohontas. Mag has been bred to Mr. Cross's champion Lark.

MORE DOG SHOWS.—And now Cincinnati is to have a dog show. Our correspondent writes us from there that a show will be held on the 21st, 22d and 23d of this month, and that over 300 entries have already been made. The place in which the show is to be held has not yet been selected.

A CHALLENGE.—I will match my crossbred red Irish setter bitch Irene, six months old, against any imported, native or crossbred Irish setter, dog or bitch, in the Syracuse Show, under seven months, for fifty dollars ($25 a side), color not to be taken into consideration. If match is accepted, money to b placed in FOREST AND STREAM before Saturday, 16th inst. To be judged by Judges of Irish class in Show.
P. H. MORRIS, 72 Duane St.

☞ No. 3 of "Canine Therapeutics" in our next issue.

—Three red *Irish Gordon* setter puppies are advertised for sale by Mr. Geo. E. Poyneer.

—Mr. E. J. Robbins, of Wethersfield, Ct., claims the name of "Mirah" for his red Irish setter bitch by imp'td "Buck" and out of imp'td "Floss." My "Flirt" out of "Bonnet Carre," and by Salter's "Dash" visited my "Pat" May 25.

—At Detroit, Mich., J. H. Canniff's blue belton bitch Maud whelped eleven on June 2, 5 dogs and 6 gyps. They are by Carlowitz.

A GOOD SUGGESTION.

MARYSVILLE, May 31, 1877.

EDITOR FOREST AND STREAM:

The numerous illustrations which have appeared in your valuable paper of sporting dogs have proved of great interest to me, and, I have no doubt, to all of your subscribers also who are interested in dogs. But their value would be greatly increased if with each plate (both in the paper and the forthcoming "Kennel Register") you would give the following dimensions of the dog represented: 1. Eye to end of nose; 2. length of head; 3. nose to root of tail; 4. length of tail; 5. girth around chest; 6. spread of ear; 7. height at shoulder; 8. weight. Without these dimensions the picture is of comparatively little value.

Very truly, A. C. BINGHAM.

Our correspondent has our thanks for his very proper and timely suggestion.

Sea and River Fishing.

FISH IN SEASON IN JUNE.

FRESH WATER.	SALT WATER.
Trout, *Salmo fontinalis*.	Sea Bass, *Centropristris atrarius*.
Salmon, *Salmo salar*.	Sheepshead, *Archosargus probatocephalus*.
Salmon Trout, *Salmo oufinis*.	
Land-locked Salmon, *Salmo gloveri*.	Striped Bass, *Roccus linneatus*.
Black Bass, *Micropterus salmoides*; *M. nigricans*	White Perch, *Morone americana*.
Muskanonge, *Esox nobilior*.	Weakfish, *Cynoscion regalis*
Pike or Pickerel, *Esox lucius*.	Bluefish, *Pomatomus saltatrix*.
Yellow Perch, *Perca flavescens*.	Spanish Mackerel, *Cybium maculatum*.
	Cero, *Cybium regale*.
	Bonito, *Sarda pelamys*.
	Kingfish, *Menticirrus nebulosus*.

For list of Trout Flies in season for June, see issue of May 31.

FISH IN MARKET.—Salmon are now very abundant. E. G. Blackford received from England, last Tuesday, some fine English soles and turbot, and we noticed also on the slabs of Fulton market two Scotch salmon.

Our quotations for the week are as follows:

ripe bass, 12½ to 30 cents per pound; bluefish, 10 to 12½ cents; salmon, green, 20 cents; mackerel, 10 to 18 cents each; shad, Connecticut River, 60 cents; white perch, 15 cents per pound; Spanish mackerel, 25 cents; green turtle, 15 cents; terrapin, $12 per dozen; halibut, 15 cents; haddock, 6 cents; king-fish, 20 cents; codfish, 8 cents; blackfish, 30 cents; herrings, 5 cents; flounders, 8 cents; porgies, 10 cents; sea bass, 12 cents; herrings, 5 cents; eels, 18 cents; lobsters, 8 cents; sheepshead, 15 cents; soft clams, 30 to 60 cents per 100; pickerel, 15 cents; Long Island trout, $1; Canada do., 50 cents; hard shell crabs, $3 50 per 100; soft crabs, $1 50 per dozen; weakfish, 12 cents; frog legs, 35 cents per pound.

—Arthur Boyce, of 45 Whitehall street, had good luck last week off the wreck of Black Warrior, down the bay, succeeding, among other fry, in landing a black fish of the following dimensions: Length, 24 inches; girth, 21½ inches; weight, 12½ pounds two hours after being caught. Mr. B. feels justly proud of his achievement, having brought to basket this fine fish with a light rod and reel after nearly a quarter of an hour's hard play. J.

CANADA.—*Brompton Lake, P. R.*, June 9.—The Waterloo Fishing Club report that they have had fine sport at Brompton Lake. Four of their number killed sixty "silver lunge" (lake trout) in one day. Weather hot and dry. Streams low. Fine salmon are sold here on the market at 15c. per lb.
STANSTEAD.

Milltown, New Brunswick, June 4, 1877.—In May the salmon were not as plenty as usual. There were, at least, fifty fishermen, and if they could not kill from one hundred to two hundred each day, why fish were very scarce. To satisfy fishermen at the stream, they expect a fish to rise most every throw. Now, however, they are very abundant, every fisherman having as much sport as they could ask. Salmon more about than for several years. Perhaps our Fish Commissioner, Mr. Atkins, should be thanked for our supply this spring.

I hear the Dobsey Club have a good company, and fish quite plenty. GEO. A. BOARDMAN.

—The Newfoundland seal fishery for the season has resulted in a catch of 412,000 seals.

MAINE—*Mt. Kineo, Moosehead Lake*, June 8.—Fishing began earlier here by two weeks than before in nine years and has been better than usual. So much for the game law that has been enforced during the last two years. Fly fishing is beginning to be good, and whoever comes here any time before the 10th of July will have their fill of speckled trout, and as many "lakers" as they want. Trout are running large.
K.

—The Mt. Kineo House at Moosehead Lake, Me., is now open for the season, presenting its usual attractions. The former guests of this favorite resort do not need any recommendations from us.

—Messrs. E. M. Bunce and Samuel G. Dunham, of Hartford, Ct., have just returned from a two weeks trip to Moosehead Lake, Maine. They report the fishing as fine as they have ever had in that region. Largest number of brook trout taken in one day by one man twenty, which weighed 36¼ lbs., the weight of the heaviest being three pounds. Flies used the greater part of the time were the Red Ibis, black and brown hackel. The weather was clear and very warm, the tormenting black fly more numerous than ever. Fly fishing on the lake was interrupted the last week by a thick scum which arose to the surface, either produced by the working of the water or the buds of elder and other bushes. A number of large lake trout were also captured, but no brook fishing was had on account of the logs.

MASSACHUSETTS.—*New Bedford*, June 8, 1877.—The trap and pound fishing in this vicinity this season has proved nearly a failure, but our waters are now filled with bass, bluefish and the usual summer species. Five hundred and thirty-two bass were taken at the Vineyard at one sweep of the seine last week. Yesterday "Capt. Lafe Sisson" took a party of Boston merchants down our bay and came back *loaded* with bluefish of extremely large size. Our markets are filled with fish, at low prices. CONCHA.

—The fine schooner G. P. Whitman, Captain Jerome McDonald, arrived at Gloucester on Monday from the Banks, with the largest fare of fresh halibut ever landed at that or any other port, weighing off 140,000 pounds.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals reported at this port, the past week, have been 89, as follows: 9 from the Banks, 51 from Georges, 28 from mackereling trips, and 1 from Magdalen Islands. The receipts for the week have been about 1,122,000 lbs. codfish and 100,000 lbs. halibut from Georges, 50,000 lbs. Bank codfish, 500,000 lbs. Bank halibut, 4,000 bbls. mackerel and 500 barrels herring.—*Cape Ann Advertiser, June* 8.

CONNECTICUT.—*Hartford*, June 13.—A number of bluefish, weighing from five to seven pounds each, were caught in the river, yesterday, between Saybrook and the Lynne bridge. It is something unusual for them to be taken in the river, but it is said that on account of the low water this season, the salt water extends further up the river than usual.

Bluefish are being caught in abundance off Saybrook, and are especially numerous at Plum Island.

As salmon, large and small, hover about the mouth of Connecticut river in schools, the Kennebecker's come down in their prices, and their fine salmon are retailed here for twenty-five cents a pound. T. S. S.

—A salmon weighing 10½ pounds was taken on the 6th inst. at the Falls at Pautucket, in Rhode Island. It was a female, and the eggs were about the size of a No. 7 shot. Pautucket is at the extreme head of tide water in Naragansett Bay, and at the falls the Blackstone River comes in. The river was first stocked five years since. It was taken in a scoop net, such as are used for catching shad and herring in the holes of the rocks. The captor reports he had a very hot time of it for a few minutes. FISH COMMISSIONER.

Adirondacks, June.—Mr. Arthur N. Hollister, of Hartford, Ct., just back from the Adirondacks, caught, among many other fish there early last week, one lake trout that weighed between seven and eight pounds. He was standing on the shore of Lake Delia, and caught the fish on a minnow, but with a seven ounce fly rod.

NEW JERSEY—*Kinsey's Ashley House, Barnegat Inlet*, June 9.—Bluefishing past week only middling. H. C. Patterson & Co., 39; Samuel Russell & Co., Phila., 36; Middleton & Co., 40 blackfish; D. L. Ketter & Co., Philadelphia, 14; Captain McWin, 36. Same day other boats from 10 to 20. Some Sheepshead were taken in the lower bay. We are expecting them every day. B.

—Blooming Grove Park offers rare attractions for the season of 1877. It affords good trout and black bass fishing, duck, ruffed grouse and hare shooting, and fox and deer hunting in their seasons. Trains via Erie Railway leave New York for Lackawaxen 8:45 A. M., 10:15 A. M., 6:45 P. M.; returning, leave Lackawaxen 9:09 A. M., 4:04 P. M.; leave Hawley 8 A. M., 3:05 P. M. Excursion tickets at 401 Broadway. For permits to visit the Park apply to GEO. A. REED, Secy, 37 Park Row, Room 23.

—The most profitable seining ground on the Delaware is the Mantua Creek fishery, about ten miles below Philadelphia. Several persons have retired on fortunes made at this fishery. The yield there on two days this season was respectively 2,400 and 2,000 shad, worth when taken at wholesale rates, nearly $1,500.

—On Monday last Mr. Wm. T. Boulden, at Locust Point fishery, on the Elk River, Maryland, caught a sturgeon measuring twelve feet in length and weighing 290 pounds. It was not the fish usually known as sturgeon in those waters, which are properly "mules," but the true sturgeon, such asfrequent the Delaware. They rarely enter the Elk.

VIRGINIA.—*Norfolk*, June 4, 1877.—Saw a good, plump Spanish mackerel last week that came from Lynn Haven. Have you ever tried a bonita steak? They are prime. These fish are now coming in from Back River. W. H. S.

—A fine salmon, weighing about nine pounds, was caught in the Delaware River, off Robbin's Wharf, opposite Bordentown, on Saturday.

FLORIDA.—*Halifax Inlet*, May 26.—We have lately been taking two species of fish in the river, which are not found here in the winter. First, the Vavalli, or Crevallé—the first being the pronounciation of the Minorcan fishermen of this coast—the name signifying in that language "horse," derived probably from the active habits of the fish in question. Its generic name in Gill's catalogue is *Carangus—Caraux defensor* of Cuvier. It seems to be allied to the dolphins and mackerels; to the former in activity and brilliancy of color, to the latter in solidity and richness of flesh. Size, from one to ten pounds, and is a very game fish when hooked, very predatory in habits, takes all kinds of bait, either on the surface or at the bottom.

Second, the ladyfish, named *Albula conorhynchus* in Gill's catalogue, which, as I have not seen described, I will give the following from a specimen 18 inches long, taken by me. Body slender, somewhat quadrangular in shape; head 1-5 the total length. Color of back, dark blue; sides and belly, silvery; scales small, head greenish. One dorsal, soft rayed, about midway of the back; tail deeply forked. Eyes very large, black; fins, silvery yellow. Mouth large, teeth small. Labials long and large, with fine teeth on the edges. All the fins soft rayed. P. 16, V. 16, A. 10, D. 18.

The ladyfish grows to the length of three feet, takes any bait, either at the bottom or on the surface. Is very voracious, and as game as a grilse. Like that fish, as soon as hooked, it begins to jump, and is half the time in the air when being played on a rod. The membranes of the jaws being thin, the ladyfish often escapes capture by shaking its head after the manner of the black bass. It is little esteemed for the table, being bony and soft of flesh. They would probably in summer, when they come in shoals to feed on the small fry, take the spoon, perhaps the fly. Those I have killed were taken with cut mullet, while fishing for red bass. S. C. C.

SPLIT BAMBO RODS.

To our customers and the public:—In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

June 20	6	56	3	25	2	47

—The weather for the past fortnight, at least for yachting puposes, has been in strong contrast with that experienced during a similar period last year. Then each club had for its annual event all the wind that was required, and in some cases even more; during the present season the regattas have been but little more than drifting matches. The Corinthian regatta of the Long Island Yacht Club was held on Friday, the 8th. The Jersey City Yacht Club held its regatta on Thursday, the previous day. It was cloudy and rainy, and the weather was wholly unfavorable.

—ATLANTIC YACHT CLUB REGATTA.—On Monday of this week the Atlantic Yacht Club held its twelfth annual regatta. Although not a a success from a yachtsman's point of view, in reality it was most delightful excursion for about 500 friends of members of the club, mostly ladies, for whose transportation the fine steamer Americus had been provided. Indeed, the annual regatta of the Atlantic Yacht Club has come to be looked upon by the ladies of Brooklyn as the most enjoyable event of the season. As the steamers Wm. Fletcher, carrying the judges and reporters, and the Americus left Jewell's dock the weather seemed anything but propitious, the last end of an easterly storm still blowing, and the sky being overcast. As the day advanced, however, the wind hauled to the southwest, with not enough of it to enable the schooners and first-class sloops to round the lightship and make the race within the prescribed time. The entries and dimensions of the yachts were as follows:

SCHOONERS.

Name.	Owner.	Mean length. Ft.	In.
Triton	Com. G. A. Thayer	65	10½
Peerless	J. Maxwell	70	9
Agnes	W. R. Vermilye	59	5½

FIRST CLASS SLOOPS

Niantic	R. H. Huntly	64	9
Orion	William Cooper	50	6¾

SECOND CLASS SLOOPS.

Kaiser Wilhelm	W. H. Field	41	8
Lizzie L	J. G. Johnson	41	5½
Genia	T. P. Fiske	40	3
Hope	E. C. Swan	38	8½
Nimbus	L. H. Biglow	31	7½
Mab	Richard Arnold	25	8

The start was from off Bay Ridge, and the course, for schooners and first class sloops, to and around the S. W. spit, the Sandy Hook Lightship and home. The second class sloops, after rounding the spit buoy, proceeded to a stake-boat in Gedney Channel, and thence to the starter's point. The yachts, having a flying start, crossed the line as follows: Peerless, 11h. 16m. 25s.; Agnes, 11h. 9m. 42s.; Triton, 11h. 18m. 31s.; Niantic, 11h. 25m. 22s.; Orion, 11h. 25m. 40s.; Genia, 11h. 23m. 10s.; Hope, 11h. 24m. 30s.; Kaiser, 11h. 26m. 11s.; Lizzie L., 11h. 24m. 5s; Nimbus, 11h. 26m. 10s.

The wind was light, but still fresh enough to make the contest interesting. The Peerless held her lead of the other schooners, while the Niantic was fast gaining on them, and leading the other sloops. Several tacks were necessary to enable them to make the first stake-boat, the yachts going around as follows: Agnes, 12h. 55m. 40s.; Peerless, 12h. 53m. 15s.; Triton, 12h. 57m. 55s.; Niantic, 1h. 4s.; Orion, 1h. 5m. 53s.; Genia, 1h. 7m. 12s.; Hope, 1h. 25m. 24s.; Kaiser, 1h. 16m. 38s.; Lizzie L., 1h. 24m. 30s.; Nimbus, 1h. 30m. 15s.

The wind hauling more to the eastward again, the lightship was now dead to windward, and the second class sloops also had a beat for the Gedney Channel stake-boat. The wind now died out almost entirely, and with a flood tide it seemed impossible for the yachts to reach the lightship and return within the eight hours to which they were limited. The Triton and Orion did eventually succeed in getting around, the one at 6:6:12 and the other at 6:16:12, but as far as the schooners and first-class sloops were concerned it was declared no race.

The second class sloops went around the stake-boat in Gedney's Channel as follows:—Genia, 4h. 56m. 30s.; Kaiser, 5h. 36m. 40s.; Lizzie L., 5h. 26m. 40s.; Nimbus, 5h. 22m. 35s, and having a fair tide home, succeeded in making the course in 7h. 42m. 50s., the Genia winning. Their times were as follows: Genia, 7h. 0m. 6s.; Kaiser, 7h. 44m. 32s.; Lizzie L., 7h. 32m. 9s.; Nimbus, 7h. 37m. 14s.

We are indebted for many courtesies to the Regatta Committee, comprising Messrs. F. T. Peet, H. S. Manning and G. A. Weber.

—For the splendid combination regatta of the Brooklyn Yacht Club on Tuesday, the hour of our going to press permits only a summary. The following table gives the start, finish, actual and corrected time:

	Start.	Finish.	Actual.	Corrected.
Susie S	11:10:35	3:20:35	3:40:00	3:39:40
Wm. L. Lee	11:38:49	3:19.50	3:41:01	3:41:01
Schemer	11:38:58	4.5:03	5:26:05	5:35:18
Lizzie L	11:35:52	5:05:41	5:29:49	5:29:39
Arrow	11:36:34	5:43:16	6:06:42	6:01:50
Niantic	11:38:53	6:03:16	6:23:13	6:16:22
Kate	11:34:52	6:15:20	6:40:28	6:33:00
Comet	11:37:52	5:5 • 50	6:13:58	6:13:16
Estelle	11:35:22	6:36:35	7:01:13	7:03:54

The sloops Susie S., Schemer, Arrow and schooner Comet are the winners in their respective classes.

The event was in reality a match race in each class between two yachts of wide reputation for speed, and between which an intense rivalry has always existed. In the schooners, these were the Estelle and Comet; in the first class sloops, the Arrow and Niantic; in second class sloops, the Lizzie L. and Schemer, and in the third class, the Wm. L. Lee and Susie S. Between the last two there was a wager of $300 a side in addition to the contest for the club prize.

REGATTA OF THE BOSTON YACHT CLUB.—*Boston, June 7.*—The first regatta of the Boston Yacht Club took place off the club house, City Point, to-day. The weather was very stormy, with occasional squalls from the northeast, thunder being heard in the distance. Despite the mist and gloom, four or five of the more courageous owners placed their boats at the disposal of the committee for a regatta. After consultation on board Commodore Cheeney's yacht Fleur-de-lis, the Commodore decided to present two of the prizes to be sailed for. The judges were: Thos. Dean, Esq., Capt. C. W. Jones of the Stranger, and A. Claxton Cary, Esq. The Regatta Committee decided (after conferring with the owners that wished to sail) to handicap, making but one class, with the regular time allowance. Every now and then the fog would shut down thick, and things would look gloomy enough. Precisely at 4 P. M. the centre-board sloops Violet, Rebie and Posy, and the keel-sloop Sunbeam, with the little catamoran, were sent off to windward with a fresh breeze, still northeast. The course was down the bay to buoy No. 6, leaving it on starboard; thence to Sculpin Ledge buoy, leaving it on starboard, to buoy No. 7, southeast of Fort Independence, leaving it on port, up the bay toward Dorchester, leaving Cow Pasture buoy on starboard to judges' boat, passing between that and flag boat. Being one of the contestants we had an admirable chance to follow the different phases of the race, and of course give the incidents more minutely. After leaving the judges' boat we had a dead beat to windward, with quite a steady breeze, and we found we held the centre-boards very well. Although there was hardly wind enough to make us point with them, we slid through the water a little faster, and thus made up for lee-way. The Violet, Com. F. E. Peabody, took the lead from the start, and rounded No. 6 quite a little distance ahead of the Posy, Capt. Hersey, with Sunbeam third, and Capt. Jas. P. Phiney's Rebie fourth. Capt. Gleason's catamoran was occupying a modest position in the rear. From the start we were anxious to know how the double boat would sail, but soon discovered that on the wind she was not a success; off the wind she skimmed like a bird. After rounding 6 we lost sight of the Violet the fog had shut down so. I immediately went below and got out the compass and chart, for on the face of our navigation lay our chances for a prize. Our course from 6 to Sculpin was S. S.E., and we made it correctly. On rounding that buoy we again came in sight of the Violet, which had her kites drawing splendidly; ours, too, was doing the business for us, and apparently we had neither gained nor lost on the Violet after she had got round No. 6. Again the wind lightened, and the Violet vanished, like the flying dutchman, in the mist. We could hardly see the others, they were so far astern; but we made out Rebie third, and the Posy bringing up the rear—the catamoran had given up and gone back. The course we were now sailing was north by west, and *that*, we found out, was not enough to make the buoy. The course from the chart is N. N. W., but we gave her a point to windward for lea set of the tide. Every eye was strained on the lookout, and if ever a buoy in our harbor was scanned for more closely than No. 7 I want to hear from it. We were sailing against odds and had got to make all that was possible to beat the boats astern, on allowance; besides the wind was light, and the centre boards skim in such weather. About ten minutes more and the Violet and No. 7 were sighted up to windward. We had made too much leeway, and were compelled to take in the balloon jib and beat up to the buoy to get round. The Violet was rounded with her jib top-sail thrown over the stay and piling for Cow Pasture buoy No. 6, Dorchester Bay. Again she left us like a vision, and all was bleak. What a lonesome feeling. Imagine yourself in a small circle of space, the only objects in view your boat and companions, and an ugly black can buoy with a big 7 painted on it in white. You are struggling to get to windward against a strong flood tide, and it seems almost as if the buoy would beat you. You know nothing about your competitors, how near or far they are. Well, to make a long story short, we got round the buoy, leaving it on port, and squared away from No. 7 for Cow Pasture, and where we supposed our friend the Violet was. In jibing around we always have to throw the balloon jib over the working jib stay, as it would not set properly without. The wind seemed to freshen as we got into Dorchester Bay, and we were soon bowling along with our lea rail down and everything drawing handsome as a picture. On our trip up the bay we spoke the little sloop Mignon, which had the hardihood to brave the uncertain to find out how the race was progressing. She followed us up to the buoy and over the rest of the course. Our usual luck of former buoys! The Violet and No. 6 (Cow Pasture) was discovered at the same time; she on the home track and the buoy quite a little distance ahead. We got round, however, but the Violet had gone into smoke. We took in the big jib and were sailing snugly along under jib, gaff-top sail and mainsail; our decks were slippery with moisture and one had to use due caution in getting about. In a few minutes the boom of a gun was heard ahead, and we were notified of the Violet crossing the line. Good-bye 1st prize, but look out for second. We spoke the Rebie when we were half way to the judges' boat, and that eased our minds; she was standing for the buoy and could not possibly make up the time we were ahead of her, the Posy had given up the race. We crossed the line just 1 minute and 11 seconds too late for the first prize, and beat the Rebie 9 minutes and 24 seconds. The Violet sailed the course (9¾ miles) in 1 h. 51 m. 22 sec., 1st prize. The Sunbeam (keel) 1 h. 59m. 11 sec., 2d prize. This race to us was of great importance, as it brought out all the knowledge of navigation we could display and gave us some ideas of dead-reckoning. We were fully satisfied with the result.

Appended is a summary:

Name.	Master.	Length over all. ft.	Allowance. ft.in.	Actual time. H. M. S.	Correct time. H. M. S.
Violet, C. B	F. E. Peabody	37	21.31	1 51 22	1 29 51
Sunbeam K	W. S. Nickerson	26 7	28.37	1 59 39	1 31 02
Rebie, C. B	J. P. Phiney	25	30.57	2 11 23	1 40 25
Posy, C. B	F. C Hersey	24	33	———	———
Amaranth, C	W. B. Gleason	18	37.26	———	———

Yours, KEDGE.

—It will be remembered that two years ago, on the occasion of the ocean yacht race off the Isles of Shoals, one of the buoys marking the course for the larger vessels was missing on the day of the race. A few days since the mystery was cleared up by Mr. Charnock of South Boston. He says that on the night before the great race, it being foggy, he moored his yacht to one of the buoys marking the course, and that during the night the yacht drifted several miles with the buoy in tow.

—Butler's America will probably be under sail by June 15. She will be commanded, as usual, by Captain F. Reed, and will engage in some of the leading races of the season. Her owner will, it is said, make an extended trip in her in August.

SCHUYLKILL NAVY REGATTA, *Philadelphia, June* 11, 1877.—The arrangements of the committee, except as to policing the course, were excellent.

Gormly won the singles easily, rowing all about the river, vainly hunting for smooth water, while Pleasonton, who has no "go fast" in him was, as usual, a bad last. The Philadelphia pair had the race all their own way; the Undine's stroke crabbing almost at the start, and growing wild, dropped away immediately.

The last and most important contest of the day was for the four-oared shell prize. The result makes a pretty general redistribution of trophies, Gormly being the only contestant holding over. The presentations were made by Commodore Krumbhaar, at the Undine House, immediately after the races.

SUMMARY.

Schuylkill Navy Regatta, June 9, 1877, National Course, 1½ miles straight away; water high and rough, wind, S. W. and strong. Prizes, championship and Presentation Flags. Umpire and starter, Commodore Alex. Krumbhaar; Judges, E. B. Snyder, Malta; Dr. A. S. Roberts, Undine.

Single Sculls.—Gormly, Quaker City. 1, time, 12:25; Thomas, Pennsylvania, 2, 12:35⅘; Hoffman, University, 3, 13:07¼; Pleasonton, Quaker City, 0, distanced.

Pair Oared Shells.—Philadelphia Club. C. V. Grant, stroke; Bonsall Taylor, bow; 1, 11:06¾. Undine Club. C. K. Barnes, stroke; P. F. Goddard, bow; 0, distanced.

Double Sculls.—Crescent Club. C. E. Steel, stroke; H. F. Witmer, bow; 1, claim of foul allowed. Quaker City Club. F. Henderson, stroke; J. D. McBeath, bow; 0.

Four Oared Gigs.—Pennsylvania Club. W. A. Rennert, stroke; F. M. Hartley, 3; Jas. W. Barr, 3; Max Schmitt, 4; Frank Kappes, cox.; 1, 10:04⅘. University Club. H. H. Brown, stroke; Ed. Law, 2; E. A. Crenshaw, 3; W. W. Fisher, 4; Dallas Saunders, cox.; 2, 10:23¾. Quaker City Club. S. B. Stinson, stroke; Oscar West, 2; J. D. Ferguson, 3; Frank Wood, 4; Geo. W. Parker, cox.; 3, 10:30⅘.

Six Oared Barge Race.—Pennsylvania Club. W. A. Rennert, stroke; F. M. Hartley, 2; W. J. Thomas, 3; Frank Street, 4; F. F. Cobb, 5; W. B. Cobb, 6; W. J. Barr, cox.; 1, 10:39⅘. Crescent Club. Geo. Young, stroke; C. D. Tatman, 2; C. T. Colladay, 3; H. D. Roberts, 4; H. W. Ridgeway, 5; Jos. Wiley, 6; J. B. Harper, cox.: 2, 11:05⅘.

Four Oared Shells.—Crescent. H. K. Hinchman, stroke; J. M. Harper, 2; H. W. Terry, 3; C. E. Steel, bow; 1, 9:09¾. Quaker City. C. R. Adams, stroke; S. Gormly, 2; F. Henderson, 3; J. D. McBeath, bow; 2, 9:16¾. University. Edw'd Waen, stroke; Frank Biddle, 2; H. Worrell, 3; J. M. Holsman, bow; 3, 9:39. SCULLS.

THE MORRIS SCHARFF RACE.—In the much anticipated five mile single scull race on Saturday, June 9, between William Scharff, of Birmingham, Pa., and Evan Morris, of Pittsburgh, for the championship of America and a purse of $2,000, Scharff was beaten. The race was rowed over the Monongahela course in the presence of thousands of spectators. Morris, who had been the favorite for some days previous, took the lead almost at the start, which he maintained until he passed the winning line. Morris turned the buoy in 29:54, Scharff following in 21:28. On the home stretch Scharff labored to close the gap between him and his rival, but the latter spurted and maintained his advantage, passing the winning point, according to the official time announced by the judges, in 36m. 45s., five to six lengths ahead, while Scharff's time was 37m. In the race last year Scharff won by less than a boat length, but no official time was taken. It is now expected that Morris will tackle Hanlon, the Canadian.

HARLEM RIVER.—A one mile race took place on the Harlem River, on Saturday afternoon, between selected crews from the Charlier Rowing Association, Columbia College, and the Polynesian Literary Society. The race was started at 4:30 o'clock, the Charlier crew taking the lead on a "spurt," and maintaining it easily to the end of the race, which they won by fully five lengths, in 5m. 55s., Columbia coming in second. The winning crew were: E. Littauer, stroke; A. W. Payne, No. 3; C. Gaunaurd, No. 2; N. B. Eustis, No. 1, and W. Clarke, coxswain.

—The race for the Beacon cup, between Harvard College students, was rowed on the Charles river Saturday morning, Goddard, class '80, and Harriman, class '77 contesting. The race was won by Goddard in 14:52. The distance was two miles.

—The Corinthian regatta of the Long Island Yacht Club was held on Friday, the 8th. The Jersey City Yacht Club held their regatta on Thursday, the previous day. It was cloudy and rainy, and the weather was wholly unfavorable.

National Pastimes.

CRICKET.—The match which was to have been played between the Germantown Club, of Philadelphia, and the St. George's, of this city, is off, much to the disappointment of many lovers of cricket. The secretary of the Germantown Club telegraphs: "Cannot come on. Match off. Cannot get an eleven." This seems very remarkable, as there appears to be no difficulty in getting an eleven when the visit is the other way. The St. George's Club has never broken an engagement, and last year went on with seven men and played two matches. The match was made three weeks before the secretary found that he could not get in town.

The St. George's Club has received a very cordial invitation to visit Ottawa, Ontario, on or about the 20th inst., to play a match with the Ottawa Cricket Club, and the secretary, Mr. Talbot, has issued a circular addressed to the members asking for volunteers.

ENGLISH FOOT BALL.—To the uninitiated onlooker, the game of foot-ball is one of the most mysterious performances which it is possible to contemplate. It would appear to be called foot-ball, on the *lucus a non lucendo* principle, because the ball is hardly ever kicked. After the first "kick off" it is seized by one of the players, who runs with it in his arms as fast and as far as he can. His opponents forthwith set upon him, and, if possible, knock him down. Then there is a general struggle for the ball. Of course, the possession of it lies between two or three men in the centre of the throng; but all the rest close around them with the exception of certain ones who, appointed for the purpose, with hands on knees intently, watch the "scrimmage." Every one in the main body pushes and struggles as vigorously as may be, and the outer ones put down their heads, and butt like goats against their friends. There is nothing to be seen but a writhing, swaying, confused mass of humanity, from which a column of steam rises into the wintry air. At length, those in the centre are compelled to drop the ball, and after innumerable kicks at each other's shins, it is pushed out of the little forest of legs, whereupon one of the outside watchers makes a snatch at it and carries it a few yards, when he is in turn set upon by his adversaries, and the same scene is repeated.—*Tinsley.*

—A. H. Hart & Co, and E. H. Van Ingen & Co., played at Greenville, N. J., on Saturday last. The former only played with eight men. Score: A. H. Hart & Co., 23; E. H. Van Ingen & Co., 8.

DITTMAR POWDER.

Please direct all letters for the above powder to Neponset, Mass. Capt. Bogardus and Ira Paine, are using my powder. CARL DITTMAR. —Adv.

—The largely increased business of Schuyler, Hartly & Graham, one of the largest and oldest houses in their line in this country, now occupying the buildings Nos. 19 Maiden Land and 20 and 22 John street, has necessitated their adding the adjoining store, No. 17 Maiden Lane, which is very handsomely fitted up and devoted entirely to samples of military equipments and business offices.

COCOA BUTTER, for external use, is superior to glycerine, and meets with great success in cases of sore throat and typhoid fever. This excellent remedy is prepared by Walter Baker & Co., the great Chocolate manufacturers, and may be procured of druggists in any part of the country.—Adv.

PIGEON SHOOTING.

Bogardus Trap Shooting.—At Norfolk, Va., Saturday, June 2, the following score was made by members of the Norfolk Game Protection Association, at Bogardus' glass ball trap shooting.

First match.

White, S. R.	1 1 1 0 1—4	Bowles, R. W.	1 1 1 0 1—4
Garnett, T.	0 1 0 1 1—3	Hardy, F.	0 0 0 1 0—1
White, L.	1 0 1 1 1—4	Corprew, J.	0 1 1 1 1—4
Adkisson, J. C.	1 1 1 1 0—4	Taylor, W.	1 0 0 1 0—2
Dey, D.	1 1 1 0 0—3	Polk, Jr.	0 0 1 0 0—1
Total	18	Total	12

Second match.—New sides chosen.

Taylor, W.	0 0 1 0 0—1	Hardy, F.	0 1 1 1 0—3
White, S. R.	1 1 0 1 1—4	Adkisson, J. C.	1 0 1 1 1—4
Bowles, R. W.	1 1 0 1 0—3	White, L.	1 0 1 0 1—3
Dey, D.	1 1 1 1 1—5	Garnett, T.	1 1 1 1 1—5
Corprew, Jr.	0 1 1 1 0—3	Rogers, T.	1 0 0 0 0—1
Total	16	Total	16

The second match being a tie, was shot off with two balls each.

Taylor, W.	0 1—2	Hardy, F.	1 0—1
White, S. R.	1 1—2	Adkisson, J. C.	0 0—0
Bowles, R. W.	0 0—0	White, L.	1 1—2
Dey, D.	1 0—1	Garnett, F.	0 1—1
Corprew	1 1—2	Rogers, T.	1 0—1
Total	6	Total	5

—The Bogardus glass ball trap shoot of the Jamaica Rod and Rifle Association came off the range on Tuesday afternoon of last week. The following is the score:

A. J. Wilkinson	1 1 0 0 1 1 0 1 1 0—6
L. R. Jagger	1 0 0 0 1 0 1 1 1 1—6
Thomas Lloyd	0 1 0 1 0 1 1 0 0 1—5
George W. Damon	0 0 1 0 1 1 1 1 0 0—5
Theo. Rogers	1 1 0 1 0 0 0 0 1 —1
George H. Creed	0 0 0 1 0 1 1 1 0 (—
Wm. S. Emendorf	0 0 0 0 0 1 0 0 1

Toledo, Ohio, June 5, 1877.—A pigeon match came off here to-day for a purse of $200, between Ed. Gillman of Detroit, and W. W. Stinett of Fort Wayne. Shot from plunge traps, 21 yards rise and 80 yards boundary; each man to shoot at fifty wild pigeons. The weather was fine and a large crowd in attendance. Both shooters seemed to be a little nervous, as the score has been beaten many times by both of them.

Ed Gillman—1 0 1 1 0 0 0 1 1 1 1 1 0 0 0 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 0 1 1 1 1 0 0 1 1 1 1 1 1 1 1 1—38.

W W Stinett—0 1 1 1 1 1 1 1 0 1 0 1 1 1 1 1 0 1 0 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 0 0 1 1 0 0 1 0 1 1 1 1 1 1 1—39.

W. W. Stinett winning the match by one bird. Messrs. Gillman and Stinett will indulge in another shooting match, at the same place and under the same conditions as at their recent meeting, on the 10th of July. M.

Hurlingham Park, Detroit, June 6, 1877.—Match between Robt. Crawford and L. H. Hascall; $50 a side, 25 birds each, 21 yards rise, Detroit Gun Club rules.

Crawford....1 1 1 1 1 1 1 1 1 1 1 1 0 0 0 1 0 1 1 1 1 1 1 1 1—20
Hascall....1 0 1 1 0 1 0 1 1 1 1 1 1 1 1 0 1 1 0 1 1 1 1 1 1—20

Ties on twenty—26 yards.

Crawford....1 1 1 1 1—5 Hascall....1 1 1 1 1—5

Second tie—31 yards rise.

Crawford....1 1 0 0 0—2 Hascall....1 1 1 1 0—4

Hascall won.

June 7—State medal shoot, English rules, 11 birds each.

Cook Cousins	1 1 1 1 0 1 0 w
E H Gillman	1 1 1 1 1 1 1 1 1 0 0—9
Harry Hawkins	1 0 1 0 0 1 1 1 1 1 0—7
J E Long	1 1 1 1 1 1 1 1 1 1 1—11
J V D Eldridge	1 1 1 1 1 1 1 1 1 1 1—11
Goff Stenton	1 0 1 0 w
Louis Dubois	0 1 1 1 1 1 1 1 1 1—10
E S Barbour	1 1 1 1 1 0 1 1 0 0 0—7

Ties on eleven.

Long....1 1 1 1 1—5 Eldridge....1 1 0 1 0—3

Long won.

Sweeps, same day, miss and go out; plunge traps, 26 yards rise, two prizes, $18 and $10.

Hascall	1 0	Stenton	0
Eldridge	1 1 1 1 0	Gillman	1 1 0
Dubois	1 1 1 1 1—5	Cousins	1 1 1 1 1—5
Long	1 1 1 1 1—5		

Ties on five—31 yards.

Dubois	1 1 1 1 1—5	Cousins	1 1 1 1 1—5
Long	1 1 1 1 1—5		

Second tie.

Dubois	0 1 1 1 0—3	Cousins	1 1 1 1 1—5
Long	1 1 1 1 1—5		

Long and Cousins divided.

Same day, glass-ball shoot, 5 each; 2 prizes, $9 each.

Gillman	4	Dubois	3
Eldridge	5	Hawkins	2
Long	w	Barbour	3
Hascall	w	Alvarson	2
Cousins	4	Sheldon	3
Stenton	4	Schweikert	3

Ties on four for second money.

Gillman	1 1 1 1 1—5	Cousins	1 0 1 1 w
Stenton	1 1 1 0 w		

Sharon, Pa.—The semi-annual match for the gold medal of the Sharon Shooting Club, at 10 glass balls each, 18 yards rise, took place on Saturday, June 2, and resulted as follows:

C E Tribby	7	E Morgan	6
T E Blunt	8	H Crostwaite	5
A E Carter	8		

In shooting off ties of eight Mr. Carter won, after which the club participated in several small five-ball matches, $2 entrance.

First sweep:

Tribby	5	Crostwaite	4
James Ray	3	Blunt	4
Carter	4		

Tribby took first, Carter second.

Second sweep:

Ray	5	Tribby	4
Crostwaite	3	H F Dickson	4
Ed Ohl	4	Blunt	3

Ray first, Ohl and Tribby divided second.

Third sweep:

Crostwaite	2	Tribby	5
Ray	5	Dickson	4
Ohl	5	Blunt	4

Tribby and Ohl divided first, Dickson second.

Fourth sweep:

Crostwaite	2	Tribby	5
Ray	4	Dickson	5
Ohl	5	Blunt	4

Ohl and Dickson divided first, Ray second.

The day's sport ended by Dickson challenging Crostwaite to shoot a gum-ball match, in which Crostwaite came out winner, nine to Dickson's eight. C. E. T.

(Other Game Bag and Gun matter on Page 310.)

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

T. W. G., Nashua.—Inform me, if possible, in what number of your paper the last article by Fred Ober (Beverly) was published? Ans. In May 17.

Verd Mont.—What is the legal way to measure a net, whether from knot to knot in the mesh, or by extending and then measuring between extremities? Ans. Extend the mesh.

L. M., Northampton.—Will you inform me if dogs are more liable to run mad in summer than in winter? Ans. In winter, ratio of three to two for summer.

O. N. L., who asked a query about muzzle-loading guns in our paper of May 24, will please send us his address.

J. E., Laramie City.—Will you please inform me if there is a book published for curing fish for market; if so, what is the price? Ans. No book of the kind.

O. C. O., New York.—Will you let me know in your next issue, 1. Where the game laws of New York can be had. 2. Also, what reputation Grant & Co.'s double-barrel shot guns have. Ans. 1. "Fur, Fin and Feather." 2. Very good.

W. A. A., New York.—I would like to know if you can give me a receipt for stuffing birds and animals? Ans. The information asked for would occupy several pages. Send to Naturalists' Agency, Salem, for C. J. Maynard's Taxidermists' Manual; price $1.50.

E. T. D., San Francisco.—Where can I get "Canoe and Camp Life in British Guiana," by Barrington Brown? Ans. Write to Leggat Bros., No. 3 Beekman street, New York.

J. C., New York.—Where can I obtain the official figures of the Centennial Rifle Match of 1876? Ans. Write for copy of report to Geo. S. Schmehorn, Jr., Secretary N. R. A., 23 Park Row, N. Y.

W. V. B., Poughkeepsie.—"Tacking Ship Off Shore" is credited in your paper, to Mrs. Celia Thaxter. I understand it was written by Rev. Walter Mitchell, of Rutland, Vt. Is it so? Ans. We copied a reprint with credit as given. Cannot decide as to the authorship.

F. D. P., North Pearl st., Albany.—Can you inform me where I can get a full-blooded *English* mastiff dog pup, not over three or four months old, and at what price? Ans. There are several breeders of pure Lyme Hall mastiffs near New York, but cannot say whether they breed for a market. You had better advertise.

B. P., Pittston, Pa.—What can I do for my young setter? His nose is as dry as a puff ball, and has been so ever since I have had him—four weeks. He acts as though the passages were obstructed, sneezing and trying to clear them out. There is no discharge, and he seems to be in good health every other way. Ans. Give him an ounce of castor oil and feed on corn meal mush.

C. A. P., Peterboro, Canada.—Can you, or any of your correspondents inform me if trolling baits are made with an attachment to prevent weeds catching the hooks; if so, where can they be had. Ans. Spoons so made can be bought of Bradford & Anthony, Boston.

S L. W., North Manchester.—Where, and at what price can the Massey cartridge crimper be purchased? Can it be used on Sharps' new .45 calibre straight shells? Ans. Address Messrs. M. B. Massey, Huntington, Pa. It is used only for paper shells.

J. H. M., Mamaroneck.—Has there been any change in the law regarding the close season for woodcock in this State, viz, New York? Ans. Not yet signed by the Governor, but the new law makes the season open Aug. 1, except on Long Island.

H. S., Rouse's Point.—Which is the easiest muzzle for a dog, as our law enforces muzzles? Ans. The patent automatic dog muzzle is regarded as the most comfortable for the animal, as it allows it to eat while muzzled, at the same time preventing him from biting. There is no objection whatever to its use. Address W. & F. Mersereau, 321 Broadway, New York City.

Captain, Graniteville, S. C.—Is it true that a 72-pound striped bas was caught in the Hudson River, off Verplanck's a fortnight ago, as stated in the Poughkeepsie *Telegraph*? I never heard of anything approaching this weight. Ans. The statement has been authenticated by our correspondents. We have heard of striped bass larger than this, but not in the Hudson.

T. P. Wendon, 68 Christopher st., New York.—Your specimen reached us in such a fragmentary condition that it is impossible to do more than say that it belongs to the *Gyranidae*, a family of water beetles. For information concerning it, see Packard's Guide to the Study of Insects. Your specimen was very likely *Gyrinus nutator*.

S. E. W., Manchester.—Continue treatment as recommended to J. W. P., of Philadelphia, but for the word *nerrun* read *iron*. Two weeks of the diet and alterative medicine recommended ought to make a decided change for the better for your dog, which, by the way, should be carefully protected from heat and dampness, and be allowed to run to grass as much as possible.

D. McG., Harrisville, Mich.—Have the rifle clubs of New York adopted the new Wimbledon targets or retained those of 1876? Ans. Yes; but for the coming Wimbledon meeting the mid-range and short-range targets the British N. R. A. have ordered important changes, fully explained in Rod and Gun of January 6 last, page 218.

Camper, N. J.—Do you know of any place that an army hospital tent, 14x14, can be rented first of July for two or three weeks? 2d. Would dry sand be good to carry worms in during hot weather? In using moss on a very hot day the worms spoil, and I thought sand might keep them if they had been well scoured beforehand? Ans. You can buy a tent about as cheap as you could hire one. See advertisements in our paper. 2d. Sand is the proper thing in which to keep worms.

R., Phila.—We are shooting at pigeons from the trap, single birds, 21 yards rise. Philadelphia Sportsmen's Club Rules. A bird rises and flies a few feet, then alights. Just as he reaches the ground he is shot at and killed. The shooter claims that it is "no bird," and claims another, as the bird was on the wing when covered by the gun, and at the moment of pulling the trigger. The others claim it a "missed bird." Which is right? Ans. It was a missed bird. It should have been hit while flying.

W. C. B., St. Louis, Mo.—Please explain the difference, if any, in the terms "shedders" and soft-shell crabs. Answer in columns. Ans. Shedders are crabs that are preparing to shed their shell. They have reached that period when they are next to helpless, and the old shell is easily removed. Soft-shelled crabs, so called, are crabs that have shed their old shells, and whose new ones have not become sufficiently hardened to act as a protection, or to assist them, as far as the claws are concerned, in locomotion.

W. E. G., Stockbridge, Mass.—Will you please give me a few hints as to the construction of an eel-pot, to be sunk in the deep eddies of the river. Is there any book treating on this subject in connection with small trapping? Ans. The common eel-pot is a long basket cylinder into one end of which a wicker funnel is intruded after the bait of lobster or meat is placed within. The eels crawl in easily, but cannot get out. Do not know of such a book. The U. S. Fish Commissioners Report for 1872, pages 255 to 274, contains diagrams and printed descriptions of various seines, pounds, nets, fykes and weirs.

J. J. S., Bloomington, Ill.—1. I have a setter bitch three weeks with pup. She is between three and four years. For the last two weeks one of her eyes keeps running what I would call in a person a "dry tear." Is it caused from a cold or from some other cause, and what is the remedy? 2. She has something that looks like a wart on her fore leg; it is quite sore and seems to be spreading. What is the cause? Ans. 1. Your bitch probably has a cold. Give her a good dose of castor oil, and afterwards a Dovers' powder night and morning for two or three days. 2. Could not tell without seeing it. Apply a flaxseed poultice; afterwards wash well and annoint with carbolic salve.

H. W., St. Louis.—My Gordon setter has a large raw sore on one hip, and another coming on the other, and several small ones on the flanks, with scales and considerable dandruff. The larger sore looks like a scald, but nothing of the kind has befallen him. Otherwise the dog is all right. Ans. Your dog would seem to have one of the numerous forms of mange, and needs alterative medicines, a formula for which you will find in the books, a cooling diet, clean, dry bed in a cool, airy place, and as much liberty to run to grass as you can afford him.

J. M. C., Clyde.—My setter pup, 4 months old, vomits every time she is fed. I have tried powdered glass, areca nut and santonine for worms. Do you know of anything else? I think she has worms yet. Ans. Do not know precisely what to advise without seeing the pup; but incline to think that your pup requires a stomach tonic, two formulas for which are given by "Stonehenge" as follows: Stomachic Bolus—extract of gentian, 6 to 9 grains; powdered rhubarb, 2 to 3 grains. Mix and give twice a day. Stomachic draught—Tincture of cardamoms, ½ to 1 drachm; compound infusion of gentian, 1 oz.; carbonate of soda, 3 grains; powdered ginger, 2 grains. Mix and give twice a day. You can try either of these prescriptions, not forgetting they are intended for full-grown dogs.

L. R., New York.—1. Please inform me whether the N. Y. State law allows summer woodcock shooting, and from what date. 2. In your opinion does the game law of Illinois, as published in your issue of April 12th last, prohibit a party visiting that State in Nov. for pleasure shooting, from sending presents of game out of the State to friends at home? Ans. The new law makes the close season for woodcock expire on Aug. 1, except on Long Island, where it remains as before. 2. As the law reads, or at least as the one we published reads, it would seem that the section only referred to residents of that State.

J. F., Detroit.—1. My dog is 5 months old and seems well and lively, but his hind leg seems to be weak; he will walk a short distance and begin to walk on three legs; it seems to pain him at times very much and he licks it often, also wants to gnaw it. What can I do for him? There is a small *red* spot on the bottom of his foot, but it does not seem to get any larger. 2. What will be the price of Mr. Hallock's new book? Ans. 1. From your description we could not say what was the matter with your dog. If carefully fed on nourishing diet he will probably outgrow the trouble. This probably is a remnant of distemper.

Tennis, Nahant, Mass.—Could you tell me through Answers to Correspondents what is the best preparation for fastening rubber to the soles of boots, for playing tennis, etc.? Ans. Cut virgin rubber with shears into thinnest possible shreds, place in a wide-mouthed bottle in quantity about one-tenth of its capacity; fill the bottle three-quarters full of good benzine perfectly free from oil. The rubber will swell up, and in a few days become as thick as honey if shaken up often. A piece of solid rubber the size of a walnut will make a pint of the cement. This cement dries in a few minutes. Apply three coats. If too thick add more benzine; if too thin, more rubber. Unvulcanized rubber can be bought at most large stores where rubber goods are sold, and at some drug stores.

F. R. Welsh, Concord, N. H.—1. Can you tell me what kind of a hawk's nest I have found from following descriptions? The nest was built in a pine tree, and made entirely of sticks. It was about 18 inches across and one inch deep. There were three light blue eggs, spotted (blotched) with brown. The hawk itself was light slate color above, with a gray breast, spotted with brown. It measured *about* 12 inches in length, and its tarsi were *about* 4 inches long. 2. What is the best food for young gray squirrels? 3. What kind of shooting can be had in July and August at Point Judith, L. I. Sound? Ans. 1. Probably *Nisus fuscus*, though the tarsal measurements are too long for that species. 2. We should feed bread, or crackers and milk. 3. Bay birds, including the sand pipers and some of the plover.

O. S. M., Goshen, Indiana.—1. I have a muzzle-loading duck-gun, single barrel, 7-gauge, 30-in. barrel, weight 11 lbs.; a good shooter of the kind. Can it be choke-bored so as to greatly improve its shooting at long range? 2. Probable cost of choking? 3. What would good pattern be at 60 yards, 2 ozs. No. 1 shot, 6 drs. powder? 4. Do you have guns often at a bargain? I would like one 7 to 8 lbs. weight, 12-gauge, a good serviceable gun, if I could get it cheap. 5. Who manufactures the Phœnix shot gun, and do they make decoy duck guns on same plan as Phœnix? Ans. 1. Yes, decidedly; or, as is more often done, what they call enlarging at the breech and gradually tapering at the muzzle. 2. Price from $3 to $5. 3. Good pattern would be. 4. Yes, we often have such guns as you mention offered for sale at this office. 5. Mervin & Co. of this city, are the agents of the gun. We believe they use larger grades.

P. M., Pittson, Pa.—Please let me know through your Answers to Correspondents where I can get bird-lime and how to use it; also, what effect does it take on the bird? Ans. Boil linseed oil until it is of the consistency of molasses. It should be boiled in an earthern pot in the open air, for about two or three hours. It is very essential that an earthen vessel should be used, as an iron one heats and the oil takes fire when boiling, and in such a case is useless as bird-lime. A pot should be used with a tight fitting cover, to prevent the fire entering inside it. When prepared set the oil away in tin boxes with tight fitting covers until it is to be used. Prepared lime made of pitch and oil and sold by some dealers, is worthless. Select some small dry sticks, about eight inches long and as thick as a straw; sharpen one end of them to a flat, thin edge, so they can be stuck into a cut in a stake; take a large stick or stake and drive it in the ground; make cuts in its sides suitable to receive the flat ends of the stock; take two of the small sticks and dip them in the lime; when covered, hold one in each hand and roll them between your thumbs and fingers with their sides touching, thus equally distributing the lime; insert their ends loosely into the notches in the stake in the ground, and place a "call bird" in a conspicuous place near the stake; when the birds alight in the sticks they pull loose from the main stick, and when flying away the wings come in contact with the lime and are pinioned to the bird's sides. It does not hold them by the feet, as is generally supposed.

—Undoubtedly one of the best and cheapest stocks of Carpetings, Oilcloths, Mattings, etc., to be found in the United States is that of Messrs. John H. Pray, Sons & Co., Washington street, Boston. I. W. Adams is the sportsman of the firm, and will take special pains to please any of our friends calling upon him, or with any orders sent him. It is a good, reliable house.—*adv.*

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

Base Ball: Chicago vs Hartford, at Brooklyn; St. Louis vs Boston, at Boston; Buckeye vs Lowell, at Lowell; Rochester vs Cincinnati, at Rochester; Indianapolis vs Erie, at Erie; Star vs Louisville, at Syracuse. State Sportsmen's Convention, with Bench Show of Dogs and Pigeon Shoot, at Syracuse.

Wednesday, June 20.—Trotting, as above. Running Meeting, at Cleveland. State Sportsmen's Convention, Bench Show of Dogs and Pigeon Shoot, at Syracuse. Eighth Annual Prize Meeting of the Richmond Rifle Association, at Danville, Canada.

NATIONAL SPORTSMEN'S CONVENTION.—The fourth annual convention of this association was called for June 10, at the Vanderbilt House, Syracuse. Only six delegates appeared, and as it required fifteen delegates to constitute a quorum, there could be no regular meeting. After listening to the annual address of the President, Mr. Greene Smith, the gentlemen present adjourned. The next meeting is appointed at Wilkesbarre, Pa., the first Tuesday in June, 1878.

THE SUMMER RESORTS OF LONG ISLAND.

THE remark has been made, regarding New York, that one of its advantages, and that not the least, is that it is so easy to leave it. The observation is perfectly true. Thanks to the enterprise of our men of business, steamboats are plying and trains whirling in every direction, and within an hour the citizens of New York can be in the enjoyment of magnificent scenery, and of a complete change of air and temperature. It is unfortunately characteristic of a large proportion of city residents to undervalue the resorts nearest at hand. In the most literal meaning of the phrase, "Distance lends enchantment to their view" of a desirable summer residence. Their usage has accordingly been to make a considerable yearly sacrifice to leave business entirely for a short season, and having enjoyed their brief rest to return to the city for what might remain of the heated term. The rule operated badly in the case of those who left and returned early. They left before the heat had produced its enervating effects, and returned at the dullest and most oppressive season.

To these and others less prejudiced in favor of distance, the advantages of Long Island are well worthy of attention. There are many places between Fort Hamilton and Montauk Point, along either the northern or southern shore, easy of access by one or other of the branches of the Long Island railroad, beautifully situated, cool, secluded and salubrious. We leave aside the historical associations attaching to some of these localities, which would carry us back through all the leading events of American history to the landing of Hudson and the times of the Indian tribes. We also leave out of view the commercial advancement of Long Island. We would concentrate attention entirely upon its advantages as a summer resort, or as a place for spending a brief summer holiday.

There are first to be considered the requirements of the city man whose business really demands his daily attention and presence, such as he could not give it if retreating to a great distance. His object ought to be to find a quiet, cool place, from which he can, if necessary, run into the city in the morning and return in the evening. A glance at the map will show how perfectly he can realize his wish. It is not likely that it will be considered advisable to travel more than the thirty-seven miles which lie between Long Island City and Babylon, on the southern shore. This resort has many special advantages and numberless attractions. Near the seashore it possesses facilities for bathing and sea fishing, and, in the bracing air from the great South Bay, all that is offered by a sea-port town, minus its objectionable features. The waters of the bay, sheltered on the south by Oak Island, a group of islets and the great South Beach, are safe and pleasant for bathing or boating. The bather will not find, of course, the wilder enjoyment of dashing and tumbling in the surf, but the lover of a still-water "dip" can be abundantly gratified. If time, however, should permit, the luxury of surf bathing can be enjoyed to the full, nine miles from Babylon, at Fire Island, one of the most famous of American bathing places. The island is reached after a pleasant sail from Babylon. The fishing here is admirable, and the dragging of the finny monsters from amidst the rolling surf is to be classed amongst the most exciting methods of plying the piscatorial art. It savors of the primitive no doubt, but is none the less exhilarating. There is no need to expatiate upon the enjoyment of a sail when waves have just sufficient roll to relieve the pursuit of this form of pleasure from tameness. We must leave much to the imagination of the reader, and return refreshed by the strong ocean breeze to Babylon. To what has previously been said of its attractions must be added the trout fishing and shooting. The former is to a great extent preserved, but the latter is for many miles eastward both good and abundant.

Keeping before us the necessities of a man who must visit the city daily, or, at least, very frequently, we turn westward and pass hastily through South Oyster Bay, Bellmore, the beautifully wooded section between Merrick and Baldwin's, and so on until Rockaway and Rockaway Beach are reached.

Looking now to the northern shore, the pleasant little town of Northport, forty miles from Long Island City, may be taken as the furthest point likely to be selected. It would be hard to find a retreat so cosily situated and so perfectly inclosed in quietude, within an equal radius from New York. Lying a short distance from the depot, at the head of a perfectly sheltered inlet, it is reached after a charming walk or drive along a road winding among woods clad at this season in the full richness of their verdant beauty. Apart from its undulating and varied character, an air of repose seems to lie upon the whole region. If a man can enjoy anywhere the luxury of rest, Northport is surely the place. Across the wooded hill on the right, and almost two miles off, lie the waters of the sound. Turning to the inner shore, a few small ship-building yards give the feeling of restfulness only an additional fullness by their freedom from anything akin to bustling activity. A pleasant road leads along the hill-covered shore, from which we look across to Little Neck, the narrow intervening bay dotted with a few boats or sailing craft. We pass the ruinous jetty where a steamer formerly landed its passengers from the city and intervening ports. Occasionally a yacht puts into the bay, and by the beauty of her build and trim rig, breaks the monotony of the life of the residents. Keeping along the shore the land bends to the left, and a narrow isthmus leads us to Eaton's Neck, on the outer point of which stands a light-house. The walk is delightful, and still keeping to the left or west, the shore of Huntington Bay is reached. Directly opposite is Lloyd's Neck, and, to the southwest is seen the entrance to the inlet, at the head of which stands the town of Huntington.

Returning to Northport we are informed that the town was settled almost seventy years ago, that sickness is almost unknown, and, strangest of all, that its beauties are monopolized by a certain number of summer visitors who return year after year, and almost claim a prescriptive right to the place and its accommodations. There are many other towns and villages nearer home scarcely less deserving of attention, and which any one in quest of a summer residence can visit in a very short space of time, and there make a selection to suit his special requirement.

What has been said for the benefit of the man of business, who makes his home temporarily in the country without severing his connection altogether with the city, is equally applicable to the case of those who have only a brief annual holiday of a few weeks' duration. The latter can, however, if it should be thought desirable, venture to a greater distance and explore Shelter Island, or even venture beyond the railroad system to Montauk Point.

Nothing has been hitherto said directly of Long Island as the ground for a pedestrian tour. It is a pity that such excursions are not more in fashion. All the places mentioned might be visited on foot with pleasure. Few fields would better repay the pedestrian than that extending from Cow Bay, or from Hempstead Harbor to Northport. The distance in a direct line or by rail is trifling, but may be stretched to an almost limitless extent by one determined upon peering into the beauties of the winding coast. The shore is broken by a great number of inlets, and the scenery along the promontories or necks is in a great measure a sealed book to those who are unused to the most ancient friend of locomotion.

RECENT DISCOVERIES IN PALEONTOLOGY.

IN the "American Journal of Science and Arts" for November, Prof. Marsh continues his series of papers on new Tertiary mammals, and describes four new genera from the Eocene. Considerable attention has recently been attracted to the Yale collection by the remarks of Prof. Huxley, and by the fact that that learned gentlemen drew a large part of the material for his lectures on Evolution from the fossils which he examined while at New Haven. The interest which seems to be generally felt in these matters, at the present time, induces us to give some brief description of a few of the wonderful forms of animal life from the Tertiary formation, since most of the discoveries that have recently been made are quite unknown, except among scientific people. In future we shall endeavor to keep our readers posted on these matters, which are interesting, not only in themselves, but from their bearing on the great and now universally discussed question of Evolution. Nor shall we hereafter confine ourselves to the Tertiary epoch. The Cretaceous has its wonders, no less striking than those of later time, and, in their proper places, we shall discuss at some length the marvellous variety of reptilian and avian life which existed during Mesozoic time.

Perhaps the most striking fossil described in the paper to which we have referred, is what Prof Marsh has called *Eohippus* (the dawn of the horse). This animal, which was about equal in size to the red fox, differed from its nearest ally, the *Orohippus*, and thus from all horselike animals hitherto known, in the character of its teeth, and, what is still more striking to the unscientific mind, in the number of its toes. While the *Orohippus*, the most remote ancestor of the horse known up to the time of this latest discovery, had four toes in front and three behind, *Eohippus* goes back one step further, and has four toes on the hind foot as well as in front. We are told, besides this, that there is some evidence to show that it had perhaps the rudiment of a fifth toe, both before and behind. We have thus a horselike animal, the feet of which probably resembled those of a tapir more nearly than anything else, but whose general aspect was widely different from that of the large, clean-limbed horse of the present day.

Another new form, of which Prof. Marsh has given us an account in the paper under discussion, is an animal of the suilline, or hog tribe. This *Parahyus*, as it has been called, is interesting as being one of the very few artiodactyles, or even-toed mammals, that have been described from the Eocene in this country, and the first as yet noticed from the *Coryphodon* beds of New Mexico, the lowest and hence the earliest Tertiary known on this continent. *Parahyus* resembled in size the modern wild boar, but the jaws were proportionately shorter and stouter. The general aspect of the remains from which this genus is described is quite similar, except, of course, in respect to size, that of *Elotherium*, a gigantic suilline of the Miocene; but the former may readily be distinguished from its later ally, as it has one less premolar tooth. The present genus, as remarked by Prof. Marsh, "affords an interesting example of an extinct form outside of the ancestral line, which terminated in the existing suillines."

A third new genus announced is a remarkable carnivore, about the size of a large wolf. The remains from which it is described consist of a nearly perfect skeleton in an admirable state of preservation. This animal, *Dromocyon*, like the one just described, resembles a later form, the terrible *Hyaenodon*,

of Miocene time. The top of the skull supports an enormous sagittal crest, for the attachment of the biting muscles, and, although the skull was large, the brain, as in all Eocene mammals, was very small.

Dryptodon, the last of the animals described, belongs to the lately discovered and remarkable order, *Tillodontia*. In this order, which was announced by Prof. Marsh a short time ago, the characters of several different groups of mammals are united, and the animals composing it are thus quite unlike anything known at the present day. All the genera of the order are characterized by huge incisor teeth, growing from persistent pulp like those of the rodents of to-day. These teeth in *Dromocyon* are of enormous size, and measure in antero-posterior diameter at the alveolus, or point where they emerge from the jaw, not less than an inch and a quarter. These monstrous teeth extend back through the jaw under three of the premolars.

We see, then, that the paleontologists have at last discovered the four-toed horse, the existence of which was predicted some years ago; and we may confidently look forward to a not distant day when we shall be introduced to a five-toed equine which shall form the immediate link between the first of the horses and the tapiroid perissodactyles of the earliest Eocene. We see, too, how the unremitting labors of years have brought, and are still bringing to light an infinite variety of new forms, of the existence of which no conception was had until they were discovered. These strange creatures, standing, as most of them still do, alone, seem veritable monsters; but we may feel sure that, as the knowledge of the vast subject which we are discussing becomes more and more extended, each of these wonderful animals will be found to have his place in the system of life, and that finally the "missing links" having all been supplied, the grand plan of nature will at last be clearly revealed.

THE STARLINGS IN CENTRAL PARK.

SOME DISPARAGING COMMENTS ABOUT THE SPARROWS.

THE City of New York is greatly indebted to the American Acclimatization Society for the setting at liberty a large number of common starlings (*Sturnus vulgaris*) in the Central Park. This bird, which is to be found in almost every part of Europe, is a little larger than our robin, with a plumage shaded purple and green. From the moment of leaving the nest it begins to manifest its bright and joyous disposition by singing merrily all day, no matter how inclement the weather, nor how scanty its supply of food, teaching us a lesson of contentment more effectually than could some of our greatest philosophers.

W. A. Conklin, Esq., Superintendent of Central Park, gives us some interesting facts respecting the habits of this bird. He says:

"The starling builds its nest in the early spring, in trees, deserted houses and church steeples, hatches about five or six eggs, of a light blue color, upon which the female sits sixteen days. The young are left to take care of themselves after a short time, and with the parents congregate in immense flocks, flying about during the day and resting in trees or in beds of reeds during the night. The service rendered to mankind by these little songsters cannot be too highly estimated. They clear the gardens and fields of snails, worms, grasshoppers, caterpillars, etc., displaying in the performance of this work an amount of patience and skill almost incredible. It is stated that a single young starling will consume 140 worms or insects in fourteen hours out of the twenty-four, and in the part of Germany where this calculation was made it was estimated that the 180,000 birds which composed the flock cleared the ground of not less than 12,600,000 snails and worms daily.

It is a very sociable bird, flying in the company of crows and jackdaws, and fond of mimicking the sound of other birds. In captivity it learns readily to speak and sing. One has been known to repeat the Lord's Prayer without missing a word. It breeds regularly in the London parks.

We believe that the starlings are vastly more useful as worm destroyers than the sparrows, which have certainly not made a good record for themselves since their introduction here. They are vastly more entertaining and interesting in themselves, besides being more civil to other birds. We append a voluminous correspondence relating to the sparrow question, which we present as a testimony to convict or defend, as its weight may incline the jury to decide.

EDITOR FOREST AND STREAM:

We wish to add our mite to the much mooted "Sparrow question," which was brought to our notice in the last issue of your paper. Having had ample facility for judging of the merits and demerits of this bird, we would say a few words tending to prove the inadvisability of allowing them to increase in such a ratio as has taken place since their first introduction to this country.

As a city scavenger and destroyer of some classes of the noxious insects which infest the shade trees of our public parks, they do very well, for 'tis best, perhaps, with this object, to forego the presence of what few of our native birds were formerly accustomed to live in these noisy centres. The verdict of Mr. Galvin, of Boston, to the contrary notwithstanding, the fact still exists that where the English sparrows congregate or breed in numbers, there soon our native birds are wanting. We have time and again witnessed the fierce pugnacity of the imported birds. Among themselves they are exceedingly quarrelsome, but let a bird of a different genus but show himself, and the fury of the whole sparrow community is turned upon the helpless interloper; they chase him hither and thither, giving him no rest until he is banished from the neighborhood. The sparrows prefer the city streets, where their repulsive food is plenty, and select the public parks for breeding, but their marvellous increase has driven hordes of them out to the surrounding suburbs, where their presence is not needed, the numberless insectivorous and worm eating natives generally being there amply sufficient to cope with the vermin. We have in mind a locality on the banks of the Hudson, not many miles from the heart of New York City, a spot noted for its forest trees and picturesque loveliness. A very few years ago it was the abiding place of many of our most melodious song birds. The wood thrush sent his metallic notes ringing from the tall oak and hemlock, the robins, scarlet tanager, oriole and a host of others, made the woods ring with their songs, or enlivened the scene with their brilliant plumage.

The English sparrow, overflowing from the city, made his ill-omened appearance; within six months, the harsh never-ceasing chirp filled the air from morning until night, and our native birds began to be heard and seen in less numbers. The following spring the most prized wood thrush had gone elsewhere to breed, and there was a corresponding diminution in the numbers of our other yearly visitants. The indignation of the neighbors soon vented itself on the useless usurpers, and they were, by being killed and having their nests broken en up, soon driven off, and at the present time, two years since the banishment of the English birds, the native and aboriginal avi-fauna of that region are as plenty as they ever were. The sparrows breed nearly the year through, and their rate of increase is equalled by that of no other bird. Can not some steps be taken to confine them to the cities where alone, if anywhere, they are needed? RAMON.

BROOKLYN, June 2, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

It is with great interest that I have read carefully the different controversies respecting the English sparrows, both in the daily and sporting journals. The result of personal observation has led me to differ greatly from Mr. Galvin and others regarding the peaceful propensities of the sparrow. I think the following will be of interest:

I had in my garden a small Virginia creeping vine, the haunt of many sparrows, and although they played among its foliage they never built a nest in it on account of its close proximity to the house. In the autumn the berries of this vine turn purple, and different birds used to come there for them. One day as I was admiring the contrast between the berries and the foliage there came a fine big brown thrush. He picked a berry, and to my surprise he swallowed it, it being quite a large one. In a few minutes he picked a second, and a third, and as he was about to take a fourth there came a flock of these "common" sparrows, such as loaf around the streets and gardens, and Mr. Thrush's retreat was a hasty one. I noticed this in particular on account of the great size of the thrush.

Not long after, on a nice, balmy morning, my attention was drawn to the greatest rabble that I ever heard or witnessed among the foliage of this same vine. I watched a few minutes, and there came out a large yellow bird, or it appeared to be yellow, and his night was so quick that I could not distinguish the classification, and the sparrows in hot pursuit after it. I was one day in the Jamaica woods and saw this same species of sparrow attack a bluebird, and whenever they do attack any other bird they never come singly, but in sixes or dozens.

But of all the animosity ever cherished against any one, the sparrow's against the song sparrow is the worst. I have witnessed the severest attacks of these villains against this charmer of the spring. Seven or eight years ago I used to hear his note among the apple and pear blossoms in the early spring, and with a sad feeling have I noticed his decrease year by year. Likewise have I missed the robin and the wren, on which these sparrows have made sad havoc. I could give many instances, but they would fill half the pages of this valuable journal. On one occasion I had a hen sparrow spread her wings and make an attempt to fly at me when I only approached to see what she was feeding on.

In regard to the usefulness of the sparrow, he deserves very little credit. I had forty monthly rose bushes destroyed in one season by the "aphais" or rose bug, and a green worm, which I do not know the name of, and the neighborhood full of sparrows. And the same season the worms destroyed a whole crop of cherries.

From what I have seen I know from experience that the sparrow is a good-for-nothing, domineering bird, and any casual observer cannot help but notice that they are always fighting among themselves, and if one picks up a crumb or worm the others pursue him to the death almost, to take it away, and more times than one have I seen him drop a "rare bit" trying to flee from his companions. They let orchards go to ruin, for they will not eat every kind of insect, and the cornices and window tops of the houses in our cities present a disgraceful sight from their droppings, they preferring to build their nest on the eaves of houses and spend their time among dung hills in the street rather than protect the orchards, which they were transported for. They are given to wanton laziness, and I recommend that the Acclimatization Society ship them a-l home again, and bring English starlings, nightingales and the like, and while they are about it bring over some English partridge and woodcock. In my opinion there is no better authority in New York than J. H. Batty, of New Utrecht, and if Mr. Galvin or Dr. Thomas Brewer have not perused the back numbers of this journal I would recommend them to cast an eye on page 101, Vol. 4.

Yours truly, WM. WALSH.

EDITOR FOREST AND STREAM:

In your last issue you ask for "observations" concerning English sparrows. Five years ago I brought three pairs to this city and planted them in boxes on trees in my yard, and have watched them closely ever since, until they have multiplied into thousands, and my first "observation" is that each pair hatches from two to three broods of from three to five birds annually. 2. They are a long lived, hardy, vigorous bird, and use houses when provided for them only for hatching and rearing their young, and not for protection from storms and severe weather. 3. They roost in dense evergreen trees and ivied walls, where they assemble an hour or two before dark in the fall and winter seasons and join in a grand concert which is protracted until nightfall, and resume the same at daylight, and continue it until the sun is fully up, when they disperse in quest of food. 4. They are great cormorants, capable of consuming almost incredible amounts of vegetable, or animal substances. Their appetites ever impel them in quest of food. 5 Their value as a means of defence against the ravages of insects and worms upon foliage and plants is in an inverse ratio to the amount of other food at their command. If there is an abundance of grain and offal suited to their tastes at their disposal they will not exert themselves in search of worms. 6. They get in their best work on insects and caterpillars by destroying their larva during the winter season when other means of subsistence is scarce. 7. I have watched them with special reference to their intercourse with other birds, and while they often fight among themselves, I have seen them feeding from the same crumb of bread deposited for their use and bathing in the same fountain or puddle, nesting and hatching within three feet of the robin and blue bird, but never have observed a collision between them and any native forest bird. If there was any special antagonism between the sparrows and native birds I am sure I would have observed it. 8. They are so shy of traps that it is almost impossible to catch old ones in this way. 9. I find that caterpillars and worms are fast being banished from my trees as the sparrows multiply. The elms that were annually stripped of their foliage by worms during June and July and were fast losing their limbs and lapsing into decay, have been for the past two years renewing their growth and retaining their foliage undespoiled, until nipped by frost. 10. They are gregarious and do not migrate, but seek out and inhabit those localities where they can find the best accommodations. They evidence their gratitude for winter feeding by their constant presence and vigilant search for larva and grubs on trees and lawns adjacent to the places where food is artificially supplied them. 12. I am able to confirm the observation of Mr. Galvin, of Boston, concerning the habits of the sparrow in finding the lice and insects that attack the apple, pear, cherry and other fruit blossoms. I first thought that they were destroying the fruit germs. 13. When all other birds have migrated to more genial and sunny climes the sparrow remains the sole representative of the feathered family, to cheer the winter landscape and enliven by their plaintive monotone-song the city dooryard. 14. They prefer to build their nests in small boxes placed fifteen or twenty feet above the ground on trees in public streets, walks or grounds. When a sufficient number of these are not supplied they will build in hollow cornices, brackets, window caps, or on projections of any character on the walls, or under the eves of houses—always selecting the front or most public exposure. In these localities they, from their noise and droppings, often, become great sources of annoyance. H. G. CAREY.

Indianapolis, June 6, 1877.

EDITOR FOREST AND STREAM:

My place is five miles south of Newark, and for many years the bug pests interfered with my plants and trees, so I cultivated the sparrow until it is a regular thing for about fifty to share my chickens' feed all winter, and scold over it if the cracked corn is too coarse. I have fourteen nice boxes made for and tenanted by bluebirds ten years ago, and a pleasant time I had in early spring watching them; but when sparrows came, being on the ground all winter, they naturally had the first choice. Two sparrow families set up housekeeping the first year. When the bluebirds came it was comical to see them pecking into a house, and finding a family, with bedding and all, there before them; but they had plenty of houses left, and with robins, cat-birds, thrushes and orioles, not to leave out Jenny wren, they had a good time. However, gradually the sparrows took possession of all the boxes, and the bluebirds have all gone. I never saw any fight, or even any scolding; but the bluebirds come, look into every box, and quietly go elsewhere. The wrens, however, did not like it. They had had their homes quietly for several years, and one year (1875) they undertook to take possession of a box, and commenced ejecting the bed and bedding of a sparrow family; but the sparrows were too much for them. They called in aid from their neighbors, and drove them off. I saw four wrens, and a dozen sparrows having a scolding match on my piazza, and pretty noisy they were for a day or two. The wrens gave it up, but found some holes in an old cherry tree, and set up their housekeeping there. The next year I had some boxes made with very small holes, and then Jenny was in clover. It was comical to see the wrens get inside and scold back, as half a dozen sparrows assembled outside and discussed the matter, tried their best to enter, opened their mouths very wide, and made spiteful pecks at the hole, but they gave it up, and now I have around me five or six families of wrens.

The sparrows have never interferred with the other birds, and I have around me in about an acre and a half of wood and lawn, a goodly lot of robins, cat-birds, orioles, sparrows, wrens, thrushes, kingbird, chippies, etc., that keep my rose bushes, pea vines and fruit trees clear of caterpillars, worms and bugs. The largest share is done by the sparrows, and I make them comfortable in payment. Some winters I have more than my share, but before spring I find the barn owls thin them out, so that they are not too plenty when their services are wanted.

Yours truly, E.

TENAFLY, N. J., June 2, 1877.

EDITOR FOREST AND STREAM:

We have a few sparrows in the yard, and find their presence makes very little difference with the other birds. We have sixteen varieties of birds in the yard at this writing, viz., brown thrush, robins, cat-birds, orioles, wood robin, bluebirds, phœbe-bird, cuccoo, king-bird and the rest warblers of different kinds. We find the most quarrelsome to be the king-bird and black oriole. These last are chasing almost everything that crosses their path. A few years a pair of king-birds tormented my pigeons to such an extent that we were compelled to kill them. We do not find any special benefit from the sparrows, but find a considerable expense when a large flock feed with the chickens. Their favorite feed is screenings from wheat, and they will hardly eat anything else, if they can get it in this section. Some of the neighbors have been killing them on this account. I think they destroy an immense amount of millers and worms while they are feeding their young, but after that they prefer a grain diet, and on the whole are a great benefit, especially in the cities, where they have elm trees, and the measuring worm, and very few other birds.

Here is another instance of robins building in strange places. We have a pair which have built their nest on the crossbeam of an unfinished, roofless house near here, and laid their eggs. The nest is entirely unprotected from the sun and rain. Another pair have built in an old barn on the window frame, about thirty feet from the ground, and are under a tight roof. The theory is they do it to get away from crows and birds which steal their eggs and young. RED WING.

BOSTON, June 3, 1877.

EDITOR FOREST AND STREAM:

I do not wish to bore you unduly on the sparrow question, which here, at least, is vindicating itself, but your Indianapolis correspondent makes a misstatement of so much moment that I hope you will allow me to set your readers right. It is not true, that in France the sparrows are "sold by the peck for pot-pie." On the contrary, ever since the commission appointed by Louis Napoleon, at the head of which was that eminent *savan*, Flovert Prevost, reported that the sparrow was *par eminence* the most useful to agriculture of all the birds of Europe, the sparrow has been protected by law, and the children in all the public schools of France, by order of the Department of Public Instruction, are taught the value of all birds, the sparrow not excepted. My authority for this is the Hon. M. Servaux, head director of that department. He assured me that the old prejudice against the sparrow had all died out of France with the present generation, and I have before me as I write a printed copy of the general circular of instruction issued by M. Waddington, given me by M. Servaux himself. By it the children are required to be taught the value of all birds, instead of being such a sink of iniquity in bird butchery as your correspondent imagines. France stands out ahead of all the world teaching, in the memorable words of Prevost, that "no agriculturist can take the life of any bird, without doing that which will be sure to work injury to himself." THOMAS M. BREWER.

CAMBRIDGE, MASS., June 4, 1877.

EDITOR FOREST AND STREAM:

You ask in your issue of May 31 for evidence about the English sparrows in this country. The objections to them are these: 1. They have no personal attractions except their tameness. 2. They are practically useless, and are no longer needed. In Cambridge, those trees which are properly tarred have no canker-worms on them, because the female moth is wingless, and, if prevented from ascending the trunk, cannot lay her eggs near leaf-buds. Many others of the elms

here are largely stripped, but I have not seen an English sparrow eat one canker-worm, though both the birds and caterpillars are abundant. The birds may have been useful on their first arrival from Europe, but they are too much pampered to be so now, at least to any satisfactory extent. 3. They destroy fruit-blossoms. 4. They are often quarrelsome, and sometimes drive away other useful birds, as I can positively testify to from my personal observation.

H. D. MINOT.

GAME PROTECTION.

FISH PROTECTION, ETC., CANADA.—The new set of salmon and bass regulations for the four northern counties of Northumberland, Restigouche, Gloucester and Kent require that persons who desire to fish for salmon shall furnish the local overseer with a memorandum in writing, setting forth the length of their nets and the places where they intend to set them, at the same time paying, in advance, a tax of three cents per fathom; if they set their nets before complying with the above the nets will be seized and they themselves will be obliged to pay fines and costs.

Bass fishermen are required to register their nets and pay a dollar for each net to the district overseer before fishing.

These regulations take the place, so far as the tax is concerned, of those issued in 1875.

These new regulations are an outgrowth of the opposition to the old mode of levying this tax, and are a questionable improvement upon that system.

There is much complaint among the Gaspereoux fishermen of the prohibition of Gaspereoux seining.

CLOSE SEASON FOR BLACK BASS.

NEW YORK, 145 Broadway, May 30, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

Enclosed find a communication from Fish Commissioner Shotwell, of New Jersey, which please note and give comment. W. O. MCDOWELL.

RAHWAY, N. J., May 30, 1877.

MR. W. O. MCDOWELL:

Dear Sir—I notice with some surprise that FOREST AND STREAM says black bass fishing commenced in Greenwood Lake on the 20th of this month. If that is the New York law it conflicts with ours, and besides that, it is all wrong. The bass are now spawning. I hope the Greenwood Lake Sportsman's Club will do all they can to prevent fishing for black bass before July 1.

Can you inform me if the New York law allows fishing for black bass after May 20?

Yours truly, J. R. SHOTWELL, Com.

[Our readers in this State and conscientious anglers generally, have been much distressed by the peculiar misapplication of our law governing the close season for black bass, the close season expiring on May 20, which is at the very time when the fish are either spawning or watching their young fry. The season should remain closed until the 1st of July, as it does in New Jersey and many other States. In Greenwood Lake, which lies partly in both States, the incongruity of the laws not only makes confusion, but is likely to result in serious personal difficulties. The objects of the laws seem to be wholly defeated. A new game bill has passed both houses of the New York Legislature, but still awaits the Governor's signature. Its new amendments do not, however, change the close time for black bass. In Lake George and many other waters in the State, there are special provisions which apply, making the close time end on July 1st, which is fortunate. It would be better to wipe out all provisions of local application, and make the law common to the whole State.—ED.]

☞ Since writing the Governor has signed the bill.

—The following correspondence has been placed before us. It will be seen that the game laws are nullified, or rendered null, by the decision of the district attorney. So long as there is no disposition or effort to enforce the laws that we now have, it is supererogatory and useless to waste time every year on amendments or attempts to effect changes which may bring no practical results. For this reason our Governor, and Governor Tilden before him, have not thought fit to complicate and mystify that which few can even now interpret, comprehend, comply with or enforce.

The first letter is a complaint served on the District Attorney:

PROSPECT HOUSE, UPPER SARANAC LAKE, May 15, 1877.

District Attorney, Franklin Co., N. Y.:

Take notice that Fayette St. Germain, Levi St. Germain, Moses St. Germain, Sr., Benjamin St. Germain are catching trout out of the Upper Saranac Lake with a set-line and gill nets, to a great extent, and it can be proved by one against the other, and witnesses Edwin Otis, Simeon Torrance and Jesse Corey. They make their brag that there is no law to stop them. Now, I am Game Constable of Harrietstown, and the people wish them to be put through to the extent of the law. Send the sheriff out and arrest the whole lot of them.

Yours, etc., GEO. W. WAKE.

From the District Attorney of Franklin Co., N. Y., indorsed on the back of the above letter and returned to Mr. Wake, is the following:

"Referring to the game laws you will perceive that the District Attorney can do no more about the matter referred to than any private citizen. *The offence is not a misdemeanor, and not indictable.*

Yours, etc., S. A. BEMAN.

May 19, 1877.

THE WOODS, May 26, 1877.

EDITOR FOREST AND STREAM:

The *underscoring* in the above reply is mine, and I desire to call your attention to it and receive your reply. The Upper Saranac is almost held in terror by the above-mentioned St. Germains, who have been violating the game laws for the past years, and still the District Attorney maintaining that nothing can be done. They are the same gang that the Hoyt and Romeyn party had the trouble with in May 1876, and who fired rifles at the Wheeler party, presuming they were firing at the former. What course ought to be pursued? Section 19 is very explicit to me, but perhaps my brains are not as legally able to comprehend as the above District Attorney. Can you not enlighten him? And will you not bring the matter to the attention of the State Association for the Protection of Game, or to its attorney?

Yours truly, S. S. N.

—At the meeting of the Norfolk (Va.,) Game Protective Association, held June 5th, the following gentlemen were elected officers for the current year: President, S. R. White; First Vice-President, E. V. White; Second Vice-President, W. H. Seabury; Secretary, J. C. Adkisson; Treasurer, N. Burruss; Attorney of the Association, Judge T. S. Garnett; Executive Committee, Fred. Hardy, Jos Hobday, L. W. Tazewell, John B. Corprew.

Captain W. E. Taylor, from the Committee on Game Laws, reported that the State had adopted a law answering in all important points the desires of the Association, and asked that the Committee be discharged.

The following reference was interpolated in the President's address.

I take pleasure in recommending to our members FOREST AND STREAM, a high toned paper devoted to those principles which it is our object to promote, besides giving valuable information in Natural History and pisciculture, together with interesting sketches by flood and field, nearly all of which I have found worthy of perusal. This paper is unquestionably worthy of our patronage and support.

THE SYRACUSE CONVENTION.

HURRIEDLY I drop a few lines. The birds are the only trouble at this hour, yet the despatches from agents are very favorable, and the association is full of hopes. They will have a quantity of birds, but cannot state the amount until the arrivals from the west, which are momentarily expected. The bench show of dogs is getting on finely, and the date of closing the entries has been postponed until Monday, June 18th, which will give all parties an opportunity to enter their dogs. The committee have taken this step from the fact that many sportsmen declined to enter until they arrived to attend the convention, and will not arrive before Monday.

The novelty of an exhibition of fish will be quite an attractive feature, and is well in hand by Mr. Henry H. Porter, of Island Pond hatcheries. A goodly number have already been received and are in the tanks in the armory embracing many rare and valuable species.

All bird trappers can find ready sale for birds by telegraphing to Greene Smith, No. 8 Larned Block, Syracuse, N. Y. Sportsmen throughout this section would place the association under obligation by sending in birds to the above headquarters. They do not care how many are left over as they desire to obtain enough for the convention at all hazards, and the prospects at present are encouraging though not positive of obtaining a supply.

The following gentlemen are appointed judges: Division I.—Sporting Dogs, John Davidson, Monroe. Division II.—Non-Sporting Dogs, Geo. de Forest Grant, New York.

FROM OUR SPECIAL REPORTER.

—The enterprise of Parker Brothers, manufacturers of the celebrated Parker gun, can be seen by the large advertisement they have in our columns. They have shipped their large Centennial case, well filled with fine guns, for exhibition at the convention of the New York State Association for Protection of Fish and Game, to be held at Syracuse next week, and will undoubtedly win as many laurels for hard shooting as usual during the contests. The Parker Bros. have donated a gun and case as a special prize for the best average score in the main shoot at the Syracuse State Association meeting.

THE PEOPLE'S LINE STEAMERS.—It is universally conceded that in point of beauty the noble Hudson excels all the rivers of Europe, and that the tourist who fails to make the trip by boat between New York and Albany, is shutting himself out from some of the most picturesque and imposing American scenery. The sail is, therefore, well worthy of being taken as an independent excursion. It is much more likely, however, to be marked out by the traveller as a part of a more extended tour. It proves both a delightful opening and a satisfying close—a whetting appetite for the more distant grandeur, to be found in the west and north; it comes as an imposing finish to a trip amidst the same scenes. In either case the travellers to whom its attractions are most familiar, finds the sail on the Hudson, to or from Albany, an indispensable part of the programme. There are as many routes for summer travel in which it can form a part that it will be sufficient to mention those to Niagara, the West, the St. Lawrence, Montreal, Lake George, Lake Champlain, the Adirondacks, the Catskills, Saratoga and the White Mountains. Albany is an inevitable point in the route of both traveller and sportsman, and the most pleasant way by which to reach and leave it is by the magnificent steamers of the People's Line, New Jersey Steams boat Company.

—Rev. Joseph T. Duryea has gone to the Adirondacks to camp out for six weeks. He is accompanied by his friend, Mr. Savage, who will doubtless make the Doctor feel at home in the wilderness.

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grilse and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from $15 to $150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining, to imitate the genuine article) without letting our customers know just what they are getting.

P. O. BOX, 1,224.—*Adv.* ABBEY & IMBRIE, 45 Maiden Lane,

The Rifle.

THE AMERICAN TEAM OF 1877.

THE Board of Directors of the National Rifle Association have shown more than usual promptitude in the preparation and issuing of the call for rifleмen to fill up the American rifle team of 1877. The prospects are that we shall have a tough fight, and appreciating this, the programme makers have sought to elaborate such a scheme as should bring out the very best working eight our country can produce. The plan, as expressed, is more cumbrous than it will turn out to be in practice. Of course, all are invited, but to start only with such as are reasonably certain to gain a place; entries are limited to those only who have passed the easy point of 180 in the possible 225, the tests to be made on their home range. The managing committee is limited to three. There was a strong pressure brought to bear that some formal recognition of the Amateur Rifle Club of this city should be made in the composition of this committee, but while all are ready to acknowledge the position of the Amateur Club as the leading small bore club of the country, that from among its members has now furnished four victorious American teams, its claim to a portion of the managing power would only interfere with the advancement of the National Rifle Association to what it, by right, should be, the central representative body for American rifleмen generally, without distinction of place or section. This committee will need to be most carefully selected. None but those above reproach should be chosen, and as the board have, it seems to us in rather questionable taste, required "carackters" from would-be members of the team, it might be well for members of the proposed committee to furnish similar testimonials that they are not influenced by pecuniary or other considerations in their fatherly offices towards rifle practice. With the Pres. N. R. A. at the head of the committee, and Col. Gildersleeve as an expert holding the confidence of all, the third member of the committee might be chosen from without the immediate ranks of rifle shooters and managers, some citizen of prominence, whose name and influence would work well in giving prominence to the movement. The shooting tests for the leading men of the team seem to strike a just average, severe enough to cut out the chance of mere luck, and not tediously long. The double day test is *apropos*, as the match finally is to be extended over two days. The election of the two final members of the team will provoke, we dare say, no small amount of discussion as the day of choice draws near. It is more than likely that the next two men in order of merit will fill these posts, and rifleмen generally may rely upon it, that the mere fact of a candidate having once been a prominent shot will bear but slight influence against the fact that he has ceased to hold his own against the new-comers. It will require a pretty general concurrence among judges without the committee, to allow any departure from a straight order of selection by scores made. The clause permitting of a vacancy in the team "for cause" will, no doubt, remain rather a balance against possible contingencies than working rule. The $200 clause will not, in all likelihood, be availed of by many, if any, members of the team. As it is, it removes the appearance of having the team a paid-or "professional" body. On the whole, despite the wretched English which marks the programme, as presented by the Special Committee chairman, a fair, honest representative team may be selected under it, and with the close scrutiny, which every move of team and committee will receive from the writing experts on the professional and daily press, it is not at all likely that anything but wise and open-handed counsels will prevail. The scheme of selection in its entirety reads as follows:

PROGRAMME FOR THE SELECTION OF THE AMERICAN RIFLE TEAM OF 1877.

Whereas, A united team, representing Great Britain and Ireland, has been entered to compete for the American Centennial Long-range Trophy and the championship of the world in a match, to be shot at Creedmoor in September next; and

Whereas, The importance of this match demands that the best rifleмen the country can produce be selected to defend it, it is therefore

Resolved, That four (4) competitions, of 2 days each, shall be held at Creedmoor, July 17 and 18, July 24 and 25, July 31 and Aug. 1, and Aug. 7 and 8, the scores of three (3) of such competition only to be counted in determining the team to reserve. Open to all native born citizens of the United States, who in any two stated practices or competitions of 15 shots at each of the 3 distances of 800, 900 and 1,000 yds., upon any range, between April 1 and July 17, 1877, shall have made an average of at least 150 points in each of said two competitions or practices—said score to be certified to by an officer of the rifle club to which the person belongs, or sworn to by himself before any officer authorized to administer oaths; distances 800, 900 and 1,000 yds., fifteen shots at each distance on each day; weapon, any rifle within the rules of the National Rifle Association (which rules shall also govern the competitors in all other respects.) No sighting shots, or previous practice by any competitor on the days of these competitions to be allowed.

A committee of three shall be appointed by the Board of Directors N. R. A., to whom shall be referred the duty of carrying out the programme. The team shall consist of a captain, adjutant, eight men and two reserves. The captain may or may not be one of the shooting men of the team. In case any competitor shall, for reasons satisfactory to the Committee charged with the conduct of the competition, be unable to finish a score or to compete on any of the prescribed days, such Committee shall be authorized to fix another day for such part of the competition as he may have missed. Such Committee shall decide when, if at all, a competition shall be postponed on account of the weather and when it shall be resumed or completed. No competitor shall be allowed to retire from any competition without the permission of the Committee.

The team and reserve shall be chosen as follows: Upon the conclusion of the competition six members of the team shall be decided upon by selecting in the order of merit, as shown by aggregating the best three of their scores in these competitions, the highest aggregate taking the first place, and so on until the required number be obtained. The committee of three herein provided for and the six men so chosen shall, by a joint majority vote, elect the other two of the eight necessary to constitute the team, being authorized, if in their judgment it be

deemed advisable and necessary for the strengthening of the team, to make their selection from among riflemen of known skill who may not have shot in all or any of the competitions.

The reserve shall consist of the two men next highest in order of merit in the competition to those already in the team. As soon as practicable after their selection the team and reserve shall, by a majority vote, select a captain who shall appoint an adjutant to assist him in his duties. The captain, when selected, shall have the management of the team and prescribe the rules for its government and practice. Each person entering for the competition shall subscribe to the following:

"I desire to compete for a place on the American Rifle Team to represent the U. S. in the Centennial Long Range Rifle Match of 1877 for the Centennial Trophy, and hereby agree to conform to the conditions prescribed for the selection of said team. If I am successful I hereby pledge my word that I will shoot in the match, and will in addition perform such practice and submit to such discipline and government as the captain of said team shall direct."

Competitors not members of the N. R. A. will be furnished with members tickets admitting them to the range during the year 1877. Successful competitors on the team and reserve will have their expenses that are approved by the committee having charge of the match refunded to the extent of $200 each. In view of the national importance of this match, competitors will be required to furnish to the committee having charge of the match satisfactory references as to their character from the localities they represent, or the Rifle Association or clubs to which they may belong. Any person who may have been selected in accordance with the foregoing regulations, may for cause be removed by a two-thirds vote of the members of the committee having charge of the match and of the team and reserve.

Entries for competitions may be made by letter to the Secretary of the N. R. A. up to the evening of July 16, and in person, on the range, up to 10 A. M. on July 17, 1877. Those desiring to compete are requested to notify the secretary as early as possible. All entries must be accompanied by the certificate of eligibility above provided for.

Resolved, That the secretary be directed to issue a circular to the various rifle associations and clubs throughout the United States, urging them to send their best marksmen to compete for places upon the team, so as to ensure the selection of a truly "National Team," fully competent to sustain the reputation which has already been earned by American riflemen; and further, that, as the selection of the strongest team can only be had by competing together and upon the range where the match is to be shot, it will be necessary for competitors to attend at Creedmoor; that the conditions have been made with a view to accommodate as much as possible those living at a distance, and that the National Rifle Association earnestly recommend that the various localities having riflemen competent in their opinion to win a place upon the team, should make such arrangements as will enable them not only to do so but to remain during the practice.

THE TEAM MEN'S PLAN OF SELECTION.—As a model of concise wording, and as giving the views of a group of riflemen as to how the selection of an international team should be conducted, we give space to the following statement of the old team men's views. It will be useful for reference, and for comparison with the scheme as adopted by the Directors:

NEW YORK, June 8, 1877.

The sub committee representing the American Team of 1876, the present holders of the trophy, and to whom was referred the matter of selecting a team to contest in behalf of American riflemen against the world for the possession of the Centennial Trophy in 1877, beg respectfully to submit:

The competition for places on the team for 1877 to be held at Creedmoor and open to all comers who are native-born citizens of the United States or Territories; and that an address be issued, and published through the press, inviting all long-range riflemen to participate. Six general competitions to be opened as soon as practicable; in each competitions 15 shots to be fired at each range, 800, 900 and 1,000 yards, without sighting shots, coaching or spotting by any person other than the competitor, and previous practice on the day of competition, together with the giving and receiving of information, is forbidden. The *ten contestants* making the highest aggregate in any four of said six competitions shall form the team and reserve. In case of any vacancy after such team be selected, said vacancy shall be filled by a majority vote of the remaining members of the team and reserve. They will then elect a captain, not from their number, but one who is judged a competent rifleman. The contestants who are selected for positions on the team are honor-bound to submit to the terms and the rules governing the team, and any member violating the same shall be liable to expulsion upon a two-thirds vote of all the members of the team. We deem it important that a surgeon should be in attendance at all the competitions and practices of the team. No member shall be allowed to withdraw or retire from practice without the approval of the surgeon, under penalty of disqualification.

The committee would further recommend that the assignment of targets for the competitions be made by drawing lots on the first day, the squading so made to remain unchanged; the squads to occupy the targets in rotation, and so arranged, if possible, that each squad will not be placed at the same target more than one day during the competitions.

All of which is respectfully submitted.

L. C. BRUCE, Secretary,
Sub-Committee from American Team, 1876.

RIFLE NOTES.—The practice of the military at the short range is telling very strongly upon the iron target slabs at Creedmoor. The superintendent during the last week of May reported five slabs as disabled and valueless. These were all of American make, while the slabs imported from England are showing admirable lasting qualities. It was resolved to put up additional targets of stone. One of this material is now in use as a mid-range target, and is doing excellent service. It is a brown sandstone sent from the interior of this State, and is about six inches thick. Its demerit consists in its unwieldy weight, making transportation charges upon it very heavy, and requiring a large force of men to put it in position. They are, however, stationary affairs, and once in place seem capable of any amount of shot battering.

—Some of the troops when visiting Creedmoor for target practice seem to forget that they are under orders as much so as if on a public parade, and, instead of shifting from point to point, as the shooting progresses, in a military manner and according to tactical movements, drive about pell-mell more like a flock of sheep than of drilled soldiers. While this disregard for appearances is so general, it is not universally so, and here and there a line officer may be found who has sufficient pride to appreciate a correct regard for military usage, and energy enough to put his ideas into practice at the parade of detachments from the First Brigade. On Thursday last Capt. Smith's company of the Twenty-second Regiment was conspicuously remarkable for the orderly and systematic style in which they fell back from range to range,

—The American Rifle Association will have a special match and subscription day on June 23d, at their Range near Pellhamville, Westchester County. First match prize, Remington sewing machine, value, $75. Conditions, 500 yards, position any, 10 scoring shots, 2 sighting shots, military rifles allowed 5 points. Highest score to win; entrance fee, $1; entries unlimited. Second match, subscriptions same as the foregoing; entrance fee, 50c.

JOSEPH H. PORTER,
Secretary A. R. A.

CREEDMOOR, June 6.—The amateur club marksmen brought their series of eight weekly competitions for the selection of senior and junior teams to a close last Wednesday, Major Jewell (or H. Stuart, as he chooses to disguise himself) for the fifth time leading the field with a fine score, beating even his champion score of the Leech Cup day—213, with a bad bullet miss—is little short of extraordinary, and this, too, when the closing dozen shots were fired through a lively rain and mist, giving the bull's-eye the appearance of a dark, cloudy mass across the target face. As it was, 37 bull's-eyes in 45 shots is a feat which we think has not yet been accomplished on any range here or abroad. Mr. Isaac L. Allen was not far behind with a score of 74 in the possible 75 at 800, but he "tumbled" at the longer ranges, and got only a paltry 204, also with a miss. If Mr. Allen cannot do better he will have to fall back among the "has-beens." The score ran on the 6th as follows:

H. S. Jewell, Rem. Creed. rifle.

800	3	5	5	5	5	5	5	5	5	5	5	5	5	4	—72
900	4	5	3	4	3	5	5	5	5	5	5	5	5	5	—71
1,000	4	0	5	5	5	5	5	5	5	5	5	5	5	4	—68—213

I. L. Allen, Rem. Creed. rifle.

800	5	5	5	5	5	5	5	5	5	5	5	4	5	5	—74
900	4	5	4	5	5	5	5	4	5	5	5	5	4	0	—66
1,000	5	5	5	4	4	4	5	2	4	4	5	3	5	4	—64—204

R. Rathbone, Rem. Creed rifle.

800	3	4	5	5	5	5	5	5	4	5	5	4	5	5	—70
900	5	4	4	5	4	5	4	5	5	5	5	5	5	5	—69
1,000	4	5	4	4	5	5	4	5	5	4	3	5	3	3	4—63—202

Frank Hyde, S. C.	65	66	56	189
H. Fisher, F. M. L.	69	59	61	189
A. J. Hennion, Jr., R. C.	66	59	44	169
G. L. Morse, R. C.	62	31	48	141

The Poppenhausen Medal, or Marksman's Badge has been finally won from the list of open matches at Creedmoor, being taken on Wednesday, the 6th inst., for the third time, by A. B. Van Heusen, of the Twelfth Regiment. There were about forty competitors out of the last competition, though a stormy afternoon did not give promise of such an attendance. The leading scores were as follows:

	200 yards.				500 yards.				Tl.
A. B. Van Heusen	4	3	5	4—29	4	5	5	4—22—51	
J. R. Grohuan	5	5	3	4—21	5	4	5	4	2—20—41
E. W. Price	3	3	4	5—19	5	4	3	4—20—39	
L. H. Greve	3	3	3	4—17	4	5	4	4	4—21—38
J. F. Bultman	5	5	4	3—19	4	4	4	3	4—19—38
W. D. Ward	5	4	4	4	3—20	3	3	3	3	5—17—37
J. A. Gee	4	3	4	4	4—19	2	4	5	4	3—18—37
G. D. Hobart	4	0	3	3	4—14	5	4	3	5	5—22—36
Lewis Case	4	4	3	2	4—17	2	5	4	4	3—18—35
M. B. Farr	3	4	5	4	3—19	4	5	2	2	3—16—35
A. Pyle	4	4	4	4	4—20	2	3	3	4	2—14—34
W. H. C. hrane, Jr.	2	4	4	4	4—18	2	5	3	3	2	3—15—33
D. Chan cey, Jr.	4	4	4	3	4—19	4	4	4	2	2	1—14—33
W. N. Inman	4	4	4	3	4—19	2	0	5	5	4	3—16—35
W. C. Clark	4	4	4	4	3—19	3	2	3	5	0	1—13—32
Geo. Waterman	4	4	3	4	4—19	4	2	3	4	0	1—13—32
G. W. Hasbrouck	0	2	3	3	0—8	4	4	5	5	4	2—24—30
F. Harper	4	4	4	3	4—19	2	4	2	3	0	1—11—30
T. W. Linton	3	4	4	4	4—19	0	2	0	0	4	1—6—25
J. L. Price	3	4	3	3	3—16	4	0	4	3	3	1—14—30
A. G. Scranton	3	3	2	4	2—14	3	0	2	4	3	1—12—26
C. H. Howard	4	3	2	3	5—17	3	0	0	2	4	0—9—26

This match was a very great favorite among the military men, its competition being restricted to State model arms. Mr. Poppenhausen could not do a more popular act than see to its immediate replacement under precisely similar terms, being the previous winner. We shall be happy to publish a note from him announcing the offer. The record of the match is shown in the following list of match winners:

	200 yds.	500 yds.	Tl
June 24, '75, Private Van Heusen, Twelfth Regt.	20	21	41
July 29, '76, Captain Price, Seventh Regt.	21	24	55
Aug. 26, '76, Private Waterman, Seventh Regt.	21	21	42
Sept. 7, '76, Captain Brown, Forty-seventh Regt.	19	23	23
Sept. 30, '76, Private Van Heusen, Twelfth Regt.	20	21	41
Oct. 28, '76, Captain Price, Seventh Regt.	23	18	41
Nov. 25, '76, Sergt. Le Boutillier, Seventh Regt.	22	20	42
May 5, '77, Lieut. Gee, Eighth Regt.	20	21	41
June 6, '77, Priv. Van Heusen, Twelfth Regt.	20	22	42

THE SHARPS CO. PRIZE—CREEDMOOR.—The 4th contest for the Sharps Rifle Company prize of $250 in gold, was held at Creedmoor on the 9th inst., with a good line of entries, but with no very great showing of fancy superfine high scores. Major Jewell, as usual, led the field with a score of 203, his run at 900 yds. being remarkably fine. The scores ran:

	800 yds.	900 yds.	1000 yds.	Tl
H. S. Jewell	70	74	59	203
I. L. Allen	74	61	61	196
H. Fisher	70	66	59	195
R. Rathbone	66	66	59	191
T. E. Laub	66	66	59	191
C. E. Bydelburg	71	64	55	190
A. M. Farrow	65	57	61	182
F. Hyde	69	60	53	182
C. R. Raymond	72	58	52	182
L. L. Hepburn	65	59	50	174
J. P. Waters	172	F. H. Holton		128
S. G. Perry	172	J. A. Batty		107
H. D. Fredericks	137	G. L. Morse		102
A. D. Hodgman	135			

ROCHESTER, N. Y.—The 7th Division rifle range near Rochester was opened on the 8th inst. with a couple of matches, the first being limited to directors of the association: here the scores were at 200 yds.

Gen Brinker	3 3 3 4	4—17	Col. Bromley	0 4 2 3 3—12
Col. Crook	4 5 3 2	4—17	Chris. Yaky	4 4 4 2 2—16
Col. Erbeldinger	4 3 0 3	3—13	C. P. Wolters	0 4 2 0 3—9
Col. Schoefiel	4 4 4 3	4—19	Major Weitzel	3 0 3 0 2—8
Col. Campbell	3 0 4 3	2—12	Lieut Col. Miller	3 0 0 3 3—9
Capt. Engert	2 4 3 3	2—13	Col. Begy	0 2 0 3 3—7
Capt. C. G. Meyer	4 4 4 0	3—15	Capt. Phelps	3 2 2 3 3—14

Another match followed with results as below:

J. H. Brown	22	Col. Cook	16
Maj. C. Buckley	21	Col. Campbell	16
Gen. H. Brinker	21	Capt. C. Meyer	15
Lieut.-Col. S. V. Eddy	20	Capt. Hess	15
J. Standenmic	20	Col. Miller	14
Capt. Allen	20	Capt. Wagner	14
John Roda	19	Capt. Pfeifer	14
Lieut. Boyd	19	Thos. Givens	13
H. F. Hart	19	Major Weitzel	12
Capt. Schindler	18	J. Rusch	12
Col. Bromley	18	J. B. Snyder	12
Chas. Engler	18	C. P. Wolters	12
L. W. Brandt	17	Col. Schoefiel	11

THE SYRACUSE MEETING.—The spring meeting of the Sixth Division Rifle Association was a complete success, judging from the scores made. Fine weather was enjoyed. The programme was interesting enough to draw competitors from many outside places, including Oswego, Auburn, Binghamton, New York, and other rifle-shooting centres. Competition 1—the Directors' Match—was closely fought, and won only on a tie count. It was with Remington State model rifle or carbine for a gold badge. The scores stood as follows. Captain Paul Birchmeyer, who held it last year, came within a very close shave of holding it again, but an unaccountable miss in the last shot demolished his chance:

	100 yds.	200 yds.	Tl.
Lieut. Col. Rhesa Griffin	21	20	41
Lieut. Col. G. N. Clou e	22	19	41
Capt. Paul Birchmeyer	23	17	40
Capt. M. Auer	23	16	39
Lieut. Col. Jas. Manning	18	18	36
Col. J. Dean Hawley	18	16	34
Col. N. Grumbach	15	8	23

The short-range match, 200 yards, drew out a good list of entries; but, owing to proxy shooting, protests were entered, and the bogus scores thrown out. In this way George W. Chase's second prize was lost. The score attributed to Col. W. Yale was made instead by Captain Birchmeyer. The scores, as recorded, stood:

George White	31	A. H. Thompson	28
G. W. Chase (proxy)	31	P. H. Stafford	28
James Howley	31	Col. J. E. Stroke	27
M. B. Nicholson	29	James Larned	27
M. J. Blakeley	29	Chas. Talladay	27
S. Westover	29	R. G. Winn	27
Paul Birchmeyer	29	Col. Geo. Hagemh	27
Chas. Van Orden	29	Willard Knowlton	27
Col. Yale (proxy)	28	E. C. Smith	26
L. L. Barnes	28	F. A. Wright	26
Fred Holmes	28	Thos. Stafford	26
J. H. Figary	28	J. McCarten	25
J. L. Mills	25
Wm. M. Kirby	25
Lieut Col. Gunser	25
Capt. D M Dunning	24
Maj. J. F. Pettit	24
Capt. J. A. Nichols	22
C. A. Glenning	22
Capt. Bogan	21
Lieut. Col. R. Griffin	19
M. Reily	18
Lieut Col. Manning	17
Lieut. Col. Crouse	15

The best shooting of the meeting was in the team work. The first of these matches was open for teams from any regiment or battalion in the Sixth Division. Four teams entered, and scored as follows:

Forty-ninth Regiment, Auburn.

	200 yds.	500 yds.	Totals.
Priv. J. L. Mills	21	23	44
Priv. J. Rowley	21	21	42
Capt. J. McCarten	20	21	41
Priv. F. A. Wright	24	17	40
Priv. Talladay	18	20	38
Priv. J. Fallades	13	20	33
Priv. J. Cook	14	22	36
Capt. D. M. Dunning	19	16	35—276

Forty-eighth Regiment, Oswego.

Lieut. J. S. Barton	21	22	43
Sergt. Major George White	22	20	42
Private R. G. Post	19	22	41
Sergeant C. A. Barton	21	19	40
Sergeant L. L. Barnes	18	21	39
Captain A. Curtis	17	21	38
Lieut. Colonel C. V. Houghton	19	13	32—275

Forty-tourth Battalion, Binghamton.

Private James Larned	23	21	24
Lieutenant M. J. Blakely	20	22	42
Private Fred Holmes	21	22	43
Corporal Chas. Van Orden	20	21	41
Capt. A. H. Thomson	20	18	38
Captain J. H. Figary	20	17	37
Private W. Knowlton	12	15	27—268

Fifty-first Regiment, Syracuse.

Private Wm. Van Pelt	24	16	30
Private Geo. Appleton	17	12	29
Captain J. A. Nichols	16	12	28
Private Peter Meyer	11	16	27
Lieut. Colonel R. Griffin	15	9	24
Private Robert Emerick	8	14	22
Sergt. W. L. Lyman	9	4	13—173

The cavalry match brought out but two teams of five men each to shoot at 200 and 300 yards. The scoring here again was very excellent, running:

Yates Dragoons, Syracuse.

	200 yds.	300 yds.	Totals.
Private O. G. Jones	22	15	37
Sergeant M. Nicholson	17	23	40
Private Conrad Brown	16	22	38
Sergt. Fred. Schneider	18	20	38
Sergt. C. E. Minard	13	15	28—191

Separate Troop, Twenty-fourth Brigade, Oswego.

Sergeant A. A. Wellington	19	23	42
Corporal Frank Havens	15	20	35
Private George Sheldon	15	12	27
Lieut. C. S. Newell	15	5	20
Corp. Samuel Benson	3	11	14—138

A company team match made for the 6th Division militia men brought five teams to the front, pretty nearly matched, as the following close scores will show:

Company C, Forty-fourth Regiment.

	200 yds.	500 yds.	Totals.
Lieut. A. J. Blakeley	21	24	45
Private James Larned	20	23	43
Private J. Thompson	21	18	39
Private Chas. Van Orden	19	15	34
Priv. Fred Holmes	19	15	34—196

Company E, Forty-ninth Regiment.

Captain J. McCarten	20	23	43
Private Patrick Stafford	21	22	43
Priv. Michael Kelley	21	18	39
Priv. Henry Van Gilder	17	18	35
Corp. Michael Dorsey	18	16	34—194

Company B, Forty-ninth Regiment.

Private C. Talladay	21	19	40
Private James Rowley	22	18	40
Private J. L. Mills	19	20	39
Private F. A. Wright	19	18	37
Private J. Cook	20	13	33—189

First Team—Company A, Forty-eighth Regiment.

Sergeant C. A. Barton	19	21	40
Lieut. J. S. Barton	19	21	40
Sergt. L. L. Barnes	18	19	37
Priv. R. G. Post	19	17	36
Sergt. James Hardin	19	15	34—187

Second Team—Company A, Forty eighth Regiment.

Private James P. Hall	21	22	43
Private H. G. Calkins	17	15	42
Private P. T. Perkins	19	9	39
Private Frank Watson	17	16	33
Corp. L. L. Miller	16	14	30—187

The special 51st Regt. matches did not turn out very well, owing to lack of entries.

On the closing day of the meeting, the long range and special matches were fought. The Duncan Badge match was contested for the third time. It has been won once by Sergt. L. L. Barnes, of Oswego, once by Sergt. Maj. George White, of Oswego, and by Lieut. M. J. Blakey, of Binghamton.

The scores were:

Lieut. M. J. Blakely	22	20	42
Sergeant Major George White	22	18	40
Colonel C. V. Houghton	19	18	37
James Larned	19	15	34
Sergt. L. L. Barnes	20	14	34
Fred Holmes	20	12	32
C. Van Orden	16	13	29
A. H. Thompson	15	11	26
Sergt. J. H. Figary	21	3	24

The mid-range match fell to the same fortunate Binghamton man, with a perfect score. The small bores were discrim-

inated against, and put at 700 yds., the full list of scores being as below:

Five hundred yards.

Lieut. M. J. Bakely	35
Chas. Van Orden	36
Col. C. V. Houghton	26
Sergt. L. L. Barnes	26
C. A. Cleming	23
James Larned	21
O. G. Mills	20
Wm. Van Pelt	18
A. H. Thompson	17
John Smith	14
Lieut. J. H. Fleary	13
Capt. Paul Birchmeyer	12
Dr. James Robinson	10
Joseph Gilford	6

Seven hundred yards.

H. Fisher, Fisher rifle	32
Dr. C. E. Rider, M. L.	30
M. Cooper, Rem. Creed	26
Geo. F. Stilson, M. L.	26
R. B. Yates, Rem. Creed	23
E. C. Smith, Maynard	5
J. R. Pattee, Maynard	0

The final match won at long range was fought under most favorable conditions of calm and light. The scores were:

	800 yds.	1000 yds.	Tl
R. B. Yates, Rem. Creed	46	36	82
Homer Fisher, muzzle-loader	46	35	81
Geo. T. Stilson	46	35	81
A. B. Smith, muzzle-loader	39	41	80
Captain, J. A. Nichols, Nichols & Lefever	41	32	73
O. G. Jones, Sh. Creed	38	23	61
M. Warner, muzzle-loader	28	31	59
Major M. Auer, Sh. Creedmoor	27	30	57
Dr. C. E. Rider, muzzle-loader	withdrew.	41	12	53
E. C. Smith, Maynard	withdrew.	44	3	47
M. Cooper, Rem. Creed	withdrew.	46	—	46
M. B. Nicholson, Sh. Creed	23	11	34

THE INTER-STATE MILITARY MATCH.—The special committee of the Board of Directors, N. R. A., appointed to draw up a set of conditions to govern the Inter-State Military Match at the next fall meeting, has reported a plan which has been adopted, providing a competition almost exactly similar to that for the Queen's Prize at Wimbledon. The competition will be fought in two stages. The first stage will be open to all bona fide members of regularly organized military companies in the U. S., either regular or volunteers. There is no limit to the number of representatives from any one company or command. The firing at this stage will be at 200 yards, standing, and 500 and 600 yards any military position, 7 rounds at each range. The 1st prize will be cash $50, and the next 59 highest aggregates will receive prizes of $5 each. The 2d stage will be restricted to those included in the above 60 to compete on equal terms at 800, 900 and 1,000 yards, 7 rounds as before. The first prize to the U. S. Military Championship, grand gold medal, valued at $100, and $100 cash; 2d prize, $50 cash, and 3d, $25 cash, making in both stages a list of 63 prizes, valued at $620. The rifles in the first stage will be the regular weapon with which the competitors' company may be armed. In the second stage the Association will provide special military rifles of various makes from which the members may chose a weapon. Two days practice will be allowed between the ranges to enable the 60 to become familiar with the special rifles before entering in the second stage firing. Considering that the winner in this will gain the honor of Champion Military Marksman of the U. S., the number of entries should be very great.

NEW ORLEANS.—The Crescent City Rifle Club are setting to work in good time to put a strong team in for the International match at Creedmoor. On Sunday, June 3, the first competitive test match was held at the Frogmoor ranges, with ten men out, and shooting. The wind was changeable—very much so—but otherwise the day was a good one. Mr. R. G. Eyrich led the field with a very fair score of 195, the next nearest score dropping to 187; the full scores running:

R. G. Eyrich.

800	4	0	4	2	5	5	5	3	5	3	5	5	5	5—61
900	4	3	5	2	5	5	5	5	5	5	4	5	5	5—68

While the long-range men were busy great sport was in progress at the off-hand range, two teams from the Washington Artillery making lively work at 200 yards with their Springfields, and doing an amount of egg-making, which would insure the success of an oological collection. Nine goose-eggs in ten shots is rather loose work, and yet many of Uncle Sam's showed themselves capable of it. The scores ran:

LIEUT. ADAMS' TEAM.	Score.	Goose Eggs.	SERGT. BAKER'S TEAM.	Score.	Goose Eggs.
Lieut. Adams	19	4	Sergt. Baker	2	0
W. Bantelier	8	8	H. N. Baker	12	6

—— Quinna	3	9	B. Michael, Jr.	4	9
H. Dupre	20	4	N. A. Yates	10	7
H. H. Marks	11	6	—— Black	11	7
Total	137		Total	92	

—The rifle match between the Houston and Galveston Clubs, which came off at the late State fair, near Galveston, resulted in a score for the Houston Club of 550, and for the Galveston Club of 463, out of a possible 900.

—A shooting tournament came off at the Exposition Grounds, Kansas city, Mo, June 5, 6, 7 and 8. The cash prizes amounted to $2,050, and a gold and silver medal for championship of the west for teams of three from any or all clubs.

THE JAMAICA, L. I., ROD AND RIFLE ASSOCIATION.—The sixth match for the Challenge Badge was shot for on the range of the Jamaica Rod and Rifle Association, on Saturday afternoon of last week. The following is the score:

Thomas Lloyd	5	5	4	4	5	5	4	5	4	4—45
Wm. S. Cogswell	4	5	4	5	4	5	5	5	4	3—44
Geo. A. Reed	5	4	4	4	4	4	4	5	4	5—43
Theodore Rodgers	4	5	5	4	4	4	4	5	4	4—43
Geo. A. Reed	5	5	4	5	3	3	5	4	5	4—43
James M. Oakley	4	4	4	5	5	5	5	3	3	4—42
John M. Crane	4	4	4	4	5	4	4	4	4	4—41
George A. Hicks	4	3	4	4	4	5	4	4	4	4—40
Jno. Ryder	4	4	4	4	4	5	4	4	4	3—40
Geo. W. Damon	4	4	5	2	4	4	4	5	4	3—39
John B. Fleury	2	3	5	4	4	4	4	5	3	3—38
George H. Creed	4	5	4	3	5	5	5	0	4	3—38
Wm. Durland, Jr.	3	3	4	3	4	4	4	5	3	3—37
L. R. Jaggar	4	4	0	4	4	0	3	3	3	2—27

No. 1 won by Thomas Lloyd, as the best score. No. 2 won by J. B. Fleury, under the rule, as the best 38.

—According to a Canadian paper, Gordon B. Pattee, of the Metropolitan Rifle Club, Ottawa, made 63 points out of a possible 70, at 900 and 1,000 yards, on Monday of last week, with a small bore Remington, shooting from the shoulder. Who can do a similar feat among the Creedmoor company? Even at any position, shooting such a score would be very fair. Mr. Pattee ought certainly to study up a good position and join the next Canadian team that may visit our American Wimbledon.

CONLIN'S GALLERY.—The seventh competition for the amateurs' badges was shot at the gallery last Thursday evening, June 7, and was very interesting, as the badges were very closely contested for. The following are the best scores made during the evening, Mr. Alder winning the first badge with the splendid score of 47:

Fred Alder	47	Leon Backer	46
M F Engel	46	S Robinson	46
M L Riggs	45	P Fenning	45
L C Bruce	43	J Cuddy	43

The eighth competition for the badges will take place on Thursday evening, June 14. Open to all comers.

HELLWIG'S GALLERY.—The seventh competition in lying position, of the Centennial Rifle Club, took place on May 28. Distance 100 feet, Wesson rifle. The following scores, out of a possible 100, were made:

T I Jewerson	92	W R Brown	87
A E Long	89	J Q Adams	85
I F Meurch	89	J Maguire	83
W Marshall	83	A H Wilson	80
A Oats	93		

Mr. Long won the badge with the following three scores out of a possible 100 points—90, 93, 94. Mr. W. R. Brown had it twice with 93, Mr. A. Oats had it with 93 and 92, and Mr. T. I. Jewerson had it once with 92. The shooting was done in lying position, at a distance of 100 feet, with a Wesson rifle. Next Monday the club will shoot for a prize off-hand.

ZETTLER RIFLE CLUB weekly shoot for the gold medals came off on May 29 at the gallery. Creedmoor targets reduced for distance; possible 50 points.

M L Riggs	47	C G Zettler	46
F Fenning	47	M B Engel	46
D Miller	47	M Dorrier	46
B S Brown	46	A E Moore	45
J Reyles	46	Chas Voliers	44
J Dutil	46	G A Schurman	44
C Jamison	46	L Bird	44

—The third annual prize shooting of the Zettler Club will be held at Jones' Woods, 66th street and First avenue, Thursday, June 14. They invite all lovers of the rifle to participate. The shooting will commence at 9 A. M. and close at 6 P. M. Cash prizes are offered on the various targets, and they will have a Creedmoor (or Pool) target, distance 100 yards, the proceeds to be divided on the bull's-eyes made on this target.

THE IRISH-AMERICAN RIFLE CLUB.—Our alien citizens were out for their regular weekly contests over the Conlin Medal last Saturday, firing, each man, 7 shots at 200 yds., and 7 at 500 on military guns and 600 yds. for sporting rifles. Serg't N. D. Ward of the 9th Regt. led with 54 points in the possible 70, doing even work at both ranges. The scores stood.

	200 yds.	500 yds.	Tl
N. D. Ward	27	27	54
W. S. Norman	25	27	52
F. F. Millen, sporting rifle	25	27	52
W. G. Benson	18	22	40
P. Farley	19	16	35
R. Duffy	23	11	34
Bethel Burton	24	retired	

RAHWAY RIFLE CLUB.—The members of this club had a practice shoot at their 200-yards range, June 9, preparatory for their contest with the Hackensack Rifle Club, June 12. The following are the best scores, which give evidence of considerable skill with the trigger:

B Vail	44	43	44	131
F Sheldon	42	41	43	126
F Alder	41	41	..	82
Winn	37	Anderson		36
Squire	35			

The scores of the first three gentlemen, representing eighty shots, give a total of 339 out of a possible 400, which is an average of over 42, possible 50.

—The United Shooting Societies held their opening spring shooting at the Union Hill Shooting Park, N. J., May 28, 29 and 30. The meeting was largely attended and the shooting was good. Quite a number of the long-range experts were present and participated in the off-hand shooting.

Ring Target—1st prize, M. B. Engel, 69, $40; 2d, H. Raschen, 67, $30; 3d, L. E. Carr, 67, $20; 4th, J. R. Grohman, 66, $15; 5th, W. Hayes, 66, $10.

Man Target—1st prize, M. B. Engel, 43, $20; 2d, John Raschen, 43, $16; 3d, G. Schalk, 43, $14; 4th, John Rein, 44, $10.

Best Bull's-Eye—C. G. Zettler, 76 deg., $20; C. Koegel, 83 deg., $16; J Grohman, 85 deg., $12.

Mod. Bull's-eye—1st, John Grohman, $10; 2d, W. Hayes, $8; 3d, G. Schalk, $6; 4th, P. Klein, $4; first eye, W. Klein, $1; last eye, C. Zettler, $1.

Creedmoor Target, possible 25—1st, Gen. T. S. Dakin, 22, $10; 2d, R. Faber, 22, $8; 3d, Capt. Mattman, 20, $5.

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME.

PENNSYLVANIA.—*Sharon*, June 6, 1877.—Good time coming. Woodcock are more abundant ere this season than for years. Mr. H., Mr. O. and myself gave our dogs a short run the other day, and they found from ten to fifteen cock, and we the other day, and they found from ten to fifteen cock, and we did not pass over very favorable ground. The young are very large and strong. Good show for quail and grouse this fall.

C. E. T.

Rochester, Minn., June 7, 1877.—At the annual meeting of the Rochester Sportsmen's Club, the following officers were elected: Hon. J. V. Daniels, Pres.; Dr. E. G. Cross, Vice Pres.; L. E. Crane, Sec. and Treas.; E. J. Graves and Henry Kalb, Exec. Committee. Last week the club sent a member to the State Fishery at Red Wing, with an order for 2,000 salmon, which came safely and were placed in our streams. Millions of pigeons are roosting about 18 miles north, and our executive committee are making arrangements for a series of hoots on the 1st and 3d Fridays of each month. We have as good a range as there is in the state, and propose to have some sport in that line before chicken season begins. ALERT.

OHIO.—*West Alexandria*, June 5th, 1877.—Small game is plenty in this section of the country. Quail, rabbits, squirrels, ducks and pigeons (in season), and occasionally a woodcock. The former are more plenty this year than ever before known, owing to the law prohibiting their destruction for two years, which was enacted by the State Legislature in the fall of 1875. The law will expire this fall, when amateur sportsmen anticipate a good time. There are no noted crack shots around here, but we have several very efficient marksmen who, in course of time, will undoubtedly prove experts. The question of organizing an amateur shooting club is being agitated with indications of success. A pigeon match has been arranged to take place here in a few weeks to test the skill of our wing shots. Will let you know the result of the match when it occurs. HUNTER.

KANSAS.—*Girard, June 1st.*—Enclosed you will find a photograph of two setter pups five weeks old; the darkest, I call Sport, the other Nep, and expect to get some good hunting out of them this fall on quail. There will be any amount of them this year, and plenty of chickens also, but they will be a little late, that is, the most of them, on account of the farmers burning the grass off. Some of them are at it yet, and I am satisfied from the young chickens I saw the other day that there have been thousands of them destroyed; I think it is a shame. Their excuse is to kill the grasshoppers. My opinion is, there are none in the old grass, and all that hatch out are on ground that has been plowed, or on bare ground. GEO. W. CRUMFORD.

UTICA, N. Y., June 7, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

I notice in your issue of this week several articles on "deer butchering;" and I would like to say a word or two about it. I know of but one way to stop this wholesale slaughter, and that is, to appoint several trustworthy guides as State game constables, with power to arrest violators of the law anywhere in the State. Several influential men here have promised to see to it, and it is to be hoped that the plan will be carried out. MISHE MOKWA.

OGDENSBURG, N. Y., June 8, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

I see by your paper of the 7th inst. you give Ogdensburg, *New Jersey*, credit for the scores made by our club on Decoration Day. Please correct in your next issue.

JAMES IVES.

DEFIANCE, Ohio, June 7, 1877.

EDITOR FOREST AND STREAM:

In reply to "W. P. M.," in FOREST AND STREAM of May 31st, allow me to say that if you will look over ROD AND GUN of Feb. 26, 1876 you will find a review by the editor of "Shooting; its Appliances, Practice and Purpose," by James D. Dougall. In it you will find *verbatim* what is quoted before, and I think that the name of Mr. Humphreys as editor is sufficient guarantee that the review was not an illusion nor a phantasm.

J. J. E.

(*For Pigeon Shoots see Page* 305.)

HISTORY has essayed all kinds of definitions and distinctions as between the civilized and barbarous man. We should sum up the civilized man as the clean man. This tendency reaches its finest exponent in the invention of B. T. Babbitt's Toilet Soap, a recent article put on the market, and the nonpareil of toilet articles. Its velvety touch in washing and bathing makes it supremely pleasant, and it can be trusted as the purest thing in use. B. T. Babbitt's Toilet Soap will need no commendation to the man or woman using it, either for themselves or children.—*Ade.*

Tiffany & Co., Silversmiths, Jewelers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their Timing Watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. TIFFANY & CO. are also the agents in America for Messrs. PATEK, PHILIPPE & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Bronzes and Artistic Pottery is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Union Square, New York.

DOGS FOR SALE

OF THE VERY BEST FIELD TRIAL BLOOD.

YOUNG BANG, 3 yrs., by S. Price's champion Bang (winner of ten field trials) out of Davey's Luna. Young Bang is own brother to Bow and Sol, and he is one of the grandest looking liver and white pointers in England and is first class in the field; good enough for field trials. Price £60.

BANGLE, a young pointer bitch, 9 months old, very handsome, now breaking by Young Bang. Ted, by Lord Down's Mars—Lott's Lill. Price £30.

LADY DI, 1 yr. 3 mo. (setter), by Lort's Jock (pure Laverack). Rhodo by Llewellin's Champion Dan, sire of Leicester. Lady Di ran in the field trial Derby, and for a field trial puppy was very pretty in her style, and will make a very good one, as she has a capital nose." She is besides this an extraordinary staying bitch, and would be a most likely one for the Iowa Field Trials. Price £60.

Seven puppies six weeks old (setters) by Brackley (son of Lort's Jock)—Rhoda; bitches 10 guineas, dogs 7; and pointer puppies by Young Bang—Jane by Lord Sefton's Bounce. Sam out of his Flirt by his name —has Deuce the same price. Address, G. LOWE, OLD FORD MANOR HOUSE, Hadley, High Barnet, W. London. je14 1t

FOR SALE.—Three Red Irish Gordon puppies out of imported Red Irish Gordon Fan, by Arnold Burges' champion Red Irish setter Rufus. Price $25 each. For full pedigree and particulars address, je14 1f GEO. E. POYNEER, Clinton, Iowa.

FOR SALE.—One pair of handsome black setters, thoroughly broken, thoroughbred.

je7 1t W. HUMPHREYS, 31 Fulton st., City.

FOR SALE—A perfectly broken red (Kennel Register) setter bitch, two years old; probably in heat soon. Will send her on trial. Address E. J. ROBBINS, Wethersfield, Conn. je14 2t

FOR SALE—The brace of Irish water spaniels, Mac and Judy. Both took first prize at New York Bench Show. For price and particulars, address THOMAS FINN, Bridgeport, Conn. je14 1t

FOR GREYHOUNDS (a limited number)—Stud dog Sir Guy, blue and white, handsomely marked. Sire and dam, grandsires and granddams were in the celebrated kennel of M. Henri Du Pont. This dog took a prize at Chicago, 1876, and was commended at Westminster Club Show last May; stands 26½ inches; pupped in April, 1874. For further particulars, address RUFUS ADAMS, P. O. Box 2,625, New York. je14 1t

THE "FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries

OF NORTHERN MICHIGAN, VIA

Grand Rapids and Indiana Railroad.

(Mackinaw, Grand Rapids & Cincinnati Short Line.)

Sportsmen who have cast a fly or trolled a spoon in the waters of the **Grand Traverse Region** will come again without solicitation. All other lovers of the Rod are invited to try these waters, wherein

The fish named above, as also **Muscalonge, Pike** and **Pickerel**, abound.

In no other streams east of the Rocky Mountains is the famous **American Grayling** found in such numbers.

Brook Trout Season opens May 1st.
Grayling Season opens June 1st.

The sportsman can readily send trophies of his skill to his friends or "Club" at home, as **ice for packing fish** can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st **Round Trip Excursion Tickets** sold to **Points in Grand Traverse Region**, and attractive train facilities offered to tourists and sportsmen; also, on and after July 1st, **Mackinaw and Lake Superior** Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, send to FOREST AND STREAM office, or address

"THE OOLOGIST,"

A MONTHLY JOURNAL DEVOTED EXCLUSIVELY TO BIRDS AND BIRDS' EGGS.

This magazine, the favorite of amateur ornithologists, is now in its third volume. It is replete with all that is new or recent in Ornithology and Oology, and publishes important papers on the rarer of our birds and eggs. It is just the periodical for those making collections of birds and eggs for scientific examination, as its columns are constantly furnishing descriptions of the eggs of new and rare species.

TERMS—Forty cents a year, in advance. Specimen copies and prospectuses only on receipt of stamp. Address

S. L. WILLARD & CO.,
je7 Oneida st., Utica, N. Y.

FUR, FIN and FEATHER.

This is a publication that should be in the hands of every lover of shooting, fishing and trapping. It contains the

GAME AND GAME FISH LAWS

of every State in the Union and the Dominion Provinces, and also gives a description of all the best places for shooting and fishing in the United States and Canada, tells how to reach them, and what kind of accommodations you will find when you get there. It tells you what kind of tackle to use for the various kinds of fish, and where the best can be procured, and also where you can get the best of every description of shooting apparatus. It contains a number of interesting sketches of hunting and fishing adventures, and a vast fund of useful information on field sports and angling that renders the work indispensable to all who use either gun or rod. It is, in fact, a complete

Hunting and Fishing Directory

and no matter how much or how little recreation you take in the woods and along the streams, you will find *Fur, Fin and Feather* worth many times its price to you. It is a bi-monthly (every two months) publication of from 176 to 208 large octave pages, 50 cents a number, or $3 a year.

Highest Honors
AT THE
CENTENNIAL WORLD'S FAIR, 1876.

SHONINGER ORGANS.

PRONOUNCED UNANIMOUSLY AS THE

Best Instruments.

Their comparative excellence is recognized by the Judges in their Report, from which the following is an extract:

"The **B. SHONINGER ORGAN CO.'S** exhibit as the best instruments at a price rendering them possible to a large class of purchasers, having a combination of Reeds and Bells, producing novel and pleasing effects, containing many desirable improvements, will stand longer in dry or damp climate, less liable to get out of order, all the boards being made three-ply, put together so it is impossible for them to either shrink, swell or split." **THE ONLY ORGANS AWARDED THIS RANK.**

This Medal and Award was granted after the most severe competition of the best makers, before one of the most competent juries ever assembled.

New styles and prices just issued, which are in accordance with our rule, the **BEST ORGANS** for the least money.

We are prepared to appoint a few new Agents.

Illustrated Catalogues mailed, postpaid, upon application to

B. SHONINGER ORGAN CO.,
97 to 123 Chestnut Street,

SAPONOID.

Mosquito & Black Fly Repellent.

This Composition contains no ingredients injurious to the skin, is saponaceous and removed at once by the application of water, possesses great healing and cooling properties free from all greases. Certain and instant cure for the bite or sting of insects, mosquitoes, flies, wasps, bees and other insects, removing all inflammation, neutralizing the poison and allaying the swelling at once.

DIRECTIONS.

For repelling flies and mosquitoes rub the Saponoid on the exposed parts freely with the hand. One application to the sting or bite of the insect, in most cases, is certain relief.

Sold in collapsible tubes, mailed to any address on receipt of 50 cents by

Guns, Etc,

THE

CHOKE-BORE MATCH.

W. W. GREENER begs to inform his numerous patrons in America that his gun has again come off victorious at the great match of Choke-Bores vs. Cylinder Bores, at the London Gun Club, on May 23 beating seventeen of the best shots in Great Britain who used guns by the best London makers.

(See *London Field*, May 26, Editorial Remarks:)

"Mr. Cholmondley Pennell, the winner of Mr. Purdey's massive 50-guinea cup, weighing over 91 ozs., for the highest score, shot wonderfully well, killing all his birds at 30 yards with the first barrel. The gun he used was a full choke, by Greener, of Birmingham. The result of the trial served to show the superiority of the choke at the long range. Mr. C. Pennell cutting down his birds in a marvelous way with his heavy Greener."

Portable Shooting Boxes.

Portable Shooting or Tourist Houses built in Sections, carried in a one-horse wagon, can be put together without the aid of a mechanic, and are far superior to tents. Plan as shown is 10 feet square, and built of narrow pine, oiled inside, painted outside, and trimmed with rustic work. Price, $135.

Wainscoted 3 feet high, inside, $150.

Each house contains a stowaway or open attic for holding sporting equipments, etc. Plans for seaside Cottages; also, all kinds of Rustic Work.

These houses can be built more extensively and elaborately if required.

POPE MANUFACTURING CO.,
47 High st., Boston, Mass.

W. & C. SCOTT & SONS.

First Prize Medal and Diploma, awarded at the Centennial Exhibition, for excellence of workmanship and material in their **Premier Quality** and medium grades. Their **New Patent-Triplex** Lever Grip Action and **Compensating Lump.** The attention of sportsmen is requested to the above new action. Its superior strength and solidity impart greatly improved shooting powers. Hard hitting being the desideratum required, is obtained by this powerful gun. Prices of the New Triplex Lever Grip, $175, $225 to $400. Marked the Triplex 10-bores extra. Our highest grade is as usual marked the PREMIER QUALITY.

[Extract from FOREST AND STREAM, Now York, December 23, 1876, Contributed by one of the Judges of Awards of Guns at the Centennial:]

"This action (The Triplex Lever Grip) combines in the highest degree strength and simplicity, and must rapidly secure the favor of all who test its merits.

COMPENSATING LUMP. Strongly recommended. It is invaluable, and should be ordered on every gun. Costs about $10 extra. Choke-bores, medium or full. Our guns to be had of the principal dealers in the trade only.

PREMIER GUN WORKS, Birmingham, England.

Paper and Metallic Shells
FOR
Breech-Loading Shot Guns,
Manufactured by the
UNION METALLIC CARTRIDGE CO.,
BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.
THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.
PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.
Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.
Not sold at retail by the manufacturers.

"St. Louis Conical Base Paper Shell."

Having made important improvements in our Shell, we can safely recommend them as equal, if not superior, in quality to any Paper Shell manufactured in this country or in Europe.
Among the advantages claimed for these Shells, are: A saving of 25 per cent. in the use of powder, also the great decrease in recoil. The sizes made are No. 10—2¼, 2⅝, and 3 inches; No. 12—2¼, 2⅝, and 2¾ inches. Longer Shells will be made at extra cost. They are not mailable. Sample, 100, sent by express on receipt of $1.15 for No. 12; $1.30 for No. 10.
Factory and office, No. 2,230 De Kalb street, St. Louis, Mo.

St. Louis Patent Shell Manufacturing Company.

Geo. E. Hart & Co,
NEWARK, N. J.
TRADE SUPPLIED.

A VICTORIOUS INVENTION
The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game.
The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.
It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or, when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation.
It is adapted for bait of any description, and, when set, no Animal, Fish or Bird that touches the bait can possibly escape.
It does not mangle or injure its victims in the slightest degree, nor need they be handled to free them from the trap.

PRICE LIST:
No. 1—For fishing and all kinds of small game and animals, sent by mail.....35 cents.
No. 2—For catching Mink, Muskrats, Raccoons, large Game, Fish, &c.....75 cents.
No. 3, or Rocky Mountain Giant, for catching Bears, Wolves, Panthers, &c. Can be easily set by a boy, and will stand a strain of several hundred pounds. Weight, 10 to 15 lbs. $10.
All goods sent, charges paid, to any address on receipt of price.

WESTERN WILD FOWL SHOOTING.*

BY J. S. VAN DYKE.

MANY the scenes that deeply, keenly thrill
The sportsman's bosom, as o'er dale and hill
With throbbing heart and tingling nerve he bounds
With pointer, setter, or the ringing hounds.
But few more grand and wild emotions raise
Than one that oft is seen in autumn days,
When first the surly blasts begin to howl,
And heaven's smile to change into a scowl.
When droops the wild rice its once stately head,
And rush and reed and flag are sere and dead;
When withered leaves ride swift on whistling gales,
The wild fowl for their journey spread their sails,
But pause awhile around some favorite place
Ere starting on their long and weary race.
At such a time and spot our stand we take,
Close by the borders of some rice-fringed lake.
Wondrous and grand the scene that now unfolds,
And the astonished eye enchanted holds!
From every quarter of the great blue dome,
In countless throngs the wild fowls swiftly come,
Circling, rushing, darting, wheeling, dashing,
Towering, settling, in the water splashing.
High in the air, with stately, solemn wings,
Slow sail the geese in long converging strings.
Still higher up, with proud, majestic pace,
The sand-hill cranes float by in easy grace,
While far above, in dignified array,
The swans are drifting on their southward way.
From every side what varied sounds we hear,
That make true music to the sportsman's ear:
The mellow "honk," the "scape" of saucy snipe,
The widgeon's whistle and the loon's clear pipe;
The "clank-a-lank" that from the brant doth ring,
The rushing bustle of the broadbill's wing,
The mallard's "quack," the frightened wood duck's squeal,
The sandhill's trumpet that o'er all doth peal!
As falls the night, they faster, nearer come,
The air resoundeth with their steady hum.
But we've not come to idly stand and gaze.
And fast and sure spouts forth the deadly blaze.
With rapid buzz the broadbill by us whirls,
But in a trice his whistling pinion furls.
In vain the blue wing plies his whizzing wings,
The deathful ball across his pathway sings;
The lovely wood duck, with his plumage bright,
Whirls struggling down into the shades of night.
The watchful goose, that cautious threads the air,
Droops neck and wings, as if in silent prayer,
And downward plunges with impetuous crash.
In vain the mallard, with his wary eye
Doth seek, with vigorous "quack," to climb on high.
Too late his care! Too late his skyward dash!
He downward thunders with a sullen splash.
Waiting with patience till we give the word,
Our faithful dog retrieves each fallen bird.
The trusty creature, having marked its fall,
Bounds through the reeds, however thick or tall;
Although they fall where man could never stand,
This honest servant brings them to our hand.
The lake is cold; its edges fringed with ice;
But still he flounders on through tangled rice,
Heedless of comfort or the wintry blast,
Toils shivering on until he gets the last.
Then to our boat, and down the moonlit stream
We glide to camp, and soon the fire doth beam.
From drift wood piled on high, the cheery blaze
Shoots far and wide, and o'er the river plays;
And soon we gather round the festive board,
Laden with viands that would tempt a lord;
Then round the fire comes the social smoke,
The song, the story, or the spicy joke;
And then to sleep upon our bed of reeds,
While fancy pictures out to-morrow's deeds.

**Between wild fowl shooting in the West and on the sea coast there is a wide difference.*

A Trip to the North Fork of Navarro River.

(Continued from June 14th.)

WE arrived at the inn shortly after dark, truly glad to get our supper, for we had foolishly taken a very scanty supply of food, and had been moving almost incessantly on the hills and along the creek for fifteen hours. The scenery along the North Fork of the Navarro River, as I have said before, is exceedingly wild, there being no signs of civilization for many miles, and but for a solitary trail nothing to show that human beings traveled through the valley. Extensive fires have blackened the trees and eaten up the undergrowth in parts of these great forests, causing a most desolate appearance. This, however, is only found in comparatively limited spaces adjoining the logging camps.

The next day Uncle, B. and I traveled up stream, uncle on horseback, we youngsters on foot. We walked along the trail as far as a solitary farm house (ranch) where lives queer old specimen of humanity, known as "Uncle Mo," a regular old "Pike" from Missouri. Having consented to act as our guide, he conducted us along a wild mountain trail to a point on the stream where uncle tied his horse and proceeded to fish the creek (where we afterwards found he took eleven good sized trout). Uncle Mo, B. and I then ascended the ridges in search of deer. B. got one snap shot, but without effect, and beyond this we saw nothing. We visited a bear-trap and saw the remains of a monster black bear, killed ten days previously. On our way back we had occasion to walk along the most extraordinary ledges of rock, creeping under low-growing boughs, and generally following our guide over places which none but venturesome hunters dare traverse.

We returned to the little hostelry, and enjoyed a delicious bath and swim in a long deep pool, in which, during my stay at the North Fork House, I daily indulged. That night a camping party arrived from the city, consisting of Mr. Rector, of Oakland, and his brother, and Mr. Sweet. To M Rector I had a letter of introduction from a friend in San Francisco, who had told me of his intended visit. Accordingly next morning I presented my letter, and, with B., was cordially invited to join the party in a camping expedition to the ridges of the adjacent hills. So, having all things in readiness, we bade farewell to uncle, leaving him to enjoy the sport afforded by the trout stream, and taking two pack horses we started for a spot well known to Mr. Rector, he being an old hunter, familiar with that country in every direction. The distance to our camping ground is about four miles. The ascent up the bold hills was very severe. The spot selected is just above a fine spring of water on the top of the ridge, commanding a marvelously fine view over the grand mountains of red wood—a panorama not easily forgotten. As far as the eye could reach is one magnificent succession of monster forests, rising one above the other in nobility beyond description. We pitched our tent upon a spot formed, as it were, by nature for a camping ground, surrounded by a belt of large redwood trees, so grouped as to leave just sufficient space in the centre for our large fine tent. Having hitched the horses, we set to work to level off and clear the ground before pitching our canvas. We then worked hard with hatchets, cutting the tender young branches of redwood, which proved a capital foundation for our sleeping berth. The camp being arranged according to the most approved style, towards evening we all sallied forth with our rifles in search of deer and bear if they should come in our way, B. and I together, the rest in other directions. We had not gone far when, descending a deep gorge, I saw three deer ascending the other side. I fired several shots, and B from another position dropped a young buck fawn. We were conscious, from the motion of one of the deer, that she was badly hit; and, though we followed and saw quantities of blood, and a small bone shot out of the leg, we did not succeed in overtaking our game. A little further along the ridge B. dropped a fine doe at the first shot. We returned to camp before dark. B. and one of the others then started with a horse, and brought home his two deer. Mr. Sweet also bagged a doe. So we had three fine deer hanging in camp the first night. Next day we all hunted the woods in different directions, but failed to bag another deer. Sweet's shotgun killed a number of quail (which were very numerous in those parts) for our supper, and greatly did we relish our meal after our long mountain climbs. Our table (most admirably fixed in true carpenter's style by Mr. Rector's brother) was spread with venison, quail, fried potatoes, apples, peaches, coffee, etc., etc. After supper each evening we sat encircled around the cheerful blaze of our camp fire, smoking our segars and pipes, and telling each his stock of yarns and anecdotes. And many were the hunting stories told by the Messrs. Rector of their experience in the early days of California.

Next morning (Sept. 6) we all started forth after the timorous deer, and all returned to breakfast at about 8 o'clock without any bag to report. Having myself done no execution up to that time, I was naturally considering it about time that I contributed my share. I was the first to leave the camp, and entered the forest all alone. The rain had been falling fast during the night, and still continued, thus improving one's chances for a deer. The leaves and twigs, which, in dry weather, warn the quick-eared deer of the hunter's approach, were that morning silent, and therefore I was able to creep along comparatively unheard. I had not been out of camp more than ten minutes when, standing in an open glade, I perceived a fine doe situated about fifty yards from me, looking earnestly and inquiringly at me; but as I raised my rifle to fire, she, with one spring, darted down the valley out of my sight. I sprang forward, and seeing the way the deer had gone, I considered it prudent to make a circuitous trip rather than follow the same trail. As I paused on the side of the hill, I beheld the doe with a large fawn standing on the opposite side. I fired and missed. The doe then ran forward, and in so doing exposed her neck. Again I fired (distance 200 yards), and that shot was instantly fatal. The splendid creature fell dead, rolling some fifteen or twenty feet down hill. In my intense excitement I rushed down the steep incline, leaping over great fallen trees which ordinarily I should have had great difficulty in crossing. But on this occasion I thought no more of these giants than had they been mere twigs. Down I went with frantic speed, and up the opposite bank, fearing lest the *dead deer* might run away, and thus deprive me of my victory! As I neared the fallen victim the fawn sprang up, and had I been less excited no doubt would have lain beside the mother. But foolishly I thought of nothing but securing the doe, so, after hurriedly discharging my rifle at the retreating fawn without effect, I turned to survey the body of *my first deer!* There she lay quite dead, the bullet having passed through her neck. And what had that gentle beauty done that I, a savage hunter, should have thus assailed her! These are thoughts which to many a sportsman must occur while looking into the sweet and peaceful face, and at the graceful tapering limbs of the fallen beauty. The deed was done, and could not, even had I regretted it, be undone. I therefore raised my big hunting knife and commenced the usual work of cleaning my game. On hearing the crack of my rifle, Mr. Sweet left the camp, and answering to my call he kindly ascended the hill, and offered his assistance, which to me was most acceptable. Shouldering the game I marched in triumph to camp. A heavy burden this would have proved under any other circumstances, but on this occasion a mere trifle! I marched into camp waving my hat and cheering till my very voice gave out. Many were the congratulations offered. The Rectors, though old and experienced hunters, had, up to that time, bagged nothing. After my exertions I was ready for a hearty breakfast, No. 2. I felt as though a great weight had been removed from my mind, for B. having been so successful, and I having up to that time killed nothing, I had begun to be rather disheartened, fancying luck was against me.

That afternoon B. left us on his homeward journey, his business duties calling him back a day or two in advance of me. He packed one of his and my deer on one of the horses and started for the North Fork. That afternoon I took a new route all alone, descending the ridge and passing down a stupendous valley. I saw two or three deer, having a shot at one without apparent effect. Although I killed nothing there was great excitement to me in creeping stealthily among those splendid forests, perpetually on the *qui vive*, the slightest sound attracting my attention. And many a time did a grotesque-shaped tree-stump to my excited imagination appear for the first moment a living object. Upon thinking over my adventures, of the difficult and dangerous climbings, the extent of ground traversed and the many obstacles overcome, I seem to wonder while writing this in my calmer moments in the city how I succeeded in accomplishing so much; and yet, so great is the enjoyment of the sport, that I anxiously look forward to and shall not be satisfied until I enjoy another outing of the same kind. But to return to our camp on the ridge. That evening a Mr. Call arrived from the city to join the Rectors and Mr. Sweet according to agreement. B. met him at the North Fork, and that evening conducted him along the trail, pointing out our position on the ridge. Next day I hunted alone. While passing over a trail to the north-

ward I could distinctly hear below me in the ravine a bear tearing the bark from a tree in search of worms which are found thereunder.

On returning to the same trail I found the bear had made havoc, during my absence, of a tree by the side of the trail, but I had no opportunity of catching even a glimpse of him. That morning I left the trail, hunting in an entirely new section of the country, crossing over the roughest ridges. I caught sight of a couple of deer, but no chance was afforded of a shot. The day wore on, and in my wanderings a valley of wondrous beauty appeared before me. I descended the hill, coming upon a lovely stream, surrounded and partially covered by overhanging trees and shrubs of great variety. The minature pools of crystal brilliancy were surrounded by beds of the most beautiful ferns, mosses and grasses, while at intervals lay the massive trunks of giant trees by force torn up by mountain storms and hurled into their last resting-places in the valley beneath. In all my wanderings in the beautiful valleys of California I have not seen a rival to that which I have endeavored to describe. But while deeply appreciating this scene in Fairyland the extreme loneliness and tranquility of the spot struck me that I had imprudently traveled into unknown regions. I sought to retrace my steps, but no trail was to be seen, and nothing before me to indicate my position and that of our camp. Time passed on, and I seemed to become more and more entangled among the forest trees. As I ascended each ridge I hoped and expected at the summit to be able to discover my position. Things were looking not a little serious, as I had never been upwards of five hours lost in the woods. True it is I had with me my rifle and a goodly supply of ammunition, and if the worst came to the worst I could have lived on squirrel's meat and other small game. Towards afternoon I ascended a high ridge, and, to my great satisfaction, I discovered far away on another range of hills the open ground near our camp. On arriving at the tent I was agreeably surprised by a visit from Uncle and our excellent hostess of the North-Fork Inn, who had ascended the hills on horseback. The many little attentions shown by Uncle to the lone widow seemed greatly appreciated by that lady, and she must have greatly regretted our departure from under her roof. The following day we broke up camp and returned to the inn, and the next day the camping party pitched their tent on the banks of the stream near the junction with the main river, where we heard afterwards they killed among them twelve large deer, and a great quantity of large trout. Uncle and I enjoyed a quiet day by the creek, taking with us a horse and riding in turns. I did no execution with my rifle, but Uncle as usual brought home a splendid basket of trout, some taken with fly and some by baiting with pieces of chub. Our last day at the inn was spent in complete rest. I took my sketch-book and made a picture of the inn, bridge and stream, and also of a soda springs situated a mile away. Passing over the same ground on our return home there is little more to be added. We arrived safely in San Francisco after an excursion of great and complete enjoyment.

P. F. HOOPER.

BAY BIRD SHOOTING IN NEW JERSEY.

EDITOR FOREST AND STREAM:

Three o'clock was the time agreed upon for the "meet" at the depot of the N. J. R. R. Destination, Townsend's Inlet, on the Jersey coast, midway between Atlantic City and Cape May. Object, a week's shooting at bay birds. Upon summing up the number at the appointed time we counted Soule, Prosser, Kitchen, Roop and Karsner, six ardent votaries of the rod and gun. A pleasant two hours' ride brought us to Seaville, fare $1.90. A stage ride of 18 minutes, costing 25 cents, luggage included, and we were at Capt. Bill Sutton's, who warmly welcomed us in person. Right heartily indeed did we grasp his proffered hand, for we had been doubly assured that the captain was thoroughly reliably and scrupulously just in all his dealings; in no manner whatever connected with or related to that band of pirates so generally found at seaside resorts. The house is a large old-fashioned farm dwelling, having plenty of room, and better than all besides, an excellent well of water in the yard. A general air of comfort and pleasure seemed to pervade the very atmosphere in and about the old place. We were soon agreeably informed that there was no dressing for the dining-room, shooting garments being admissible everywhere. High silk hats it is true were allowed to come and go, but in imminent danger if worn after a fifteen minutes' residence. A fine supper on bluefish and oysters, only out of the salt water a few hours, an argument upon the action of breech-loading guns (the "Lefever" coming out first best), a few games of whist, and early to bed. Awakened at daylight the following morning by the report of a gun in the yard, and hastily jumping out of bed we beheld Roop through the open window, alternately hugging and targeting his "Purdy" (?) "Ain't she a jewel?" he exclaimed, holding up a target that looked like a fine sieve. Breakfast being soon dispatched, the party paired off for the day. Soule, that very prince of gentlemen sportsmen—one of the best amateur wing shots of our city, together with Howard Rice as boatman and guide, were soon aboard our craft, the Centennial. "Got everything, Howard? lunch, water and bushes for blind?" inquired Soule. "Yes, sir, everything necessary," he replied as he shoved Centennial off from the shore. Afloat upon the principal thoroughfare, we were soon heading for the lower meadows. Casting our eye upon the surrounding scene we beheld a beautiful stretch of waste meadow land, extending eastward miles away, north and south, as far as the eye could reach, through the midst of which run small creeks or thoroughfares in every conceivable direction, losing themselves upon the wild desert waste in the distance. At the eastern boundary loomed up upon a gentle acclivity the white sand of the ocean shore, while beyond, and seemingly over, lay old ocean, in all its restlessness and grandeur. The intervening meadows were fresh and green, their surfaces looking smooth as floors, sloping away to the waters edge. Here and there could be seen remnants of "blinds" relieving by their height and their deeper green the extended surface. A brilliant sun and cloudless sky beamed brightly over all, disclosing a most beautiful scene, at once soft, gentle and charming.

Notwithstanding the picture we could not help thinking how desolate and unattractive would this broad expanse appear deprived of the presence and tuneful voices of those feathered warblers, the birds. Rightly indeed do we as sportsmen associate these graceful creatures with our sense of beauty; ever do they seem to us "like flowers, the gratuitous offsprings of nature." At length a landing was effected at a choice spot, a temporary blind constructed, and stools arranged temptingly upon the edge of a small salt pond. Scarcely were we concealed when Howard's acute ear detected a bullhead plover's whistle, which he soon succeeded in calling over the decoys from out of the very sky. Now, from the time when that bird appeared to us no larger than a bumble-bee up to the instant of its death, we had silently determined to astonish our companions with an artistic exhibition of our skill. But alas for "cherished hopes and fond expectations!" the bird fell to our friend "Scott," we being a moment too late. A merry twinkle in Howard's eye told plainly that he rather enjoyed our discomfiture. Congratulating our quondam opponent with as much grace as possible under the circumstances, we turned our attention to the many flocks of birds now on the wing, alarmed by the report of the gun.

"Down, close!" whispered Howard, "here comes a pair of calico-backs." Ah, now was our chance; how finely they came! what tremendous pace! Hardly an instant elapsed ere they were upon us. Glancing hurriedly along our gun barrel at one of the birds imagine our chagrin to discover it in the very act of falling to Soule's gun. Changing our aim nervously to the remaining one we "fouled" in the blind and scored a clean miss. A loud laugh from Howard, mingled with the sharp report of our companion's gun and the splash of a dead bird striking the water, brought us to our feet instanter; and turning our "wiped eye" now filled to overflowing with withering rebuke, upon our convulsed friends, endeavored thus to annihilate them—but, strange as it may appear, they didn't wilt worth a cent. We consoled ourself mentally with a firm resolution to fill the next bird so full of shot that it would sink when it struck the water, and thus by one fell stroke retrieve our lost laurels. At this instant a fusilade opened at our nearest neighbors' "blind" (Burroughs and Florence, of Philadelphia,) which was followed by a lively cotillion "on the green," as they gathered up the cripples. Being now in a desperate mood, we tried our hand on a wisp of robin snipe at very long range, which our friend's "Scott" had failed to reach, bringing down three with the first and two with the second barrel. At last we had the key note of success in our possession. Our choke-bore Nichols & Lefever was sure pop all the way up to ninety-one yards. So said Howard, who retrieved the birds, counting the paces to the nearest one. With this assurance we proceeded to "unhook" at all distances the balance of the day.

Our next fly was a fine flock of bull-head plover. They made a splendid dart at the decoys, and catching them just as they bunched, we added largely to our bag; and a few moments later a remarkably good double shot for both completely restored our equanimity. The different parties of sportsmen were now all ensconced in their hiding abodes, and the engagement became general, and as the birds came thick and fast how thankful we felt for our extra provision of shells and our easy working breech-loader. "What a splendid hot corner to wean off one from his old muzzle-loader," remarked Soule, as we hurriedly slipped in shell after shell. Merrily spun the time, and grand indeed was the sport throughout the entire day, and not until the "sun's latest rays" did we pack up our traps and away to the boat for a delightful sail home, enjoying all the while the rare beauty of a summer's eve at the seaside with its invigorating breeze and refreshing fragrance.

As day succeeded day, we drank to fulness of health and happiness with our every breath. Furiously fast, indeed, did that relentless despot, "Old Father Time," drive his tireless steeds during our sojourn, and now that but one day remained to us, it was unanimously agreed to do the thing "bang up," by pitching in for high boat, Captain Bill and your humble servant being "booked" to beat the field. "Accordingly, so be it done," said the Captain, as we made sail early in the morning. "It is my will and pleasure," we responded. A short half hour's sail, and we were at Ludlum's Sound, where we proposed to put in a part of the day. *En route* we bagged a jack curlew, together with several grey-backs. A desirable point was selected in the sound, and we were soon banging away as fast as we could push in fresh shells until noon, when a change in the tide necessitated a change of base to the meadows, where we continued the sport away into the twilight of evening. We reached the landing as the moon towered aloft and tinged the surface of the waters and meadows with exquisite rays of burnished silver, and taking a last lingering look upon the many places made familiar during our holiday week, turned our faces homeward. We found our jovial companions all in a state of anxiety concerning our bag. A count revealed the fact that we were doomed to another disappointment, as we only stood second on the list, Soule and Ober beating us by a score of 71 to 60. Messrs. Norris and Pardsell, of Balt., taking third place with a score of 54—large birds only counting. Thus ended one of the most pleasant week's sport that has ever fallen to our good fortune. Having commenced our narrative by stating railroad expenses we opine that it will not be amiss to say in conclusion, that the rate for board is only $1.50 per day. Charge for boat and man, $2, which is customarily shared by two gentlemen, thus making the individual expense $2.50 per diem. Our 8½ lbs. gun, right barrel modified, left full choke, was deemed by all the party a model weapon for the sport, its massive breeches thoroughly protecting our shoulder from recoil, while its efficient range and handiness of action were all that could be desired. We make mention of this as a gentle hint to brother sportsmen in the selection of a gun, as we saw several shoulders badly used up by excessive recoil from light breech guns.

DOC.

Fish Culture.

THE FISH MORTALITY IN NEW JERSEY.—The fish epidemic which so fatally affected the fish of the Passaic river, was equally serious at the reservoir at Upper Longwood, Lake Hopatcong, and in fact all the streams in the various localities, twenty or thirty miles apart. The bottom fish only seem to have been affected, such as suckers, sunfish, perch and catfish. No black bass, pickerel, or trout have been affected. The cause of the mortality must therefore be sought at the bottom of the river, and may be due to some fatality among the crustacea, larvae, etc., on which the fish feed, or to poisonous gases that have percolated through the earth from beneath. The warmth or turbidity would not cause the destruction of the fish.

The most plausible theory advanced regarding the epidemic is that of Fish Warden Pierson, of Morris county. He expresses the belief that this unprecedented destruction has been caused by the peculiarly warm spring. There have been few freshets, and the waters have been unusually low, warm and stagnant. During the early part of last month the weather was uncommonly warm for that season of the year. In consequence, the water was as warm as it usually is in the middle of summer. Mr. Pierson argues that the fish being weak from spawning, easily succumbed to the warmth and the low water.

NEW HAMPSHIRE.—Fish Commissioner Hayes of Milton, has stocked Tri Echo Lake in Milton and Lovewells Pond in Wakefield with land-locked salmon, and Policy Pond in Salem. Wash Pond in Hamstead, and Province Pond in Wakefield with black bass. And many other lakes and ponds will be stocked this season with the best varieties of fish by the commissioners.

MASSACHUSETTS.—The long vexed question of the Lawrence fish way has at length been settled, since shad and salmon have been known to ascend above the dam this season, showing that there is no mechanical difficulty in the way of their passing in large numbers.

DELAWARE RIVER SALMON.

LAMBERTVILLE, N. J., June 11, 1877.

EDITOR FOREST AND STREAM:

Please mention in your paper the catching of a nine-pound salmon near Bordentown, N. J., on June 2, in a shad seine, and presented to Capt. Jos. Yard, of Trenton, N. J. He said it graced his table, and was admired and enjoyed by himself and friends. From minute descriptions given by several individuals who saw it, the decision that it was one of the California salmon planted in the Delaware was arrived at. This forever sets at rest the question so often asked, "Will they return from the salt water to the river they are reared in?" I have seen numbers of parr of this species which have been caught by boys, while fishing with hook and line near Easton, Pa., from six to eight inches in length, which were of those placed in the upper Delaware by me for the N. J. Comm ssion in March 1876. Doubtless large numbers of them are taken in this way by persons who are ignorant of this species, never having seen them before, thus, in a great measure, frustrating the efforts of stocking this river with this variety of fish.

Yours very respectfully, A. A. ANDERSON.

HATCHING APPARATUS FOR AQUARIA, PONDS AND STREAMS.

NEW YORK, May 29, 1877.

EDITOR FOREST AND STREAM:

Will you please give the subscribers of your interesting journal a simple diagram of a trough by which laymen will be able to hatch the eggs of different varieties of fish.

The eggs can be procured by the thousand, with little expense, and, with proper information, our small and large streams and lakes or ponds will be sufficiently stocked so this generation will receive some benefit. The present slow mode of stocking a lake of 500 acres with 50 to 100 black bass is discouraging. Yours, etc., T. E. PORTER.

We would be much pleased to favor our correspondent by reproducing for his own and others' instruction a series of articles which were prepared for this paper in the year 1875 by Dr. Nahum E. Ballou, of Sandwich, Ill., giving full instructions, with designs of hatching apparatus and diagrams for laying out ponds and constructing hatching houses; but the matter is too voluminous, and unless given in full would fail to give the information necessary to accomplish the object desired. Besides these, we have published diagrams of hatching apparatus for aquaria, prepared by T. B. Ferguson, Esq., one of the Fish Commissioners of Maryland. The entire subject matter can be found in the following numbers of this paper, to wit: March, 11; April, 8; Sept., 9; Sept., 23, and Oct. 7 and 14.

PROGRESS OF FISH CULTURE IN NORTH CAROLINA.—The new bill to protect fish and encourage fish culture is given herewith:

Section 1.—The General Assembly of North Carolina do enact: That no person shall place or allow to remain in the Catawba River, between the South Carolina line and that point on said river nearest to Old Fort in McDowell County nor in the Yadkin (or Pee Dee) river from the South Carolina line to Patterson's factory in Caldwell County, any obstruction whatever to the free passage of fish (unless such obstruction shall leave a free and open passage for fish of not more than seventy-five nor less than thirty feet at any one point, or in case it may be necessary to have more than one such pass-way in the same dam, then all openings not to exceed one hundred feet; and where there may be such obstruction on both sides of any island or shoal belonging to the same or different persons, then the opening of said dams or shoals shall be as above prescribed in both channels) under a penalty of $50 for every day that such obstruction is allowed to remain; one-half to the party suing and the other to the school fund of the county where suit is brought.

Sec. 2. The owner or owners of any dam shall construct such fish-way as may be described and required by the county commissioners, and on failure to comply with such requirement the said owner or owners shall be guilty of a misdemeanor, and on conviction shall be fined $100 per day for every day that said dam or obstruction is permitted to remain without such fish-way.

Sec. 3.—That if any person or persons shall place any impediment in or near such fish-way that may hinder or obstruct the free passage of fish, such person or persons so offending shall be deemed guilty of a misdemeanor, and on conviction shall be fined not less than $100, nor exceeding $500, or may be imprisoned not exceeding thirty days, or both, in discretion of the court for each offence.

Sec. 4. That any person or persons who shall take any sealed fish from the waters of said rivers, by any means, except hook and line during the spawning season, to wit: From the first day of May to the tenth day of June of each and every year for the period of two years, shall be deemed guilty of a misdemeanor, and on conviction shall be fined not less than $100 nor more than $300, or may be imprisoned not exceeding thirty days, or both in the discretion of the court, for each offence.

Sec. 5. That whenever any person shall decline to remove

the obstructions which prevent the free passage of fish on said rivers on account of any claim to the ownership of the bed, or channel of said rivers, and if, for any cause, the same cannot be purchased from the owner at a reasonable price, the County Commissioners of the county wherein said owner's land is situated shall condemn the same.

Natural History.

NOTES ON THE CARIBOU.

ABSTRACT OF A PAPER READ BEFORE THE INSTITUTE OF NATURAL SCIENCE, HALIFAX, N. S.

BY R. MORROW.

MR. MORROW said that the paper owed its origin to the following quotation from Sir John Richardson's "Fauna Boreali-Americana," pages 250 and 251. Mr. Hutchins mentions "that the buck (caribou) has a peculiar bag or cyst in the lower part of the neck about the bigness of a crown piece, and filled with fine flaxen hair neatly curled round to the thickness of an inch. There is an opening through the skin near the head leading to the cyst, but Mr. Hutchins does not offer a conjecture as to its uses on the economy of the animal. Camper found a membranous cyst on the reindeer above the thyroid cartilage, and opening into the larynx, but I have met with no account of a cist with a duct opening externally like that described by Mr. Hutchins, and, unfortunately, I was not aware of his remarks until the means of ascertaining whether such a sac exists in the barren ground caribou were within my reach."

Mr. Morrow had several times looked for the cyst without success, but always forgot to do so for the sac, and in order to obtain some information on both points, he went to the woods in December last and succeeded in killing a large buck, the result of the examination of which and dissection of others, male and female, made since, he would place before the Institute. But first he thought it necessary to give Camper's* description of the membranous sac from a reindeer "four years old." Camper says* "that as he did not know the reindeer, and as the imperfect account which Valentyn gave of Stenon's dissection in 1672 did not give him much light, he was forced to proceed with caution (date June 1771). He had often observed on the bucks that when this animal swallowed all the larynx rose and fell in a peculiar manner, and seemed to indicate something singular in this part. He then removed the skin of the neck with much care. The muscles being raised in the same way he found a membranous sac which had its origin between the os hyoides and the thyroid cartilage. He then discovered two muscles which take their origin from the lower part of the os hyoides, exactly where the base of the os graniform and the cornua meet. These muscles were flat and thin at their beginning, but widened towards their junction with the sac, and certainly served to support it as well as to expel the air from it at the will of the animal. After he had opened the æsophagus from behind he found under the base of the epiglottis a large orifice which admitted his finger very easily. This orifice spread and formed a membranous canal which passed between the two muscles already mentioned, terminating in the membranous sac. Consequently the air drawn from the lungs into the larynx fell into this sac and necessarily caused a considerable swelling."

Mr. Morrow said that when he shot the buck alluded to he had not seen the account by Camper of the sac, and his specimen is not therefore so perfect as it might otherwise have been. Examining the outside of the throat of the animal, the cyst of Mr. Hutchins with "an opening through the skin" does not exist, but immediately under the skin there was a roundish sub-triangular cyst or valve of cellular membrane of the "bigness of a crown piece," and on cutting through the cellular membrane this "valve" is found to be a closed sac having a peculiar lining membrane, and closely packed with what may be called loose hairs of a flaxen color in a considerable quantity of sebaceous matter; at the same time, however, the lining membrane is covered by hair of the same quality growing from and rather lightly attached to it. Camper in his account has described this valve as if it were the sac, and his drawing gives only the valve, which the larynx, exhibited by Mr. Morrow, plainly shows. The muscles which Camper describes as connecting the sac with the os hyoides in Mr. Morrow's specimen do not exist, but their representatives are probably the muscles found in the larynx of the young buck by Dr. Somer, as will later appear. The valve is connected with the omohyoids muscles as they pass towards their insertion on the hyoid bone. The valve which Camper has evidently taken to be the sac lies outside of the mucous sac, but is incorporated with its anterior walls; the inner wall of the true sac surrounds and is attached to the larynx, extending longitudinally from the hyoid bone to the base of the thyroid cartilage. How much further it may extend cannot from the imperfect state of the specimen already mentioned be determined, and at present the writer would only call it an organ of voice. The slit or orifice exists as Camper describes, but opens into the laryngical sac which lies above the valve that is next the larynx. The dimensions of this larynx are as follows:

Length of larynx, from base of epiglottis to base of thyroid cartilage, 5 inches; circumference of larynx, 11 inches; inside diameter of larynx, 2 inches.

May it not be possible that Camper was in error as to the age of the animal he dissected; the muscles described by him taken in connection with those found in the young buck make this very probable.

Mr. Morrow said that he had made every exertion to obtain a more perfect specimen of the larynx from an old buck, but without success. A small buck 8 months old was sent to him and dissected by Dr. Somers, Dr. Gilpin and himself on the 27th of January; and a female calf 9 months old and an adult doe were put at his disposal by Mr. J. J. Egan, and dissected February 19th. Mr. Morrow gives an account of the dissection of these three animals, taken from the notes of Dr. Sommers, with reference to the larynx, very much abridged. It was as follows:

In the young buck the organ existed as described in the adult animal, but in an immature state, it would probably be developed with the growth of the animal. The muscles were not found as in the adult animal: but, arising apparently from the base of the epiglottis on either side, "possibly continues with the thyro-epiglottidean and aryteno-epiglottidean muscles," all two bands of muscular fibres passing over on either side of a body which probably would develop and form the valve in the adult, and are connected with it by fibrous adhesions; extending forwards they unite at its upper border forming a single muscular band which becomes inserted into the upper and inner edge of the hyoid bone. These fibres have no analogues in man. Under the microscope the structure forming this body (which was about the size of a small horse-bean) was found to consist mostly of fatty tissue with a moderate proportion of granular cells. This body which would form the valve was absent in the doe and very rudimentary in the female fawn. Camper pointed out that the female reindeer is without this organ on the larynx, and also that it is not present on the male fallow deer, and from a specimen exhibited it was seen that it was not in the Virginia deer.

Inside of the hock of the caribou there is a patch of hair of a lighter color and somewhat longer than that which covers the skin in its immediate neighborhood, and the skin under this patch is slightly thicker than that immediately around it. This spot is usually called a "gland:" it is caused by an enlargement of the hair follicles, has a very strong smell, and in the caribou is a scent "gland." The matter producing this scent is entirely different from that contained in the tubes; it appears to be a highly volatile oil and resists salt for a long time after the rest of the skin has become saturated; when dry it collects on the outside of the skin in the form of very small scales, such as would be left by minute portions of varnish. Although Mr. Morrow did not see the animal use the so-called "gland," yet his Indian hunter saw a doe caribou use it in this way: When she had voided her urine (she squats in doing so almost exactly like a sheep) and as soon as she had finished, she rubbed these glands together, leaving the scent behind her for a short distance. When creeping moose or caribou, this scent, floating in the air, had often been with him a subject of inquiry, and he had very little doubt but that this was at least one way in which these "glands" are used, and in confirmation he mentioned that the dogs at one time openly used for hunting moose did not often take the scent of that animal from the snow, but by standing upon their hind legs as if it had been rubbed from glands as described. The point was merely mentioned in the hope that some gentlemen present would be able to throw some light upon it, or keep it in mind when an opportunity offered for observation, confirmatory or otherwise.

A little further down the leg, on the outside, at the hair parting, he showed the "metatarsal gland," which had been looked for during a long period by Dr. Gilpin, Mr. J. J. Egan and himself, on answer to an inquiry from the Hon. Judge Caton. This was the first they had ever seen, and may probably be taken as a mark of adult age; it was afterwards found on the old doe, but not so perfectly marked, possibly because the doe was killed in February, the buck in December.

Attention was also drawn to the tubes in the feet of the caribou, which first attracted the notice of Dr. Gilpin, from inquiries made by Judge Caton. Dr. Gilpin as well as others thought that they were only to be found in the hind feet, and the discovery of them on the fore feet of the caribou is due entirely to Dr. Sommers.

Camper says, speaking of these tubes: "In addition to the peculiarities of the reindeer, of which I have just spoken, I have discovered besides something very singular on the hind feet of this animal—that is to say, a deep sheath between the skin at the place where the dew claws are united together, of the size of the barrel of a quill, running deeply as far as the point where the dew claws are articulated with the bone of the metatarsus. These sheaths were filled internally with long hairs, and a yellow oleaginous matter proceeded from them, the odor of which was not very agreeable. I have not found these sheaths in the fore feet. It was not possible for me to discover the use of them, inasmuch as the heat of the summer obliged me to remove the flesh from the skeleton." And further on he says that in another reindeer he found no tube on the hind foot, but one very apparent on the fore foot. And again, he found tubes on the hind feet, but none on the fore, "so that I am not able to determine anything very exactly on this subject."

In the skin of one of the hind legs of the old buck, the bones of which had been removed for the purpose, the tube was shown (the tube of the other foot had been used in experiments), and also a number of other specimens of tube from the caribou one from the Virginia deer, and a hind foot of the moose containing a tube. In the skin of the fore feet of old buck caribou, also exhibited, there was no appearance of the tubes—they had been absorbed. By many, Mr. Morrow said, these tubes were considered to be scent "glands." Camper evidently did not think them so, although he mentions that the skin of the hind as well as the fore feet "were sprinkled with glandules, which probably give out an oleaginous matter intended to protect the hoof against the snow." Prior to December last, Mr. Morrow said that he had paid very little attention to these tubes, and had the question been asked him, were they scent glands, the answer would have been affirmative, but after a careful examination of the animal while warm he had come to the conclusion that these tubes are not glands properly so called. His first view, that the tubes were for the purpose of strengthening the bones of the feet of this animal in its spring, from further examination of a number of fresh tubes, and from the observations of Dr. Sommers, does not appear to be tenable, and for his own part, he had to adopt Camper's statement, and could not say what was their use, but they are not scent glands; if they were, it seemed scarcely probable that as the buck comes to maturity, he would be deprived of the means of leaving scent from his forefeet at the time when he most required it, without taking into consideration the fact that the tube only exists in the fore feet of the male (up to an unknown age), or in the female in a rudimentary state.

The waxy matter is contained in the tubes of the hind feet of the caribou, and in all the tubes on the feet of the Virginia deer, owing to their shape. The tubes of the caribou are rather wider in the mouth, and of more equal diameter to their lower end than that of the Virginia deer, which, at their opening, are somewhat narrow and wider toward their centre. The moose, which, contrary to preconceived ideas (and this shows how little our animals are studied), also has tubes on its feet, fully developed in the hind, rudimentary in the fore feet, but of a very different shape from those of the caribou and Virginia deer, being in the hind feet, very wide at the mouth and gradually tapering toward their lower extremities: these, from their shape, can retain but little, if any, waxy matter.

In general terms, the buck caribou, when young, has the tubes in the fore feet in a rudimentary form, which, instead of passing upward and backward to the skin close to the dew claws, as in the developed tube of the hind feet, lie between and nearly parallel with the bones of the feet; and they are gradually absorbed until, certainly in the adult male, they entirely disappear. The doe has them also perfectly developed in the hind, and rudimentary in the fore feet, and it is a question which is yet to be decided, whether these tubes ever entirely fade out of the feet of the does. In the old doe, the tubes, although small, are still plainly to be seen. A young moose in possession of Mr. J. W. Stairs, has the tubes in all its feet; those in the hind feet are perfectly developed, and pass as in the caribou, between the phalanges. On the fore feet, they are as in the caribou of the same age, only rudimentary, but at what time of life they disappear in this animal, or whether in male or female, or both, cannot, owing to our prohibitory law, at present be decided.

Mr. Morrow said that it had been shown that the caribou and moose have the tubes developed in the hind, and rudimentary in the fore feet. An examination of a wapiti or elk (*Cervus canadensis*), [Plains of the Great West—by Col. R. T. Dodge, page 164 and 166.] skin with feet attached in Mr. Egan's collection, presented the fact (confirmed by Judge Caton), that this animal has no tube in any foot, and that its feet are of a different shape from those of the moose, caribou or Virginia deer, and that the phalanges are very much shorter in proportion to the size of the animal in the specimen referred to than in the caribou or Virginia deer. From the metacarpophalangial articulation to the point of the hoof they measure seven inches, while those of the young buck caribou measured seven and a quarter inches, of the old doe seven and a half inches, and of the old buck nine inches. The gentleman already referred to informed him that the wapiti is a natural trotter, "he, however, can and does run much faster than he can trot, but it is a labored effort, and soon tires him out." His run is an awkward, lumbering, rolling gallop. A few hundred yards of this gait tells. It is said that an elk will trot at an equal speed, "without stopping or flagging, for twenty miles." The Virginia deer has a tube in each foot, fully developed, which led him to inquire the gait of this animal, his impression that it would prove to be a running deer being confirmed. The inference he wished to draw was this, that the number of tubes in the feet of the different species of deer will point out the gait of the animal. Those which have a tube fully developed on each foot should be bounders or runners, while those wanting the tubes or having them partially developed on the fore, and fully in the hind feet should be trotters. This point, as far as he was aware, had never been touched upon by any naturalist, and as it could not be pursued here, he mentioned it in the hope that it may be examined into by those who have access to a number of different species of deer.

Returning to the tubes, Mr. Morrow stated that as his notes upon them were only those of a hunter, and therefore of very little scientific value, he would use those of Dr. Sommers, as follows:

"In the observations here annexed I have endeavored to furnish an accurate description of the so-called 'interdigital glands' which exist in the feet of the caribou, by subjecting them to very careful anatomical and microscopical inspection. The conclusion at which I arrive relative to their structure and functions is that they are not glandular in the correct meaning of that term, an opinion which coincides with that which you previously expressed.

"This organ presents the appearance of a fleshy tube, with thick walls and a rounded blind extremity like that of a small test tube flattened on its posterior or under side, convex on its upper or anterior side, about one and a half inches in length below, somewhat shorter above, its circumference being about three-quarters of an inch. In the young buck it tapers slightly towards its termination. When viewed in position it bears a striking resemblance to the human "mold." The surface exposed by dissection exhibits a structure consisting of rounded or slightly polygonal spaces, resembling very large cells; these are convex, of a deep red color, and united by paler interspaces. The whole organ has the appearance of a body constituted of immense cells, united by their thin cell walls. This, however, is deceptive. These spaces are the rounded terminations or bases of the bulbs or follicles, from which the hairs inside of the sac grow. The resemblance to cellular interspaces arises from the pressure of a very delicate layer of true skin upon which they rest, and which has been pushed into these interspaces by the growth of the hair follicles. The same structure can be observed on other parts of the skin by dissecting off the true skin, which is underneath, from the epithelial layer which covers it, and gives origin to the hairs; but here the spaces observed are much smaller since the hairs and their bulbs are more crowded, the space occupied by each bulb being less than in the 'cul-de-sac, or organ under notice.

The organ in the fore differs from that in the hindfeet by being very shallow, measuring not over a quarter of an inch in depth. When dissected from the surrounding tissue it presents all the characteristics of the organ in the hind feet, yet it differs in position relative to the phalangial bones, lying on the same plane as that of the anterior wall of the web, its own anterior wall being incorporated with the under surface of the skin-bone, thereby shortened to about one quarter of an inch in length. The posterior wall, however, remains distinct, and measures from the blind extremity of its termination somewhat over an inch.

The microscopic examination of this organ proved it to be of epidermic origin. Sections through the thickness of its walls showed an external layer of flattened prismoidal cells with small nuclei, a deeper or internal layer in which the cells were more rounded and filled with protoplasm (this difference on the uppermost and lowermost layer was brought out by the staining process), and it is in these only that we find the line of demarcation, the intervening layers merging gradually one into the other. Other structures observed were the hairs and hair follicles, with their accompanying tissues and some fibres, representing no doubt the true skin, which is not developed in these organs to any considerable extent. The two layers of cells correspond to the same parts in man, namely, a horny layer external, but of course internal on the *cul-de-sac*; a mucous layer external when the sac is dissected from its surroundings. The changed position of these layers is owing to the circumstance of the sac being an innovation of the epidermic layer into the true skin. Regarding the functions of this structure, various and contradictory opinions are expressed, that of its being glandular being most prevalent. Again, it is said to have no existence in the wapiti and moose, and in the fore-feet of the adult caribou. The fact of its existence in fore and hind feet of the Virginia deer being well understood, its presence in this animal is said to be for the purpose of leaving a trace or scent on the ground, and in this way serving the union of the sexes at certain seasons; but if this is the case, we may ask why should it not exist in the wapiti and be fully developed in the caribou and moose, since it must be obvious to us that the fulfilment of the conditions which obtain in the Virginia deer are required also in the

*Camper, vol. I, chap. vi., page 356. Paris 1803, where reference is made by letters to a plate which cannot be done here.

wapiti? More than this, we know that a true scent organ in the caribou is situated on the inside of the heels or gambrils.

On the occasion of my first dissection of this structure in the caribou buck fawn, I expressed the opinion that it would be found also in the fore-feet of the adult animal, though perhaps more rudimentary; and a subsequent examination of an adult doe has fully confirmed this opinion, since I found this structure as well developed as in the young animal. I now feel more than ever convinced that it exists in all our deer tribe, not excluding the wapiti, although it may be larger in some than in others, an immature living moose in possession of Mr. J. W. Stairs being provided with it.

The following summary of its histological relatives will aid in arriving at correct conclusions relative to its importance.

I. It is a growth, or offset, from the epidermic layer of the skin, invaginated between the phalangial bones, containing the malpighian and horny layers of the epipermis, and carrying with it a very thin layer of the true skin.

II. Hair follicles and hairs growing from its internal walls and emerging through its opening, these being also epidermic or of epithelial origin.

III. The absence of glandular tissue, excepting the sebaceous follicles, which accompany the hair follicles or bulbs over the whole integument of the animal ("this exception is made for obvious anatomical reasons,") nevertheless, the sebaceous follicles were not observed in the specimens examined with the microscope.

IV. The examination of the matter filling the tubes in the Virginia deer, and present in much smaller proportion in the caribou, showed it to consist, in principal part of desquamated epidermis scales and oil globules; microscopically it resembled megma from the skin of man, or, perhaps closer still, the 'vernix caseosa" from that of a recently delivered infant. Remembering that the epidermis in man and in all animals is a non-vascular tissue, that, unlike our other, tissues it is shelled off from the surface, we can readily account for these desquamated scales being retained here in a narrow packet from which they could not be easily discharged. Retrograde changes in these cells, secretions from sebaccous and sweat glands in adjacent parts will account not only for the oily matter seen, the viscidity of the substance, but also for the odor which it possesses, the latter being no greater than that of the general integument, and arises from the same cause, namely, the perpiration. But in this respect they are not in any degree comparable with the glandular collection at the hocks before mentioned, which will retain the peculiar odor of the animal for a ong period after the removal of the skin.

In presence of these facts, we must conclude that this organ only rudimentary having no function which is obvious to us. It is not a secreting organ, since it lacks glandular tissue, the opening in the dorsum instead of the sole of the foot, would point also in this way; it does not serve to give strength or firmness to the foot, having none of the toughness and elasticity of the skin in other parts without comparison with the tendous, etc., which are provided for this purpose. (Some instances of organs without uses were also given). From an individual point of view, taking in all the circumstances referred to, there appears to be only two ways of accounting for this structure: it is either an aborted "ungual follicle," or otherwise it is a *cul-de-sac*, representing the suture formed by coalescence of the skin from side to side in the fœtus. Its structure would convince one of the first conclusion, if the animal had rudimentary toe bones in the same position, indicative of a three-toed ancestor, but all observations relative to the morphology of the foot are opposed to this view, since the outer bones and their appendages are aborted in all animals of this kind; we are, therefore, compelled to adopt the other view, which can only be settled satisfactorily by examination of the part in the fœtus. Nevertheless, knowing the difficulty of substantiating any theory connected with its supposed origin and use, still more the difficulty of ridding one's mind of a theory once entertained, my faith in either of these is held very loosely.

The paper concluded with some general observations by Mr. Morrow, and a conversation in which a number of the members of the Institute took part.

PICKEREL IN SALT WATER.

We published some important information recently respecting the pickerel (or pike rather) that inhabit the waters of the Chesapeake Bay. We have now something to add which gives the matter much wider scope and increased interest. Our thanks are due to our correspondent. If pike are found in salt water and along the eastern coast of Maine and in the waters of the Chesapeake, why not also at intermediate and more southern points?

CALAIS, Me., June 2, 1877.

EDITOR FOREST AND STREAM:

In relation to pickerel living in salt or tide waters, I will mention a few observations made in this section. It is now about fifteen years since the first pickerel was put into the St. Croix Lakes. A few years after they were noticed to be quite abundant in tidal waters, and more or less have been taken in the weirs and by the hook every season since. They have been taken some six to eight miles below the head of tide water, where the water is at all times quite salt. They do not seem to increase in salt water; in fact are not nearly so plentiful as during the first few years after making their appearance. They seem to have decreased in our fresh waters also. Those found in salt water are usually large.

Yours truly, FRANK TODD.

PIKE, PICKEREL AND MASKALONGE.

ST. JOSEPH, Mich., June 4, 1877.

EDITOR FOREST AND STREAM:

In reading your reply to Dr. E. Sterling in the FOREST AND STREAM of May 24th, I was quite surprised at your description given of a pickerel (*Esox reticulatus*) of New England or (*Esox lucioides*) of the Northern and Northwestern lakes, the latter growing quite commonly from twelve to twenty pounds, and occasionally one is taken from thirty to as high as forty pounds.

Maskalonge are taken here in Michigan and lakes of the Northwest, ranging from two pounds to thirty pounds. General average, twelve to thirty; occasionally from sixty and even one hundred pounds.

A year ago last winter I speared with decoy, one day, three maskelonge out of one hole in the ice, one thirty-four pounds, measuring four feet one inch in length. One twenty-two pounds and one fourteen pounds weight. Same day, out of the same hole, three pickerel, twelve pounds each.

A maskalonge is not an "overgrown pickerel," as some say, but as different as can be. A maskalonge has shorter head, nearly straight back and sides; black back; skin of sides, belly and lower part of the opercles silver white (very bright in young fish) and spots of STEEL BLUE over the sides (blackish in large fish); the spots brown on caudal and dorsal fins in young fish. All the blue or black spots distinct when first taken from the water. The fins are redish; bars or reticules small; web very thin; tail very forked, like a mackerel; fins sharp pointed; scales very fine.

A pickerel—black back, slightly round; tail less forked, points rounded; fins, points rounded; bars and web large and thicker; color, alternate bars of *yellow* and *black* on fins and tail. Head and side blackish brown (according to age and color of the water) dotted with irregular *cream* colored spots; lower part of gill covers cream colored spots, with two or three of circumilex shape; scales much larger than a maskelonge.

The differences here given are only a part, but so marked that no one can mistake the *Esox reticulatus* for the *Esox estor*.

Truly yours, AGE 67.

Our correspondent will permit us to ask him, with all due respect, to refer again to the article in FOREST AND STREAM which he criticizes. The point of the article was to prove that Mr. Sterling's fish was not a dwarf muscallunge, but a common little pickerel. Prof. Gill and other careful students of the modern school recognize but three of the family of Esocidæ, viz: 1. The muscallunge (*E. nobilior*), Gill; (*estor*), Cuvier. 2. Pike (*E. lucius*), the big black fellows of Western waters, and the more golden-hued fish of the East; and 3. The little *E. reticulatus* or common pond pickerel, which seldom grows to a foot in length. The two last are constantly confounded with each other, but neither of them is likely to be mistaken for the first named.—ED.]

SNAKE EATING SNAKE.—One of your correspondents writes of the killing of the rattlesnake by the common blacksnake, as witnessed by him. This I have not myself seen, but in Florida, where the rattlesnakes are numerous and large, it is universally believed that that they are killed and eaten by the large blacksnake, called the pinesnake or gophersnake, from its habit of occupying the hole of the gopher, or land tortoise.

We are told that from the mouth of three witnesses every word shall be established, and I have that number to establish his fact. One of them tells me that he has twice seen a gophersnake kill and swallow a large rattlesnake, first, however, biting off the head, which was rejected. Another time a rattlesnake was seen to crawl through the fence into the yard, when it was killed and hung up on a tree. Soon after a gophersnake came through the fence, trailing the other along the ground like a hound, followed the trail to the tree, and when it saw its dead enemy hanging there it departed. He tells me that he always encourages these blacksnakes to live about the house, as they are excellent vermin killers, driving away rats and rabbits, which do much mischief in house and garden. They themselves are harmless, except that sometimes they steal eggs and poultry, and perhaps now and then a kitten may be gobbled up. On one occasion a large black snake (which grows to the length of eight or nine feet) took a kitten, and finding it to his taste came for another, when the two house cats attacked and killed him after a severe battle.

It is not only the rattlesnake which is killed by the blacksnake, but it has the habit of killing and eating all other serpents which it can overcome, which it does by strangulation. This is perhaps *Pituophis melanoleucus* of Holbrook.

S. C. C.

QUEER FISH.—A singular creature was recently taken out of a Bradford county oil well, Alleghany city, Pa., at a depth of 800 feet. The fish or lizard, whichever it may be, is a singular specimen of an amphibious animal. It has four legs, with bird-like claws and an eel-shaped tail. It has no eyes, and just where the eyes should be is located what seems to be a pair of lungs, the action and working of which can be plainly perceived. In color it is spotted somewhat like a trout on the back, while the stomach is of a red and white hue. It has to be kept in the most bitter salt water. T. F.

[This is probably a *Menopoma alleghaniensis* or hell-bender. Like fish and other creatures found in dark caverns, they lose their eyesight.—ED.]

[THE HELLBENDER.

EDITOR FOREST AND STREAM:

For six weeks I have had in my aquarium a fair specimen of the interesting batrachian, the hellbender (*Menopoma alleghaniensis*). He was sent to me from Warren, Pa., on the Alleghany River, and is sixteen inches in length. His actions are just as narrated by Mr. Grote and quoted in FOREST AND STREAM of Dec. 28, 1876. Since he has been in my possession he has twice shed his skin, and in the manner there described. The queer faculty he has of doubling upon himself, and his apparent ability of tying himself into knots, obtained for him, no doubt, the elegant appellation of hellbender, and although he is to most persons rather repulsive upon first sight, yet he improves upon acquaintance, and becomes rather attractive. In regard to his amphibious habits, I will state that I left him in a pan of fresh water one night, while making some change in the aquarium, and found him next morning on the floor and under a bureau in my office. His skin was dry, but he was quite lively; indeed his motions were much quicker and more decided on land than in water, though not nearly so graceful—he had probably been on the floor all night. A singular fact in connection with this specimen is, that although he seems quite healthy and well, he has not eaten anything, to my knowledge, since I have had him. The day after he arrived I found a partially digested crawfish in the water, and acting upon this hint, I have constantly kept several live ones in the tank, none of which, however, have been appropriated by him; but every few days I find claws, skin, and other parts of crawfish, as red as though cooked, and this morning I discovered a bunch or wad of Sycamore leaves, a tree which does not grow in this climate. These substances are disgorged or defecated by him, and evince a rather peculiar digestive organization, as it is at least six weeks since he swallowed them, for the crawfish I placed in the tank are still there, and alive. There are some snails in the aquarium, and it is possible he has been dieting on snail spawn. Should I observe any further peculiarities in this member of the "bender" family I will make a note of the facts, and report. OCONONOWOC.

A QUEER CASE.

EAST SAGINAW, Mich., June 5, 1877.

EDITOR FOREST AND STREAM:

Being an old subscriber of ROD AND GUN, and lately of the "consolidated," I take the liberty of forwarding this article, thinking it will interest some of your readers:

Saginaw county has produced a new and heretofore unheard-of animal. It is a hybrid, a cross between the house cat and the raccoon. The cat is a Maltese, owned by Geo. W. Chase, of Brant. She brought four kittens as above, one of which soon died. I examined the others. They show plain traces of their origin, having the tail of the cat, a long face like the coon, terminating in a wide nose like the cat. The foot has a long heel like the coon, the toes of a length like the cat. They will chuckle or whine like the young of the coon, then mew like kittens. They are now near four weeks old, and both cat and kits apparently well. What shall this new animal be called, a rac-cat or a cato-oon?

The item is clipped from the Saginaw *Courier*, to which you can credit if necessary. Respectfully yours. G. C. S.

[The cat belongs to one family of animals, the *Felidæ*, and the raccoon to the *Ursidæ*, or bears. The amalgamation would be an unnatural one certainly. We cannot account for the freak of nature.—ED.]

EELS OVIPAROUS.

ST. JOHNS, N. B., June 8, 1877.

EDITOR FOREST AND STREAM:

That the eel is oviparous I have not the least doubt, and I have arrived at this conclusion by having caught two eels on the 26th of May, 1853, which were full of ova. They were not within forty miles of the sea.

I saw, in February last, two Frenchmen engaged in spearing eels in a small clear stream at the head of one of the Tantramar lakes. In about four hours they speared two barrels, the eels apparently being knotted in clusters under the elder stumps lining the brook side. The salt water from the Bay of Fundy runs up into the lake. The lake level is about ten feet below the brook where the eels were speared. The eels when first caught were in a half torpid state.

I have seen lamprey eels ascending the River Duna in Russia in countless numbers. They are there taken in large quantities, salted, dried, and form quite a commercial commodity.

Whether the lamprey is viviparous or oviparous I cannot say.

Yours faithfully, R. C. B.

EDITOR FOREST AND STREAM:

I notice an article in your paper, issued May 31, 1877, over the signature of Robt. B. Roosevelt, on the subject of Reproduction of Eels. I would hereby inform Mr. Roosevelt and all others interested in the subject, that if they will examine small-sized eels—from five to six inches in length—during the month of April and May, they will be no longer in doubt about eels spawning in fresh waters, the same as other varieties of fish. I made the discovery some twenty years ago. I was raised on a farm, through which flowed a small stream, well stocked with eels. When young I was fond of taking them with a "bob," and occasionally would land some quite small. In those of the size above stated I frequently found spawn similar to that of the other species of fish, but never found any in eels over seven inches in length.

Wrightsville, Pa. JONES.

WET WEATHER BIRDS.

CHERRY HILL, Neb., May 15, 1877.

EDITOR FOREST AND STREAM:

Game is plenty at present. Many varieties of plover, snipe, ducks, geese and cranes; and I believe more plenty around Cherry Hill than anywhere else I have been. I shot, a few days since, a bird of a variety I never killed before. I think it is what your Texas correspondent calls "wet weather birds." I can give but a meagre description, as I took no measurements, but sent it away to be set up. It was apparently about as large as a common rainc pigeon, but wings, tip to tip, measured full thirty-six inches, and probably fifteen inches tip of bill to end of tail. Its bill was about 1¾ to 2 inches long, dark red to brown in color, shaped like a pigeon's; head black, with full, dark eye, surrounded by a white ring about a quarter inch in width; back and top of wings a fawn color; breast and under portions a very delicate pink; legs small, slender and medium length, dark red color, three front toes web-footed, one back toe, or a ghost of one. Some of the long feathers in the wings were considerably spotted with black. Can you name it?

A German told me they called them in his country *Moore*, which meant sea dove.

There are numbers of birds of varieties never seen here before, brought hither by our "full protective" law I suppose. Prairie chickens are nesting, and prospects are now fair for a greater number of them this fall than was ever known. Yours. R. G. CARTER.

VORACITY OF SHARKS.

JUNE 5, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

The mention by Mr. Vibert in your paper of May 31, p. 269, of a picture in the "Blue-Coat" dining-room, illustrating an event in the life of Sir Brook Watson, recals some anecdotes told by my father many years ago, *apropos* of the picture and its hero, who did not "fall overboard," but bravely plunged in to rescue a boy, who, aware of the shark's vicinity, was paralyzed by terror, and unable to help himself. The boy was saved, but his gallant preserver lost a leg as he was getting into the boat.

A picture of the scene—doubtless the same which your correspondent mentions—was painted by Copely, father of the late Lord Lyndhurst. When on exhibition, the painting was much admired, but a sailor made the criticism that the artist could hardly have seen a boat, for the one he had painted, though full of people, all on the side next to the escaping man, remained *on even keel*.

Watson, who, if I mistake not, became Lord Mayor of London, is said to have been a man of very stern aspect and hearing. It is related that he was once accosted in the street by a justic, who begged leave to ask "one question." "Yes, and let it be but one." "How did you lose your leg, sir?" "It was bitten off." The puzzled boor was heard soliloquizing as he turned away, "O dear! I wish I hadn't axed."

TUPAC.

A RAINBOW FROM THE MOON.

EAST BAY, Mich., May 24, 1877.

EDITOR OF FOREST AND STREAM:

Is a rainbow produced from the moon's reflection a common phenomenon? Never having met any person who beheld such a scene, I am led not only to ask concerning it, but to offer a brief account of one I had the pleasure of viewing from the basin of the San Luis Valley, in Southwestern Colorado. On the night of August 4, 1876, I left Del Norte, in company with a friend, on a ducking trip down to the

marshes of the Atamosa. Being anxious to reach our destination before night of the second day we drove into—I believe it was nine o'clock when we camped. Just as we had begun the preparation of our supper, one of those sudden, violent rushes of wind and rain came upon us, drenching our entire outfit, and compelling us to seek shelter beneath our wagon-cover. The storm was brief, but fierce, and as it swept away to the west, the bright rays of the full moon (just hung in the heavens above the crest of the Sangre de Christo Mountains) spread its silvery light on the sheet of falling waters, and produced a perfect rainbow, only lacking in color from being identical with that produced by the sun. The beauty of that scene was matchless as beheld through an atmosphere of pristine purity, with its moon and mountains, cloud and storm, the silver bow arching the heavens above that world of silver. The far-famed San Juan lent a halo to the hopes of the toiling thousands who seek their fortunes in those treasure-laden hills. GORDON LAND.

[Lunar rainbows are not very uncommon phenomena. We have seen several in our life-time.—ED.]

—The female sea lion in the Brighton (England) Aquarium has recently given birth to a fine young one. The case excites much interest among naturalists, as it is the first instance on record of the sea lion breeding in captivity.—*Boston Journal.*

ARRIVALS AT ZOOLOGICAL GARDEN DURING WEEK ENDING JUNE 12, 1877.—Two Vervet monkeys, *Cercopithecus lalandii*, purchased; one Puma, *Lama peruana*, born in garden; one white-eared parrot, *Conurus leucotis*, presented; one alligator, *Alligator mississippiensis*, presented; one iguana, *Iguana tuberculata*, purchased; two barred owls, *Syrnium nebulosum*, purchased; one pennants parrakeet, *P. pennanti*, purchased; one yellow parrot *Conurus luteus*. On June 5 two parrakeet cockatoos, *Calopsitta novæ hollandiæ*, born in garden.

Woodland, Farm and Garden

PROPAGATING ROSES.

PERHAPS the most easy and at the same time the most successful method of propagating hybrid, perpetual and other roses from the old wood is this: As soon as the leaves fall cut the slips into pieces of about 4 or 5 eyes each, using of course a sharp knife so as to make a clean cut—not a pair of shears, which bruises the end of the slip. It does not matter where the cut is made, have it more slanting than otherwise, and a *clean cut*. The slips may then be planted pretty closely in boxes three or four inches deep, leaving one or two eyes above the surface, in a soil composed principally of good clean sand, free from salt, to which a small quantity, say one fourth, of loam and leaf mould may be added. Water well to settle the soil close round the base of the slip and the boxes may then be placed in a cold frame for the winter. Frost must be rigidly excluded as well as any undue excitement by sun heat, a temperature as nearly 40 degrees as possible during the winter is about right. If any commence to grow before the base of the slip has formed a good callus, farewell to all hope of its ever making a plant; it may grow as long as the sap stored in the slip keeps it alive, but will then die. Towards spring the heavy covering of salt hay or other material necessary to keep out the frost may be gradually removed, and light and heat gradually admitted, until a nice growth is secured, when the slips should be carefully taken up and either placed separately in small pots in a good rich soil, or about two inches apart in boxes, and the frame kept close and moist for a few days to prevent their wilting. After being gradually hardened off they may be planted out any time after the middle of April, will give a few blooms the first season, and will make plants double the size in fall of those propagated during the winter or spring from the young or green wood and raised in the greenhouse. If the amateur wishes to increase his stock of a new rose of which he can only spare a few slips or eyes, root grafting may be resorted to. A few good strong roots of any free growing rose being secured and cut into about 4 inch lengths, a single eye of the rose to be propagated should be inserted near the top of the root as in side grafting, or if the root stock is large enough as in cleft grafting, the junction covered with grafting wax and the whole then treated as recommended for slips. The amateur need not get discouraged if success does not attend his efforts the first time, we have seen 99 per cent. grow one year while not over 25 per cent. would reward our efforts at another; but the cause was traceable to neglect, not to the system.

THE NEW YORK HORTICULTURAL SOCIETY'S FEAST OF ROSES.

THE special Rose and Strawberry Exhibition of this society was held at Gilmore's Garden on Wednesday and Thursday of last week, and proved, despite prognostications to the contrary, a great success. The members and exhibitors are the more to be congratulated on this, as the earliness of the season, compared with that of last year, compelled them to hold their meeting a week earlier than was anticipated, and some may therefore have been disappointed in competing. The show of roses and strawberries was particularly fine, more especially of the latter—larger, more richly flavored, or better colored berries having never been before exhibited in New York. On approaching the tables on which the strawberries were arranged, the attention was first drawn to several plates of monster berries, accompanied by a plant in fruit, exhibited by Mr. William Smith, Morrisania, N. Y., of his new seedling named President Lincoln, the largest measuring over eleven inches in circumference, and those he entered for the heaviest ten berries weighing over one pound adv. Mr. Smith took four premiums with this variety alone, and its flavor was pronounced excellent by the judges. Mr. E. P. Rowe, Cornwall on Hudson, N. Y., was awarded the highest premium for the best and largest collection with a fine lot of thirty-eight varieties, closely followed, however, by Dr. Hexamer, Newcastle, N. Y., to whom the second premium was given. The first premium for best ten varieties, one quart of each, was awarded to Peter Henderson, Jersey City, for a beautiful selected lot, Dr. Hexamer being second. Mr. Henderson also took first honors for one quart each of Champion, Jucunda, Seth Boyden and Wilson. The following gentlemen also took first premiums, viz.: E. B. Sutton, Babylon, L. I., for Agriculturalist; Geo. Herbert, Peekskill, for Black Defiance and Lennig's White; E. and J. C. Williams, Montclair, N. J., for Downer's Prolific, Charles Downing, Duncan and Monarch of the West; Fraser and Edwards, 104 Barclay street, for Col. Cheney; and John Eagan, gardener to W. S. Gurnee, Esq., Tarrytown, for Triomphe de Gand, all magnificent berries of the various sorts. Mr. Eagan also took first premiums for the best three named varieties of foreign grapes, two bunches of each, and the best Black Hamburgh and Muscat of Alexandria grapes, the latter being wonderfully fine bunches for so early in the season. The premiums for forced peaches were carried off by Ed. Huckins, West Mt. Vernon, N. Y., and for cherries by Geo. Marc, Woodside, L. I. Special premiums were also awarded in this class to John Finn, Tremont for a new seedling strawberry; to Geo. Herbert for do.; and to Mr. Durand, Irvington, N. J., for a collection of twelve new seedling strawberries, all large, well shaped and of good flavor.

If the Judges on Fruits had their hands full, those on cut flowers and floral designs had no easy task to decide the superior merits of the exhibits in the various classes. The display of cut roses was simply gorgeous, and their aroma pervaded the whole building. For the miscellaneous collection of cut flowers, Mr. Peter Henderson was first with a rich assortment, a large group of pansies of all shades and variegations, from pure white to deep black, and tastefully arranged in flat boxes, being particularly admired. Mr. Zeller, Flatbush, was second with a nice group, well arranged and containing some rare and beautiful flowers. Mr. William A. Burgess, Glenecove, was first, as usual, with a magnificent display, his Marechal Neils being especially fine. Keller and Dean, Bay Ridge, followed closely a good second. This young and enterprising firm also took first premiums for the best twenty-four Hybrid Perpetual Roses named varieties, and for the best six named Moss-roses. The best sorts in their stand were Triomphe de l'Exposition, Victor Verdier, Baron Prevost, Baronne de Rothschild, Mad. Boutin, Maurice Bernardin, Gen. Washington, Louis Van Houtte, Mad. Victor Verdier, Paul Neron, Marechal Vaillant, Coquette des Alps, Coquette des Blancs, Elisa Boelle, John Hopper, Eugene Appert, Prince Camille de Rohan, Mad. Alfred de Rougemont, and Caroline de Sansal. And in Moss buds, Luxembourg, White and the English Red, Gloire des Mosseux and James Veitch. Messrs. R. B. Parsons & Co., Flushing, were first for a fine collection of 80, named H. P. roses, S. B. Parsons & Co. second. Their principal varieties were pretty much those named above. Messrs. R. B. Parsons & Co. also took first premium for best 12 H. P.; John Hopper second for 24 named H. P. roses; and special premiums for collections of Kalmias, Ghent Azaleas, and late flowering Rhododendrons, the plants being taken from the open ground and the roots carefully matted up. Mr. Aug. Dejonge, New Brighton, S. I., a most enthusiastic amateur, took first honors for the best 12 H. P. roses, one new dark variety, Annie Wood, being especially admired, and for the best 12 blooms of Paul Neron and Jules Margottin. For the best 12 of any variety Mr. H. Carmohn, Silver Lake, S. I., was first with fine blooms of niphetos, a pure white tea rose of immense substance and a splendid winter bloomer when worked on a strong growing variety like Gloire de Dijon or Marechal Neil. The most showy exhibit of all was made by Messrs. Ellwanger & Barry, Rochester, N. Y., who filled a large table with a magnificent display of 69 named varieties of peonias of all conceivable shades of color from pure white to the deepest crimson. They were deservedly awarded a special premium and a certificate of merit. Special premiums were also awarded to H. Foddy, Brooklyn, for four seedling roses, to the C. L. Allen Co. for a large plant of Czackia Andrejouski (Syn. Anthericum), a very pretty, hardy liliaceous plant, and to Isaac Buchanan for 6 orchids in pots, and a collection of roses and peonias. Several other gentlemen made a good display in this section, Mr. W. Bennett filling a large space with cut roses, backed up with small plants of the Variegated Calla (*Richardia alba maculata*) in bloom; S. B. Parsons & Sons, a fine collection of cut blooms of hardy shrubs all named, of great service to intending purchasers, and R. B. Parsons & Co. for a large number of cut blooms of the large and fragrant Magnolia Macrophylla. The premiums for floral designs were well contested, and brought forth some unique and very tastefully arranged pieces, and were awarded as follows: For the best table design, to Ekirch & Wilson, and Fred Gordon; for the best basket of flowers, to Fred Gordon and Ekirch & Wilson; for the best design formed of cut flowers, to the C. L. Allen Co. and J. R. Sutton, Babylon; for the best vase of flowers most naturally arranged (for amateurs only), to James Riddle Inwood and N. Bullock, Creedmoor; for the best pair of hand bouquets, to W. C. Wilson and William Brower, and for the best bridal bouquet, corsage bouquet and wreath, to Mrs. W. J. Davidson, Brooklyn, and W. Brower, New York. Special premiums were also awarded to J. McCullough Inwood, John Finn Tremont and Walter Reid, N. Y., for large floral designs; to Mrs. J. Milton Ferry, Babylon, for a large vase very tastefully arranged, and to Messrs. W. C. Wilson, Pennock Bros., Philadelphia; Miss E. Bennett, Flatbush; Beckamps & Sons, D. Brooker, New York, and others for designs contributed to help to make the exhibition one of the most successful and enjoyable ever held by the society.

Inquirer.—The cruciferous plant looks like nasturtium lacustre grey, and the borraginous plant like a mertensia. Could you send larger and better specimens? It is hard to make out plants not natives of this section from such small pieces.

C. L. Kaen, Phila.—See article on Roses in to-day's issue.

P. J.—You can propagate the clematis either by layering or grafting the eyes on pieces of clematis root, as described in to-day's number for roses. This latter is the best process, if you require quantity; but the former will give you a limited number of strong plants in a shorter period.

THE MADDER PLANT.—Versmann states that the madder plant has been cultivated in Holland for more than three hundred years; France (especially the neighborhood of Avignon) now produces about one-half of all the madder consumed, to the value of about £750,000 per annum. Turkey and South Russia also supply considerable quantities of high quality. The Dutch madder will dye red, but not purple, and the color is not fast. Naples madder dyes good red and purple, but the colors are not fast; that of Turkey dyes good red and purple, and is very fast. France supplies the market with two qualities, called "roseces," from their dyeing beautiful reds and pinks, and "palnds," which give a good purple, besides a fine red; this is the best French quality. The last-named is derived from the fact that the plants are grown on marshy land.

NOTES ON ORANGE CULTURE.

MANDARIN, June 1, 1877.

EDITOR FOREST AND STREAM:

The first of June finds the southern summer well advanced. Orange trees have thickened up with new leaves of brilliant green, and vegetation generally is well advanced under the treatment of hot sun and frequent showers. The average orange grower finds the insects on his trees alive and kicking this warm weather, and no end of anxiety and also of industry is his portion.

There is such a cheerful, willing way in which the trees put out for their owner, as though they were going to serve him with their best endeavors, that one hates to see anything molest them. It is something of the same feeling that prompts one to brush the flies from his horse or provide him a net for that purpose. So it happens you see the grove proprietor out with his scrubbing-brush and suds. You see him cutting away affected twigs, bringing out his magnifying glass and making the insects look bigger, as if they were not already big enough. My friend Jones says there are seven different kinds, and proceeds to hunt for the interesting seven. He finds two varieties, turns them over on their backs for some more magnifying, and chats about what they know about orange groves, which is a great deal.

Inquiry and examination of this subject is painful, not to say exasperating. So long as we knew little we were happy, but when we learn of the many different kinds, their multiplicity, rapacity, audacity, tenacity, voracity, etc., no one can rest until he is hotly waging a war of extermination against them, and hotly enough, too, when the thermometer is ranging about 90 deg. What are things coming to when farmers have to turn scullions about their trees, using that housemaid's implement, a scrubbing-brush? I go down to call on a friend and find him up in a corner, one eye shut and a hundred wrinkles in his face as he squints through a glass at a few insects he has got on a twig, and squints so persistently that he doesn't notice my coming. My next friend will be doubled in the shape of an inverted A, with his waistband at the apex, scrubbing or scraping the base of the tree; and over in another lot sits some one whom we cannot identify by reason of his head being lost to view in the foliage of the tree. He sits on a stool, straddles the tree, and is exploring, penknife in hand, the leafy branches of the little six-year old. I want to salute him, but give it up for fear he may not be the person I think he is. There is a confusion of soap suds, sal soda, carbolic acid, tar, wax, etc., in the country, and the insects' days are surely numbered, for this season Jenkins went down to spend the day in another part of town, and came back overshadowed with the gloom of scale insects which his friends were busily fighting. "Why," said he, "I've got a month's work to do at my trees," and he hasn't had a happy day since.

Why don't the birds come down and attend to this sort of business? Here is food enough for all their gullets, and good scaly food for their little gizzards. We give it up. We only know they don't trouble them. We are obliged to the ladybugs for their slight help, and to the black ants also, but the increase of the scales is too fast for these to make any perceptible impression on the number. But then the farmer has spare time enough at this season, if a farmer ever can be said to have spare time, for just such work as this, and there is a grain of satisfaction in seeing the hordes of these shell-fish yield and perish before the mighty brush. Such wholesale slaughter it is seldom man's privilege to deal, and at the end the orange tree will deck itself in new and abundant bright glossy foliage, and you may read its gratitude every time you look at it. Well, this is what care means. This is one feature of it. I looked upon a small grove the other day, where the trees were full thirty feet high and yield four or five thousand oranges a piece, and the good housewife said: "I don't think there are any finer trees about here, and it's because they've had good care. It's a hard tree to make grow."

C. D. D.

National Pastimes.

NATIONAL MEETING OF CURLERS AT CHICAGO.—The annual meeting of the National Curling Club of America was held in Chicago on the 13th inst. Delegates were present from the New York City clubs, Cleveland, O.; Ogdensburg, Milwaukee, Wis.; Albany, New York; Yonkers, New York; Toronto; Portage, Wis., and the two Chicago clubs. The report of the treasurer showed that the receipts from the various clubs amounted to $671, disbursements to $689.55. The following committee was appointed on the distribution of medals:

Caledonian, New York vs. Jersey City, umpire New York Club; New York vs. Empire City, umpire, Caledonian, of New York; St. Andrews vs. Albany, umpire, Yonkers Club; Thistle, of New York, vs. Newark, umpire, Jersey City; Caledonian, of Brooklyn, vs. Manhattan, New York, umpire, Thistle, Brooklyn; Thistle, of Brooklyn, vs. Yonkers, New York, umpire, Thistle, New York; Ivanhoe, Patterson, vs. Patterson, umpire, Newark; Troy vs. Utica; umpire, Albany; Ogdensburgh vs. Prescott, own umpire; Granite, Detroit, vs. Four Brothers, umpire, Orchard Lake; Orchard Lake vs. Thistle, Detroit, umpire, Granite, Detroit; Portage City vs. Thistle, Chicago, umpire, Millwaukee; Millwaukee vs. Chicago, umpire, Portage City; Cleveland vs. Toledo, own umpire; Caledonian, Buffalo, point contest unless Syracuse joins the International Curling Club. The above games will be contested the coming winter, and the winners will receive medals from the National Club.

In the matter of appeals, the points under dispute were amicably settled. It was moved that all rinks East and West have the privilege of playing for the Gordon medal whenever and wherever it is contested for. The motion was concurred in. The following officers were elected for the ensuing year: President, J. Johnston; First Vice-President, John Patterson; Second Vice-President, Peter Daw; Sec'y and Treasurer, D. Foulls.

The next annual meeting will be held in New York, the second Wednesday in July. In the evening the Chicago pem-

bers of the National Club gave the visiting delegates a banquet at the Sherman House, where a general goodtime was had.

To-day, the 14th, the annual quoiting game of the National Curling Club took place. The attendance was good. The play began with twenty-four players on a side. The twelve winners were then divided, six playing six. The six winners were in turn paired off, three playing three. The victorious three were Shaw Stuart, of the Thistle Club of Chicago; A. Dairymple, of the St. Andrews Club, New York; and Robt. Lorrimer, of the Thistle Club of Chicago. Stuart and Dairymple then played, the former winning by 21 to 6 points. Stuart then played Lorrimer, winning again by the same score, and was awarded the prize, the Bell medal. Lorrimer and Dairymple then played for the second prize. It was awarded to the former. ROVER.

The Kennel.

THE KENNEL REGISTER.—We print this week an abstract of the Fourth One Hundred Pedigrees received at this office for enrollment in the Kennel Register. Any corrections or alterations necessary will be made upon our receiving notice of the same. It may not be out of place here to mention that as the editors of the Chicago *Field* have handed over, unconditionally, to the Committee of the National American Kennel Club the pedigrees received at their office, it is our intention during the coming meeting at Syracuse to do the same with ours, holding the club responsible for the correct publication of the same in book form. To those who originally paid us a fee for registration, we would say that the same will be returned to them, or the book, when printed, sent to them with the amount already paid deducted from the cost of same. We are moved to this course from a recognition of the fact that it is all-important that but one stud book should be published, and doubt not that in foregoing what would have been in itself a pleasure and a satisfaction, we are serving the best interests of breeders and owners, and shall receive the commendation of our friends.

POISONING DOGS.—The very idea of depriving even a dog of life by the secret, stealthy administration of poison causes a shudder of horror, and the man who would poison his neighbor's dogs deserves to be classed with the infamous Borgias and Luctaus of a former age. A man named Edward Shelton, of respectable position in society, was arraigned, tried and convicted in the court of a neighboring city for secretly dropping pieces of poisoned meat in the streets, whereby a number of valuable dogs were destroyed. The court imposed a fine of $50 and costs on each count. An appeal to the Superior Court has been taken under bonds of $300. Brinvilliers, the great poisoner, commenced by experimenting on dogs.

CLUMBER SPANIELS.—In a letter from our correspondent "Amicus Canium," published recently, we were somewhat surprised to observe the statement that there was not one thoroughbred Clumber spaniel present at the late New York Bench Show. Our surprise arose from the fact that to our knowledge there were at least two present, exhibited by Mr. Jonathan Thorne, Jr., that were not only pure specimens, but very famous at that. In September, 1876, Mr. Thorne brought to our office three Clumbers, two bitches and a dog, that he had purchased himself in England, after patient search for the true breed. The dog was bred by Sir Talbot Constable, and the bitches at Clumber, the estate of the Duke of Newcastle. One of the trio unfortunately died, but the remaining brace was exhibited by Mr. Thorne at Gilmore's Garden. How the judge, as well as our correspondent, could have passed them over, we are at a loss to understand, as their characteristics in color, coat, etc., are so different from any other breed of spaniels as to distinguish them at once.

Since writing the foregoing we have received the following valued communication:

EDITOR FOREST AND STREAM:

DEAR SIR:—The last issue of your valuable paper contained an interesting letter from "Amicus Canium," regarding the Dog Show lately held at the New York Hippodrome. The writer evidently was well up in his subject, and handled it with intelligence. He erred, however, when he stated, referring to the spaniels, that "there was not one thoroughbred Clumber among them."

There was no class for Clumbers, as such, but among the "field spaniels, other than cockers" was a brace numbered 548 and 549, and a litter of pups, very handsome and fully up to the standard both in appearance and breeding. The brace was from Wales, the dog from the kennel of Sir Talbot Constable, Bart, and his mate from the Clumber Kennels in a direct line. Idstone, of the London *Field*, says of the Clumber spaniel: "He is invariably orange and white or lemon and white. He is remarkable for his large bones, his length of body, the extreme shortness of his legs (so that he appears to have none), for his comparative coatless, at least his short-coated, deep ears, his large long head, his full eye, generally of a rich hazel, and his exaggerated muscle. He varies in weight; the average would be 40 pounds or less, and he should be resolute in temper. A good coat, the feather straight and not too long, are indispensable to him as a protection to briars and branches, and his legs should be well feathered."

This pair corresponds to the description. They were evidently unfavorably placed in the show, since they were overlooked both by "Amicus Canium" and the judges. For had they been seen they would certainly have been greatly admired.

"Amicus Canium" will be pleased to know that interest is felt for the Clumber in this country, and that some specimens—rare even in England—exist here. AMICUS VERITATIS.

—The Westminster Kennel Club pointer bitch Daisy dropped a litter of eight puppies last week, by Sensation; five bitches and three dogs, lemon and white and liver and white; all doing nicely.

—Mr. S. B. Dilly's champion pointer bitch Royal Fan whelped, on the 10th inst., five puppies, two dogs and three bitches, by Ranger; all extra fine and very strong.

—The recent decision in the Nashville Court, in the case of Johnson vs. Ashcroft, shows that in Tennessee dogs are, in law, regarded as property, though no longer taxed.

ABSTRACT OF THE PEDIGREES OF THE FOURTH 100 DOGS ENTERED IN THE KENNEL REGISTER.

CANINE PATHOLOGY AND THERAPEUTICS.—NO. 2.

BY ARCHER.

ALL medicines act on the system either directly or indirectly. Of the first class, or those which act directly, we have examples in the ergot of rye on the uterine muscular fibre;* in belladonna, which dilates the pupil, and in caustics applied to ulcerations, etc. The second class comprises by far the larger portion of medicinal substances; one example may suffice: For convenience I will specify the human subject suffering from neuralgia, depending upon acidity of stomach and digestive apparatus, in which carbonated alkalies, like bi-carbonate of soda and carbonate of ammonia, are given to correct the acidity. The cause being removed the effect ceases, and the alkali thus indirectly cures the neuralgic affection.

Liebig proposes to divide all medicinal substances into three great orders: The first (which includes metallic poisons) consists of substances which enter into chemical combination with certain parts or constituents of the body, while the vital force is insufficient to destroy the compounds thus formed. The second division, consisting of the essential oils, camphor, antiseptics,† etc., possessing the property of impeding or retarding those kinds of transformation which, when they take place out of the body, are usually designated by the names of fermentation and putrefaction. The third division is composed of bodies, the elements of which take a direct share in the changes taken place in the animal's body. When introduced into the system they augment the energy of the vital activity of one or more organs. All of them produce a marked effect in a comparatively small dose, and many are poisonous when administered in larger quantity. None of the substances in this class can be said to take a decided share in the nutritive process, or to be employed in the organism in the production of blood, partly because their composition is different from that of the blood, and partly because the proportion in which they must be given to exert their influence is as nothing compared with the mass of the blood.

A therapeutic arrangement of medicines, on the ground-work thus proposed by the greatest chemist of the age, would have many advantages over those now in use.

The circumstances which modify the action of medicines are very numerous. This modification or alteration depends, in some instances, on a peculiarity on the part of the animal; again, on the character, form or period of the disease in which the medicine is administered, on the combination of medicines employed, on the proper regulation of the dose, etc. These, and other points connected with the efficient operation of medicines, merit the attention of every practical man.

Many animals are peculiarly susceptible to the action of certain medicines. No reason can be assigned for this extreme susceptibility, but of the fact of its existence in individual cases there can be no reasonable doubt. I have known two grains of calomel to produce poisonous symptoms of a dangerous character in a dog three years of age. Another died with all the symptoms of mercurial poisoning from the external application of three drachms of mercurial ointment, which he could by no means have reached with his mouth. A post-mortem examination of the animal corroborated the suspicion.

The female sex are more susceptible, as a rule, to the action of medicines than males, and when in a pregnant state will not bear many remedies that are ordinarily harmless. Great care is necessary in administering irritant purgatives, particularly castor oil,‡ during this period. Acids, turpentine, and other remedies, to be hereafter considered, must not be given during lactation, being extremely pernicious to the nursing young.

In old age and puppyhood the same doses are not as well borne as in the ages between; and much nicety is sometimes necessary in regulating the dose. Habits and mode of life likewise exercise a powerful influence. Dogs who have barely a sufficiency of food, and that of mixed character, will not bear the same treatment as the pampered, over-fed lap-dog. Neither will the same remedy apply to the animal that has plenty of exercise, and the poor brute that is chained to his kennel day and night. All these points must be taken into consideration.

A judicious combination of drugs is often more effectual in its operation than a single medicine, however well selected. This is particularly the case with diuretics and anthelmintics, and it is an object of considerable importance that the prescriber should make himself well acquainted with those several combinations, which either increase or diminish the action of certain remedies. Most of these combinations will be mentioned farther on; in this place, therefore, a few examples will suffice to show the influence which this circumstance exercises. Fox-glove, or digitalis, frequently fails to act as a diuretic until combined with the sesqui-carbonate of ammonia or with squills. Jalap, colocynth, scammony, etc., are rendered more efficiently purgative by the addition of calomel. On the other hand, the violent purgative action of castor oil is rendered milder by the addition of a couple of drops of fluid extract of ipecac; less griping by fluid extract of hyoscyamus, while it is modified by the aromatic oils. In some spasmodic affections the operation of a cathartic is promoted by a combination with opium; and, lastly, this drug renders almost inert the action of iodide of potassium. In forming a combination of medicines, great care should be taken to avoid combining drugs whose action is directly opposed to each other. Moreover, do not attempt to fulfil too many indications at one time, or it is not improbable that the remedies may antagonize each other, and render your treatment perfectly inert.

As a general rule it is inadvisable to prescribe in the same formula ingredients which are chemically incompatible, unless the resulting compound be the one which the prescriber wishes to administer. Thus, if the citrate of potash is to be given, it may effectually be done by giving in one draught citric acid and the bi-carbonate of potash in solution. These mutually decompose each other; carbonic acid is evolved and the citrate of potash is obtained. It does not necessarily follow that, because the ingredients are chemically incompatible, the resulting compound is rendered inert; on the contrary, it may often happen that it is much more violent in its operation than either of the ingredients used in its formation. Here we have to call chemistry to our aid in order to thoroughly understand the changes which take place, and to ascertain what the compound resulting from the mixture is. Having ascertained this point, the next thing is to find out with what medicinal properties it is endowed. Many unchemical combinations are highly useful and valuable. For instance, "yellow wash," a compound resulting from a mixture of corrosive sublimate and lime water, or black wash, that of calomel and lime water. But of all unchemical combinations, perhaps the most signally useful is that of opium and sugar of lead (acetate of lead). These agents react chemically on each other, the acetic acid of the lead combining with the morphine principle of the opium, producing acetate of morphia, and the meconic acid of the opium in turn combines with the lead to form meconate of lead, yet experience proves the combination to be one of the highest value in hemorrhages and other diseases. As I cannot teach chemistry in this connection, I advise all who are ignorant of that science to consult some one to whom it is familiar before attempting combinations of which no knowledge is possessed. As far as lies in my power, I shall give the incompatible of each remedy when it is under consideration.

I presume some of my readers will say: "What do we care about chemistry? We want something to cure our animals!" Very true; but it is best to work understandingly and intelligently; if not, you are as likely to kill as to cure. If the gentleman that lost his dog by the use of cantharides had possessed a work giving the nature of the drug, its mode of action, etc., he would never have administered the drug for such a purpose as he did. Remember that by guess work you are as likely to do wrong as right; and in these days of valuable and imported animals, few can afford the costly experiment of guessing. Moreover, the old motto of "What is worth doing is worth doing well," is well to be remembered.

Almost every article in the *materia medica* operates differently when given in a small and in a large dose. Tartar emetic, for example, in doses of from 1-14th to 1-20th of a grain, acts as a diaphoretic and expectorant; in doses of from 1-16th to 1-8th of a grain, as a nauseant; and if carried to the extent of a half or three-fourths of a grain, it proves powerfully emetic. A few drops of turpentine acts as an irritant to the kidneys and genito-urinary organs, while in doses of half or three-quarters of an ounce, especially if combined with olive oil, it operates freely upon the bowels without producing any renal or vesical irritation. These are but a few examples out of many which might be quoted, but it may be observed generally that most of the medicinal substances, whose operation is mild and beneficial in small doses, may be converted into powerful poisons by being administered in large quantities.

There is a source of error in regulating the doses of fluid medicines, to which, unfortunately, but little attention is paid. I allude to the differences between the minim and drop. They are too often considered as identical, both being regarded as the 1-60th part of a drachm, whereas the truth of the matter is that the different medicines vary throughout the scale from 30 to 180 to the fluid drachm, varying somewhat according to the size of the opening from which each may be poured. The minim, therefore, as affording a certain standard of measurement, should always be employed in preference to the drop. This is easily done by purchasing an English minim or drachm graduate. I say English graduate, because these are more reliable than similar glassware of American manufacture, the former being graduated by measure, and the latter (usually) by the eye of the workman. One of Dr. Squibb's (of Brooklyn) drop tubes will answer every purpose.

N. B. While thus generalizing, the dose of any medicine that may be mentioned must be taken as applying to a large animal like the setter or pointer, for these are the animals I have in mind, and in whose behalf, mainly, these articles are undertaken.

ABOUT DOGS IN GENERAL AND THE SO-CALLED SIBERIAN BLOODHOUND.—While we undoubtedly have here at home as good judges of setters and pointers as can be found abroad, it must be admitted that a majority of our people are lamentably ignorant of every other variety of the canine race. Our ideas are anything but clear and distinct as regards spaniels, cockers and springers, and very few of us can distinguish with certainty a mongrel from a thoroughbred in either class, and so with terriers and the numerous sub varieties of that useful breed of vermin killers. How few of us, for instance, can distinguish a Dandie Dinmont from a Bedlington, a Yorkshire from a Skye, or a fox terrier from his near relative the English terrier. Most of us, in fact, are indebted to the British writers rather than to actual experience for what little knowledge we do possess of all the breeds, save pointers and setters, hence we fall easy victims to the misrepresentations of unscrupulous dog dealers.

One of the most successful impositions upon the credulity of American fanciers was that practiced by the late eccentric Dr. Francis Butler, whose canine emporium was at Peck Slip. He related the circumstances himself with great glee as a pleasant illustration of human gullibility.

In the course of his business he became possessed of an enormous mongrel cur, a perfect canine giant, with more or less of the Ulm dog in his blood. This nondescript, of no particular color or characteristic save size, he forwith dubbed a Siberian bloodhound, and exhibited him as such, though he did not resemble a hound in any one respect, and was as much the opposite of the majestic bloodhound as he well could be, in color, shape, form, scenting power and all other qualities. Butler's mongrel was taken to England and exhibited to the Queen, who, "God bless her," is a great lover of dogs, *not* as a bloodhound, but simply as a *monster* dog. The great dog seller was too shrewd to attempt to deceive John Bull. The dog was brought back to this country and became the founder of that race of huge pricked eared curs far more formidable in appearance than they are in fact, which excite the awe of the ignorant when visiting our breweries.

To become as learned as our English cousins are in dogology we want here in this country an acclimatization society like that of the Bois de Boulogne, near Paris. At this institution they take great care to breed every known variety of dog in the utmost purity. The surplus stock finds prompt and ready sale, and this canine branch of the society is not only self supporting, but pays a handsome yearly tribute to the common treasury. We have not the slightest doubt that a kennel on this plan, where every known variety of dog could be purchased, and located within easy reach of New York, would prove a most profitable enterprize.

—The imported Irish setter bitch Floss, belonging to C. Z. Miley, of Lancaster, Pa., whelped, on the 1st June, six puppies, three dogs and three gyps. They are by imported stud dog Buck.

"THE ONLY ILLUSTRATED."—The ugliest dog in North America is owned by a Chicagoan named Whitman. It is an Irish water spaniel, and its portrait is given in one of the absurd sporting journals. In the background is an immense tree which has broken through a monstrous fence, and is about to fall upon the unconscious brute, while two Chicagoans are firing upon him from a boat.—*Courier Journal.*

NAME WAIVED.—We have received the following letter:

EDITOR FOREST AND STREAM:

The Westminster Kennel Club yields the name of Dutchess to Mr. W. A. Coster, and will claim for their pup the name of Beauty of Westminster. W. S. WEBB, M. D.,
Sec. and Treas. W. K. C.

—A dog on shipboard is thought a good omen. He can be used for a mast-iff necessary.—*Buffalo Express.*

—Mr. Jerome Marble, of Worcester, Mass., lost his valuable young Gordon setter Shot, June 13th, by dog distemper. Shot was on exhibition at the late dog show in New York.

—M. Von Culin's (Deleware City, Del.) Fire Fly, by Champion Rufus, out of Friend, whelped, June 16, eight dogs and seven bitches, sired by Elcho.

—James L. Marvin, of Newark, N. J., claims the name of Bess for imported black and tan Gordon setter bitch, second prize winner at New York dog show, by Earl of Glasgow's Jock out of Flora by Mr. Tennant's Di.

TENNESSEE FIELD TRIALS.—The Nashville *Rural Sun* says: "The FOREST AND STREAM does not seem to understand what we intend to have here next fall. It appears to think that we are simply to have a dog *show* and not a dog *trial*. Tennessee inaugurated the field trials five years ago, and we intend to keep them up."

Now as it was through the influence of Col. John M. Taylor, then Kennel Editor of this paper, that the Tennessee trials were initiated, we think that we *do* know what our Nashville friends are to have on the 20th of November next. We are pleased to learn the prospects for a successful trial are most encouraging. The number of dogs will probably be double that of last year. The purses in champion stakes for both setters and pointers, $500, to be divided—$240 to first, $150 to second and $100 to third. In puppy stakes the purses are for $300; $150 to first, $100 to second, and $50 to third. Every provision has been made to insure a supply of birds, and all arrangements are in the hands of competent committes.

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grilse and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from $15 to $150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining, to imitate the genuine article) without letting our customers know just what they are getting.
P. O. BOX, 1,294.—*Adv.* ABBEY & IMBRIE, 48 Maiden Lane.

—We have received from Messrs. W. Haley and S. J. Atwood, of Winterport, Me., a beautiful stereoscopic view of a ruffed grouse sitting on her nest. The price of the view by mail is 25 cents.

—The large hotel at the Jordan Alum Springs, in Virginia, is now open for the season under the management of Mr. J. N. Woodward, formerly of Rawley and Orkney Springs, who is well known in that connection. They are delightfully situated in the northeast part of Rockbridge County, in a most picturesque portion of the mountains of Virginia, nestled in the beautiful valley, between the North Mountain on the east and the Mill Mountain on the west. There are two fine springs of chalybeate water in addition to the far-famed alum waters whose medicinal virtues are so well known. —[*See adv.*

—The mean mid-day temperature at New Smyrna, Florida, for the month of June, as recorded by Major Geo. J. Alden, was 77 deg., highest 87, lowest at 7 A. M. 71, lowest at 9 P. M. 68.

—The Barnegat House has opened for the season under new management, which promises to make it a first-class resort for sportsmen, and as it is easy of access from the city should be well patronized.—[*See adv.*

---

* Mayhew denies that ergot has any effect upon the canine uterus. Farther on I shall show why and how he is an error.

† *Antiseptic*—A term applied to any substance which has the power of preventing animal matter from passing into a state of putrefaction, and of obviating putrefaction when already begun.

‡ Castor oil is an irritant purgative to dogs, particularly pregnant bitches.

Sea and River Fishing.

FISH IN SEASON IN JUNE.

FRESH WATER.	SALT WATER.
Trout, *Salmo fontinalis.*	Sea Bass, *Centropristris atrarius.*
Salmon, *Salmo salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo confinis.*	
Land-locked Salmon, *Salmo gloveri.*	Striped Bass, *Rocrus lineatus.*
Black Bass, *Micropterus salmoides;* *M. nigricans*	White Perch, *Morone americana.* Weakfish, *Cynoscion regalis*
Muskalonge, *Esox nobilior.*	Bluefish, *Pomatomus saltatrix.*
Pike or Pickerel, *Esox lucius.*	Spanish Mackerel, *Cybium maculatum.*
Yellow Perch, *Perca flavescens.*	Cero, *Cybium regale.*
	Bonito, *Sarda pelamys.*
	Kingfish, *Menticirrus nebulosus.*

For list of Trout Flies in season for June, see issue of May 31.

FISH MARKET.—Our quotations for the week are as follows: Striped bass, 15 to 25 cents per pound; bluefish, 10 cents; salmon, green, 18 cents; mackerel, 10 to 15 cents each; shad, Connecticut River, 60 cents; white perch, 15 cents per pound; Spanish mackerel, 18 cents; green turtle, 12½ cents; terrapin, $12 per dozen; halibut, 10 cents; haddock, 6 cents; king-fish, 20 cents; codfish, 8 cents; blackfish, 15 cents; herrings, 5 cents; flounders, 10 cents; porgies, 10 cents; sea bass, 15 cents; eels, 18 cents; lobsters, 8 cents; sheepshead, 15 cents; soft clams, 30 to 60 cents per 100; pickerel, 15 cents; Long Island trout, $1; Canada do., 50 cents; hard shell crabs, $2 50 per 100; soft crabs, $1 50 per dozen; weakfish, 10 cents; frog legs, 40 cents per pound.

MAINE.—*Camp Kennebago, Rangeley,* June 16, 1877.—Among the gentlemen visiting Camp Kennebago, within a fortnight, were J. W. Brouty, R. W. Emerson, Phineas Pierce, B. F. Adams and F. O. Dana, of Boston; H. A. Richardson, D. R. Baker, Daniel Reed and J. B. Taylor, of New York; A. D. Lockwood, of Providence; James Dempsey, J. B. Stow, John B. Cotton and Hon. W. O. Frye, of Lewiston, Me.; J. H. Kimball and Clarence Worden, of Bath, Me. A goodly number of large trout have been taken. Theo. L. Page secured a magnificent seven pounder, May 30.

RANGELEY.

Rangeley Lakes, Boston, June 16, 1877.—I forward you the *Somerville Journal* containing an account of a trip to the Rangeley Lakes, written by E. R. Morse, Esq. This as my forty-second trip. I arrived there the 16th of May, and commenced fishing on the 18th and fished fourteen days, during which time I caught 143 trout, only ten of them weighing less than a pound; one weighed 6½, two 6, four 5 to 5½ pounds, and the balance from two to four pounds.

Yours respectfully, N. D. SWAIN.

MOVEMENTS OF THE FISHING FLEET.—The mackerel fleet continue to bring in good fares, and prices rate low for the season. The receipts have been considerably in excess of those at this date last year. At this time last year the market was lively at $8 to $11 per bbl., while at this writing holders find it difficult to place them at $5 to $7 for medium and large 3s. The arrivals the past week have been 41, and the receipts about 3,600 bbls. The early appearance of mackerel in the Bay of St. Lawrence points to a more successful season than that of 1876, and it is probable that quite a fleet will engage in the Bay fishery. Some attention will also be given to the hook and line fishery on our own shores, with the hope of securing a better quality of mackerel and realizing more satisfactory prices than are likely to rule for fish of the ordinary grades. A large fleet continues in the Georges fishery, the number of arrivals since our last issue having been 65, with a catch of 130,000 lbs. codfish and 1,500,000 lbs. halibut. The number of Bank arrivals the past week has been 16, bringing 500,000 lbs. codfish, 640,000 lbs. fresh halibut and 140,000 lbs. fletched halibut. The market is practically bare of pickled Bank cod, and the stock of dry cured is confined to small lots, held at good prices. Georges cod rule a trifle lower than last year at this time, but other grades are higher.—*Cape Ann Advertiser, June* 15.

PASQUE ISLAND CLUB.—This club is composed of gentlemen of middle age, and mostly married men of quiet and retired habits, who, with their families, resort to Pasque Island for health and amusement. Its members are from all parts of the country, and some from the Island of Cuba. In looking over the roll, I recollect the names of Peter Balm, A. S. Hatch, Wm. H. Gunther, Thos. J. Havemeyer, Don Egbert Guernsey, Edmund DePeisire (of Cuba), S. T. Brown, Solon Humphrys, A. B. Doulop, Frank Herring, John O. O'Donohue and brother, John L. Siettinius (of Cincinnati), W. A. Slogg, A. T. Higgins, W. H. Chopman, Dennis Brown, H. Harbeck, Thos. E. Tripler, A. T. Higgins and James L. Valiveton, its president. The mention of their names will give you an idea of the character of the club.

The island is about fifteen miles off of New Bedford, between that place and Martha's Vineyard, and belongs to the club. It comprises about 1,000 acres of land, and is famous for the variety of its fishing grounds. The land of the island is quite rolling, and from some of the bluffs you have a varied and extensive view. They have erected magnificent sites for country cottages. The island is susceptible of considerable culture. The club is supplied with vegetables and melons from its garden, and the wild strawberry and cranberry grow in great profusion. You can have surf or still bathing, as it suits your taste. The ladies have a very fine and commodious bathing ground, where they can enjoy the water at all hours of the day in complete retirement. A creek runs meandering through the island about a mile, where the young people sail and row with perfect safety. The club house is a long, two-story wooden building, in the shape of an L, with piazzas on both sides, and offering a splendid promenade. The walks about the island are varied and delightful, the land being a succession of hills and dales. The members and their families gather here in the largest number in the month of July, just before the Fourth. The blue-fish, weak-fish, sea-bass and fluke are abundant, and those who are fond of boat-fishing can have all they desire. The great fish of the island, however, and which the scientific sportsman prides himself in capturing, is the striped bass, which are taken with the rod and reel in great numbers, and sometimes to a prodigious size. The average run is from 20 to 40 pounds, but are quite often taken as heavy as 45 and 50 pounds. Mr. Valiveton was over two hours in landing a 49 pound bass, and he handled him with all the skill of an adept, although it was his first large fish. Uncle Peter says that he will make the best hook on the island, and feels quite proud of him, as he is one of his pupils. Uncle Peter is an old hand at the rod, and is one of the most skilful fishermen in the club. He is called "Great Hook." He has taken more pounds of fish than any other member. Mr. Dunlap may be put down as "high hook" since no one has equalled him in the weight of a single fish, which was 60 pounds. Miss Chapman has put some of the lazy fellows to the blush; she handled and took an 11 pound bass with as much ease as if she had handled the rod from childhood, which, I believe, does not date back very far.

The fish are weighed as each party comes in from his stand, and the weight of every fish is registered in a book under each member's name, in the order in which he takes them from day to day.

Uncle Pete is the Acetes of the island, and when he rises from the breakfast table to take a look at the indications of the wind and weather, careful observers, by sure prognostics, may fortell a run, and the oracle announcing "*There are fish to-day, gentlemen,*" every man springs for his pole, and the rattling of rods gives warning of the day's toil. It is a good lesson to watch Uncle Peter on his stand. You will see him cast his small, keen sparkling eye over the surface of the waters, and then hear him say to his "chummer" Charley in a low, gentle voice, as he well knows that he has got a coming foe to contend with, "Now, Charley, curl right in that eddy, or close to that rock;" and, in about fifteen or twenty minutes, you will observe Uncle Peter bending, twisting and squirming as if he had an attack of gout in the stomach. Your whole anxiety is that you have no bottle to go to his relief; and as you approach him nearer to view, you perceive his rod bent nearly double and striving as if he was trying to lift one of the boulders from the bottom; and all at once you hear something go "whiz! whiz! whiz!" his rod straightens out, and everything seems still and calm again. In another minute another spasm seizes him, and the belt of his rod seems embedded in his abdomen, and his whole frame trembles from stem to stern. Then such a lashing and foaming of the waters, and a long, silvery streak flashes in the sunlight as the finny monster darts off again on another run. The line smokes with the heat of the friction, but the bend of the rod brings the stubborn fellow to his mind; and Uncle Peter winds in the slack with gentle caution, and prepares himself for another dash of his foe. But, as he hauls him closer to view, he sees that he has not yet recovered from his exhaustion, and he brings him slowly and gently along the stand, where Charley stands ready to ply the gaff. Among the other hygienic pleasures of the island is its good, healthful food and good cooking. Good cooking is as conducive to good health as exercise and temperate living; and, for this reason, particular attention is given by the club to the *de re culinaria.* Since it is the chief business of the cook to please the palate and the eye, and to render food easy of digestion for the purpose of nutrition,

> "When pleasures to the eye and palate meet,
> That cook has render'd his work complete."

William seems to have studied all the arts of

> "By Jove! such cooking; as if Juno had been sick, and he her doctor. His name should be enroll'd with that of Apicius"

in Escourt's book, and his gridirons should be framed of gold."

SAMUEL.

CONNECTICUT, *Hartford, June* 19.—Trout fishermen in this State must put aside their rods after July 1, or the game clubs will be after them.

—The shad season is about over, and people living in boarding-houses rejoice with exceeding great joy.

—Mr. Henry Andrus, of Hartford, and R. R. Cone, of Willington, on Saturday, caught in the streams near East Haddam 115 trout, which together weighed over 35 pounds.

—The engineer of the Silver Star brought up with him, this morning, a striped bass weighing 55½ pounds, caught by a man named Spencer, a fisherman at Goodspeed's Landing.

T. S. S.

NEW YORK, *The Adirondacks, June* 14.—There has been a world of trout fishing near Trenton's (No. 4) the past spring. One man has taken more than 125 pounds about here and over at Stillwater, where he fished about a week. He has been here since the second of May. (Hope he made good use of them.) The Rev. S. H. Cox, D. D., caught in Beaver Lake a trout the other day that weighed 2¼ lbs. Parties who have visited Smith's Lake report good fishing. S. B. Edwards' guide has started a house at Smith's Lake, and is living there at present; but I hope he will not make it pay, for there are too many hotels on the lakes now. Deer are quite plenty, notwithstanding so many were slaughtered last winter. I took a party of ladies out the other night, and showed them four in an hour. About three weeks ago I caught a huge bear just on the other side of the lake, where I had left a dead cow the first of March. I came past the place and found old brutin feasting on the carcass. I set a trap for him that night, and the next morning had him. He had a splendid hide, and I intend making a robe of it.

BALSAM.

—Four brook trout, weighing sixteen pounds, were recently taken by Messrs. James Lyon and C. T. Richardson, of Oswego, at the rifts in the Oswegatchie River, one mile above Cranberry Lake. The largest fish weighed fully seven pounds. They are on exhibition at Butler's drug store in Oswego.

—Rev. Dr. S. H. Coxe, of Utica ("Amateur," of FOREST AND STREAM), last week caught a 2¼ pound speckled trout in Beaver Lake, Number Four, Adirondacks, where one is seldom caught.

A FIFTY POUND MUSKELONGE.—A monster muskelonge (muskinonge), weighing 50 pounds, and measuring 4 ft. 8 in., has been sent to John Cummings, of Utica, by Sydney Adams, Cananoque, Ontario. It is one of the largest ever caught in the St. Lawrence River. It was taken on a hook and line, and occupied the attention of the angler and Charley Lasha, his boatman, for over three hours.

—Fishing is now excellent in Cayuga Lake. The successful efforts to secure the discontinuance of the net and seine at the Thousand Islands, have already been rewarded by an unusual abundance of fish there this season.

—Fire Island, N. Y., has established cable communication with New York City. This will prove a valuable accesion to that popular summer resort. The steamer Surf is now making regular trips between the Island and Babylon. Good fishing in the bay.

NEW JERSEY—*Kinsey's Ashley House, Barnegat Inlet, June* 17.—Sheepshead are getting quite plentiful, and some good catches have been made during the week. A number of quids arrived to-day. Bluefish seem very plenty, but only take the squid by spells. Among the catches this week are Chas. H. Belren, N. Y., in one hour, 43 bluefish; H. K. Neill, N. Y., 38 sheepshead; Wm. Ackers & Co., Phila., 18 sheepshead. Some of our captains as high as 40. Sea bass, and blackfish only middling.

PENNSYLVANIA.—The State Fish Commissioners are busy stocking the streams of Lehigh and Jefferson Counties with brook trout fry. Large pike are caught at Waterford Lake, in Erie County. A party of fishermen from Waterford recently captured three, weighing respectively 18, 24 and 45 pounds.

TROUT STREAMS OF PENNSYLVANIA.—An obliging correspondent has furnished the following valuable information, which answers in *extenso* queries constantly put to us:

In Potter County, Pa., there is a creek called the Sinnemahoning, and at a small hamlet, put down on the county maps as Wharton Mills P. O., it divides; or, rather, the East and First Forks of the stream here unite. The village consists of a few scattering houses, but does not boast of either hotel, store or shop. The waters of the creek are crystal clear, and, as yet are unpolluted by tannery or factory, and the East Fork is even free from saw mills. Here, in my opinion, is to be found to-day decidedly the best trout fishing in the State.

About a mile below the forks is an old mill, and under the dam a dark, deep pool, where you can always depend on taking a string of fish. During the day, deep bait fishing is usually successful, but at sunset the surface of the pool and of the rapids below is broken in every direction by swarms of the speckled beauties; and there the fly, in skilful hands, does its work. Both the First and East Forks are beautiful streams, and afford excellent fly fishing with plenty of room to cast, while for those who prefer to use the bait, Nelson and Freeman Runs, Birch Creek and the headwaters of East Fork, all within an hour's drive from headquarters, cannot be excelled.

Trout are unusually plenty in these streams this spring, and a week of warm weather is all that is needed to insure glorious sport. The fish range from one and a half pounds down, and average a good size.

To reach this arcadia, trains leave the West Philadelphia Depot of Penna. R. R. Co. every evening at 11:55, except Saturdays, reaching Sinnemahoning Station at noon the following day; fare, $8.35. From this point a stage starts on arrival of the train, each Monday and Thursday, for Wharton, distant about 18 miles, arriving in time for supper; fare, $1.50. On other days private conveyance can be obtained at a cost of $5 for a team to carry two to four persons.

Excellent accommodation and bounteous fare can be had with Mr. M. T. Seibert, whose house stands at the head of the valley, just at the forks, at a ridiculously small expense. If desired, Mr. Seibert will meet a party either at Sinnemahoning or Cameron (a station a few miles above on the railroad, and a shorter drive; but in that case he should be notified a week ahead by letter addressed to the care of F. Welton, Sinnemahoning P. O.

Guides, one dollar per day; but it grieves me to have to record that some of these natives indulge in pernicious and reprehensible practices. When a rise occurs in the stream, and the fish are running and jumping the dam, boxes are set for them to fall in, and even umbrellas are used for the purpose. It is said that over 500 large trout were caught in a single day last year in this way by one person. Set lines are also used, but still the fish are not sensibly diminished in numbers. Ought not these things to be stopped?

By the way, I would mention two articles I have used that pleased me much. One is an india rubber stocking, reaching to the hip, over which a stout brogan, well studded with miner's nails, can be worn—an almost indispensable comfort when the water is cold. The other is a small landing net, suspended by a rubber band around the neck and carried hanging down the back. By its use, when in the middle of the stream many fish may be saved that would otherwise be lost. W. H. L.

ILLINOIS.—Our correspondent "Theo." of Huntley, Illinois, sends us an account of three days' fishing in Fox Lake about the first of June, which yielded a goodly number of pickerel and a large amount of sport. This lake also contains pike, and bass of three varieties. He says:

"Fox Lake is one of a small chain of lakes situated on the Fox River, in McHenry and Lake Cos., Ills.; is 3½ or 4 miles long, ½ to 1½ miles wide, and one of the finest resorts for the lover of the rod and gun to be found in the State. Two fine club houses are already built, and there will be more as soon as the place and its advantages are more widely known.

The lakes in the fall are full of wild rice, and wild ducks are abundant."

MICHIGAN.—*Detroit,* June 9.—Two young lads took a run down the river on the 7th inst., and during the afternoon made a string of nearly one hundred perch. E. W. Reynolds, Wm. Christian and Albert Hill were down the river on a fishing excursion June 6th and 7th. The first afternoon, in a short time, they made a string of forty-six. The next day they started up our creek, and when opposite Fighting Island their yacht (Sweepstakes) struck a snag, making a large hole in her. It made the boys dust around lively to stop the leak. They used every thing handy, but the water gained on them so rapidly that one of them doffed his pants and put them over the leak and stood upon them, while the other two bailed for dear life. Nevertheless, the water gained so rapidly that they were compelled to run her ashore. State Fish Commissioner Jerome passed through this city, on the 7th inst., with 50,000 young eels, which are to be placed in rivers in the vicinity of Monroe, Mich. Revere Gay and a couple of friends were down the river on the 7th, and made a string of 31 black bass.

L. F. W.

Traverse City, June 7, 1877.—Fishing parties are arriving every day. This morning a large party went up the river after trout, and another started for Long and Bass Lakes for bass and pickerel. It is the best fishing season ever known here.

Grand Rapids, June 11.—Our Trout season has opened finely in Michigan, and catches are large. A friend, DeLittle, made a trip up the Grand Rapids & Indiana R. R. to Mayfield, a few days since, and returned with five hundred and thirty-three speckled beauties as the result of two days' fishing in the Boardman River. Parties are going from here almost daily, and all report the trout more plenty than ever before. I shall be with them in July, and will let you know the result. We Western people can't see why, with such fine fishing, reasonable charges and good accommodations, we are not visited by more Eastern sportsmen.

I see in your issue of June 7, you advise a correspondent to try Northern Michigan as a paradise for fishermen. You are

correct, as any one can satisfy himself by making a trip over the Grand Rapids & Indiana R. R. to Traverse City or Petoskey, and stopping a few days among the Grayling trout, black bass, pickerel and other denizens of the beautiful lakes and sparkling streams of our northern shore.

VALLEY CITY.

[REMARK.—We shall show our faith in the representations of our correspondent by taking a trip to Michigan next month ourself.—ED.]

OREGON.—*Portland*, June 11.—A couple of men made a splendid haul of fish a few days ago near the Columbia River bar. They went out at three o'clock A. M., and returned about 6:30 A. M. During the three hours and a half, the men captured 121 salmon. They receive 50 cents each for every fish caught. The fishing was done almost immediately on the bar.

Kinney Bro.'s fishing boats captured about four thousand salmon one night last week. One of Hepburn & Co.'s boats was carried over the bar a week ago Sunday night, and was picked up at sea by the barque Forward, 40 miles from the bar. The men and part of the net were saved, and brought in all right. The idea of drifting 40 miles from mainland in a small open boat, is not very comfortable; and that these men should have escaped a watery grave is strange, but yet it is true.

S. G. Reed, J. C. Ainsworth and W. B. Blackwell returned from down the river last week with 197 trout (one day's catch), ranging from ¾ to 2 pounds each. They were taken in a small tributary of the Deschutes River, on the line of the North Pacific Railroad, between Kalama and Tacoma. They are said to be quite plenty there.

There has been some $36,000 raised among the fisheries towards starting a hatching house on the Columbia. Professor Baird has been consulted as to arranging the necessaries appertaining thereto, and the buildings will be put up this season.

It is said that Capt. Thompson, of Upper Elk Creek, Douglass County, this State, recently killed a deer which had but one horn—which projected from the centre of its head, having fourteen prongs, one of which extended in front in the shape of a crescent.

Three elk were killed one day last week near Blossom's Logging Camp, in Coos County.

Harry Spredden found the skull of a mammoth bird, on the beach below Point Adams, recently. The bones measured six inches across the forehead, and twelve inches from the crown of the head to the point of the beak. OCCIDENTAL.

[Why don't Harry send the skull to the Smithsonian Institution.—ED.]

SPLIT BAMBO RODS.

To our customers and the public:—In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

CONROY, BISSETT & MALLESON,
—[*Adv.* Manufacturers, 65 Fulton Street, N. Y.

THE DITTMAR POWDER.

Please direct all letters for the above powder to Neponset, Mass. Capt. Bogardus and Ira Paine, are using my powder. CARL DITTMAR. —[*Adv.*

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

S. R., New York.—We can give you no information about Brooklyn Lake, N. J.

W. H. C., Brooklyn.—When is the woodcock law up in N. Y. State and L. I? Ans. See editorial page this week.

O. F., Ancram.—Please inform me where I can get maps of the upper part of New York State, and of lower part of Canada? Ans. Of Colton, 172 William street, New York.

E. W., Cambridge.—1. Will you have the kindness to tell me in what pond in Arlington, Mass., I can find bass? 2. Is there any law against fishing for bass or other fish in Spot Pond, Arlington? Ans. 1. Inquire of local residents. 2. We cannot answer.

S. F., New Haven.—Where is the best place to stop for a day's trout fishing on the Central and Union Pacific Railroads, without going far from the railroad, and without incurring much expense? Ans. Stop at Ogden, Utah; and fish in the Weber River, or at Reno, Nev., for the Truckee River fishing.

S., Boston.—Can you inform me where can I get good plover shooting on the coast of Maine, during the latter part of July and the month of August? Ans. Good woodcock shooting at Princeton, Washington Co., reached by European and N. A. R. R., or by rail from Eastport.

AMATEUR, Fisherville.—Every sportsman has his favorite shell. Many could not be induced to use anything but the U. M. C. The shells you speak of may not have been perfectly suited to the chamber of your gun. Both makers are first class.

F. B., Springfield.—Would the operation of spaying injure the hunting qualities of a sist? Should like to know the effect? Ans. Not if the animal is spayed while a puppy. In an adult case it usually enervates the animal and of course impairs its usefulness. The operation should be performed only by a skillful operator.

JAS. ROY, Sharon, Pa.—The close season for black bass in Pennsylvania is from March 1 to July 1. That part of the Chenango river which divides Ohio from your State can be fished on the Ohio side at any time, as that State has no law regulating black bass fishing.

W. M. K., Cambridge, Mass.—We should recommend a boat made by J. H. Rushton, St. Lawrence county, N. Y. Weight, 25 lbs; cost, $35. For two persons—weight, 40 lbs; cost, $40. For paper canoe, address Waters & sons, Troy, N. Y.

J. C. W., Indianapolis.—1. Are there lake trout caught near Decatur, Ala., which resemble brook trout? or what are properly called trout? 2. In what part of a lake is the best fishing to be found when the wind is coming from the NW., the lake (lengthwise) running N. and S? Ans. 1. They are the black bass, *Grystes salmoides*. 2. The wind will make little difference.

H. G. C., Indianapolis.—1. Can the angle of a gun stock be changed by "steaming and bending?" I have a fine Dougall the stock of which is too straight by three-fourths, or one inch. 2. If so what will it cost? 3. Will the change be permanent? Ans. 1. Yes. 2. Ask our advertising gunmakers. 3. Yes.

SCAIP, Kingston.—When will the articles on Florida, by "Al Fresco," promised last fall, be published in the paper? I am waiting anxiously. Ans. A letter just received from Dr. Kenworthy promises them "soon"—probably in September.

C. W. W.—Please let me know in your paper if it hurts a young setter dog to hunt on woodcock when not broken on snipe? Ans. Certainly not, but if broken on woodcock he cannot be equally well trained on snipe when you require him for that work.

C. S. J., Meshoppen, Pa.—I have a very large owl. I had him for three years and I would like to sell him. Can you tell me where? Ans. Advertise him in F. and S. and perhaps some one will buy the owld fellow

G. H. R., Gainsville, Texas.—Where can I get a copy of Sitgreave's Report of Texas birds? Ans. Cannot say. Better get some second-hand bookseller to hunt. Dr. Cones' "Birds of the Northwest" can be procured from the author, Smithsonian Institute, Washington.

F. W. S., Philadelphia.—My setter dog vomits everything he has eaten for the last two days, otherwise he is well; what can be done for him? Ans. Give him a mild purgative, say of castor oil, and feed him lightly.

"SUBSCRIBER," Philadelphia.—Does it hurt a young setter dog to hunt him on woodcock before being broken on snipe? Ans. As the mode of hunting the two birds is quite different we should prefer the animal trained first on the species which he is to generally hunt.

L. J. P., Goshen.—Will you kindly inform me where I can procure Ratjer's mange cure? It being sent to me by a friend I have lost the address of the place where it was purchased and wish to obtain another bottle. Ans. We do not know who makes and sells Butler's mange cure since the proprietor's death.

C. A. D., Sing Sing, N. Y.—Now that the Legislature of this State has adjourned will you please inform your readers how the game law bill stands which was before that body. Ans. We have official notice that the new game law has been signed by the Governor.

JOE, Clearfield, Pa.—What is the fastest time for a running horse for one mile up to present time? What horse, when and where? Ans. Col. Kelly's celebrated horse Eclipse is said to have run, as near as we can now recall, a mile in one minute on the Epsom Downs. Cannot specify date exactly, but as near as memory serves about 1797.

H. Van S., Newport.—Can you inform me what has become of the Clumber spaniels that you reported the arrival of last fall in one of the numbers of your valuable paper? Also, whether they have bred, and if any of their progeny can be obtained? Ans. Two of them are now in possession of the importer, the third died. The pair had a litter of pups. For particulars address Jonathan Thorne, Esq., 76 Gold st, this city, care Thorne, McFarlane & Co.

DICK, Rochester.—Is their any way to prevent a dog's hair from coming out? We have a large white dog at home whose hair comes out like fury so that he is an awful nuisance. Ans. Your dog is in all probability shedding his coat as all haired and furred animals do at the return of the vernal season. Have him thoroughly groomed every morning and you will get rid of the nuisance of which you complain.

T. H. N., New York.—Are there any streams or lakes containing trout and black bass within a few miles of New Bedford? Ans. Yes, but the best trout streams are known only to the initiated. Have sent you a line by mail. For fish and game localities see Hallock's "Gazetteer." It contains over 5,000 of them, in all parts of North America, from Labrador to Alaska, and from Florida to California.

F. S. C., Boston.—1. Where can I obtain the rules of the National Association of Amateur Oarsmen? 2. Where can I get some good black bass fishing near Boston? Ans. 1. Address Fred J. Englehardt, Third Ave, cor. Sixty-third St. 2. Go to Lynnfield Lake on the Danurs and Newburyport branch of the B. and M. R. R. Fine bass fishing also in Lake Cochickewic, North Andover, reached via B. and W. R. R.

J. P., San Francisco.—I was trying to raise some white Leghorn chickens, but they are dying off very rapidly as soon as they get about four to five weeks old. Have had no trouble with them until they arrive to that age. Will you be kind enough to let me know which is the best food for young poultry? Any other advice will be thankfully received. Ans. The food is all right; try change of ground.

SNIPE, New York City.—1. Can Barnegat Inlet or its neighborhood be reached by steamboat now? 2. Is there any snipe shooting there at this time of the year? 3. Is there any agency for Hyde & Shattuck's B. L. gun, formerly advertised in the FOREST AND STREAM, in this city? Ans. 1. No. 2. Somewhat late. 3. N. W. Robinson, 19 Chambers st.

FRANK, Southfield, Mass.—What kind of a dog would be of most service to me in Florida? or would a man get on as well without any? Are pointers or setters, either, good for anything as watch dogs? What kind of setter is the best? Ans. A setter is preferable, although in many localities one does not absolutely need a dog. The pointer makes the best watch dog by far. It is a matter of fancy about the setter. Just now the red Irish are most in favor.

JONES, Syracuse, N. Y.—Can you give a recipe that will prevent the blistering and burning by the sun of the face, neck and hands, when one not accustomed to water occasionally goes out for a day's fishing? Ans. The only preventive we can suggest is the havelock worn by soldiers in tropical climates. The best remedy for sun-burn is cold cream. Your hands may be partially protected by an old pair of fingerless kid gloves, but fishing, shooting and fighting are best done "with gloves off."

C. J. G., Lebanon Springs.—1. Will conical base metal shells do as good shooting with less powder than the common metal shells? 2. Will not the single barrel breech-loading shot-gun, manufactured by Hyde, Shattuck & Co., compare favorably with any gun made, considering price? 3. When a rifle "kicks" does it impair its shooting? 4. Are the rifles manufactured by Forehand & Wadsworth, of Worcester (Allen patent) reliable first class rifles? Ans. 1. There is a diversity of opinion regarding that question and we cannot decide it. 2. Yes. 3. No. 4 Yes.

TOXLEY, Berlin, Wis.—1. Is there any difference between bullheads and catfish? 2. Are there two species of catfish? Fishermen here on the Fox River claim that (notwithstanding arguments which, I think, I have seen in your paper) the bullhead will average about one pound each, while the catfish weigh from ten to thirty pounds. Please enlighten me. Ans. There are but two species of catfish (*Saluridæ*) in the West, the common mud-cat, a small, worthless fish, found in ponds, and the lake or channel cat, which is common in the waters of the upper Mississippi, grows to weigh even one hundred pounds. In the South and Southwest there are seven varieties of catfish. The mud-cat is often called a bullhead.

E. G. J., Danielsonville, Conn.—As I design to spend a few weeks in the White Mountain region during August, perhaps you will be kind enough to advise me, through your valuable paper, as to the fishing I will be likely to find in and about Lake Winnepissesogee, and the suitable flies for that locality? Can you recommend a concise pamphlet on fly fishing? Ans. 1. The lake trout of Lake Winnepissesogee do not take the fly. Brook trout can be caught in the vicinity. Better send your order to any tackle dealer in Boston or New York if you want an outfit of flies. 2. The best information on angling and fly-fishing in America will be found in Hallock's Sportsman's Gazetteer, for sale at this office and by all booksellers after the middle of July.

CONSTANT READER, Berlin, Wis.—Will salmon from California propagate in our small inland lakes in Wisconsin, and will they grow as large as they do on the coast of California and in the Columbia River? Several thousand Cal. salmon have been put in some of our small lakes in this vicinity and we are anxious. Ans. Experiments with the California salmon have been very satisfactory so far, and we are encouraged to look for success in Wisconsin. They will not probably grow as large as in their native waters.

T. H. S., Charlestown, Mass.—What make, bore, length and weight of gun for real work; also charge of powder and shot for the same, should you recommend for general use for partridge, beach birds and the like? Can you inform me of places on the coast of Maine where there is good fishing and shore birds are plenty? Where can I procure a map of this region? For the same amount of money how do the Fox and Remington compare with English and French makers? Ans. We prefer a 12-bore of any reputable maker, charged with 1¾ oz. of shot and 3 drs. of powder. To your 2d query: Procure Farrar's Guide Book, Lee & Shepard, Boston. Third query we decline to answer, because we cannot discriminate between our advertisers.

J. B. Babylon.—A disease of a peculiar and fatal character is prevailing in this village. The principal symptoms are as follows: A hacking cough, stoppage of the nostrils which compels the animal to breath through the mouth. Running at the eyes and a fierce glare of the eye. Feverish condition of the system and a rapid shrinkage of flesh. A valuable setter belonging to D. J. Runyon, Esq., is dying to-night. I have two valuable setters and fear they may become victims. Ans. The symptoms are such as ordinarily indicate the presence of worms. Castor oil will dislodge the worms and so will areca nut, but the latter acts by inflaming the bowels. It is not remarkable that the disease should be prevalent. Where the method of transmission is known we might explain why it is not.

F. A. T., Cincinnati, Ohio.—1. Which is the better material for a fine breech-loader (shot-gun), laminated or Damascus steel? 2. Is it true that a 10 bore will shoot stronger and closer than a 12 bore gun? 3. Is 8½ lbs. too heavy for a 12 gauge breech-loader for general use—to shoot every kind of game you come to—at all seasons? 4. Is it any sign of canker in the ear that my pointer has a great deal of wax or secretion in his ears? I wash them out and apply sulphate of copper in solution, but the secretion quickly accumulates again. The dog has no other signs of canker. He shakes his head when the solution is put in. 5. Does feeding meat this season of the year promote canker in the ear? Ans. 1. Damascus steel. 2. No; either can be bored to shoot close. 3. No. 4. No. 5. No.

C. C. C.—Will you please let me know what bait is best for sea bass? Is July 4 a good time for them? Can you tell me how to get to Oyster Bay and the Cinders? In what depth of water do weakfish run in this season of the year? Should they be fished for with a float? What size hook should be used for sea bass? Ans. Oyster Bay is reached by the South Side Railroad from Hunters Point. Sea bass are in season now and will be all summer. The Cinder bed is about two miles east of Fire Island Light in the great South Bay. Weak fish in the above bay are found in the channels; generally there is so much current running that a float cannot be used. Your fishing tackle dealer will post you on hooks.

C. M., Niagara Falls.—We have a very valuable mocking bird which has diseased feet, caused probably by the perches and bottom of cage not being kept clean from the droppings. Would you please say what to do for him? Ans. We have seen a similar case cured by putting a fresh sod in the bottom of the cage every morning for two weeks. Scurf can be removed from the legs of fowls by soaking the legs in warm water and then applying sulphur ointment, or the ointment of green iodide of mercury. This scurf has been examined microscopically with great care by Dr. Moxen and Mr. Tegetmeir, who have ascertained that it depends on the presence of a minute acarus allied to the itch insect in the human subject. Another recipe is: sulphur, 2 ozs.; charcoal, pulverized, ½ oz.; train oil, enough to paste; apply with the hand, rubbing well in. Allow it to remain three days, then wash off with good soap suds, repeating the dressing as often as is necessary

G. A., New York.—Will you please tell me whether you consider 26 or 28-inch barrels, 12 bore, capable of giving satisfaction as a general gun, such as one would get a Baker 4-barreled gun for? If 28-inch barrels would give good results, whole gun would only weigh about 8 pounds, and I would not want it heavier, unless necessary to get good shooting. As applied to trout flies, what color do you mean when you speak of hyaline? Also to what part do you apply the term setae? Also what part do you call the feet? I always supposed the feet was the bristling part, and, as I understand it, setae means bristly. Is Hallock's "Gazetteer" ready yet? Ans. 1. An excellent gun for general use would be 12 gauge, 8 pounds and 30-inch barrel. The Baker gun would be preferable if you had much use for the rifle, as in the Rocky Mountains, or in Florida. 2. Hyaline and sub-hyaline are shades of that indefinite color seen in the wings of the ordinary housefly. The definition for hyaline is "glassy," "crystalline." 3. Setae are the bristly hairs on he body, and you can include the feet among them, if you please. The fish will hardly notice the technical difference. 4. Hallock's "Gazetteer" will probably be ready in three weeks. It is a work of much magnitude, and will repay the disappointment caused by a month's delay in its promised time of publication.

W. H. MILLER, Sterling Run.—I have a setter that has been out of condition for a year or more. Appetite poor, coat rough, dog poor in flesh; often howls, making a very dismal noise while apparently fast asleep. Eyes discharge a dark, thick matter. What do you think would be good for him? I would like some instructions from you or some of the numerous readers of FOREST AND STREAM in regard to the art of shooting on the wing, as I have read several books on the subject, and each one has a different theory? Some say shoot with both eyes open, and others one eye shut. Some say throw the gun to shoulder just ahead of the bird, and fire just as soon as the breech of the gun touches the shoulder; others say throw gun to shoulder and follow the bird up until overtaken. As I am just learning to shoot on the wing I would like to shoot right. Will you please answer plainly so I cannot be mistaken. Ans. Give your dog areca nut, or otherwise treat him for worms, then tonics, such as quinine and iron; any doctor in your vicinity can tell you the quantity to be given. It is next to impossible to instruct any one how to shoot flying. Mr. Dalzell Dugall, the great gunmaker, and a philosophical writer on field sports, insists that one should shoot with both eyes open, and we think makes his assertion good. When you drive a nail with a hammer you take aim at the nail; try it with one eye shut and you will find that you will frequently miss it. Dougall contends it is the same in shooting birds, and we agree with him. The best shot we ever saw shot from the hip without shutting one eye. In shooting flying the best thing is deliberation, and to attain this go out with an unloaded gun and snap caps at the birds until you conquer the flurry so natural to tyros in shooting.

—Undoubtedly one of the best and cheapest stocks of Carpetings, Oilcloths, Mattings, etc., to be found in the United States is that of Messrs. JOHN H. PRAY, SONS & CO., Washington street, Boston. 1. W. Adams is the sportsman of the firm, and will take special pains to please any of our friends calling upon him, or with any orders sent him. It is a good, reliable house.—[*Adv.*

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JUNE 21, 1877.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

☞ Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

T. C. BANKS, Business Manager. S. H. TURRILL, Western Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Thursday, June 21.—Trotting: Madison, Ind.; Elmira, N. Y.; Albany, N. Y.; Parker City, Pa.; Akron, O.; Grand Rapids; Dover, N. H. Running Meeting at Cleveland. Base Ball: Chicago vs. Hartford, at Brooklyn; St Louis vs. Boston, at Boston; Athletic vs. Philadelphia, at Philadelphia; Cincinnati vs. Cricket, at Binghamton; Mutual vs. Red Caps, at Janesville; Buckeye vs. Manchester, at Manchester; Hoboken vs. Enterprise, at Centennial Ground; Quickstep vs. Jasper, at Manhattan; Keystone vs. Witoka, at Capitoline Ground. State Sportsmen's Convention, Bench Show of Dogs, Pigeon Shoot and Rifle Match, at Syracuse; Bench Show of Dogs at Cincinnati; Eighth Annual Meeting of the Richmond Rifle Association, at Danville, Canada.

Friday, June 22.—Trotting: Grand Rapids; Dover, N. H. Base Ball: Harvard vs. Yale, at Cambridge; Osceola vs. Mohawk, at Stapleton Flats, S. I.; Howard vs. Brockton, at New Bedford; Pittsfield vs. Buckeye, at Pittsfield; Enterprise vs. Fly Away, at Centennial Ground; Star vs. St. Louis, at Syracuse. State Sportsmen's Convention, as above, at Syracuse; Bench Show of Dogs at Cincinnati.

Saturday, June 23.—Base Ball: Star vs. St. Louis, at Syracuse; Witoka vs. Osceola, at Capitoline Ground; Metacomet vs. Brockton, at New Bedford; Quickstep vs. Harlem, at Melrose; Germantown vs. Rivington, at Rivington, N. J. Regatta of the Seawanhaka Yacht Club; State Sportsmen's Convention, as above, at Syracuse; Bench Show of Dogs at Cincinnati.

Monday, June 25.—Base Ball: Tecumseh vs. St. Louis, at London, Can.; Buckeye vs. Auburn, at Auburn; Enterprise vs. Delaware, at Port Jervis.

Tuesday, June 26.—Trotting: Catskill, N. Y.; Ithaca, N. Y.; Marshalltown, Ia.; Jackson, Mich.; St. Petersburg, Pa.; Fleetwood Park, N. Y.; Running Meeting at Rochester. Regatta of the Hudson Yacht Club; Regatta of Harvard and Columbia at Springfield. Annual Meeting of the Frontier Rifle Association at Durham, Canada. Base Ball: St. Louis vs. Chicago, at Chicago; Cincinnati vs. Boston, at Boston; Louisville vs. Hartford, at Brooklyn.

Wednesday, June 27.—Trotting as above; Running Meeting at Rochester.

—Col. F. G. S., formerly Field Editor of the *Turf, Field and Farm*, and now on the staff of the consolidated FOREST AND STREAM AND ROD AND GUN, has gone to Cincinnati as their special agent and correspondent. Col. S. proposes to visit the springs of the two Virginias, where no doubt his many friends will give him a warm welcome. The season over, he will extend his travels into Kentucky, Tennessee, Mississippi, Alabama, and possibly Louisiana.

—Among other valuable features of Hallock's forthcoming Sportsman's Gazetteer, it contains over 5,000 specified localities in North America where sportsmen can go and fish, with directions how to get there.

LADIES OUT-DOOR COSTUMES.

IT may safely be assumed that even in this age, which many people are fond of calling mercenary and prosaic, there are men, generally young in years, to whom women appear as they did to the young forlorn Teufelsdrockh. Of him it is recorded that "As yet he but saw them flitting past, in their many-colored angel-plumage; or hovering unto and inaccessible on the outskirts of Æsthetic Tea; all of air they were, all soul and form; so lovely, like mysterious priestesses, in whose hand was the invisible Jacob's ladder, whereby man might mount into very heaven." It is this "many colored angel plumage" which we intend here to examine, and in regard to the arrangement and disposal of which we have a few suggestions to offer. It is not, however, to it as it appears "on the outskirts of Æsthetic Tea" that attention is to be directed.

There are indoor and outdoor costumes, and it is the plumage seen on the race-course, on the yacht, on the mountain side and at the butts which will mainly engage us. There are fashions for these different places as well as for the ball-room or city promenade, and their chief distinctive feature is that their designs are less restrained by specific and stringent canons. Common sense and convenience are allowed some weight in their selection, and the *modiste* who adopts these as her guides, who constitutes them a court of appeal in all cases of doubt, and keeps her eye upon "the eternal fitness of things," will achieve the greatest triumphs. In point of attire no greater compliment could be paid to a woman than that addressed by an anonymous poet to his mistress:

"My Love in her attire doth show her wit,
It doth so well become her;
For every season she hath dressings fit,
For Winter, Spring and Summer."

All that is required to make the stanza suit our present purpose exactly, is the substitution for the seasons in the last line, of the names of the outdoor amusements in which ladies indulge. The poet's discriminating praise, it will be observed, is based upon the fact of the adored one's dresses not only becoming her, but being fit or suitable for the season. The first aim, therefore, in choosing an outdoor costume is fitness. A demi-train is manifestly out of place on the croquet ground, or the river bank. We have now reached the season when these things imperatively demand consideration, and should we be found to lack the other qualities necessary for the proper fulfilment of the duty we have taken upon ourselves, we have at least that form of experience which consists of ample opportunities for observation and comparison. As a last preliminary, we would point out to our fair readers that while we do not like seeing them reduced to helplessness when out of doors by reason of absurd costumery, still we have no wish to see them hideous—if such be possible. The styles we uphold are those in which the graceful is combined with the useful. We do not remember a season when, taking them all in all, the styles for ladies' costumes were prettier than they are for the present summer. We congratulate them upon the fact, and we also congratulate ourselves since our task is thereby made so much the more pleasant.

THE RACE-COURSE AND POLO GROUND.

We give these the preference, because the styles suitable for either place are but a slight remove from those worn at home. It is probable that in no previous season were such costumes displayed. On the race-course ladies are conscious that they are seen at their best when from their carriage seats, and under the excitement of the occasion, they look across the "turf." The movement seems now to have culminated, which induces them to appear to the best advantage, and to study their dress as critically and carefully as though an evening reception or the opera were their destination. On Saturday last the display of beauty and finery at Jerome Park was simply gorgeous. The Club-house bluff resembled a parterre of flowers, from which we cull one or two specimens. One lady's dress was of dark blue silk, with upper skirt of white blue satin and trimmings to match. From the neck down the back to the bottom of the outskirt was a row of white plaitings, which gave the costume an almost startling effect. The bonnet was of white straw, with a white feather and scarlet rose. Another costume almost equally striking consisted of a white and pearl gray striped silk, trimmed with white lace headed with scarlet ribbon, and having scarlet cord laid along the seams. Scarlet and yellow roses and autumn leaves decorated a neat hat of brown straw, and the parasol was black, lined and edged with scarlet. In a third the skirt was a plaited tulle, and the overskirt and basque of white open embroidery; the white straw hat was gracefully turned up in front where it was lined with black velvet and mixed leaves and flowers of green and white, and further ornamented on the top with white silk and a fawn colored feather; the parasol matched the feather and was covered with white raised work. These three will answer our purpose in giving an idea of the extent to which gayety of costume may permissibly be carried on such occasions. The rule if rule there were, appeared to be to employ the colors best suited to the wearer's style and complexion in producing the most effective contrasts. The favorite hat was a graceful and jaunty white straw, decorated with a white feather. There were, however, several of unquestionable beauty and taste in straws of various colors.

THE MOUNTAINS AND WOODS.

The present is the time for mountaineering and exploring the recesses of the woods, before the grass has been scorched by the sun of summer, or the leaves take on the hues of autumn. As we turn to these forms of exercise, suggestive as they are of health, strength and beauty, fashion almost sinks out of sight, or appears in a new form. Styles perforce adapt themselves to circumstances, and the general sentiment is that "Handsome is that handsome does." What are wanted are lightness and freedom. There are many ladies, we might almost say the majority, who prefer the ordinary short walking costume to any of the more daring innovations which have appeared to obviate the necessity of skirts. The extra fatigue thereby entailed is very considerable, and there are at least two styles worthy of the consideration of those who intend to seek the hills and forest. The first of these is the knickerbocker, which may be modified into the zouave. In either case the weight of the skirt is entirely done away with, and the wearer enjoys the most perfect liberty of action. The blouse and pants have been adopted by some, but in point of appearance such a costume is far inferior to the others. In any case a round hat, or a Derby simply trimmed will be both comfortable and appropriate. The material for a dress may be either plaid or plain. The most artistic is that which best becomes the wearer and harmonizes best with the place where it is to be worn. Possibly the most important item of all is the boot. Those with cork soles and low heels will be found the lightest and coolest, and it is fortunate that those long in the foot are most fashionable. This change has, in all likelihood, arisen from the increase among ladies of a propensity for out-door exercise which demands a shoe, roomy, but not too large. The latter fault is to be carefully avoided, as a boot which moves on the foot inevitably produces blisters and soreness. It is comforting, however, to find that the old mistake of deeming a small foot necessarily a pretty one, is disappearing, and that some regard is being paid to shape, in which alone beauty consists.

TRAVELING.

A gentleman, well known among fishermen, lately described a trip in which he and several others were accompanied by a number of ladies. The excursion extended over three weeks, and yet not a single lady had more baggage than she could carry in a shawl strap. The trip was most enjoyable to all concerned, and one part of the moral may be said to be, never leave home without a shawl strap! According to the old idea a mountain of Saratoga was essential to a lady-traveler's dignity and happiness. This may be, but it was none the less a bugbear to have gentlemen companions, be they brothers or friends. The result was that it was impossible for ladies fully to accompany gentlemen; that is to say, to go wherever they went and with the same facility, and the more sensible soon rebelled and began to regret that they too could not step into a barber shop and emerge renovated. The general rule now is, the less baggage the better; a black silk will always remain a standing favorite among lady travelers. This season there is a novelty. Some man of genius invented "bunting," an all-wool fabric good either for the road or the seaside, for wet weather or dusty weather, and possessing every essential property of summer suiting. It comes in dark blue, brown, green and other shades both light and dark. The costume may consist either of polonaise and skirt, or of two skirts, jacket and simulated vest in the *Breton* style. The round hats of various styles are the most popular, and are certainly the best. Cotton and lisle thread gloves are very much worn. The latter, with three or four buttons, are as expensive as kid, but are more comfortable and useful for summer wear. Besides bunting there are several other very useful materials. Few things surpass all-wool serge, or rep and camel's hair cloth of light quality is a constant favorite. The primary qualification is that the material will shed dust. Although the costumes for other purposes may be gay in color, it is advisable in selecting a traveling dress to choose something dark and quiet in tone, lightened, if thought desirable, by trimmings of brighter tints. Dresses are worn high in the neck, and collars and cuffs are linen, the former close and high. Dusters are of linen, cut either in the Princess shape, or to resemble the Ulster, long and belted at the waist. The main object to be kept in view is that the suit shall be such that the lady can as nearly as possible dispense with baggage.

RIDING.

As a consequence of the increasing attention paid by ladies within the past few years to riding, a closer attention has also been paid to equestrian costumes. A handsome lady seated on horseback is in one of the most fascinating positions she can assume. Riding is, moreover, recognized as one of the most healthy and exhilarating of all recreations. Next to being able to ride well we place the art of dressing well, for a simple reason, viz., that the amusement is one of the few which gives as much pleasure to the observer as to the fair equestrian herself. All the grace possessed by a lady is inevitably brought out in the dress and movement demanded by riding. In regard to costume, the question has reference rather to what is most elegant than to what is most fashionable. Taste has been remarkably conservative upon the point. A high standard was set up a very long time ago, and though it may be modified it has never been surpassed in any change of the essentials of the habit. Alterations to suit personal requirements are quite permissible, but they have only been slight. The flowing skirt is made narrow, gored and not over long, so that the devices formerly resorted to for keeping it down are no longer required. Dark green cloth, or velvet or black velvet are used. The basque requires careful fitting and should be high at the throat, tight in the sleeves and with long flaps behind like those of a coat, decorated with buttons variously arranged. Another style of basque is open in front and is worn with a linen chemisette. It arose probably from the prevailing fashion of low cut dresses. The high silk hat and sash is always in fash-

ion, although some prefer the smaller and neater jockey hat. Others wear the Gainsborough, than which there is no more graceful finish to a riding costume, although its open face makes it objectionable against the wind or on a gallop. The gloves are long and strong. For the throat a black lace tie is very becoming, and is, in fact, admirable with almost any costume. The boots are high and buttoned, and pantaloons are used, which come down to the top of the boot. The zouave style would make a pretty alternative. An improvement in the method of carrying the dress has been effected by the introduction of rings and a cord, by means of which it can be pulled up to any height and held before mounting and after dismounting. Gold and silver plated buttons, or other kinds in contrast with the material, embellish the costume. The hair should be arranged in the most simple fashion and with an eye to the avoidance of any unseemly accident. Jewelry is, as a rule, to be avoided, although solitaires in the ears produce a fine effect with a dark costume. Chatelaine chains are useful on a long ride for attaching a cup or other necessary article, and can be dropped with the attachment into a large pocket made on the off side of the skirt.

YACHTING.

It has been said that "Woman brings luck to the fisherman and victory to the yachtsman," and certainly the passenger list is incomplete without a liberal sprinkling of

"Fair ladies, fairer than the spray
The prow is dashing wide."

Should the above saying not always be true, woman can at least best soothe the unlucky fisherman who has waited in vain for a bite, and lighten the disappointment of defeat in the race. The sport is more important now than it was some years ago, and is noble enough to deserve a special dress. So many ladies' names are bestowed upon yachts, that courtesy alone would require them occasionally to grace the deck. A very beautiful yachting costume was completed last week by one of the New York *modistes*. The material was navy blue bunting, made in the Breton style with jacket, vest and two skirts. The vest was ecru bunting, and the same shade was used for a broad sailor collar. The trimmings were of the body material in both colors, and a profusion of pearl buttons finished the ornamentation. The skirt was short and narrow, and had two rows of knife plaitings in blue edged with ecru. The upper skirt had a like plaiting but narrower and similarly edged. The hat was round and trimmed with both shades of the dress fabric. Such a costume is simple, useful, very picturesque and exceedingly appropriate for yatching. We give this particular description merely as an illustration, and because no rule can be laid down. A very wide scope is allowed in choosing the style most appropriate and most becoming to the wearer.

BATHING.

Ever since Aphrodite rose from the foam woman has been more or less intimately associated with the sea. When, according to Holmes, the gods sold out their frippery to the Wandering Jew, Venus came last.

"Poor Venus! what had she to sell?
For all she looked so fresh and jaunty,
Her wardrobe, as I blush to tell,
Already seemed but quite too scanty."

Possibly the Queen appeared in bathing costume, in which event had the poet vouchsafed a description, he might have supplied the ladies of to-day with a warning if not with an example. The bathing dress which shall combine freedom with propriety has yet to be invented; many devices have been tried. At some places abroad the dress consists simply of a long coarse blue flannel gown and oilskin cap. This is altogether inadequate to the occasion, although it may answer its purpose when ladies are bathing in still water. Another dress consists of a blouse belted at the waist, with pantaloons reaching to the ankles, and banded at the bottom. A third style was brought in more recently, and consists of a tight fitting woolen suit; it was not generally adopted. The object of all is to impede action as little as possible, to make swimming feasible, and yet to satisfy the punctilious. A combination of the two last styles presents itself as the best solution of the difficulty, *i. e.*, to have the upper garment as loose as is consistent with perfect freedom, and to have the limbs encased in coverings tight enough to permit of their unrestrained use.

SHOOTING AND FISHING.

From *Aphrodite* we turn to *Diana Victrix*. Linen of any shade is probably the best general material for the above purposes, or at least when Diana is inclined to whip the stream. In cool weather dark camel's hair is the first to be recommended. Linen has the advantage of always being amenable to the cleansing processes of the laundry. Gloves are desirable to keep the hands from being tanned, and a broad brimmed hat will be required to keep off the sun. We may here safely leave ladies to be guided by their own judgment. For shooting, the mountaineering suit will be suitable, although it is capable of being improved by the substitution of a short jacket, and leggings or high boots for knickerbockers. The urgency for any novelties for this purpose is not very pressing.

ARCHERY.

"Who can deny that bows and arrows are among the prettiest weapons in the world for feminine forms to play with? They prompt attitudes full of grace and power, where that fine concentration of energy seen in all marksmanship is freed from associations of bloodshed." Such are the opinions of George Eliot. We are far removed from the olden times of bow-and-arrow warfare. Although at Chevy-Chase

"Our English archers bent their bows,
Their hearts were good and true;
At the first flight of arrows sent,
Full fourscore Scots they slew,"

Even such a moderate feat could hardly be accomplished in our time without annihilation; George Eliot is strictly right in regard to the attitudes of grace and power. She dresses Gwendolen at the butts very tastefully in a dress of white cashmere with a border of pale green, a thin line of gold round her neck, a hat with a pale green feather and an undescribed jacket. Presuming that there are a few ladies who love archery for its own sake, the object in dressing ought to be to leave the arms free, and to have no superfluous or flying finery. Any summer material may be used, but, with the great novelist, we would give the preference to white.

White as the gleam of a receding sail,
White as a cloud that floats and flits in air,
White as the whitest lily on a stream.

With such a dress might be worn a colored sash and the other accessories of a strictly simple costume. In choosing a material it is well to keep graceful draping in view.

STATE SPORTSMEN'S CONVENTION AT SYRACUSE.

The nineteenth annual convention of the New York State Association for the Protection of Fish and Game, convened at Sumner Corps Hall, on Monday evening, 120 delegates being present. The President, Mr. Greene Smith, called the meeting to order and delivered an address that was heartily endorsed by the meeting. He recommended that a law be passed prohibiting the shooting of ruffed grouse, snipe or duck before September 1; wild pigeons should be protected by law until August. He stated that there was more fish in the waters of the State to-day than there has been for the past twenty years, owing to the exertions of the New York State Association and Mr. Seth Green. He urged that sportsmen should secure the passage of a law making the open season for quail from November 1 to February 1, and recommended that persons cognizant of infringements of the game and fish laws who did not inform against offenders, be expelled from the local organizations. He said that game laws should not be made solely for the benefit of wealthy sportsmen, but for the purpose of increasing the amount of game and fish so that they may come within the reach of all. The bird or fish taken out of season is the very best witness against law breakers. We will print the address in full next week. Our crowded space will oblige us to defer it.

After the adoption of the Secretary and Treasurer's reports, four new clubs were admitted to membership, viz: The Long Island Shooting Club, of Brooklyn; the Amsterdam Sportsmen's Club, of Amsterdam; the Lewis County Sportsmen's Association, at Lowville, and Rome Spotsmen's Club, of Rome. It was then voted to hold the next convention at Buffalo, under the auspices of the Forester Club. The following officers were elected: Dr. R. V. Pierce, Buffalo, Pres't; John J. Flanagan, of Utica, and Hon. John Vanderburgh, of Clyde, Vice-Pres'ts; John B. Sage and John B. Green, of Buffalo, Secretaries, and S. M. Spencer, Treasurer.

A resolution, amending Section 5 of the Constitution was adopted.

The following clubs were represented:

Albion Rifle and Sportsmen's Club; Audubon Club, of Rochester; Audubon Club, of Buffalo; Central City Sportsmen's Association, Syracuse; Dean Richmond Club, Batavia; Danville Sportsmen's Club; Forester Club, Buffalo; Forester Club, of Penn Yann; Genesseo Sportsmen's Club, Irondiquot; Jefferson Sportsmen's Club, Watertown; Livingston Sportsmen's Association, Geneseo; Mohawk Game Club, West Troy; Monroe County Club, Rochester; Onondaga County Sportsmen's Club, Syracuse; Queen City Sportsmen's Club, Buffalo; Riverside Shooting Club, Buffalo; Phœnix Shooting Club, Seneca Falls; Rochester Sportsmen's Club; Skaneateles Shooting Club; Wayne County Sportsmen's Club, Clyde; Otsemingo Sportsmen's Club, Binghamton; Leather Stocking Club, Oswego; Madison County Sportsmen's Club; Ilion Sportsmen's Club; Jordan Sportsmen's Club; Adirondack Sportsmen's Club.

The arrangements for trap shooting, fly-casting, rifle and pistol shooting during the coming week are first-class in every respect, and the list of prizes offered are larger and more valuable than those offered at any previous meeting.

THE NEW GAME LAW OF NEW YORK.—At last Gov. Robinson has signed the new game law. Its chief amendments to the old law are as follows:—

Moose and wild deer can be chased and killed only during September, October and November, and their meat can be sold only in those months and in December. The killing of fawns in spotted coats at any time is forbidden. It is unlawful to pursue deer with dogs at any time, and any person is authorized to shoot a dog in pursuit of a deer. The killing of a deer in Suffolk county, Long Island, is forbidden entirely for five years.

The killing or selling of wild ducks, geese and brant is forbidden between May 1 and September 1, and at all times between sunset and daylight, or by the aid of artificial light.

The killing or selling of woodcock is forbidden between January 1 and August 1, except on Long Island, where the shooting may begin on July 3; of black and gray squirrels between February 1 and August 1, except in Franklin and St. Lawrence counties; of quail between January 1 and November 1; of rabbits between March 1 and November 1, the use of ferrets to catch rabbits being entirely prohibited, except that owners of nurseries may trap them at any time within their own territory.

The trapping, netting or snaring of partridges or quail is forbidden. Any person may sell or have in his possession a prairie chicken or quail between January 1 and March 1, and a partridge between January 1 and February 1 without incurring the penalty of the law, on proving that they were killed within the period provided by law, or outside of the State where the law did not prohibit such killing.

The catching of speckled trout, except in private waters, by any means but angling is forbidden, as well as the setting or drawing of any net in any stream or other water inhabited by black trout; and any person may destroy such a net if it is found. Speckled trout may be killed, sold and held in possession only between April 1 and September 1. No person is allowed to take any fish by means of a pound or trap in Great South Bay or Lake Erie. Offenders to be guilty of a misdemeanor and to be liable to a fine of $100 or thirty days' imprisonment.

The use of any machine or floating battery in shooting wild fowl in the waters of the State, or of any bough-house more than twenty rods from shore is forbidden; but nothing in this section applies to Long Island.

OUR WASHINGTON LETTER.

ZOOLOGY AND COMPARATIVE ANATOMY—LECTURES BY DR. ELLIOTT COUES.

[FROM OUR SPECIAL CORRESPONDENT]

WASHINGTON, D, C., June 1, 1877.

THE admirable course of lectures on zoology and comparative anatomy, now being delivered by Dr. Elliott Coues, professor of anatomy in the National Medical College of this District, have attracted much attention, and the learned Professor has been listened to with marked attention not only by the large class of students, but many prominent physicians and scientists. The thorough manner in which he has developed his subject shows deep research and study. He has been repeatedly complimented by gentlemen who have been honored for years in the scientific world and who recognize his standing as a scientist, as well as his ability as a naturalist, demonstrated by numerous works acknowledged as standard authority to-day. Dr. Coues was recently elected lecturer on anatomy in the National Medical College to fill the vacancy caused by the greatly lamented death of Dr. Wm. B. Drinkhard, and, as he is a valued contributor to FOREST AND STREAM I am sure the many readers of this journal will be interested in all that concerns his welfare. His lectures are of the same character as those of the late Prof. Wyman, of Cambridge, who is regarded as the pioneer teacher of comparative anatomy, and Prof. B. G. Wilder, of Cornell University, in his opening lecture, a few weeks ago, took a bold and enthusiastic position as to the study of his favorite specialty, anatomy, and deprecated the idea of anatomy being dry. He argued that there was no such thing in nature as dry bones, but that they must always be regarded as covered with complex tissues endowed with vital power. He spoke of the dissecting room as a means to the end—a place for study, not recreation—a place to be revered by idealizing the cold corpse and looking forward to the great end in view.

He argued that there is a science of anatomy as well as an art of anatomy, that the science of anatomy comprehends the idea of a comparison in structure between different animals and a study of the relationship of homologous forms as they are presented in animals that science cannot take in the idea of any one species without knowing the relation of that of other species. The art of anatomy is the intimate knowledge of anatomical structure which forms the basis of the science of anatomy. He graphically pictured the use of anatomical knowledge, and in urging the necessity of the study of comparative anatomy for a correct understanding of any one species showed that the study of one single species might lead to positively erroneous ideas as to the nature of particular points of structure, because no anatomical fact could be examined without finding it linked to other facts which proclaim great truths and principles of anatomy. In some cases human anatomy, considered alone, not only falls short of the whole truth, but may be positively misleading. It is only by pushing the researches into the domain of comparative anatomy that we gain confidence in the omnipresence of law, order and harmony in the development of organized structures, and are enabled to erect upon solid ground the whole edifice of biological science in which reason holds supreme court to try the vast problem of life. In short, he showed that human anatomy can never be understood without a knowledge of comparative anatomy. He then referred to the fact that there were persons always ready to repeat to us that stumbling block of ancients as well as moderns—that execrable conundrum—*Cui bono?* What is the use of all this study into details of the lower animals? They can never be made of practical service. As well might we retort, "What is the use of a baby?" The lecturer took the ground, without qualification, that the theory of evolution is true and that its application is universal; that is to say, it includes man, his physical origin being directly and exactly according to the relation of parent to offspring with ape-like forms of animal life. Truth is always worth knowing, and we are searchers after truth. He argued that according to anatomical and zoological facts man is a mammal of the same order as monkeys, from which he is a lineal offspring, and the researches of the anatomist prove it in the most convincing manner. The lecturer thought that if any exchange of amenities were required we should pay our compliments to our Simian ancestry and congratulate ourselves upon their success. The converse cannot be maintained. Why should we fear the induction? It cannot change us in any way. We are what we are, and cannot be reproached with ancestors over whom we could have had no influence. Rather be proud of our high position. He argued that this belief cannot clash with faith, for faith is above reason; when we begin to reason about faith it is no longer faith. "My soul's my own, and I will fight, if need be, for my faith in God."

He then discussed briefly the topic of Science *vs.* Religion, and argued that science had no business to teach matters of faith, which were entirely beyond its ken and scope. It is the part of honest science to recognize limitations of human reason, and faith is not a matter of reason. He then showed how science could be made not the antagonist, but the most efficient and noblest handmaiden of true religion, since it affords an unbroken series of analogies tending directly toward the proof of some of the grandest conceptions of religion. He argued that any faith which science could destroy was not worth having. Science is the strong ally of true religion, and its every method, every purpose, every plan can be made to subserve the highest and noblest aims to which a rational human being can aspire. Science does not degrade the body, but redeems it from the

senseless clay, and makes it part and proportion of a wondrous whole. He argued that anatomical science bore directly upon the theory of evolution, for the evolution of species is the development of their structure. "Evolution is true, and in preaching the doctrine of evolution, which I now give notice I shall do on all proper occasions, I shall tell you the truth, nothing but the truth, but not all the truth, for vast truths are yet to be learned. In these days of unprecedented activity certain great questions are agitated in which anatomists are largely concerned, and in the solution of these problems the anatomist's research is the fountain head of biological wisdom. When I say that evolution is true, I do not imply that the doctrine in its present shape is the whole truth, or is entirely free from error, but I do say that every item of exact information we have acquired respecting the origin of species tends to confirm the probability of the general proposition that the relation which species, as well as individuals, sustain to each other is simply the relation of parent to offspring, and direct experimental evidence of this has accumulated till it renders the assertion so highly probable that the negative of the proposition cannot be logically entertained. The contrary can be honestly maintained only in ignorance of the premises or by false reasoning that leads to irrational conclusion. Those who really seek for truth at any price have nothing to fear, for truth is never at variance with itself. Those who want only such truth as happens to suit them have everything to fear from the revelations of anatomical science. To desire any particular truths to the exclusion of any others is thoroughly unscientific and is a conviction of prejudice which is unworthy of recognition as a respectable enemy. In science a man has no business to have any wishes or wants respecting the upshot of any problem he may investigate, for the simple reason that his emotions do not effect the facts, while they do influence the judgment; nor has the desirability of any given theory anything to do with the facts. In the special case of the human species neither horn of the dilemma is preferable to the other, and if one of the horns is more agreeable than the other, that has nothing to do with the question which is the right and which is the wrong horn. What we are, we are, whether created by miracle or by law. It does not detract from our intellectual pre-eminence to know that we have no mental attributes, the possession of which in some degree can be denied to brutes; and if it did the fact would remain the same. Again, even if we make the nobility or ignobility of our conceptions respecting the origin of man the test of their truth, the biologist has still the best of the argument, for evolution, or the making of animals to make themselves, is a conception worthy of the highest possible ideas of creative intelligence, while the contrary implies constant tinkering. If we admit that a single species may develop from any other species, the whole case is virtually conceded, and this simple hypothesis is susceptible of as direct and complete experimental proof as any proposition can be outside of mathematics. Species are born to die as individvals are born to die, and the struggle for existence is continual: it is a question of the survival of the fittest running through the whole course of nature. As strongest nations overcome the weaker, as good governments are more stable than unwise ones, so even down to the lowest forms of creation, the best suited to their surroundings will survive. The rocks of ages bear the impress of this destructive evolution, the sands of time are strewn with the wrecks of created beings."

The lecturer proceeded to show that man has actually created different species, by submitting eggs of one and the same species to hatching under different artificial conditions of temperature, and instanced the case of the German naturalist who hatched two sets of butterflies from the same brood of eggs, by varying the conditions of heat and cold. He claimed that man might represent different species at different stages of the embryonic growth in the same individual. There are not wanting those who admit in a general way the truths of evolution for plants and brutes, but stick at man, making his origin miraculous, and himself a pivotal point, around which the universe revolves, chiefly for his accommodation; but embryology teaches us differently. In his mysterious journey in the womb, man begins as a minute mass of protoplasm without form or structure—a monad if you please—exactly like one of the protozoan animalcule. From the egg stage he takes some short quick steps in which he resembles the adult of various lower animals. With the first appearance of a primitive back bone, man somewhat resembles an ascidian. He next struggles into a fish-like creature, still falling short of a fish, having, like the amphioxus, a back bone, but no skull or brain. Gaining these, he passes through a fish stage, and with the development of the amnion and allantois becomes a reptile. Birds, in structure, are so much like reptiles, that, embryologically speaking, to be one is to be the other, and the next step makes a mammal, of man, as soon as that characteristic mammalian structure, the *placenta*, is developed. At this stage the future man is absolutely indistinguishable by any test from any other mammal, and it would be impossible to say whether the young creature was going to be a man, a dog or a rabbit. At nine months of age man casts aside the temporary organs, now first acquiring the ability to live separately from the parent stem, and at this stage his general configuration is indistinguishable from that of an ape; nor is it until about two years, during which time the hind limbs grow more rapidly than other parts of the body, that he arrives at the erect attitude, his chief characteristic as distinguished from the anthropoid apes. The entire withdrawal of the four limbs from the offices of mere locomotion and the perfection of the structure of the hand as distinguished from the foot makes the hand "it instrument of the soul" and signalizes the final triumph of nature in the development of organized beings. There is a profound significance in the steps by which the body is evolved from structureless protoplasm to be the medium of relation between the inner man and the outer world; and especially significant is the change at birth, when with the casting off of now useless organs that formerly bound him down, man enters upon his new individual existence assuming far wider and higher relations with the world around him. The lecturer earnestly begged those who might flout at science, or defy it, to ponder on the wonderful analogy between such physical birth and another alleged birth when all physical organs are dropped, and to consider whether every true revelation in science does not foreshadow and enforce some other truths that science, unaided, can never disclose.

The lecturer claimed that even in man, the highest created being, we found defective arrangements, as for instance the inguinal canal which has not being sufficiently remodelled to suit the altered requirements of the erect posture; consequently a large percentage of the human race suffer hernia.

In defining the term species, the lecturer said, it was formerly held that a species was a natural entity, and represented a distinct creation. The teaching of biological science and comparative anatomy had changed the old notion, that an assemblage of individuals, which bear to each other the relation of parent to offspring, and which reproduce each after their kind with little or no variation of zoological character, could be termed specific. While retaining the convenience of classification, we know that species are no more natural integers than genera or orders are, but depend with them upon relation of parent to offspring. Practically, for convenience in nomenclature, we retain the term species, but give it a new and natural instead of an arbitrary signification. A species is such an assemblage of individuals as agree or differ but slightly in their zoological character, but always with the clear understanding that such assemblage is derived from such other assemblages which did differ, and that such assemblage is, or may be, constantly varying, in other words splitting up into yet other species. When a set of individuals acquire any recognizable differences, we call it a variety. When the difference proceeds a little further, and the connecting links are lost or destroyed, we call the result a species. *Natura non facit saltus*—nature does not take leaps—her mutations are gradual, often imperceptible. If we look at the geological periods, Silurian, Devonian, Jurassic, etc., we might think from the classification and illustration in works on that science, that the different strata were the result of entirely distinct eras, whereas they glide imperceptibly into each other, the end of the one and beginning of the other being difficult to determine.

During the course Dr. Coues took up the various points of comparative anatomy, illustrating them in the light of such principles already advanced, adopting the synthetic mode of teaching, by progress from the simple to the complex, as being the rational method according to which nature herself had built up 250,000 species. One of his lectures was mostly upon the large number of definitions in which the anatomical ideas of morphology, homology and teleology and many others were elucidated. He proceeded to a sketch of the classification of the animal kingdom, selecting the species man to classify, showing to what genus, family, order, class, and sub-kingdom he belongs, defining all these groups and using them in illustration of the principles of classification equally applicable to all the rest of the quarter of a million species. In elaborating the characters of the great sub-kingdom vertebrata, he took occasion to fully describe and illustrate the morphological idea of a vertebrate, and continued with a rapid outline of the animal kingdom, beginning with the very lowest animals, Moners, Gregarians, Rhizopods and Sponges.

In one of his lectures, referring to the doctrine of Evolution, he said, "God speed the day when the glorious truths of evolution shall be preached from every pulpit in the land in place of illusory traditions that now dim the perceptions of the people—when such truths shall be preached as a means to the intellectual, moral and spiritual advancement of the human race, and when the religionist, the artist and the poet shall be made sharers in those triumphs which now cause the breast of the scientist to swell with conscious pride."

Letter from Dublin.

RIFLE MATTERS AND SPORTS IN GENERAL—MAJOR LEACH'S STRATEGIC VICTORY—IRISH VOLUNTEERS TO THE FRONT.

DUBLIN, May 12, 1877.

EDITOR FOREST AND STREAM:

As I promenaded Grafton street this afternoon, I had the pleasure of meeting, face to face, that most enthusiastic of riflemen, most happy of speech-makers, Major Leech. After the usual formalities of greeting, what could be more natural than to inquire of this irrepressible rifleman what he intended doing this year with his famous team, and who were to form it? The information given was such as might be expected—that the team would carry out its own programme in Ireland and England, but that its members were at present unknown. It was, of course, supposed that those who have made their names known throughout both continents would still keep their old places, but it was also inferred that others might loom up whose names as riflemen are not as yet enrolled on the scroll of fame. Strange hopes are entertained that the Elcho Shield will grace the Mansion House or Rotunda this year, and that the Irish will again prove their right to bear arms. This assertion about bearing arms reminds me that I have heard that Major Leech has won a splendid diplomatic contest, and has almost achieved what no Irishmen, not even the most gifted and influential, could achieve since 1782. This is no less, *de facto*, than the right to shoot for the Queen's prize. Now, as that prize can be shot for only by volunteers, it follows that if the Irish are permitted to compete for it they must organize volunteer corps. As this is a privilege heretofore denied them, it is certainly a great victory to obtain, especially from the most ante-Irish of governments—that of Earl Beaconsfield.

The mode in which Major Leech moved on the enemy showed that he is an able strategist, and belongs to the same school of military tacticians as General Grant, Hannibal, Wallenstein and others; for when he fails to accomplish his purpose by a direct assault he resorts to flanking. In this instance he went to Lord Belmore first, and got him to sign a resolution asking that the Irish be allowed to compete for the Queen's prize. That done, he received the signatures of the leading noblemen of Ireland, and closed the list of forty noble petitioners with the name of the Duke of Abercorn, the late lord lieutenant of Ireland, and the president of the Irish Rifle Association. Should their prayer be granted, volunteer clubs will be organized, and it will then be seen what the natives of the Emerald Isle can do with the "grooved tube," as they can then bring their best men forward. At present, rifle shooting is confined to a very few men; not enough to represent Ireland except in the most remote manner, and they of course must feel that they cannot compete with all England and Scotland, where men are not only allowed to bear arms but taught to use them. It would be just the same as if a dozen of them were to challenge the whole of the British kingdom. If the prayer of the petitioners is granted, this most unjust discrimination between the different sections of the empire will cease, and the Irish must then stand on their own merits as riflemen. The efforts of Major Leech in this matter should be seconded by all lovers of shooting in both countries, as it is by all just men; and for the sake of those men who have shown so much pluck and perseverance, let us hope that his struggle will be crowned with victory.

I am sure that no persons would be more pleased to hear that the Irish had obtained such privileges as would enable them to compete on more equal terms than their late and most admired foes, the riflemen of America. During my rambling around town I met Mr. Edmund Johnston and Mr. Wm. Rigby in their places of business. The latter keeps a shooting gallery in his establishment, but, in comparison with a similar institution in the United States, you might say that it was scarcely visited, owing to the paucity of the number of persons who have the time, money and inclination to indulge in such pastime. During my sojourn here I heard no intimation of the international contest between an all-British and an American team, so if such a movement is on the carpet it must, it seems to me, have originated in England. There certainly was an impression, prevalent in one quarter, that if such a team was organized it might be able to win the laurels now worn in New York, but the idea did not seem to have assumed definite shape. I, for one, hope such a contest will take place, as it will prove, in quite a satisfactory manner, the superiority of the different rifles, the various systems of loading, and the best positions for shooting accurately. That the result would be in favor of America is, I apprehend, the opinion of those who have paid close attention to the matches that have been held thus far.

As I am writing from this "dear, dirty Dublin," which Lady Morgan loved so well, I may as well attempt to give some idea of the outdoor amusements to be seen here almost daily.

At the head of the list may be mentioned horse-racing. Enter Phœnix Park at any hour in the afternoon and you will be sure to see groups of ladies and gentlemen galloping wildly over the green and elastic turf, or engaged in friendly races with rivals of other groups. The number to be seen at one time will not of course compare with that of Rotten Row during the season; but one thing may be said in favor of the Dublinites, and that is, that all are good riders, whereas the grooms claim that honor in Hyde Park. Did the Dublin gamins see a man ride badly they would chaff him most unmercifully, and suggest to him to get inside, straighten his back or reverse his position, so that playing the cavalier there becomes a matter of no small moment, unless one is actually a cavalier. Ladies are treated with more courtesy, but even they do not always escape rather severe, though good-humored, criticism. The race courses around Dublin are better attended during the season than those in any other portion of the world, in proportion to population; but Pat's greatest fun is the hurdle and steeple-chasing. When the coursers approach a six foot wall, and there is danger of the entire group of steeds and jockeys breaking their necks, then is the enthusiastic native in the region of bliss. As the flying horses skim over the seemingly impossible leap, they receive a true Irish cheer, loud and long, while those that come to grief are regarded with a feeling of pity not unmixed with contempt. As the "toppers" bound from the obstacles, they are recognized immediately, and the involuntary comments of, "There goes a Galway man!" "That's a Galway mare!" or, "That's an old blazer!" are made aloud. None of the prurient curiosity which *Punch* attributes to the Irish gentlemen who go in search of the "staggerers" that they may be present when the horse and jockey become corpses can be seen, so that the clever skit was merely intended to show the tremendous efforts the Irish horses must make to clear the walls and dykes. Polo is also very popular in Dublin, and the military matches always draw audiences as socially mixed as those to be met in New York. The polo clubs are composed exclusively, I believe, of army officers, and as they have the Park to play in they do not demand admission fees of the auditors. Cricket is also very popular, and clubs, each surrounded by a heavy group, may be seen scattered about in every direction. Yachting is one of the very elegant pastimes of the Dublin people, and few sights are more interesting than to see their fleet put out from Kingston during a stiff breeze. The yachts, as a rule, are not so large as those belonging to the New York Club, but they seem more homelike when once you tread their decks. They seem to be made more for comfort than display, being solid, rather broad, and having a good hold of the water. They are by no means mere racing shells, with sky-scraping spars and canvas enough to run an old 74-gun frigate.

Boating is also a favorite amusement with the young men, though it does not seem to be as popular here as in England. One reason may be that the people do not support it so cordially as they do other amusements, and its lovers are, therefore, compelled to fall back on their own resources for its support. During my runs up and down the Liffey, from Carlisle Bridge to the North Wall, I did not see over two crews out at one time, and they, from their cut and style, were evidently University men. In mentioning this fact I am, of course, speaking from mere observation, as I made no effort to dive into statistics and get the numbers and membership of the clubs in existence.

Military reviews are another great attraction to the *flaneurs* of this city. The Irish seem very fond of martial pomp and parade, hence all musters and reviews are largely attended. These generally occur in Phœnix Park, so that this piece of rolling plain is the scene of more manly exercises than any other spot of equal area in the world. Here may be seen, at one time, cricket, polo, foot-racing, displays of equestrianism and mimic war, while the groups of enthusiastic lookers-on would prove most conclusively that the Irish are excelled by no people in their love of athletic sports and outdoor recreation.

MORTIMER KERBY.

STODDARD'S CARTRIDGE LOADING IMPLEMENT.—Now is the time to send for No. 10. The sooner you possess yourself of one, so soon will you appreciate what it is to have a convenient and handsome implement for preparing your shells. Don't think it expensive because it costs more than one of all the others, which it combines. It is one-seventh the size, and costs less than one-half. See advertisement in another column.

The Rifle.

POSITIONS.

A LITTLE over three years ago a general theory among riflemen was that only the large, broad-shouldered men could ever expect to amount to anything as long-range shots, for the reason that only the "strongly built" could endure the great strain which is brought to bear on the human system through the continued jar caused by the rifle's recoil during a day's shoot. This favorite belief seemed quite feasible and, to look at the physique of the members of the first American team, it can be seen that there was good foundation to cause such an opinion to be entertained by the riflemen.

But all this has been changed. At the present time "light weight" marksmen are found who are fully able to successfully compete with their stronger brother "knights of the trigger," and the above theory is one of the past.

A reduction of the recoil of the long-range rifles has not caused this revolution of things; they are still muleish and "kick" as badly as ever. It has been brought about by the improved manner of holding the rifles and nothing else; an explanation of this is not very difficult and can be done in a few words. Here is the secret. When the lying-down "head to the target" position was in general use, at each discharge of the piece the shooter's body would receive almost the entire force of the recoil, and a strong, solidly built marksman at the end of a day's shoot (say of forty-five shots) is liable to find himself in a "used up" condition, caused, mainly, through the continued jar which, all who have experienced it will agree, is very exhausting. But, now, the positions generally used by the long-range marksmen, especially by the Americans, are such that the shooter's body receives but little, if any, of this troublesome and demoralizing jar, most of it being caught by the hands and arms.

As instances of the success of the "light weights" as long-range marksmen C. E. Blydenburgh and H. S. Jewell are good examples. Both of these gentlemen are rather slightly built, but have made extraordinary scores.

Mr. Blydenburgh's good shooting is too well known among the lovers of the pastime for further repetition, which may not be the case, however, with the position which he uses. It has but few equals, and many who are "posted" think it is better than any of the others.

The position combines the good points of both Fulton's and Farwell's manner of holding the rifle, being similar to the former with the exception of the "left arm's hold," the head's place of rest and the use of the second finger for pulling the trigger.

ulton position, as it is called in this country, the legs rm (with the exception of the use of the second fing ng the trigger) are used. The left arm instead of going back of the head is brought forward and grasps the rifle's barrels *a la* Farwell, while the head is rested, with the use of a small pad, on the stock. By looking at the cut those who are not experienced with the use of the long-range rifle would think there was a danger of the rear sight "coming back," when the rifle recoils, and cutting the shooter. This is not the case, as through the inertia of the sight it falls against or toward the breech part of the rifle when the recoil takes place, thus making it almost impossible for such a thing to happen if the piece is held firmly at all. There is one trouble, however, which a careful man will not experience, and that is, if not "tending to his business" the shooter might get a "rap" under the ear, which is not very pleasant under any circumstances.

The recoil is caught by the hands and arms which are better able to stand it than any other part of the body, as the "jar" has little effect on them.

Major H. S. Jewell's position, judging from appearances, is not as good as a number of others in use, but, by his excellent scores, making 213 in a possible 225 in a match—without "coaching"—is sufficient proof that appearances are deceptive sometimes.

Here it will do no harm to offer on opinion that both of the above mentioned gentlemen will be on our next American team—*that is, if good shooting will put them there.* Time will tell.

There are times when the hunter finds it to his advantage to crawl up within range of his game and shoot while in a prone position, and on such occasions a knowledge of the various ways of shooting in lying-down positions would come in useful. The gentlemen who never can see any practical use in lying down to shoot may discover a little if they ever go deer-stalking.

OSIOKO.

CREEDMOOR, June 16.—Saturday last turned out rather a dull day at Creedmoor. The rai n and the extra attractions of yacht race and Jerome Park races kept many away, but those who did attend enjoyed a very good match and a finish as exciting in its way as any home stretch of a trotting track. The *Spirit of the Times* match was on at 300 yards with about 25 entries. There was good shooting all along the line, Sanford running up 40 in the possible 50, and flattering himself that the badge was once more to go into his possession, but Mr. R. H. Keene had a score of 36 and one shot to go; a bull's-eye would give him the match; anything less would throw him down among the general throng. It is nice work at best to hit an eight-inch bull's-eye at 300 yards, but to do it with a crowd of rivals at one side, shouting all sorts of suggestions simultaneously, and in general doing all it is possible to do to upset that shot, the task becomes greater still. "Take it easy," shouts one, while with same breath another warns him against delay. "Don't fire till you're sure you've got it," very wisely counsels a third. "Get the right target," and so on through the multitude of counselors. Once Mr. Keene lowers his rifle, not quite ready to touch off the trigger. Again he raises the piece, and, after a good aim, fires. Any number of keen eyes note the ping of the bullet upon the target, but await the uprising of the marking disk before venturing a guess. At last it comes, white as could well be, hiding the bull's-eye and Mr. Sanford's chances at the same time. A shout of approval from his fellow-riflemen, and Mr. Keene receives no end of compliments for his nerve in putting in that winning shot. The scores stood as follows:

R H Keene	3	5	5	2	4	3	4	5	4	5—41
R H Sanford	3	4	4	4	4	4	4	4	4	5—40
E Duffy	4	3	4	4	4	3	4	5	4	4—39
J L Price	5	4	2	3	5	3	5	4	4	4 39
E B Lewis	4	4	4	4	3	3	4	3	3	3—36
W H Murphy	4	3	4	3	3	3	5	4	4	3—36
Henry Fulton	4	4	2	4	4	4	4	3	4	—36
H A Gildersleeve	3	3	3	2	4	3	4	5	5	4—36

A Anderson	34	M M Maltby	28
F F Mallen	31	Lewis Cass	27
C W Minor	33	D C Putney	25
F A Dagro	3	L H Greve	6
E W Price	32	N D Ward	24
F H Holton	32	J E Irvin	21
George Waterman	29		

—The Irish-American club held their fourth regular contest for the Conlin medal, the trophy going again to Gen. Millen with a good score of 56 in the possible 70. He using a fine Creedmoor rifle, was required to shoot his second string at 600 yards; others with .50 cal. Remingtons at 500 yards. The scores stood:

	200 yds.	500 yds.	Total.
F F Millen	29	27	56
W H Murphy	27	27	54
Edward Duffy	28	34	62
N D Ward	20	17	37
P Farrelly	12	18	30

The Irish-American boys are anxions to meet a similar club from any other section of the country, and if there be any representatives of the old sod among the shooters of other ranges, if they will organize a team and send on a challenge the Creedmoor Irishmen will be happy to give them a knock down in a friendly way.

CONLIN'S SHOOTING GALLERY.—The weekly competitions for the amateur badges still attract considerable attention and strife among the frequenters of the gallery, and unusually fine scores are made. The last competition was the eighth of the series. The following are the names and scores of the first ten competitors, Mr. P. Fenning winning the first, and Mr. M. L. Riggs the second badge for the second time.

P Fenning	49	C B Webster	46
M L Riggs	47	M B Engel	44
L C Bruce	47	H P Carrington	43
Fred Alder	46	R W Day	42
C Von Gerichten	46	R B Milton	41

The ninth competition for the badges will take place on Thursday evening (to-night), June 24. Open to all comers.

RIFLE SHOOTING AT JONES' WOOD.—The third annual prize shooting of the Zettler Rifle Association took place June 14, at the above range. Several clubs were well represented, and some excellent shooting was done, as the scores will show. The Zettler Club appeared in their new uniform for the first time, which looks neat and comfortable upon the marksmen. This range being only 100 yards, the targets were reduced in proportion, and the centre ring (one inch in diameter) only counted 18 points, consequently only 54 rings possible, instead of 75, as at 200 yards.

Ring Target—1st prize, $25, R. Faber, 50; 2d, $20, W. Klein, 49; 3d, $15, N. Crusins, 49; 4th, $10, P. Fenning, 48; 5th, $10, Max Engel, 48; 6th, $10, T. Kleisrath, 48; 7th, $8, J. Dutil, 47 rings. Three last prizes, $8 each, were taken by C. G. Zettler, C. Judson and P. Klein, 46 rings each.

Target of Honor (open to the association only).—The prizes of various kinds were won as follows: 1, C. Zetzler, 48; 2, MAX ENGEL, 46; 3, Wm. Klein, 46; 4, Kleisrath, 46; Fenning, 45; G. Schurman, 44; B. Zettler, 42; D. L. Beckwith, 40; D. Miller, 39; Fabarius, 39; J. Grohman, 39; M. L. Riggs, 29; J. Brown, 36; D. Patterson, 32; Judson, 32 rings.

Most Bull's-eyes (or cartoons).—T. Kleisrath, gold medal and $20; second prize, P. Fenning, $17; third most, R. Faber, $16; first and last flag, J. Dutil, $2.

ZETTLER RIFLE CLUB held their final weekly shoot for the three gold medals which were to be awarded to the winners on June 12. The record showed that in 24 shootings, C. G. Zettler had made 1,105 points in a possible 1,200, and received the first badge, D. L. Beck winning the second badge, having won that badge most times, and John Reycls, third badge, similar conditions. The following is the score of the last shoot, June 12, possible 50 points:

P Fenning	48	L Bird	44
Max Engel	48	C G Zetzler	44
C Judson	48	Schurman	44
J Dutil	47	D L Beck	44
Fabarus	47	Ross	43
Kleisrath	45	Bowler	43
Zimmerman	47	D Miller	42
Riggs	43		

ZETTLER'S RIFLE GALLERY.—The Zettler Bros. have procured a fine gold medal, to be shot for every Friday evening until won on the following conditions: Open to all, entrance fee 50c., Creedmoor target reduced for gallery distance, ten shots per target, only one entry same week per man; best average of centres (40) to win, to be won three times by one person (not necessarily consecutively), when it will become his property. Any marksman making forty points without making a bull's-eye will be paid one-half of the entire entrance money received in that competition. First competition will take place Friday, June 22, inst., at 207 Bowery.

HELLWIG'S GALLERY.—On the evening of Saturday, June 16, the members of the N. Y. Centennial Rifle Club met at Hellwig's Gallery, Fortieth street and Sixth avenue, for the purpose of competing for a handsome prize. The fortunate winner was Mr. B. S. Brown, who succeeded in carrying off the trophy on a score of 43 points out of a possible 50, off-hand. At the termination of the match the members of the club adjourned to the club-room, which had been tastefully decorated with the flags of all nations, while the tables were laden with the luxuries of the season. The members of the club had provided this entertainment on the occasion of the departure of one of their members, Mr. E. Bryant, ex-Secretary, who intends to make the land of the orange and the alligator his future home. Full justice having been done to the viands, and the crackings of the rifle forgotten amid the poppings of corks, Mr. John Quincy Adams, the president of the club, in an eloquent and touching speech, proposed: "The health and prosperity of our departing friend and member," which was feelingly responded to by Mr. Bryant. Speeches were afterward delivered by Mr. B. S. Brown, Vice-President; Mr. John Murch, Secretary, and by Messrs. Maguire, Carsley and Reilly.

ROCHESTER, N. Y.—On June 13 a picked team from the Newark Rifle Club met a similar team from the Rochester Amateur Rifle Club, at the grounds of the latter club. Each man fired 15 shots, and the scores generally were very good. The result was a defeat for the visitors. Not a bad one, however; near enough to encourage them to try again. The full scores:

Rochester Team.		Newark Team.	
S A Servis	41	Nichols	40
C E Rider	42	Peake	39
H Brown	42	Elliott	37
R J Yates	41	Gatcomb	36
G T Stillson	40	Van Dusen	36
E S Combs	42	Wilcox	34
Total	331	Total	342

Capt. Van Dusen's miss, with which he is credited in the score, was owing to his shooting on the wrong target.

AUBURN, June 15.—The Forty-ninth Regiment association meeting here to-day brought out some excellent team-shooting, and the Forty-eighth and Forty-ninth men seem to have the patent of high-team scores entirely to themselves. The Twenty eighth Oswego boys had things pretty much their own way. In the short-range match, fought first, Geo. White, of Oswego, carried off first place with 30. In the team match the Auburns got only 227, while the Oswego representatives carried off head prize with the following scores:

	200 yds.	500 yds.	Total.
L L Barnes	19	21	40
Geo White	21	19	40
J D Hall	19	20	39
J S Barton	21	18	39
J L Wood	18	17	35
C A Barton	19	16	35
Total			228

RHODE ISLAND, Providence, June 15, 1877.—At the individual match for a silver cup that was won by the R. I. Amateur Rifle Club, at Rocky Point last September, as a team prize, the following scores were made, the highest aggregate to win at 200 yards and 500 yards:

200 yards off-hand.

F J Rabbeth, Martini rifle	41	J H Crowell, Maynard	40
G W Davison, Martini	42	E Thompson, Martini	41
Jno Howe, Stevens, 18 in. 32 cal.	41	E L Freeman, Remington	35

500 yards.

E L Freeman, Remington	42	G W Davison	42
E Thomp-on, Martini	48	John Howe, Sharps	40
F J Rabbeth, Martini	47	J H Crowell, Remington	50

Mr. Crowell won the prize with 90 out of a possible 100.

JOHN HOWE, Secretary.

CONNECTICUT STATE RIFLE ASSOCIATION.—The third semi-monthly contest for the Long-Range Champion Badge for 1877, took place at Willowbrook, on Saturday, June 9. There were some twenty competitors, and though the day was dark and showery, with changeable winds, very good scores were made. The following were the four highest scores, Mr. Judd (editor of the *American Agriculturist* of this city) winning the badge the second time:

	800 yds.	900 yds.	1,000 yds.	Total.
Orange Judd, Middletown	47	47	41	135
Geo W Yale, Hartford	45	37	48	130
Wallace Gunn, Bridgeport	43	44	40	127
O V Coffin, Middletown	44	44	33	121

The Mid-Range Champion Badge, 10 shots at 500 yards, was contested for by a considerable number, and was won this time by Mr. King. The following were some of the scores, Mr. Judd coming next to the head in this class:

H P King, New Britain	5	5	4	5	5	5	5	5	5	5—49
Orange Judd, Middletown	5	5	5	5	4	5	5	5	5	4—48
O V Coffin, Middletown	4	5	5	5	5	5	4	3	5	5—46
Geo W Yale, Hartford	5	5	5	4	3	5	5	4	4	4—45

THE MASSACHUSETTS RIFLE ASSOCIATION.—As we go to press the meeting of the Massachusetts Rifle is in successful progress. The number of entries was encouraging, and the scores were averaging well on the opening day. There were over 100 contestants, and a large crowd of spectators at the long-range match, with 7 shots at 800, 8 at 900, and 10 at 1,000 yards. The leading scores stood:

	800 yds.	900 yds.	1,000 yds.	Total.
John A Lowell	34	32	45	111
T H Gray	32	37	38	107
James Wemyss, Jr.	32	35	37	104
G W Davison, Providence	33	34	36	103
A H Hebbard	35	29	38	102
I J Crowell	27	28	44	99
H P Blake	32	28	37	97
I E Sheppard	32	34	30	96
W H Jackson	34	35	27	96
C C Hebbard	38	28	37	93

All save Davison are members of the Massachusetts Rifle Association. In our next issue a full report of the meeting will appear.

FROGMOOR, New Orleans.—There was a very large attendance on the grounds of the Crescent City Rifle on the 10th inst. to witness the second competition for places on the team. The day was not at all favorable, as there was a fish-tail norther blowing which required close watching and constant changing of wind-gauge. Mr. Dudley Selph having been presented with his old gun (with which he has done such fine shooting) by his company of Washington artillery, stepped to the front again, and I have no doubt that he will retain that position in future. The following are the scores:

	800 yds.	900 yds.	1,000 yds.	Total.
Dudley Selph	66	65	64	195
Wm Arms	70	68	53	189
John Glynn, Jr.	66	62	60	188
John K Renaud	68	56	56	180
R G Eyrich	62	57	55	174
J Buckley	51	58	54	163
L B Daponka	44	49	44	157
E T Manning	34	56	31	121

The *Turf, Field and Farm*, of June 1, in answering "Brooklynite," says: "Major Jewell has the best record as a marksman; next comes McVittie, then Mr. Selph; Gen. Dakin is fourth, etc." No doubt the *Turf* editor has not kept any record of our shooting, or he would have done justice to one of our best shots, Dr. Geo. Howe, who made the following score for Scooler Bull's-eye Trophy, Oct. 5, 1876; no coaching allowed:

800.5 5 5 5 5 5 4 4 5 5		
900.4 3 5 5 3 4 5 5 5 5 5 5 4 5 4		48
1,000.5 4 5 5 5 4 5 4 5 5 5 5 5 5 5 4 3 4 5—91		57
		196

The record should therefore stand as follows:

1. Major Jewell	213	5. Gen Dakin	208
2. Dr Geo Howe	209	6. Dudley Selph	208
3. McVittie	209	7. Col. Sanford	207
4. Dudley Selph	208	Grassie.	

—Under date of June 12, "Gussie," our New Orleans rifle correspondent, writes encouragingly of long-range prospects there and says:

I think that the prospects are very good for one of our members gaining a place on the international team of 1878. Considering that we have a very hard range to shoot over, we are very proud of the scores we have already made. Have you ever had a description of our range? It runs along the Bayou St John, over swampy ground. Our 800 and 900-yard firing points are in the swamp, and we are from mounds thrown up three or four feet high. Our greatest drawback is the mirage. When the sun shines hot down upon the water in the swamp, between us and the targets, the bull's-eye seems to *dance* be-

fore you. If you have ever noticed hot water on a stove, the vapor rising above the water, you have as good a description as I can give you. Our range is also very much exposed to strong winds. It is very seldom that we have such favorable days as I see reported at Creedmoor. We either have a fish-tail wind down the range or from the targets. Is there any probability of the directors of the N. R. A. changing the number of the teams of the inter-State match from four to six? We much prefer the latter number, and I think the probability of our taking part will depend a great deal on that. I think by making it six they will give others a chance, as the best shots of America are residents of New York, and, as New York has the making of the number and conditions, they should be more reasonable, and certainly should have the conditions acceptable to all. Of course, if we compete we will fight for first place, with a faint hope of coming in second. I have read Mr. Orange Judd's letters in your paper with much pleasure, and I hope to meet him next fall and will thank him in person.

The restriction to four members on the teams in the inter-State match was fixed by the N. R. A. directors, with special regard to outside clubs who might find it more convenient to send a smaller than a larger squad. Of course the amateur club who will represent the Creedmoor experts could as readily, if need be, put a team of fourteen as of four, but consideration for the visitors expected determined the limitation. It is very doubtful now if any change can be brought about.

—At the request of the donors of the Nevada Badge, the Commander-in-Chief of this State has modified the conditions upon which that trophy is to be contested, so as to allow any company of the National Guard of this State to compete for it with a minimum number of 35 officers and men, all the officers and men required for a minimum being obliged to compete.

California.—The Vallejo Rifles had their annual target practice on the 30th ult. The shooting was had at 150 yards, and resulted in a tie between Sergt. Powers and Privates W. Hall and P. Larkin, who made 20 points each out of a possible 25. Sergt. Powers won in shooting off the tie with a score of 19. Considering the fact that the guns were old muzzle-loading Springfield rifles, which have been in use for sixteen years, the shooting was good. The judges were: Chris. Blank, P. Durne, John Luccy and James McGinnis.

REMINGTON RIFLE BARRELS.

Ilion, June 4, 1877.

Editor Forest and Stream:

Your esteemed correspondent, Mr. Orange Judd, of Middletown, Conn., makes some very sensible remarks, published in a late issue of your paper, but in one item, at least, he is mistaken. The man who engineers the manufacture of the Remington Creedmoor rifle is a salaried one, employed expressly on sporting goods. No member of the firm, the secretary, or general superintendent, ever says "do this, or do that," so and so, to the Creedmoor rifle. Whether it was by chance or native tact I cannot say, but somehow they got the right men in the right place; placed the proper material, appliances, and men at his disposal, and then, very wisely, let him alone. A very wise man once said that one poor general is better than two good ones. Everybody has not yet found that out, or is it likely they ever will. It may be of interest to shooting men to know that no man, except this salaried one, has ever finished the inside of a Remington Creedmoor rifle barrel. A Workman,

Vanilla Chocolate.—The highest perfection is obtained in the goods made by Walter Baker & Co., who received the first award over all the world even at the Paris Exposition. Ask your grocer for *Baker's*, and you will get the very best Vanilla Chocolate in the market.—[*Adv.*

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME.

☞ Those gentlemen who have been in the habit of shooting woodcock on the 3d of July heretofore, will bear in mind that the new law has been signed by the Governor, whereby they cannot shoot until the 1st of August, except on Long Island.

Sportsmen's Tournament at St. Paul, Minn.—A grand shooting tournament is to be held under the auspices of the St. Paul Sportsmen's Club, at their club grounds on Lake Como, near St. Paul, the 26th, 27th and 28th of this month. The first two days are to be devoted to single birds, the last day to double rises. The prizes offered amount to over $325, and the shooting is open to all members of regularly organized clubs throughout the State.

State Sportsman's Association—*Sycamore*, June 12.—A practice shoot was held at the Driving Park in the afternoon; a business meeting held in the parlor of Winn's Hotel in the evening, J. L. Pratt, president, in the chair. The report of the treasurer was read, and on motion adopted. Arrangements were perfected for the club shoot, and the meeting adjourned. On Wednesday afternoon the club shoot commenced for the following prizes: 1. A double-barreled gun, valued at $150; 2. A pair of glass ball traps donated by Capt. Bogardus; 3. A 25-lb. keg of powder, donated by the American Powder Co. Teams: Audubon Club, Evanston, Chicago, Quincy, Sycamore. The rules were: 4 teams of 4 from each club, 15 balls each, 3 traps 10 yards apart, with the following result:

Chicago Club, 1st prize	43	Sycamore	31
Audubon, 2d prize	40	Evanston	25
Quincy, 3d prize	35		

At an adjourned meeting, W. B. Haworth in the chair, it was resolved that the next meeting be held at Quincy, Ill. The meeting then proceeded to the election of officers with the following result: W. B. Haworth, of Quincy, President; Charles Kern, Chicago, 1st Vice-President.

New York, *Oswego, June* 12.—Our club ("Leather-Stockings") take a little recreation with the glass balls occasionally, and with my Nichols & Lefever gun did the enclosed work in good style, which find in *Palladium* of June 8: "For the first prize, yesterday, Skinner, McManus, Poucher and Maltby tied on seven balls. Shooting off, Skinner, McManus and Poucher tied on four, and in shooting off this tie, Skinner broke four and won the $20 gold piece. Failing took the second prize on six. There being no third best score, the prize was not awarded." J. G. Skinner.

Long Island.—The members of the United Pigeon Club, of Brooklyn, L. I., mustered on Monday, June 11, at Lehman's Hotel, Canarsie, to test their skill at pigeons and glass balls. There were ten competitors. They shot at eight birds each. The other contest was at glass balls, and something new to the club. The conditions were: 8 birds each, 21 yards rise, 80 yards boundary, 1¼ ozs. shot, H and T trap, and under their own rule. Condition of glass balls: 8 balls each, 18 yards rise, 1¼ oz. shot, using Purdy's trap, and under Bogardus' rules. The following is a full score:

At Pigeons.		At Glass Balls.	
Knebel	0 1 1 1 1 1 1—7	Schroder	1 1 1 0 1 1 1—7
J Bohling	1 1 1 1 1 0 1—7	Knebel	1 0 1 1 1 1 1—7
Schroder	1 0 1 1 1 1 1—6	Helmstadt	0 1 1 0 1 0 1—5
Tomford	1 1 1 0 1 0 1—5	Tomford	4
Schlieman	1 0 1 1 1 0 1—6	Van Staden	4
Van Staden	1 1 1 0 1 1 0—6	Bohling	4
Helmstadt	0 1 1 0 1 0 1—5	Schlieman	2
Palmer	1 0 1 0 1 0 1—5	Lemken	2
Lemken	0 0 1 0 1 1 0—3	Palmer	2
Munsees	1 0 0 1 1 0 0—4	Munsees	1

After the match several sweeps were shot, both at single and double balls, the result being quite an improvement, and gave general satisfaction. Sportsman.

—Regular monthly match of the Fountain Gun Club, June 6, 1877; 7 birds, 21 yards rise, 80 yards boundary, F. S. C. rules.

Wingut	1 1 1 1 1 1—7	Miller	4
Slane	1 1 1 1 1 1—7	White	4
Eddy	1 1 1 1 1 0 1—6	Williams	3
Hunter	1 0 1 1 1 1 1—6	Race	3
Kearney	1 1 1 1 1 1 0—6	Andrews	3
Bennett	1 1 1 1 1 0 1—6	Walter	3
O'Connor	1 1 0 1 1 1 1—6	Byrne	3
Crook	1 1 1 1 1 0 0—5	Denham	1
Goodwin	1 1 0 1 0 1 1—5	Fish	1
Henderson	0 1 0 1 1 1 1—5	Hanley	1
Cleaver	4	Bogert	4

Ties on seven.

Wingut	1 1 1—3	Slane	1 1 1—3

Second tie.

Wingut	1 1 1—3	Slane	1 0 1—2

[Remark—Our correspondent does not give the place of the shoot.—Ed.]

New York, Buffalo, June 13, 1877.—A pigeon shoot took place between John Cook, Jr., of Denver, Col., and Geo. Meister, of Buffalo, for $50 a side, at 50 single birds each, from ground traps, 21 yards rise, 80 yards boundary. The result was as follows:

Cook—1 0 1 1 0 0 0 1 1 1 1 1 0 1 1 1 1 1 1 1 0 1 0 0 1 1—40.
Meister—0 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1—43.

W. T. R.

Clyde, N. Y., June 15.—The following match was shot here to-day; Bogardus' trap, smooth glass balls, 18 yards rise, 20 balls each, for $10:

L A Dayton	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1—19
H K Compson	1 1 1 1 1 1 1 0 1 1 1 1 1 0 1 1 1 1 1—17

C.

HUNTING COLDEN PLOVER.

Pomeroy, Iowa, June 9, 1877.

Editor Forest and Stream:

Plover of different kinds on their first arrival from the South afford very good sport. For about a week the golden plover will almost cover the flats and fresh burnt prairie, coming and going in immense flocks. They are hard to get a shot at on foot, but a person has no trouble in approaching within easy range by driving up with a team and shooting wagon, and large bags can be made by any one willing to take the trouble. Few people hunt them much, as they think them "small fry," but I consider them very fine as a game bird, it taking a good shot to bring them down when on the wing; besides, they form the nucleus of a very eatable pot-pie, which may well be termed the sportsman's standard dish.

The grouse season opens in August, when we can reasonably expect prime sport, as the country is full of old birds for a breeding stock. Any of my Eastern friends wishing a week or two of relaxation from care cannot fail to obtain enjoyable sport by coming out in August, on the line of the L. C. R. R., and stopping anywhere between Fort Dodge and Sioux City.

Since the flight birds left I have been doing some collecting in the way of eggs for specimens, and have had fine success, obtaining nearly all kinds of those nesting there, among which were over two hundred coot eggs, and others a lesser number. Abe Dacotah.

IOWA SHOOTING NOTES.

Knoxville, Marion County, May 21, 1877.

We are located in the third tier of counties from the southern boundary, and in the fifth tier of counties from the eastern boundary of the State. Our beautiful little city—Knoxville—is quite a flourishing business place. It enjoys the advantages of two first-class railroads. We have quite a number of sportsmen, some of these owning fine guns, and many owning fine dogs. The game of this part of Iowa, not long since, must have been very abundant, as there is a good share still existing. We still have two varieties of grouse, wild turkey, the gamey little Bob White, and in the wildest portions of the county are still to be found some wandering deer. These are local. Those of a migratory character are the swan, goose, brant and duck of all varieties common to this latitude, woodcock, snipe and plover, besides two varieties of squirrel, and rabbits by the million. We have two large rivers, the Skunk and Desmoines, traversing the county, besides many small streams. Along the valleys of these rivers and small streams are lakes innumerable, in which water-fowl may be taken from early spring till first of May. Snipe were here this spring by the thousand. We made some fine bags. We are pleased to note the fact by the columns of your worthy journal, that Mr. Jesse Sherwood, of the Edina Kennel—our friend—was with you during the bench show, and that he was fortunate enough to carry off two of the fine guns offered. We know Mr. Sherwood to be a gentleman in every sense of the term. That he has some fine dogs, no one consulting the columns of your excellent paper can deny. He is zealously working, not for mercenary ends alone, but for the benefit of his brother sportsmen of the West.

Yours truly, H.

BORROWING PIES.

St. Louis, May 23, 1877.

Editor Forest and Stream:

I spent most of last August in the little town of C——, in Kansas, "chicken shooting." The days were hotter than blazes, and after the first two or three of the season, I concluded to lie by in town till four o'clock in the afternoon, and then drive to the prairies and shoot till dark. One day I was walking down the road with Andrew ——, at whose house I was staying, and with whom I shot every day, and I said to him, "Andrew, how is it, you, an old New Yorker, can content yourself in this little out-of-the-way town, away from civilization friends and everything else?" He answered, "Well, I suppose it's because I have such grand shooting at all seasons. I like the free and easy life, and I like to breathe the pure bracing air of the prairies, and I must say I like the people, though they have a great many peculiar ways. Why, John, they beat the world borrowing! The neighbors send over and borrow all sorts of things from us. One of my neighbors, last spring, had some company one day, and would you believe it, she sent over to my wife, and wanted to *borrow a pie!*" That afternoon a covey of chickens got up under Andrew, and as he cut down two of them handsomely, he turned to me and said, "Here's to the pie-borrowers."

J. W. M.

The State Shoot at Syracuse, *Tuesday, June* 19, 1877.—The first field day opened at East Syracuse this forenoon on the fields of John A. Nichols, where the Sixth Division rifle range is located. The weather was as favorable as could be desired, and the attendance equal to the occasion. The trap-shooting did not begin until a late hour, from the non-arrival of wild pigeons, but when it did begin it went on lively. There were eighty-five entries in the amateur shoot by members of clubs represented, and at the close the prize winners were: First, H. Silsby, of Seneca Falls, prize a silver set, value $100, presented by Dickinson & Austin, proprietors of Globe Hotel, Syracuse; second, Mr. Dayton, of the Wayne County Club—cash $75; third, Mr. Sheridan, of Seneca Falls, dress pattern by Ed. F. Rice, Syracuse, valued at $50; fourth prize, $30 worth of powder, presented by Hazard Powder Co., was won by Dr. R. V. Pierce, of Buffalo. The fields allotted for trap and rifle shooting are first-class in every respect. The dog show at Armory Hall has over two hundred entries, is well patronized and considered a success. T. C. Banks.

Wanton and Criminal Slaughter of Deer in the Month of May.—We are requested to print the following letter:

Editor Forest and Stream and Rod and Gun:

When, from whatever cause, the law is powerless for its own vindication, it becomes such a journal as yours—whose mission is to aid legislation in the protection of game, and to encourage all honorable and manly sports—to hold up to the censure of all true sportsmen all violators of the laws. Doctor Ferber, of New York, and T. V. Johnston, Esq., have requested me to call your attention to what is to me a shocking fact: That one W. S. Dutton, N. W. corner of Chestnut and 13th streets, Philadelphia, slaughtered, on Moose Lake, eight deer in one week, in the month of May just passed. Having every confidence in my information, I do not hesitate to sign myself

F. G. Skinner.

Yachting and Boating.

New York Yacht Club.—The annual regatta of this club was sailed last Thursday, June 14th, with a free wind and fair favor. The catamaran Nereid was admitted as a participant in the race, and entered in the list of second-class centre-board schooners. The start was uneven, with a light breeze which freshened so much at the Narrows that the Peerless carried away her foretopmast, and nearly all the yachts shortened sail on their lighter canvas. The race down the bay was a beat to windward and very exciting, the Comet leading, followed closely by the Active, Windward and Wanderer, with the Ariadne a short distance from the heels of the latter. There was a fair brush for a while, but in rounding the southwest spit the Wanderer gracefully dropped her foretopmast; nevertheless she pluckily kept on, logging off a good record. At the lightship the Active led, Comet second. Coming home the Wanderer again had a mishap, breaking her mainstop stay-sail, which let the sail down with a run. The Rambler, which had gallantly picked up her post, notwithstanding her unfortunate start, carried away her flying jib-boom, but did not seem to weaken much. The Nereid (catamaran) failed to show the points expected of her, the breeze apparently being too heavy, though this is a conundrum. The Vision passed the home stakeboat at 5:08:21, the Comet following at 5:10:44. As the Wanderer and the Rambler were approaching the home stakeboat, the former leading, a sudden heavy squall struck them, and they heeled over, burying their port rails in the waves. There was a moment of strained suspense among the spectators, every one dreading another Mohawk disaster, but the strong racing crews were all at their stations, every thing was let go, and the yachts quickly righted themselves. The Wanderer came round in the wind and lost her headway, while the Rambler, which was immediately astern; kept hers and crossed the line at 5:15:40, the Wanderer following at 5:17:50. The Active came in at 6:20:31; and the others were not timed.

The following is the official record of the race:

KEEL SCHOONERS.

Name.	Start	Finish	Actual time	Corrected time
	H. M. S.	H. M. S.	H. M. S.	H. M. S.
Rambler	11 30 13	5 15 45	5 45 45	5 45 45
Wanderer	11 29 35	5 17 50	5 48 15	5 44 23
Restless	11 24 53	Not timed.		
Nettie	11 30 00	Not timed.		

SECOND CLASS—CENTRE-BOARD SCHOONERS.

Comet	11 29 09	5 10 44	5 41 35	5 41 35
Peerless	11 28 18	Not timed.		
Nereid	11 27 35	Not timed.		

FIRST CLASS SLOOPS.

Vision	11 26 07	5 08 21	5 41 51	5 41 51

SECOND CLASS SLOOPS.

Ariadne	11 25 00	Not timed.		
Active	11 26 56	6 20 31	6 53 35	6 52 44
Windward	11 28 49	Not timed.		

The Wanderer thus wins the keel schooners' prize by 1 min. 23 sec. corrected time, though if the Rambler's time had been taken from the time she actually started she would have won the race by about nine minutes. Both of these yachts showed unusually good "staying" qualities, and won their record against great disadvantages.

The Corinthian Regatta of the Seawanhaka Yacht Club was sailed Saturday over the usual course of the New York Yacht Club. The competitors were the schooners Estelle and and Peerless; first class sloops Arrow and Vision; second class sloops Active, Kate, Orion, Petrel, Pilgrim, Regina, Schemer, Windward and Winsome. The start was made about 11:30 A. M., and the vicissitudes of the weather—shower, calm and squall—occasioned an interesting contest. The winning schooner was the Estelle, first class sloop the Arrow, and second class sloop the Windward, the Orion being first in this class, but being ruled out because she carried a sail which, though not exactly a club topsail, was decided by the Regatta Committee to be something different from the working topsail, which is the only kind allowed in this race.

The official record of the race is as follows:

SCHOONERS.

Name.	Start.	Finish.	Elapsed time.	Corrected time
	H. M. S.	H. M. S.	H. M. S.	H. M. S.
Estelle	11 39 42	5 33 52	5 55 10	5 55 46
Peerless	11 41 59	5 33 33	5 51 54	5 42 00
FIRST CLASS SLOOPS.				
Arrow	11 39 20	5 22 33	5 43 33	5 32 38
Vision	11 45 00	5 46 39	6 01 39	5 51 32
SECOND CLASS SLOOPS.				
Orion	11 44 53	5 31 21	5 49 28	5 26 29
Windward	11 41 30	5 33 31	5 53 51	5 32 59
Schemer	11 41 12	5 33 33	6 11 21	5 49 39
Kate	11 38 52	5 55 13	6 16 21	5 57 24
Winsome	11 41 38	Not timed.		
Active	11 45 00	5 41 24	5 56 24	5 36 19
Petrel	11 44 16	Not timed.		
Pilgrim	11 40 59	Not timed.		
Regina	11 40 30	5 47 09	6 06 39	5 43 47

The names of the winning crews are:

Estelle—Captain, J. D. Smith; First Mate, J. P. Walters; Second Mate, W. H. Scott. Crew—Messrs. C. P. Williams, J. F. S. Oddie, C. Thompson, Brion Foulke, W. D. Smith, T. Warner, Edward Brown, G. Addie, S. L. Blood, W. A. Putman, T. Barlow, D. Wright, M. Kellogg, N. D. Thorne, A. H. Farrington, W. A. Greenleaf.

Arrow—Captain, R. Center; First Mate, O. E. Cromwell; Second Mate, E. M. Cooke. Crew—Messrs. Charles Pieters, H. D. Wood, William May, M. D., A. H. Stephens, J. O. Davidson, Gouverneur Morris, F. L. Leland, George Hitchcock, J. E. Peabody, D. S. Hone, Thomas Hitchcock, Ross R. Winans.

Windward—Captain, Hugh L. Willoughby; First Mate, Mr. Kortright; Second Mate, Mr. Fisher. Crew—Messrs. Geyeting, Gibson, Fell, W. Philler, M. G. Fuller, Reath, Middleton, Willets.

These amateur seamen well deserve honorable mention, as do all of the gentlemen who participated in the contest. They do not belong to the school of fair weather sailors.

The Regatta Committee made special entertainment for the ladies on board the fine steamer Americus, and provided a most bountiful spread; and inasmuch as the Seawanhaka Club is called upon to participate in numerous similar events throughout the season, its liberality is certainly well tested. This club deserves success, especially as it is educating gentlemen in naval duty, which may be made useful in emergency one of these days.

Harlem Regatta Association.—The Harlem Rowing Clubs held their annual regatta on the Harlem River on Monday. The shores, club houses, steamers and barges were filled with spectators. The course was a mile straight for all the races which were rowed on the flood with a fresh breeze astern, which accounts for the fast time made.

The first race was called about 2:45 P. M. It was for pair-oared shells, and the following crews started:

1. Nautilus—Red—W. H. Walsh, bow; T. A. Levien, stroke.
2. Columbia—White—E. E. Sage, bow; J. T. Goodwin, stroke.
3. Nassau—Blue—J. B. Robert, bow; W. Robinson, stroke.

Time.—Nautilus, 5 m. 34½ s.; Columbia, 5 m. 40⅝ s.; Nassau, 5 m. 61¼ s.

In the Junior scull race the starters were:

1. New York Athletic Club—E. Mills, Jr. Time, 5 m. 34½ s.
2. New York Athletic Club—Jas. Fraser. Upset.
3. Dauntless—J. H. Bates, Jr. Time, 6 m. 1s.

In the diamond-sculls race the contestants were R. W. Rathbone, Athletic Club, and P. C. Ackerman, Atalantas. A foul occurred and the referee awarded it to Rathbone, who rowed over the course at his leisure.

The fourth race was for four-oared shells. In this Columbia College's racing four came to the front, as well as a crack four from the Athletics. The crews were:

1. New York Athletic Club—A. T. Shand, bow; A. B. Shand, W. E McCredy, L. S. Mack, stroke. Ruled out.
2. Nautilus—W. H. Walsh, bow; L. E. Rouse, W. Childs, F. A. Levein, stroke. Time, 5 m. 16⅞ s.
3. Columbia—E. E. Sage, bow; R. R. Colgate, C. S. Boyd, J. T. Goodwin, stroke. Time, 5 m. 21¾ s.

The four-oared gig race was the prettiest contest of the day. The crews were:

1. New York Rowing Club—P. R. De Florez, bow; Eugene C. Cruger, Gasper Griswold, Robert C. Cornell, stroke; Robert Centre, coxswain.
2. Nassau—James Wills, bow; James D. Foot, Charles E. Badgely, W. Lentilhon, stroke; W. E. Foster, coxswain.
3. Columbia—H. P. Brown, bow; Charles Eldridge, H. G. Ridabock, J. C. Edeon, stroke; H. G. Casmer, coxswain.

All caught the water evenly, and the bow tips of all three were on a line up to the eighth. At the quarter Columbia led a few inches, and the other two still kept abreast. At the half Columbia had only gained a half length, the other two being still abreast. Such close racing is seldom seen. At the three-quarters Columbia had gained a length, the other two still chasing her hotly. On the last eighth all three boats made a tremendous effort, the New York Rowing slipped to the front of the Nassaus, and for a moment it looked as if their bow tip would pass the Columbias. Unfortunately, at this vital moment, the bow of the New Yorkers caught a crab, and amid the hoarse cheers of the collegians the gallant Columbias dashed by the finish—the winners—in 5 minutes 52½ seconds; New York Rowing Club, 5 minutes 58¼ seconds; Nassau, 5 minutes 59½ seconds.

The last race, for six-oared gigs, was also interesting. The contestants are:

Columbia.—R. R Livingtone, bow; G. P. Sceley, E. E. Sage, R. R Colgate, C. S. Boyd, J. T. Goodwin; G. B. Cornell, coxswain. Time, 5m. 23¾s

New York Rowing Club.—W. R. Stewart, bow; Gardiner Sherman, Jr., C. D. Ingersoll, R. B. Hartsthorne, John A. McKim, Edmond Kelly, stroke; C. F. Frothingham, coxswain. Time 5m. 15½s.

Dauntless.—N. F. Pearl, bow; H. W. Peckwell, C. E. Knapp, W. E. Demorest, W. W. Walter, David Roach, stroke; J. Kyle, Jr., Coxswain. Time 5m. 14½s.

In this race the betting was heavy, and the result a surprise to those giving odds.

Prize adjudged to the N. Y. Rowing Club because the Dauntless carried a light-weight coxswain.

The Atlantic Challenge Pennant.—A challenge race for the championship pennant of the Atlantic Yacht Club for second-class sloops was sailed. The Myra was the holder of the pennant, having won it in a well-fought race last fall. There were four entries for the race—the Hope, Genia, Nimbus and Myra—and the contest, from a time-allowance standpoint, was one of the closest on record. The Hope won the pennant, beating the Genia by 1 sec., the Nimbus by 23 sec. and the Myra by 9 min. 37 sec. The yachts had a good sailing breeze throughout, although at the start the wind was a little squally and made careful steering necessary.

Name.	Start. H. M. S.	Finish H. M. S.	Elapsed time. H. M. S.	Corrected time. H. M. S.
Genia	1 32 29	5 33 44	3 34 15	4 03 02
Hope	1 40 26	5 36 27	3 55 51	4 03 01
Nimbus	1 42 14	5 45 35	4 01 21	4 03 24
Myra	1 40 08	5 33 06	4 12 58	4 12 58

Brooklyn Yacht Club.—Mr. Henry D. Polhemus has been elected Chairman of the Board, vice Commodore Dillon, resigned. Mr. Lester Wallack has been elected a member of the club.

Schuylkill Navy Regatta.—In the regatta which took place on Saturday, the 9th instant, the following boats were entered: four-oared shells—Crescent, Quaker City and University. Four-oared gigs—Crescent, Pennsylvania, Quaker City and University. Six-oared barges—Crescent and Pennsylvania. Pair-oar shells—Undine and Philadelphia. Double scull shells—Crescent and Undine. Single scull shells—Hoffman, University Club; McBeath, Gormley and Pleasonton, of the Quaker City Club; and Thomas of the Pennsylvania Club.

St. Paul's School, Concord, N. H.—A boat race between the two first crews of the two boat clubs of the school (namely Shattuck and Halcyon), took place on Thursday, June 14, course two miles, with turn, without coxswains. Shattuck, shell of cedar, by Blakie; that of the Halcyon crew, of paper, by E. Waters & Sons. Prize, a silver cup. The Shattuck crew won by several lengths in 13 min. 40¼ sec. Time of Halcyon crew not taken. Philip.

Potomac Rowing.—June 18. The four-oared shell race between the Saratoga and Sue Sheppard, at Washington, was won by the former in 18 min. 53 sec. Distance, two miles. The race of the same distance, between A. T. Brice and Dennis Coughlin, was won by the former; time, 17 min. 5 sec. The four-oared shell race between the married and single men won by the former in 16 min. 14 sec. The skull race between Bestor, Barbarian, Gadsby and Bailey, won by Barbarian in 16 min. 40 sec.

Rowing on the Raritan.—June 18. Shell race between the fours of Rutgers College, New Jersey, and the Carteret, three mile pull, Rutgers leading from the first and winning by 55 seconds in 20 minutes 36 seconds.

—The St. John Rowing Club celebrated their fifth anniversary by a regatta at New Lake, June 14, and had a most enjoyable time.

Birch and Canvas Canoes.—We take much pleasure in refering to the advertisement of J. Darling, in its proper column. We have so many constant inquiries for canoes that we trust the modest advertisement of our friend will save us a great deal of time and trouble in replying. Mr. Darling is a guide of thirty-five years experience in the northern and eastern portions of Maine, and is highly recommended, not only by many of our correspondents whose letters have appeared in these columns, but especially by George Homer, of Kimball, Barnes & Co., 35 Bedford street, Boston, who is now sojourning at Darling's house in East Lowell, Maine.

—Hon. Charles W. Hutchinson, of Utica, broke his leg last week, but that won't prevent his taking the stump at the next fly-catching tournament at Syracuse. We are glad to know that his limb is improving and getting on le-gantly.

New Publications.

—An important contribution to our ornithological knowledge has recently appeared in the Bulletin of the Essex Institute, vol. 8, nos. 9 to 12. The list of the birds of Northeastern Illinois will be gladly received by collectors and ornithologists in general, and in no way can our knowledge of the distribution and breeding range of our own birds be more readily enlarged than by the publication in this form of the experiences of individual field naturalists. The locality in which Mr. E W. Nelson's observations were chiefly carried on presents an unusually favorable field to the ornithologist. "Situated, as it is, midway between the wooded region of the east and the treeless plains of the west, with the warm river bottoms of the south, rich in southern species, extending within a comparatively short distance, and the Great Lakes upon the north, Northeastern Illinois forms a kind of 'four corners' where the avian-faunæ of four regions intergrade." On Lake Michigan are to be found, during the winter, many of our truly maritime species, such as *Harelda glacialis, Histrionicus torquatus*, two species of *Somateria*, and all the representatives of the genus *Œdemia*. On the other hand, in the southern portion of the State, many truly tropical birds occur regularly as summer visitors. Among these may be mentioned *Tantalus, Gallinula* and *Plotus*. Mr. Newton mentions 316 species observed by himself, and adds a list of 16 noted by other observers, but which have escaped his eye. The notes on the dates of arrival in spring and fall, and the hints as to the habits of different species are most interesting. In several instances Mr. Newton describes the young plumages of certain species which, although well known to us in the adult state, have never before been described in their immature dress. Altogether the list is a delightful one, and we strongly recommend it to our readers.

Log Letters from the Challenger. By Lord G. Campbell. New York: Macmillan & Co., 1877. Price $2 50.

No scientific event of late years has been so productive of delightful literature as the recent expedition of the English ship Challenger. The accounts of the voyage by Wyville Thompson and others have been received with much favor, not only by scientific students, but also by the more intelligent reading public, and among these none is more thoroughly enjoyed than the "Log Letters from the Challenger," a copy of the second edition of which now lies upon our desk. Originally written as letters, the author tells us, which were sent home during the cruise, these chapters are marked by a refreshing *abandon*, and the easy epistolary style of a familiar correspondence. Lord Campbell is a close observer, has an eye for the droll and humorous aspects of life, and possesses withal the faculty of describing what he sees in the happiest possible vein. The route of the Challenger party was from England to the Cape, thence to Australia, China, Japan, Valparaiso, overland across the Andes to Monte Video and home again. They fished up all manner of marvelous specimens from the bottom of the ocean; saw more and stranger wonders than ever Othello told to the listening Desdemona, and from a scientific point of view were in many of their undertakings highly successful. The summing up of these results, with the description of the methods of deep-sea sounding and other processes of the work of the expedition, make up the last trio, and not the least interesting chapters of the book. Here was abundant material for a good book, and it has been well employed. We have not found a single dull page. To slightly modify a good old adage which we were used to hear in our younger days: "A book for every place, and every book in its place." And this is a book to be taken into the country and read while you are lying under the shade trees.

Annual Record of Science and Industry for 1876. Edited by Spencer F. Baird, with the assistance of eminent men of science. New York: Harper & Bros. Price $2.

This is the sixth volume of the series which was begun in 1871, and which constitutes a complete and continuous history of the progress of science and industry for the last six years. The distinguishing features of the work, as Dr. Baird tells us, are a series of summaries of progress in the different branches of physical, natural and industrial science; a series of abstracts and digests of important papers, memoirs and other publications, carefully edited by specialists in the different departments of science; a necrology of scientific men for the year, a list of the more important scientific publications of the year, with critical notices, and guidance to purchasers, and, what much enhances the value of the volume, a minute index and analytical table of contents. We cannot speak in too high terms of the value of this series, and its adaptability to the general reading public. An examination of the several departments reveals the same thoroughness and comprehensiveness of treatment that have won for the preceding volumes an established place among the scientific reference books of the day.

Harry.—By the author of "Mrs. Jerningham's Journal." New York: Macmillan & Co. Price 30 cents.

There are in literature, just as in art, certain pieces of work upon which the sex of the author is as clearly stamped as if his or her name were upon the title page. Indeed the experienced critics profess infallibility in this particular power of discernment. But the utmost tyro may not mistake in this little poem. No man would sit down and give us such a delicate bit of analysis of a woman's heart; it would come only from a lady's pen. The concise, crisp form of the work, too, almost tempts us to read a lecture to some of our novelists with capacious ink bottles, who might have taken this half hour, too, and given us in its stead two ponderous volumes of prose. The *denouement* is as happy as it is unexpected, and the whole effect of the poem one of pleasure and satisfaction.

Norston's Rest. By Mrs. Ann S. Stephens. Philadelphia: T. B. Peterson & Bro. Price $1.75.

Those who may have read any of Mrs. Stephens' former books—this is the twenty-third novel which has come from her pen—will find this story of equal interest to that lady's usual work. The scene is laid in England, and the plot has for its basis the love of a royal lover and peasant maid, a theme which has furnished unfailing material for romance writers ever since the days when gods and goddesses were won't to descend from Olympus and wander love-lorn through the terrestrial groves. Whether this theme develop into a comedy or a tragedy depends upon the inclination of the writer. In the present case the marriage bells ring happily, and the gardener's daughter becomes the mistress of Norston's Rest.

The Heiress in the Family. By Mrs. Mackenzie Daniel. Philadelphia: T. B. Peterson & Bro. Price $1.

This is a story of English domestic life, which will doubtless find much favor among fiction readers. The clever plot is well worked out, the characters natural, and the movement lively. The story ends happily, the heiress, after various trials and tribulations, finding a worthy husband, and the various personages are all disposed of in an eminently satisfactory manner.

The recent blowing up of the last remaining reefs in Hell Gate, New York harbor, by the great engineer, Gen. Newton, may justly be pronounced a great triumph in engineering science. But a still greater triumph has recently been achieved in chemical science, the invention of an absolutely perfect toilet soap, in which impurities are not covered up by fragrant odors, namely, B. T. Babbitt's Toilet Soap.—*Adv.*

Tiffany & Co., Silversmiths, Jewelers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their Timing Watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. TIFFANY & CO. are also the agents in America for Messrs. Patek, Philippe & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Bronzes and Artistic Pottery is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Union Square, New York.

—A live moose was captured a few days ago, while swimming across Cupsuptic Bay, at Rangeley Lakes, by Messrs. Barker and Haines, taken on shore, and tied to a tree. He was exhibited to quite a number of gentlemen from Indian Rock, and was then set free.

READY JULY 7.

THE

Sportsman's Gazetteer

AND

GENERAL GUIDE.

WITH MAPS AND ILLUSTRATIONS, 750 pp., Price, $3.

BY CHARLES HALLOCK,

EDITOR OF "FOREST AND STREAM;" AUTHOR OF THE "FISHING TOURIST," "CAMP LIFE IN FLORIDA," ETC.

NEW YORK:

"FOREST and STREAM" PUBLISHING COMPANY.

AMERICAN NEWS COMPANY, AGENTS.

1,000 Copies Sold in Advance of Publication.

The book is a complete manual for sportsmen:

It gives every sportsmanlike method for capturing every known game animal, bird and fish in North America.

It designates the proper charges for guns for each kind of game, the various kinds of decoys and blinds, and baits and tackle for the fish.

It gives over 4,000 localities where game and fish may be found, specifies the game found in each locality, the hotel accommodation, and the best route to get there. (The preparation of this Directory was in itself a work of great magnitude.)

It gives the scientific name and specific characteristics of each species it describes, with the *habitat* and breeding season of each—a most valuable contribution to science.

It describes 197 varieties of edible fish alone, that may be taken with the hook; 50 varieties of ducks, 50 varieties of snipe or weeders, and the different methods of shooting each.

Its instructions for capturing large game are very minute, and the chapters on woodcraft, outfitting and camping have been pronounced by "El Cazador," of Los Angeles, California, to be simply complete.

Every kind of dog used for sport is designated, and his points for bench judgments fully given. The chapters relating to selection, breeding, rearing, breaking, care and diseases, comprise a seventh part of the volume. There are 71 prescriptions and recipes given under the revision of the best modern canine therapeutists.

It is in itself the most concise, accurate, instructive, sensible and comprehensive work ever written upon the dog and his diseases. Any physician can administer the prescriptions with perfect confidence in their safety and efficacy.

Every scientific portion of the work has passed the inspection of an officer of the Smithsonian Institution.

It contains very useful recipes and remedies for wounds, bites, poisons, illness, and emergencies of all kinds; for cleaning, repairing, and preserving every implement used for sport; for selection and use of every kind of boat employed by sportsmen; a reference list of several hundred books in request by sportsmen, and a directory where to buy outfitting goods.

It instructs in taxidermy, and tells how to preserve and mount specimens of animals, birds and fish.

ENDORSEMENTS.

"I can judge from your advanced sheets that your book will be a *rade mecum*, invaluable to sportsmen."—*Dr. H. C. Yarrow, U. S. A. Smithsonian Institution.*

"Your forthcoming book will indeed be a treasure. The labor of preparation must have been immense."—*S. C. Clarke, Jamaica Plains, Mass.*

"Having examined the proof sheets of your forthcoming book, I predict an extraordinary sale."—*C. Bird Grinnell, Peabody Museum, Yale College.*

"That portion of your book relating to woodcraft, outfitting, camping, etc., is simply complete. I can scarcely add anything."—*H. M. Mitchell ("El Cazador"). Los Angeles, California.*

"Your book is much needed, and I have every confidence that you are capable of covering the whole ground. We need something more recent than Frank Forester."—*D. C. Estes, M. D., Lake City, Minnesota.*

who can be met at Northville Depot.

By previously communicating, Van A. & L. will have carriages to meet cars.

Refers by permission to "Pisco" (L. A. Beardsley, U. S. N. my17 4m

JORDAN ALUM SPRINGS,

ROCKBRIDGE COUNTY, VA.,

Eight miles from Goshen Depot C. and O. RR.

JNO. W. CAMERON, Prop'r.

To old patrons it is only necessary to say that the management will be strictly first-class, with reduced terms to meet the hard times.

The hotel appointments are unequalled by any summer resort in Virginia, comprising all modern appliances which characterize first-class city establishments—hot and cold water on each floor, gas and electric bells, with hair mattresses in each room.

Mr. JOSEPH N. WOODWARD, so well and favorably known at both Rawley and Orkney Springs, will be in charge as manager, where he will be happy to see his patrons.

For pamphlets or particulars address

JOHN W. CAMERON, Prop'r.

TEE "FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries

OF NORTHERN MICHIGAN, VIA

Grand Rapids and Indiana Railroad.

(Mackinaw, Grand Rapids & Cincinnati Short Line.)

Sportsmen who have cast a fly or trolled a spoon in the waters of the **Grand Traverse Region** will come again without solicitation. All other lovers of the Rod are invited to try these waters, wherein

The fish named above, as also **Muscalonge, Pike** and **Pickerel,** abound.

In no other streams east of the Rocky Mountains is the famous **American Grayling** found in such numbers.

Brook Trout Season opens May 1st.
Grayling Season opens June 1st.

The sportsman can readily send trophies of his skill to his friends or "Club" at home, as ice for **packing fish** can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st **Round Trip Excursion Tickets** sold to **Points in Grand Traverse Region,** and attractive train facilities offered to tourists and sportsmen; also, on and after July 1st, **Mackinaw and Lake Superior** Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, send to FOREST AND STREAM office, or address

FUR, FIN and FEATHER.

This is a publication that should be in the hands of every lover of shooting, fishing and trapping. It contains the

GAME AND GAME FISH LAWS

of every State in the Union and the Dominion Provinces, and also gives a description of all the best places for shooting and fishing in the United States and Canada, tells how to reach them, and what kind of accommodations you will find when you get there. It tells you what kind of tackle to use for the various kinds of fish, and where the best can be procured, and also where you can get the best of every description of shooting apparatus. It contains a number of interesting sketches of hunting and fishing adventures, and a vast fund of useful information on field sports and angling that renders the work indispensable to all who use either gun or rod. It is, in fact, a complete

Hunting and Fishing Directory

and no matter how much or how little recreation you take in the woods and along the streams, you will find *Fur, Fin and Feather* worth many times its price to you. It is a bi-monthly (every two months) publication of from 176 to 208 large octave pages, 50 cents a number, or $3 a year.

SKINNER'S

New Fluted Bait.

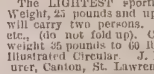
The best bait used for Bass and Pickerel Fishing Bass size, 75 cents; Pickerel size, 50 each, by mail, post-paid, on receipt of price. Eagle Claw, for catching Fish and Game, samples by mail, 35 and 75 cents. Send stamp for illustrated price list of Fishing Tackle and Sporting Goods,

FISH & SIMPSON,
132 NASSAU ST., NEW YORK.

SAPONOID.

Mosquito & Black Fly Repellent.

This Composition contains no ingredients injurious to the skin, is saponaceous and removed at once by the application of water, possesses great healing and cooling properties free from all grease. Certain and instant cure for the bite or sting of insects, mosquitoes, flies, wasps, bees and other insects, removing all inflammation, neutralizing the poison and allaying the swelling at once.



DIRECTIONS.

For repelling flies and mosquitoes rub the Saponoid on the exposed parts freely with the hand. One application to the sting or bite of the insect, in most cases, is certain relief.

Sold in collapsible tubes, mailed to any address on receipt of 50 cents by

BRADFORD & ANTHONY,
374 Washington street, Boston, Mass.

Laflin & Rand Powder Co.

No. 26 MURRAY ST., N. Y.,

Sole Proprietors and Manufacturers of

Orange Lightning Powder.

No. 1 to 7, strongest and cleanest made, in sealed 1 lb. canisters. Higher numbers specially are recommended for breech-loading guns.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in metal kegs, 6¼ lbs. each, and canisters of 1 and 5 lbs. each.

Orange Rifle Powder.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6¼ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less resistance than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

BLASTING POWDER and ELECTRICAL BLASTING APPARATUS, MILITARY POWDER of all kinds on hand and made to order.

Safety Fuse, Frictional and Platinum Fuses.

Pamphlets, showing sizes of the grain by wood cut, sent free on application to the above address.

THE
HAZARD POWDER CO.
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest or water shooting, it ranks with the best, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6¼ lbs, and canisters 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

Superior Mining and Blasting Powder.

SEND FOR DESCRIPTIVE CIRCULAR.

A VICTORIOUS INVENTION

The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game.

The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.

It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or, when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation.

It is adapted for bait of any description, and, when, set, no Animal, Fish or Bird that touches the bait can possibly escape.

It does not mangle or injure its victims in the slightest degree, nor need they be handled to free them from the trap.

PRICE LIST:

No. 1—For fishing and all kinds of small game and animals, sent by mail.....35 cents.
No. 2—For catching Mink, Muskrats, Raccoons, large Game, Fish, &c.....75 cents.
No. 3, or Rocky Mountain Giant, for catching Bears, Wolves, Panthers, &c. Can be easily set by a boy, and will stand a strain of several hundred pounds. Weight, 10 to 15 lbs. $10.

All goods sent, charges paid, to any address on receipt of price.

Paper and Metallic Shells
FOR
Breech-Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,
BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers.

"St. Louis Conical Base Paper Shell."

Having made important improvements in our Shell, we can safely recommend them as equal, if not superior, in quality to any Paper Shell manufactured in this country or in Europe.

Among the advantages claimed for these Shells, are: A saving of 25 per cent. in the use of powder; also the great decrease in recoil. The sizes made are No. 10—2⅝, 2¾, and 3 inches; No. 12—2½, 2¾, and 2⅞ inches. Longer Shells will be made at extra cost. They are now available. Sample, 100, sent by express on receipt of $1.15 for No. 14; $1.30 for No. 10.

For Forest and Stream and Rod and Gun.

SENTIMENT AND HUMOR.

BY WM. H. CAREW.

WHEN vernal suns have kissed the hills,
The daffodils and daisies,
'Tis sweet at morn to hear the birds
Hymn out their matin praises;
I love the genial airs of spring,
The pansies and the posies,
The op'ning of the tender buds,
The fragrance of the roses—
And more than all the two-lips sweet
That woman's kiss discloses.

Through woodland dense with tangled leaves
Alone I love to wander,
To muse upon the happy past,
And on the future ponder;
I love to see the startled stag
His dainty antlers flinging,
And hear the hounds' pursuing cries
Far in the distance ringing—
While frightened from the dusty road
The screaming geese are shinning.

And when the storm-king's thunder guns
Flash o'er the heavenly arches,
I love to hear the forests far
Resound like martial marches.
There freedom's feathered monarch reigns,
By battles unaffrighted,
Who fought the growling king of beasts,
Both times they got excited—
Proud emblems of the brave and free,
Be evermore united.

I love to see the farmer's plow
Throw up the stubble furrow,
Where all the whistling winter long
The rabbits kept their burrow;
To see at noon the horned yoke
Graze up the clover's roses,
Or 'neath the branches, leafy shade,
Indulge their lazy dozes—
More sweet to them are pastures green
Than snuff to sneezing noses.

I love at dawn, when slow the sun,
Fires up the mountain passes,
To hear the bleating flocks afar,
And braying Johnny asses;
And when at dusk the milky kine,
Their homeward way are wending,
'Tis sweet to hear their tinkling bells,
With evening vespers blending,
And see the little baby cows
Their mother's steps attending.

And when the moon her silver light
O'er dreamy earth diffuses,
I love to hear the Thomas cats
Mew to Tabby's mew-ses.
On fragrant beds of catnip green,
They lie like loving spouses,
And spit and purr and pledge their tails
In loud a-mew-sing mouses;
As if no sad cat-astrophies
Could scat-ter their carouses.

'Tis sweet, as in the days of yore,
To hear the rippling waters,
Where loud the parent frogs discourse
To croaking sons and daughters.
And when the star-gemmed wing of night,
Beyond the vision reaches,
I love to hear the owlets screech,
Though terrible their screeches,
Like truant boys beneath the birch
That agitates their breeches.

My soul is filled with love for all
In nature, grave or funny;
For life is full of shadows dark,
As well as pleasures sunny.
Yet far above them all I love
The love that falters never,
That clings to mine in weal or woe,
That death alone can sever,
Through Him who ruleth over all,
Forever and forever.

—Surveying parties are out, to ascertain whether the branch of the Union Pacific Railroad to the Black Hills shall start from Cheyenne, Sidney, or the North Platte.

—Another mail route will be opened to the Black Hills soon, making six in all. It will be run from Paddock, Neb., to Custer, Dakota.

Bog Shooting.

BY FRANK WARWICK.

ABOUT the middle of August, when the woodcock depart on their brief annual migration northward, and but few remain to moult in their old breeding grounds, our regular summer shooting is over—with the exception, perhaps, of a few tarrying "shore birds."

Between this period and the regular autumn shooting of grouse, quail and "fall woodcock," a new phase invites the sportsman's attention, namely, the game of the bog. Very little has been written on this branch of sport, and I take up my pen, hoping that I may afford some little entertainment to old sportsmen—not necessarily, my dear reader, old in years, but in experience with "dog and gun"—and perhaps impart some instruction to the young Nimrods.

The shooting over salt bogs, namely, those found adjacent to the ocean or to brackish streams or rivers, exceeds in quantity and variety of game found in that of the fresh, as most of the waterfowl mentioned in this article are indigenous, as it were, to salt or brackish feeding grounds, where the tide receding offers abundance of food in the shape of snails and other small crustacea that cling to the reeds and meadow grass, among which they love to run.

I shall omit, under this head, "skiff shooting," as it is called—that is, shooting from a boat those species of rail which frequent water too deep for a person to wade through—and confine myself to those bog birds which may be successfully pursued on such ground, where a boat is not required; where the ground is hardly watered more than an ordinary snipe meadow, and thereby have the pleasure of seeing your dog work.

The game of the bog which is usually pursued by the sportsman are: the clapper rail (or salt water marsh hen), commonly known as the mud hen; the Virginia rail (*Rallus virginianus*), and the gallinule (or common water hen).

These, together with a sprinkling of the heron and bittern families, form the game—not true game, perhaps, in the full sense of the word, especially the herons and bitterns—with which the sportsman may occupy his attention and "keep his hand in," as the saying is, until the return of the snipe (*Scolopax wilsonii*) on the same ground later in the season.

In fresh water bogs and wet, low-lying meadows the above birds may be found in greater or less varieties, with the addition of the red-breasted rail (or fresh water marsh hen) which is the largest of the *Palidea*. All the young bog birds are in condition to shoot about the 15th of August, but in some states and counties they are protected until the 1st of September.

Rail are very secretive, and close lying in their habits (with the exception of the red-breasted rail, which prefers flying to lying close), and it is very difficult, in fact almost impossible, to start them up without a dog to find them, hence the question arises, which kind of dog is most suitable for this shooting? In my opinion, and, in fact, the opinion of all who have used them in the bog, the cocker spaniel is the best dog for this work. The cunning, lazy rail, rather than take wing, will dodge the pointer or setter among the tangled water grasses, and as Carlo or Don is pointing, the bird will slink away, dive into some little stream, and there, with only the top of his bill above water, is out of scent of the dog and out of sight of the gunner.

But the cocker will stand none of this nonsense; on striking the trail of this skulking bird, whether it be Virginia rail, gallinule or marsh hen, he follows, bounding over the bog tufts faster than even these swift birds run through their paths, among the tangled wet bog grass, and forces them to take flight, at the same time calling his master's attention by his his crisp, cheery yelp, and as the fat, lazy rail reluctantly takes wing, not to fly further than twenty or five and twenty paces, he presents the easiest wing shot in the world with his slow, laboring, low flight, dangling legs and out-stretched neck.

The Virginia rail resembles very closely its cousin, the clapper; but it is little more than half the size of the latter. The gallinule is slightly larger than the Virginia, and is easily distinguished from it by the former's curiously shaped bill, which is very broad and flat on the sides, the upper mandible tapering ovally to a point.

No. 9 shot is the proper size for bog shooting. No. 10 would be better, perhaps, for the *Ralidea*, but a bittern or heron is often stumbled upon, and then No. 9 tells its own tale. The most common varieties of the herons and bitterns, which occasionally engage the sportsman's attention, are: the great blue heron, the green heron (*Vulgo shytepoke*), and the American bitterns, all greatly resembling each other in appearance and general characteristics.

The largest of all is the great blue heron, next in size is the American bittern, and lastly, the green heron, or "shytepoke," by which latter name it is most generally known. Their flesh (what there is of it) is palatable, though coarse and fishily flavored, not being nearly as delicate as that of the Virginia rail. The herons and bitterns are all distinguished by the great mass of plumage they sport, but when plucked, they make but a sorry show. Notwithstanding their size and the mass of feathers which cover them, they are very easily killed with small sized shot.

All the bog birds leave for the South about the latter part of September and first part of October; and I have seen the green herons during the latter part of September in small groups of three or five birds flying high in the air, headed for the warm swamps and bayous of the "sunny south." The food of the above are frogs and the same kind of crustacea as is favored by the rails. They will not lie to the dog like the *Ralidea*, but take wing, generally giving utterance to a deep booming sound, if a bittern; or, if it be a green heron, by a shrill shriek-like cry, resembling "ke-urk" when observing either man or dog, and fly a long distance before alighting. When wounded, they will attack the dog which endeavors to retrieve them. It is the safest plan to knock them, when wounded, on the head with the gun barrel, or give them a second shot if the bird endeavors to escape by running, keeping the dog at heel until this is accomplished, for if ordered to retrieve a wounded heron or bittern, his eyes may suffer from the long bill, which all these birds use freely when wounded.

The great blue herons have frequently killed dogs by plunging their enormous bills into the bodies of their would-be capturers. This species of heron will oftimes attack man, but its bravery is always when wounded and cannot escape by running or by flight, for at all other times they are arrant cowards and are approached with difficulty.

Along sedgy ponds and sluggish reedy-lined creeks, these birds are found in great numbers, as well as in the bog, and a person passing by their haunts at eventide cannot but be impressed by the dismal, hollow, sepulchral noise which they utter.

At evening o'er the swampy plain
The bittern's boom came far.—*Southey.*

These birds are not the game of the bog, however, as that name belongs to the *ralidea* and the *Scolopax wilsonii*, or Wilson's snipe; but as the heron or bittern is frequently "put up" they are, of course, fired at, and sometimes make a valuable addition to the bag when other birds are scarce.

The dress for rail or bog shooting should be the same as that used for snipe, as it is on the same ground, and the best thing that can be worn in this as in all other shooting is one of the shooting suits advertised in the columns of the sporting papers by different makers. They are all excellent articles, the coat having numerous pockets for cartridges, or powder and shot flasks, etc., besides having game pockets in the skirts. The goods are waterproof, which prevents rotting by continued wet.

For this shooting, as in snipe and woodcock shooting, laced ankle boots and canvas or leather leggins should be worn. For grouse shooting and also for quail shooting in swampy bottome, boots may be worn, with comforts to keep the feet dry; but in the bog it is impossible in all ordinary cases to prevent sinking over your boot tops in mud and water—or even a single splash will fill your boots to overflowing; and how nice, light and comfortable you feel encumbered with a couple of quarts of water—you dare not take off your water bags for fear of not being able to get the wet things on again.

But in laced shoes and leggins the feet become wet, but on reaching drier ground the water immediately runs out of the lace holes, and one feels a great deal more comfortable than if one was encumbered with boots half filled with slime. On arriving home after shooting, wash the feet and limbs in cold water, which will both effectually remove the mud and muddy water which may have penetrated the pants, shoes and leggins, and prevent taking cold.

* * * * * * * *

One September afternoon I was sitting in the light wagon holding the reins listlessly, under the shade of a noble chestnut, which stood about twenty-five yards from the station, awaiting the arrival of the train from New York.

"The Pines," where your humble scribe was "holding forth" for the summer and early fall shooting, is about two and a half miles from the aforesaid station, which is that of R—, New Jersey. I had written to Lang Moorston, an old friend, and as thorough a good fellow as ever drew trigger, to run down for a few days and practice on the rail, which were quite abundant in the bayou near the South Shrewsbury River—and it was to convey him home with me that I was awaiting the train.

There are quite a number of vehicles clustered around the depot, and as for want of something better to do I am scrutinizing each and the inhabitants thereon, the welcome rumbling of the approaching train sounds like music to my impatient ears, the white smoke can be seen floating in wreaths of fantastic shapes over yonder wood—now the iron horse breaks into the open, and soon is rushing by the depot with breaks hard down, amidst the hissing and bellowing of the escaping steam—people are flocking out, and I look eagerly for the jovial face of Lang.

There he is, gun case in one hand, and in the other a portmanteau, and also a dog chain, to whose lower end is attached a beautiful liver and white cocker spaniel. Of course he is looking in the wrong direction for me (for who, on leaving a train, was ever known to look in the right one), but I immediately attract his attention by uttering the shrill treble of the woodcock. Soon greetings are exchanged—not the lisping "How d'y dew," and dainty touch of the fingers with which those two *elegantes* in yonder phaeton salute each other—but by a heartfelt shake of the hand and still heartier greeting. The cocker, whose name I believe to be Joe, is snugly ensconced under the seat; he is truly a magnificent animal, with long curly, wavy air, thickly feathered limbs and stern; "ears that sweep away the morning dew" and a full expressive eye. Lang is seated beside me, and I gather up the lines, and we are soon off at a rattling pace, headed for the house, and conversing about what had happened, where we had been since last we met.

Up and down the hills of the dusty country road, broad, green fields stretching alongside; over creaking, wooden bridges which cross creeks and streams of all sizes; through woods whose darkness make the afternoon seem later than it is; now and then passing a cosy farmhouse; until at last we arrive at the gateway of "The Pines"—so named on account of the number of these trees which surround the place.

Driving down to the stables we surrender our steed to the care of the coachman, and, giving Lang's "clothes' bag" and gun to the stable boy to carry to the house, we proceed to the kennel, whose presence readily manifests itself by the numerous yells of the inhabitants at the new-comer to find a place for Joe. This being done, and tying him securely, Lang pauses to examine the other inhabitants, which consist of a black pointer, a Gordon setter, and last, but not least, a black cocker spaniel. Reaching the house we are greeted by another setter, a white Belton, who is happy in being the house dog, if the happiness of a dog consists of being crammed to suffocation by indulgent sisters and cousins.

A good wash, then supper, after which we take out the dogs for a run over the green upland field stretching away to the west. A good long chat on shooting after this, and, reading the evening papers which Lang brought with him, we turn in early, so as to be up with the sun next morning.

Awakening next day while it is yet dark, I proceed to pound on Lang's door to awaken him. This being accomplished I return to my room to don the habiliments of the field. I have hardly finished my toilet when Moorston enters, gun in hand, in the glory of a new shooting suit and high, English leggins. I pick up my breech-loader and a couple of handfuls of Eley's brown paper cartridges loaded with No. 9, and accompany my friend to the kennel for our respective spaniels, just as the September twilight announces the coming day.

With dogs at heel, so as to husband their strength for the bog, we pass down the avenue and gain the main road; then turning to the right into a little lane, we travel down this until we gain the meadows. Here a beautiful sight presents itself—meadows, stretching and rolling away each side as far as the eye can reach, here and there show a low, wide, long vale-like hollow, with its tall, brown-headed "cat tails" and high waving bog-grass, which hollow is gently watered by creeks streaming in from the river. These hollows augur well for our hunting ground, namely, being the bogs. Away in front of us stretches the Shrewsbury River, while farther over still, separated from it by only a thin neck of land, rolls the broad Atlantic, seemingly from whose depths the rising sun is emerging. The shrill, hen-like cry of the fish-hawk, and the sonorous caw of the crow, are the only sounds which float to our ears in the early morning.

Striking across the meadows in the direction of the nearest bog, we order our respective canines to "Hie on," in order to warm them up for the coming work, and amuse ourselves watching them slowly becoming acquainted. How sweet and fresh the salt air seems, purified by the cool, early rays of the sun.

"Quick, shoot!" Lang yells out, and bangs away accordingly into a flock of bay snipe we had surprised in the long grass. My gun also twice gives tongue. Seven birds have dropped from the flock, and the spaniels make merry work of it retrieving them. They are upland plover, as fat as one could wish.

A moment's more walking and the first bog is reached. Leaving Moorston and Joe to hunt on that side, I take Jack and cross to the other to hunt down toward the creek. On goes the spaniel through the tangled grass and reeds, which reach to my waist. Now Jack has disappeared from view in the high reeds, when from a clump of "cat-tails" I hear his cheery bark; holding the gun in readiness I wait. Up she goes, a salt water marsh hen, hanging heavily on wing; but something strikes her in the shape of a few pellets of No. 9, and down she drops. Little Jack soon finds her, and bounding over the bog tufts lays her at my feet. We had not yet reached the exact haunts of the Virginia rail, which were a little farther down where the land was more boggy, Moorston in the meantime bagging a gallinule.

On we go. Glancing in Lang's direction I can see his cocker on the scent, and dashing at a great rate he gives tongue. At the same instant up goes a mud-hen, with its sharp, cackling cry, flying away slowly and lazily, and but three feet from the ground. Up goes Moorston's gun, a puff of white smoke and a report, and the lazy old "clapper" flies no more.

"Now, Lang, we are in for it," I shout across to my friend, as we strike the bog in every sense of the word—water and mud, sometimes knee deep, through which places the dogs flounder with difficulty; but the general surface is good, where the spaniels can work with freedom among the reeds, in the slimy, muddy and watery soil.

Ah! there is Jack after something; and I see him bounding along, nose to the ground, with an indistinct feathery form running swiftly ahead of him through the tangled bog-grass. "Wow, wow!" says Jack, as *Rallus virginianus* rises in the same manner as did his cousin, the clapper. Bang! my 12 bore rings out, and this most delicious species of rail is *non est*.

Now the *Virginianus* rise right and left for a few moments; we have struck, so to speak, a flock, and Lang and I bang away. It seems almost impossible to miss these slow-flying birds. At last the end of the bog is reached, namely, where deep water prevents further passage, so Lang and I fall in together and head for the dry land or the south side, to rest and count our game. This is nearly reached, when fully forty yards away springs up, like a rocket, uttering his deep, booming cry, the American bittern. Bang! Moorston salutes, but on goes the American representative. "Try him, Frank," Lang exclaims, your gun shoots farther than mine. Frank's gun tries and succeeds, for down comes the bittern, head dangling down, wings powerless, and strikes the earth a confused heap of feathers. Jack starts to retrieve, and Joe Lang's dog starts to keep him company, but he is instantly recalled by his owner. With difficulty I cram the "lengthy" bird in my game pocket.

A resting-place is now reached in the shape of a fence, and seating ourselves thereon, we proceed to talk over the shoot and count the birds. Lang has three gallinules, one marsh hen and seven rail, while Frank has six rail, two marsh hens, one gallinule, and last, but not the least—in size, anyway—an American bittern; in addition to these we must not forget the seven plover.

Seeing by the sun that it is nearly breakfast time, and feeling painfully conscious of the claims of the inner man, we wend our way homeward across the meadows. Lang expresses himself well satisfied with the first bog shoot of the season, and we both resolve to try to find a woodcock or two that afternoon.

REMINISCENCES OF CAMP LIFE IN FLORIDA.

CHATTAHOOCHEE, Fla., May 26, 1877.

EDITOR FOREST AND STREAM:

Leaving Columbus, Ga., about the 1st of last November, a party of four of us started on a hunting and fishing excursion to Florida. The trip down the Chattahoochee River to Rieves Bluff (a distance of about 400 miles) was made in about two days. Having letters to several of the resident farmers—*with instructions to put us through*—we anticipated fine sport. Nor were we disappointed, as this section of country is hunted and fished in less than any other portion of the Union; and all kinds of game can be found at all seasons of the year, and it only requires a visit there to get as much sport as you want.

While waiting for horses to be procured for us, and to notify one or two parties who had the crack bear dogs of the country, we devoted our first day to duck shooting, or at least a part of the day, as the sport became monotonous, from the ease with which the fowls were killed and the immense number bagged. Early the next morning we were aroused from our slumbers by the baying of innumerable hounds, and on emerging from our tent we were immediately surrounded by a perfect horde of lean, hungry dogs—not the fat, well-kept deer and bear dogs that we expected to see, but a miserable, half-starved set that soon devoured everything eatable that happened to be outside the tent. And such a number! It seemed as if every man within a radius of 50 miles had turned out, and each had a full pack of hounds following him. Dispatching a hasty meal, we mounted our horses and started for the swampy country, some five or six miles from the river, which was said to abound in bears. Who can describe the sensation on first emerging from the low river bottoms in Florida, and coming suddenly upon the finest sight that the eye of man ever rested? Florida—"Land of Flowers!" It is certainly correctly named. Stretching before you as far as the eye can see is a perfect carpet of flowers, every hue in the rainbow represented. The dew on each flower, as the morning sun shines on it, sparkles and glitters, and appears like diamonds set in a natural bed of flowers. But a loud bay disturbs our thoughts, and away we go at a break-neck pace in order to get a good stand for a shot as the bear passes from one swamp to another.

In this section of Florida there are a large number of small swamps, low and marshy, and filled with a low shrub or bush called ti-ti. These swamps are almost impenetrable to a man on foot and quite so to one on horseback; and the only way to successfully hunt the bear is to send the dogs in to drive him out, and having taken your stand at some point near another swamp to get a shot as he passes you. Deer are also hunted this way; but as they are so numerous a party rarely goes out for hunting deer solely, but they get as many shots as they want while bear hunting. To those not initiated, riding after dogs on a bear hunt is quite dangerous, owing to the innumerable gopher holes in the ground, which your horse is liable to stumble into at every step; and many amusing incidents happened to our party during the day, one notable one which I will perhaps mention later. It was late in the afternoon before we killed our bear, although he was shot at, at a good fair range, perhaps twenty times during the chase. But we had killed seven deer during that time, and considered we had had a very fair day's sport.

And now for camp! We learned we were seventeen miles from it, and had we been alone no one of our party would have known even the direction to take. Seventeen miles through an uninhabited country, with deep and almost impenetrable swamps to pass through; and to make matters worse one of our party, whose weight was 220 lbs., who had been riding a mule which stumbled into a gopher hole, had been thrown, and the mule getting away from him had left for parts unknown. However, we had guides who knew every foot of the country, and by frightening our heavy man with snakes, and occasionally letting him ride, we at last got back to camp, completely fagged out, but well satisfied with our first day's sport in Florida.

I forgot to mention that one of the deer was killed with bird (No. 7) shot. The evening before, one of our party had been shooting birds, and had a number of cartridges loaded with bird shot in his coat pocket. Being on his stand, and not noticing what he was doing, he loaded with one of these cartridges, and a full-grown doe passing him, he fired, killing it dead. Upon examination it was found he had killed it with bird shot. It was one of Scott & Son's gun, No. 10, 30in. barrels.

But for fear I may lengthen out my letter too long and weary your readers, I will bring it to a close. If you desire it, in some future communication I will give you a description of the fishing in this section, also alligator shooting, turkey hunting, etc. CHOKE-BORE.

[We shall hope to hear again from this correspondent.—ED.]

NOOSING A GRIZZLY.

BY NED BUNTLINE.

I WAS over the Contra Costa Range east of San Jose, in California, on a hunting and fishing trip, living high on crested quail, venison and speckled trout when I came across two noted native cattle raisers, Don Miguel de Castro and Ramon Pico, who were feeding an immense lot of stock over in those valleys, aided by fifteen or twenty Indian and half-breed pedus. I had got acquainted with both gentlemen before in San Francisco, so that it was a pleasant meeting when I rode into their camp and dismounted at their invitation to coffee and broiled beefsteak, for they had just killed a fat yearling.

"Colonel, you shall have some fun after dinner if you will take a ride with us," said Don Miguel. "A huge grizzly has been making free with our stock, and as we traced him to his nest by the trail of a heifer he carried off, we intend to make meat of him between now and sundown.

"I'm in for that, especially if you'll indulge me with a chance to try my Sharp's improved rifle," said I.

"You can kill him," said Don Ramon. "But we want some fun with the *lariat* first."

"All right," said I, wondering what fun they could have with a lariat on an animal of the known ferocity and power of the grizzly.

After dinner we rode up the valley about a half mile and then turned short into a little canyon pretty well grown up with short bushes and tall grass. Through this a well-beaten trail showed the course of the grizzly. And before we had ridden three hundred yards we saw the gentleman in a little bare slope under a high overhanging ledge of rocks, lying lazily by the carcass, half devoured, of his last prize. He raised his head, his red, fierce eyes scanning us as we halted for consultation about a hundred yards from him, but showed no inclination to move.

"Had I not better open on him?" said I. "I can bore him through and through with my .45 calibre from here."

"If you did kill him you'd spoil the fun we want to show you," said Don Ramon. "But no single shot will ever put him out of the way. He will go over a thousand pounds. Do not fire till we tell you."

And the intrepid Californian, swinging his lariat over his head, rode directly toward the large animal. When within forty feet or less, the lariat flew out, and in a breath it was around the neck of the grizzly. With a snort of anger he made a rush for Pico, who darted toward us for a little way and then turned off at a short angle, and before the bear could check his way toward us the lasso was tight, and huge as he was the grizzly went over backward.

Now was Don Miguel's turn, and in a second his lariat flew out and a second noose was over the grizzly's neck. Such clawing and tearing, and snarling and snorting I never saw before or expect to again. The tough ropes of raw hide were of immense strength, and though the bear seemed bound to break away, first rushing for one and then for the other, the two splendid horsemen tumbled him over and over a dozen times or more.

He was now furious, and I felt sure he would break away, and begged permission to put an end to the struggle with my "Old Reliable." Pretty well tired, horses and men, my Californian friends consented, and dismounting I waited for the beast to get still for one second so I could put the ball where I wanted to. As they both slacked up their lariats a little the grizzly gathered himself up as if to pick out a victim, set his ugly front fairly toward me, and I had the chance I wanted—a shot, head on at twenty paces. That bullet went as fairly through his thick skull between the eyes as lead could go, and how far into his body I know not, for we only took his skin—we did not examine or want the meat—*the single shot killed him.* The two Dons were astonished.

"I was born in California and I have seen full a hundred grizzlies killed, and helped to kill a great many, but this is the first I ever saw killed with a single ball," said Don Miguel. "Colonel, I must have your rifle or one like it, no matter what it costs!"

But I would never have risked the shot so near had not that grizzly been *noosed*.

Fish Culture.

OUR WASHINGTON LETTER.

THE U. S. FISH COMMISSION—SUCCESSFUL RESULT OF ITS LABORS—OPERATIONS OF THE PRESENT SEASON—IMPORTATION OF CARP, ETC., ETC.

[FROM OUR SPECIAL CORRESPONDENT]

WASHINGTON, D. C., June 16, 1877.

PROF. SPENCER F. BAIRD, chief of the U. S. Commission of Fish and Fisheries, is actively engaged in preparations for the work of the Commission this season, and will leave here about the first of July for Salem, Mass., where the headquarters of the Commission will be established this summer, for the purpose of inquiring into the fisheries of Massachusestts Bay, and the New England coast between Portland and Cape Cod. The fish to which particular attention will be directed this year are cod, mackerel, blue fish, tautog, menhaden, haddock, pollack, sea herring, cusk and hake, and careful inquiry will be made as to the temperature of the water at different depths, its varying transparency, density, chemical composition, percentage of saline matter, surface and under currents, etc., etc. The Commission will also ascertain from fishermen and others in that locality, all information possible as to the distribution of the fish, character of their food, their abundance, and modes of capture, and to this end a series of questions relative to the food fishes of the United States will be freely distributed. These questions relate to the name, distribution, abundance, size, migrations and movements, relationships, food, reproduction, artificial culture, protection, diseases, parasites, capture, economical value of the various fish, etc., and are calculated to elicit full information upon all

these points. In fact Prof. Baird and his assistants have analyzed the whole subject of the life of food fishes and produced these questions which have been found of great value in collecting the desired information. The field experiments and collections this year will be continued until the latter part of September, or first of October.

Prof. Baird, in a recent conversation with your correspondent, stated many interesting facts connected with the work of the Commission, and explained at length what had been done, as well as what new plans are proposed for the multiplication of the food fishes of the United States, and stocking of various waters with them. When the Commission was first organized, the headquarters for collection of the various species, testing currents, temperature of the water, food of the fish, etc., was at Wood's Hole in Buzzards Bay, off the coast of Massachusetts. The next year Eastport, Maine, was visited for the same purpose; the following year the operations were conducted at Portland, Maine; then Noank, on the coast of Connecticut. In 1875 Wood's Hole was again the headquarters, but last year the Commission being engaged at the Centennial made no collections of or experiments in regard to sea-coast fisheries.

THE WORK SUCCESSFUL.

The first practical result of the hatching of shad has been demonstrated this season by the catch of these fish in the Ohio River at Louisville, Ky. Prof. Baird recently received a genuine Potomac or white shad, weighing four pounds, caught at Louisville, being the first of the catch at that place; and he has received information to the effect that shad have been caught in Tennessee, Louisania, Indiana and other Western States, the rivers of which were stocked four or five years ago. Up to this season the Commission has been working on faith in stocking Western rivers. Time enough had not elapsed, nor were the experiments sufficient to show whether the waters of the Gulf into which the shad descend were suited to them, but the work of stocking the rivers was kept up year after year with the full confidence that the work would ultimately be successful. During a period of eight or ten days nearly one hundred of these shad were caught daily at Louisville, and it is fair to suppose that quite a large number passed up the stream and escaped the seine. These fish are the result of about 200,000 young shad placed in the headwaters of the Alleghany River in Western New York about five years ago; and it is thought those caught at Louisville were about two months in their journey from the Gulf to that place. This year was the first that any satisfactory fish could be expected, and there is considerable rejoicing in the Fish Commission over the result. It is anticipated that the run of shad in Western rivers next year will be quite large, and that it will steadily increase as the stocking of the rivers was increased year after year. When Prof. Baird first learned that shad had been caught at Louisville he felt some anxiety on the subject, having several times previously been informed that shad had been caught in Western waters, but when specimens reached him he found, to his disappointment, that they were not the genuine shad, but what are known as Taylor shad, which are found in the Mississippi River—a fish somewhat larger than a herring, but not as large as a shad and much inferior to that fish in quality. When the Louisville specimen reached him, however, he found it to be the genuine white shad like that found in the Potomac.

PROPAGATION OF SHAD.

An efficient corps of assistants of the fish commission have been at work at Havre de Grace on the Susquehanna River this season gathering shad spawn and hatching out the young shad in connection with the Maryland Fish Commission. By the co-operation of the U. S. Fish Commission and the Maryland Fish Commission greater results have been accomplished by the expenditure of a comparatively small amount of money than if the two bodies had prosecuted the work separately. Thus far about nine million young shad have been hatched out and over one million distributed by the U. S. Commission in Louisiana, Mississippi, Georgia, South Carolina, Kansas and Missouri. About 100,000 young fish are now *en route* to California to be placed in the waters of that State. A large number have been distributed in Maryland waters by the Maryland Commissioners and others will be placed in various waters of Maryland and other States by the two bodies.

The joint labors of the U. S. Commission and Maryland Commission have been entirely satisfactory to both and attended with great success. The U. S. Commission has found it impossible to hatch shad for reproductive purposes in any stream south of the Susquehanna for the reason that frequently occurring high, muddy water in some sections, or exceedingly clear, low water in other sections, prevented the fish reaching places where they could be taken; besides in most of the Southern streams the supply of shad has been so reduced that the chance to procure ripe spawners has been very poor.

SHAD IN THE POTOMAC.

A few years ago about half a million young shad were hatched out and placed in the Potomac, but as yet no increase in the supply of this river has been noticed. In a stream already supplied with them it is rather difficult to discover the first appearance of the fish when they return to the spawning grounds, and besides sufficent time has not yet elapsed for any noticeable increase in the supply. It is thought that many of those hatched out in the river will return next year, though observations thus far have not been able to ascertain the exact time required for the return of the fish. It is thought they return in about four years from the time of first being placed in the stream. Of the half million placed in the Potomac one lot was turned loose near the Long Bridge, at Washington, and another near Cumberland, the headwaters of the stream. As an instance of what the extent of the Potomac fisheries were forty years ago it may be mentioned that in 1834 about 150 landings were successfully fished on this river, employing 6,500 men, 450 vessels and 1,350 men to navigate these vessels. The number of shad taken during the season was 22,500,000 and the number of herring 750,000,000. To cure these fish 995,000 bushels of salt were required and 995,000 barrels to contain them. The season probably continued about six weeks, and it is estimated that the weight of the fish taken was about 600,000,000 pounds or an average of 100,000,000 pounds a week. These figures, incredible though they seem, are given by Prof. Baird after the most careful research and are based upon undoubted authority. In those days shad sold for $1 75 a thousand, and herring were in many instances sold for the merest trifle. The fish were then cured and used for food during the whole year. Now the supply has decreased to such an extent that none are cured, the entire catch of the season being consumed in the cities as fast as taken from the stream. Probably a half million shad have not been captured in the Potomac this season. The supply has been gradually decreasing from year to year as shown by the inspections in the Washington market alone. A few years ago about 600,000 fish were inspected annually; in 1875 about 300,000 were inspected, and this year the number probably will not exceed 200,000. Washington being the largest city on the Potomac or in its immediate neighborhood, it is fair to presume that a great majority of all the fish taken come to this market.

ROCK FISH OR STRIPED BASS.

This fish, so desirable for the table as well as affording rare sport for the angler, holds a high place among commercial food fishes, but its presence in most of our rivers has diminshed gradually year by year. The experiment of hatching them has been tried by the Fish Commission but the great difficulty encountered has been in obtaining spawners. About four years ago some few ripe rock fish were found in the Roanoke River, N. C., and about 100,000 young fish were hatched from the spawn obtained. If the spawners could be procured as desired, an immense business could be done and many thousand young fish hatched out annually. One of the causes assigned for the diminution of this fish is the fact that they are marketed before they reach maturity. Prof. Baird expresses the opinion that it would be a very wise provision of law to forbid the marketing of the fish under any circumstances when less than twelve inches long. Rock fish, it must be remembered, frequently attain a weight of sixty and eighty pounds, and it has been argued that they do not spawn until they attain a weight of about twenty pounds, therefore, any fish of this species less than twelve inches in length should be regarded as an embryo, and it should be made a penal offence to sell, buy, or have in possession such fish. Such a law would protect them, and the great evil of marketing the young fish would be remedied.

Although every effort has been made to discover the spawning grounds of the rock fish, so far they have been unsuccessful. No doubt some ascend our rivers to spawn, but the favorite spawning grounds of the larger fish have not been ascertained. In Massachusetts it has been found necessary pass a law for the protection of lobsters, which punishes a one having in possession a lobster less than eleven inches length. Of course no national law could be passed to protect the rock fish, but it is hoped by the members of the Fish Commission, and those interested in the propagation of food fishes, that the States will pass laws of the nature indicated to prevent the further diminution of the fish. Last year an effort was made to obtain rock fish ready to spawn at an extensive fishery on the Delaware. Prof. Baird had a competent person stationed at this landing several weeks, for the purpose of securing such fish, but he was unsuccessful.

CARP.

The introduction of carp into waters of the United States has engaged the attention of Prof. Baird for some months past, and he has already had imported some of the best varieties of German carp, which are regarded as the best in the world. 450 of these fish were recently received by the Steamer Necker, and they have been placed in the ponds at Druid Hill Park near Baltimore, Md., in charge of the Maryland Fish Commission. They will be kept for breeders and soon ponds for their reception will be constructed near Washington with the view to obtaining as many young fish as possible to stock Southern waters. The carp does not promise to be as valuable as the mackerel, shad or salmon, but it is a fish of great commercial importance, for the reason that many can be kept in a small body of water. They are vegetable feeders and thrive equally well on bread crumbs, cornmeal, etc., which can be given to them in addition to the vegetable matter they procure in the water. They often attain a weight of four pounds in two years, and the warmer the temperature of the water, the better the fish thrives. It is a fish eminently suited for Southern streams, and it is proposed to stock those streams with them. It is expected that a large number of young fish will be obtained this year from those now in the Druid Hill park ponds, and they will be distributed in the South. The meat of the carp is very palatable, free from bones, and as a food fish it stands high, though, as above stated, does not equal the mackerel or salmon.

BLACK BASS AND BROOK TROUT.

The U. S. Commission has given no attention to the propagation of black bass and brook trout, the culture of those species being left entirely with the various State Commissions. These fish are regarded as luxuries and not as important commercial food fish. They are looked upon as holding a similar place in the fish creation as early strawberries, or dwarf peaches raised under glass do in the lists of fruits. They are luxuries to be enjoyed by the few, but not by the masses. Besides, black bass do not live in harmony in the same streams with young shad and herring. The bass, being a carniverous fish, plays havoc with the young shad and is not a suitable fish to inhabit the same stream, every bass of two pounds weight being good for the destruction of one or two thousand young shad.

SALMON.

An evidence of the success of salmon propagation and stocking rivers with this delightful fish has been manifested by the recent capture of a nine-pound salmon in the Delaware River. The fish was what is known as the California salmon with which the Delaware, Potomac, Susquehanna and other rivers were supplied about five years ago. It is anticipated that they will make their appearance in the Potomac soon, though no time can be fixed for their return to the waters in which they were placed when young. It is supposed they return in five or six years, though difference in the temperature of the water, currents, etc., may have more or less influence upon their return, and make the period longer or shorter. When the fish do come it will be with a rush, and no doubt will be plentiful until the time for their departure for deep water.

The most important salmon hatching establishment is on the McCloud River in California, where numerous eggs are procured annually and transported East to be hatched out and placed in our waters. The hatching establishment for Eastern salmon is at Bucksport on the Penobscot, Maine, where the young fish are hatched to stock Eastern rivers, and that for hatching land-locked salmon is at Grand Lake Stream near Calais, Maine. The salmon hatching establishments throughout the country are under the direction of the U. S. Commission and this is one of the works which distinguishes that Commission from the various State Commissions. The State Commissions receive as many salmon eggs from the United States as they can transport and have facilities to hatch out, the number distributed to various States ranging from 50,000 to 500,000 annually. A large number of California salmon eggs will be sent to North Carolina this season to stock the rivers of that State, the State Commissioners having shown great activity in the propagation of food fishes. Hatching houses have been erected at the headwaters of several streams in the mountains, and great interest has been manifested in fish culture throughout the State.

The transportation of California salmon eggs, which are about the size of a currant, is a matter of some importance and requires much care. Heretofore they have been carried in boxes between layers of damp moss, and the temperature kept down by blocks of ice placed on top of the boxes. Last fall the experiment of transporting them in refrigerator cars was tried and proved successful. It will be adopted hereafter in all cases where such cars can be obtained. In these cars a small percentage only of the eggs are lost. Sometimes the eggs hatch out in the moss during the journey and then the young fish soon die. Over 400,000 California salmon eggs were sent to New Zealand last fall for distribution in the waters of those islands, and but few of them were lost *en route*. As an evidence of the space required, for the transportation of salmon eggs it may be mentioned that 5,000,000 of them are equal to 120 bushels, and with the requisite packing will fill three or four large freight cars.

It is the object of the U. S. Fish Commission to always strengthen as far as possible the hands of the State Fish Commissions, and nearly every report of the State Commissions acknowledge favors from the U. S. Commission. There is no jealously whatever between them, but all work in perfect harmony. The State Commissions devote great attention to hatching shad in their own streams. New York replenishes the Hudson, New Jersey the Delaware, North Carolina the Cape Fear River, and Maryland the Susquehanna; but none of them can do anything toward hatching shad in the great waters which traverse several States, for the reason that the shad require the headwaters of the streams to develop their best condition. Ohio, for instance, could not stock the waters of that State, because the fish would go to the Gulf, and upon their return eight or ten States would have a chance to catch them before they could reach the waters in which they were placed; therefore, Ohio would get no benefit from them, but the States bordering on the Mississippi and Ohio Rivers between that State and the Gulf of Mexico would. The object of the U. S. Commission is not to enrich one State but to increase the food fishes throughout the country, and, therefore, all rivers are stocked with the fish that they may be taken in Tennessee, Kentucky, Ohio or any other waters through which they pass on their journey to and from the sea.

Over 5,000,000 salmon eggs were distributed last fall, and it is expected a greater number will be sent out to the various State Commissioners next fall. The Commission is engaged during the spring in hatching shad, and the fall is devoted to the propagation of salmon.

Although the appropriations were considerably reduced during the last session of Congress, the work of fish culture was not seriously crippled; more might have been accomplished this season had Congress been more liberal. The recent catch of shad at Louisville shows that the labors of the Commission during the past five years have not been in vain, and it is to be hoped that generous appropriations will be made hereafter to carry out the great undertaking of stocking all United States waters with fish. The work in the hands of Prof. Baird is pushed forward with great vigor. He is a gentleman in every way qualified for the position of Fish Commissioner, having devoted years to the study of fish culture. He is surrounded by a corps of competent assistants and much good has already been accomplished with the small appropriations placed at his disposal.

PROPAGATING EELS.—*Niles, Mich., June* 17, 1877.—A little talk, "may it please your honors," about Mr. Eel. With him we have just concluded a short, but very successful campaign, obtaining our supply of 250,000 from the Hudson at Troy. They were caught in large numbers with a dip wire-cloth net, and kept in wire-cloth covered boxes floating upon the river till convenient to pack and ship to Michigan. The period of their "run" lasted only about five days, during which time millions upon millions filled the waters; all headed "up the creek."

The peculiar feature of the campaign was the method adopted in their transportation. Mr. O. M. Chase, the boss eelist in charge, made experiments prior to shipping for the purpose of testing what way the eels could best endure the hardships and perils of their emigration to the West. He placed some in water at a temperature of 75 to 80 deg. Some in water at a much lower temperature, and some in water at a temperature between the two extremes. He tried some with frequent changes of water; some in water made as roily as possibly, and some he packed in ice; and still others he placed in cars with a layer of mud on the bottom of two or three inches, and filled with fresh cut or pulled river grass, the whole kept cool and moist with small quantities of ice placed on the top of the grass. The eels packed in this way he found, after being in the cars 36 or 48 hours, were by far in the best condition of any experimented with; apparently as fresh and active as when first placed in the can. The cans used were the ordinary fish-depositing cans. In this way all were shipped, and all arrived in excellent condition, the reports from the various depositors uniformly being that the little wrigglers arrived in tip-top order; scarcely a dead one in the lot. Some four or five thousand were placed in a ten or twelve gallon can. The advantages of this method of shipment are many. The can is not over one-third as heavy as when filled with water—a great saving in freight; no changes as when shipped in water. Nothing to be done by the attendant or attendants, except now and then the putting into the cans small quantities of pounded ice, keeping the temperature of the can at a little below 60 deg. Fahrenheit. In this way one attendant will move more eels, and with less labor, than will three by the old method of moving in cans of water.

As respects the introduction of the eel into our Michigan waters, our people seem to be divided into three classes: The red-hot eelist, the stone-cold and the luke-warm. I think the red-hot ones are in a very decided majority. They see in the eel lots of sport and food fit for the gods. The stone-cold class cry at the top of their lungs, "Snaiks," and think St. Patrick should be invoked to keep the "varmint" from ever infesting the warbling brooks and silver lakes of their loved Michigan. The luke-warm class are quite numerous. They don't care "three skips of a louse" one way or the other, provided they are not asked to row the boat, and

are omitted in the invitation to the feast. Hence this class occupy the proselyting ground. I think the Red-Hot Church is gathering in far more converts than the Stone-Cold. Heads of families of the luke-warm class, I observe, listen with a feverish sort of interest while being told that eels constituted the principal diet of the renowned Cleopatra, imparting to her that poetry of expression and comeliness of form by which she mastered great Antony. These once thought to persecute the "saints;" now they are of the very "elect." As for my single self, I am not ashamed to be found a-shouting, "Bless the Lord for eels."

GEO. H. JEROME.

Layman in the Red-Hot Church.

LAND-LOCKED SALMON IN NEW HAMPSHIRE.—*Manchester, June* 16th.—I notice in FOREST AND STREAM for the 14th a statement in regard to the introduction of land-locked salmon in N. H. It may be interesting to your readers to know that besides those mentioned, the Fish Commissioners of N. H. have also placed 1,000 each in Sunapee and Squaw Lakes, Tri-Echo Pond in Milton, and Lovewell's Pond in Wakefield, and have divided another thousand between ponds in Bradford and Croydon. We have also brought 25 large pike perch from Canada and put them in Mascoma Lake, in Enfield, within a few weeks, and transplanted black bass from Sunapee and Great East Pond, in Wakefield, to other suitable waters in different parts of the State where they were deemed to be desirable. We do not propose, however, to stock the State indiscriminately with black bass, as we are not convinced of their great superiority to several other varieties of fish. They are spreading rapidly "on their own hook," and thereby getting in those of others.

Connecticut River is becoming well-stocked by those which escaped ten years ago from Livingston Stone's hatching ponds at Charlestown, and those which are continually getting out of Sunapee Lake and going down Sugar River, sometimes fifty *per diem* having been seen on their travels at the mill flumes on the latter stream.

The most important event, however, which I have to chronicle is the arrival of the first salmon since 1847, when the Lawrence Dam was built. This gentleman made his appearance at the foot of Amoskeag Falls on the morning of the 12th inst., and was seen by many of our citizens, who are now convinced that the fishway at Lawrence, designed by Commissioner Brackett, of Mass., is a success. More than a dozen salmon have been seen in it at different times when the water has been drawn out for a few minutes for examination, and have immediately started up stream when the current was let on again, so that it is probable that quite a number have come up.

The one found at Manchester was just at the foot of the waste-weir, which takes off the surplus water from the canal, and was caught among the rocks, when the water was let on to the mills in the morning and the flow over the waste-weir stopped. We shall improve the fishway here at once, it being one of the old "Foster" pattern, put in nearly ten years since, and hope to send the salmon along on their way to the spawning grounds in the Pemigewasset. These fish are probably of the lot put into the Pemigewasset as young fry in 1872.

We put in 100,000 California salmon fry last Dec., and propose to put in 100,000 more next winter if we are successful in getting the spawn from the St. Cloud River.

Manchester, June 24.—The success of the attempt to restore salmon to the waters of the Merrimac River, has been further confirmed, since my letter to you of the 17th, by the appearance of one, estimated to weigh at least twelve pounds, in the same pool below the dam at Amoskeag Falls where the first one was seen; and, still better, by the arrival of another one of about the same size at the mouth of a small brook, at Martin's Ferry Station, about four miles above the Falls, showing that he had passed the fishway at that place.

The present fishway is an old one of the Foster pattern, and the Amoskeag Co. have decided to build a new one of the Brackett style at once. Mr. Hobb's, the company's engineer, went with me to Laurence on the 22d to take dimensions of the fishway there, and, on drawing out the water for that purpose, a fine twelve pounder was found about three-fourths of the way up; and Mr. Holmes, the gate keeper, told me he had seen another the same morning. He has seen over thirty on their way, and there have probably been ten times that number come up. The Brackett plan is a success, but the mouth or foot of it must lead into the main current under the fall, so that the fish can find it. The upper end may be anywhere above the dam.

SAM'L WEBBER.

FISH CULTURE IN NEBRASKA.—*Cherry Hill, May* 15.—Have just returned from a jaunt down the line of the Union Pacific railroad, between here and Omaha, and jotted down a few notes:

Stopped at Elkhorn for a couple of days. Found that large numbers of catfish and "buffalo" were being caught, both by net and by hook; also a fair sprinkling of bass, perch and pike. These latter kinds are said to be the produce of Prof. Livingston Stone's famous "plant," made in June, 1873. They are found in large numbers in the small lakes or ponds. Any one desiring to visit this section will probably find fair sport for both rod and gun. They should take the Union Pacific railroad to Waterloo, where I am told good accommodations can be secured, and the sport is right at hand, Waterloo being on the west bank of the Elkhorn River.

While in the Union depot in Omaha, our attention was called to several small tanks, which we found to contain thousands of young brook trout. Inquiry elicted the fact that they belonged to Mr. J. T. Romine, a gentleman living near South Bend, Cass county, Nebraska, about 35 miles from Omaha.

We sought out Mr. Romine, who informed us that he had purchased the fish, 15,000 in number, in Wisconsin, and will put them in a lake on his farm. If we recollect aright, Mr. Romine's lake covers about two acres of varying depth. It is fed by springs, and the temperature remains about equal summer and winter. Last February Mr. Romine placed in his lake about 1,500 young trout, and a similar number of California salmon. The former are now, at the age of one year, from six to eight inches in length, and the latter about four inches. Both kinds are thriving, and mortality slight. His success with the first batch induced him to go after more, and he expresses full confidence that it will prove a successful undertaking. There can be no doubt of it in our mind, and in a few years he will have something equal to a gold mine, and we wish there were a hundred more in Nebraska who would follow his example.

R. G. C.

SALMON AND SHAD.—Two of the Oregon salmon, placed in the river near this city nearly a year ago, have been caught this season. They were hooked, one each, by W. N. Harris and B. J. Gregory. They measured about three or four inches in length and were evidently growing rapidly and doing as well as if in native water. Shad placed in the Tennessee river at Chattanooga and Louisville some two years ago are being caught this season in quantities, and are reported to be well grown for the time they have been in these streams, and as thrifty as if in their own Eastern waters. These facts satisfactorily solve the question as to whether or not shad and Oregon salmon can be domesticated in streams from which they are compelled to seek the ocean through the muddy and turbid waters of the Mississippi. It seems clear that the efforts of the Government to stock the water courses of the Mississippi Valley with the most prolific and nutritious of the game fish family is a demonstrated fact, and we congratulate our Isaac Waltons and our people generally on the prospect of future sport and feasts.—*Jackson (Tennessee) Sun.*

Natural History.

EXPLORATION OF SOME INDIAN GRAVES IN UTAH.

IN the May number of *Field and Forest* appears an article from the pen of that accomplished zoologist Dr. H. C. Yarrow, which will prove delightful reading to the archæologist. In this short paper Dr. Yarrow gives a most interesting account of the examination of a number of graves of Pah-Ute and Gosh-Ute Indians in Western Utah, and holds forth to his readers the hope that before long he will relate facts connected with the burial places and ceremonies of other Indian tribes.

Few explorers have had more experience in this field than Dr. Yarrow, and the collection of crania and stone implements which he obtained in 1875 in Southern California was probably the finest ever obtained by an American museum. In the article to which we have referred, Dr. Yarrow says:

It is hardly worth while to describe the road, suffice it to say that it was the worst mountain trail I have ever ridden over, and so obscure that without a guide we had most assuredly lost our way both going and returning; at some parts it was necessary to alight or run the risk of being thrown over fearful precipices. Finally our guide made a halt, and we found that we had arrived at a sort of plateau some few hundred feet below the mountain's peak. Pointing to a rock-slide, composed of masses of stone ranging in size from a pebble to the enormous boulder, he said, "There are the graves." At first we saw only a confused mass of rocks piled up apparently without design, but a nearer inspection revealed a grave-like outline. To reach them we were obliged to walk over the osseous remains of many unfortunate horses, butchered to accompany their masters to the happy hunting grounds. It was not our intention to disturb the remains at this time with a looker-on who might object, but we removed enough of the stones from one of the piles to satisfy ourselves that they actually contained dead Indians, after which we carefully replaced them and descended again to camp, not however without marking the trail in such a way that it could easily be found again; this task was intrusted to one of our cavalrymen, who purposely lagged behind.

The next day were on the ground at an early hour, and the work of exhumation commenced. It was found after removing the boulders that a layer of branches was reached upon which the stones had been piled, displacing these the body was perceived resting in a sort of concavity formed by the removal of stones. In all, seven such graves were opened, and in each instance the skeleton was found lying on the back with weapons and utensils of different kinds on either side. In a grave supposed to be that of a medicine-man were found a number of articles pertaining to his trade, a gourd rattle, painted truncheon of wood, besides beads, bow and arrows and various cooking implements. In a grave separated a little from the rest a skeleton was found wrapped in skins and surrounded by all sorts of odds and ends, kettles, bows, arrows, two old-fashioned rifles and quite a number of brass buttons. In this same grave was found the head of a child, the other bones having been probably dragged out by animals. Tradition relates that a Chief was buried at this place and that a captive Piegan boy was interred with him to act as his servant on the trip to the other world, and the discovery of the cranium would seem to lend a plausibility to the story. It is hardly necessary to add that we secured the crania from all the graves, and such articles as seemed to have a certain ethnological and archæological value, after which every stone was carefully replaced so as to leave no indication that a disturbance of the bones of the dead had taken place.

At the time of the burial of the Chief already alluded to as having been watched by our guide, the following ceremonies took place: the funeral party, consisting of most of the men and women of the village mounted on horseback, started at about dusk in the evening to ascend the mountains; the corpse was fastened upon a horse like a sack of grain, the animal led by one of the mourners. During the whole of the ascent the entire party shrieked and wailed in the most mournful manner, this noise not ceasing, as my informant stated, until daylight next morning. Arriving at the spot, the grave was hastily made, as already described, the body deposited and shots fired, either to scare away bad spirits or as a parting salute, after which the butchery of horses commenced by cutting their throats. At the burial of this Chief twenty are said to have been sacrificed. In removing these remains the requirements of poetic and retributive justice was, to a certain extent, fulfilled, as the band to which their owners belonged murdered Lt. Gunnison and his party on the Sevier River some years previously.

In the vicinity of Beaver, Utah, several graves were explored which were situated near the mouth of a canyon at the foot of a mountain; these were five feet deep and exactly similar to the graves of white persons. In one of them was found the skeleton of a child, aged perhaps five years, who had suffered from a disease of the dorsal vertebræ. With the body had been buried a number of rude toys and play-things.

In Western Utah a cave was discovered in which the Gosh-Ute Indians deposited their dead wrapped in skins, and surrounded with different objects used in life, and another similar cave was heard of near the Nevada border. Neither of these were explored for want of time.

It seems to be well established from these observations that the Indians of Utah had no systematic method of burial, but that the customs varied with each little band. We hope before long to hear further from Dr. Yarrow on this extremely interesting subject.

—Dr. H. C. Yarrow is preparing a monograph on the "Burial Customs and Disposal of the Dead among the North American Indians."

GOPHER (*Testudo polyphemus*) Holbrook.—A vegetable feeding land tortoise, from ten to twenty inches long, lives in pine barrens and sandy soils, where it digs burrows five to ten feet in depth for its residence, which are sometimes jointly occupied by it and the rattlesnake or blacksnake. Comes out at noon to feed on grass and herbage; the palmetto berries are also a favorite food, which it is said to sometimes store away in its burrow for future use. A perfectly inoffensive animal, except that it eats sometimes the early corn and vegetables; possessed of immense strength, a gopher of twenty inches long being able to walk away with a man on its back; and if it can get hold of a root in its den hardly any force can drag it out.

It lays three times a year from six to twelve eggs in the sand, which are much prized by raccoons, opossums and bears, the latter of which animals often digs out the gopher, and tears it in pieces with its strong claws. The flesh of the gopher is also prized by the native Floridian, on whose table it forms a common dish. My host has a couple of hounds which are trained to hunt the gopher, which when found they turn over on its back, thus preventing its escape until their master arrives at the spot. I have often eaten it, and consider it superior in richness and flavor to the green turtle.

S. C. C.

THE YOUNG OF PHYCIS AMERICANUS—Storer.

HALIFAX, N. S., June 8, 1877.

EDITOR FOREST AND STREAM:

Being informed by a friend of mine that he had recently taken several medium-sized pollack in the waters of the Northwest Arm, near this city, having their stomachs well filled with small fry of some kind, I accompanied him in his boat, on the evening of June 6, in the hope of securing some pollack for the purpose of getting specimens of the fry. We soon caught one which was full of the small fish, bright and silvery to look at. On taking them home for examination, they proved to be the young of *Phycis americanus*.

Their length was generally 2½ inches, and they agreed with the descriptions of mature fish according to different authors, with one exception: the ventrals, which are stated to consist of one ray, divided at its extremity into two filaments, are in my specimens composed of three separate filaments, only joined together for a short distance above the base. Two of them are larger than the third. The longest reaches exactly to the origin of the anal, the next to the vent, while the third is shorter. Color, brownish above, extending to lateral line; silvery beneath.

The fry is now in great abundance in the Northwest Arm, and is, so I believe, always abundant at this season each year. The cod and pollack were greedily devouring the fry while we were out fishing for about an hour, the surface-water in places literally "boiling wid 'em,' as Pat would say.

Where can I find any description of the minute young of *Phycis*, for those authors I possess—Gunther, De Kay, Yarrell, Storer, etc.—fail to mention them?

J. MATTHEW JONES.

To answer Mr. Jones' apparently simple question has taxed the resources of the naturalists. Dr. H. C. Yarrow, to whom we referred his letter, has kindly favored us with the following reply. Possibly Mr. J. Carson Brevoort can add other information. Dr. Yarrow says:

"The only work I know of which describes the young of *Phycis americanus* (chuso of Gill), is Couch's "British Fishes," and he, I think, describes it as another species. I have looked over a number of young specimens of *P. americanus* at the Smithsonian, and in no instance do I find the ventrals as described by Mr. Jones. Moreover, I am informed by Prof. Gill that he has not seen them so, from which I imagine that perhaps Mr. J. *may possibly* be mistaken in his identification. There is a small fish, the three-bearded rockling (*Onos ensis*—Gill) which may be the individuals in question, or it may be the mackerel-midge (*Ciliata argentata*—Gill). I should not forget to state that Prof. Gill states that no scientific (not considering Couch as authority) description of the young of *Phycis americanus* has ever been published in the English language. Perhaps Sars may have published something. Be this as it may, I would strongly advise your correspondent to send on his specimens for identification, and you can send them to me and I will send them back identified!"

THE REDFISH OF THE NORTHWEST.—Mr. Oscar Spitzer, of San Francisco, sends us the following interesting notes on this redfish, of which little is known. We find nothing definite in the Government reports, nor has inquiry among ichthyologists at Washington availed to elicit anything of importance:

"The redfish of Wallows Lake, Cal., are described as being blood-red in color, very fat, and weighing about eight pounds, and are preferred, when taken, to salmon. It is said there are only four lakes known in the world in which this fish is found, Payette, in Idaho, a lake in Maine, one in Scotland, and Wallow's Lake. A company engaged in commercial fishing on the latter frequently bring in a ton of redfish at a haul, with a seine of medium length. Lake Wallows is two thousand feet deep, and the fish suddenly appear on the surface in August and disappear in December."

ALBANY, June 10, 1877.

EDITOR FOREST AND STREAM:

As there is so much being said of late about fresh water fishes being in salt water, the following experiment, taken from the *Scientific American*, may prove acceptable. Mr. Paul Bert, in experimenting, says that a fresh water salmon plunged suddenly in sea water will die in five or six hours, from which he concludes that the fish never proceed suddenly to salt water, but enter brackish water where the tide ebbs and flows, and live there a sufficient time to habituate themselves to the change; thus accounting for the frequent discovery of large numbers of migratory fish in the vicinity of the months of rivers which they ascend. A fresh water eel plunged in salt water does not seem to be affected, but if in handling them any of the slime is rubbed off osmosis occurs in the denuded portion and the eel eventually dies. Salt water fish placed in fresh share a similar fate, although a little salt thrown in the water prolongs their lives. His conclusions are that the death of the creature is not to any toxic action, but is simply a phenomenon of osmosis or transmission of fluids through the membrances. In order to prove this it is only necessary to weigh the animal before and after the experiment. A frog, for example, plunged in sea water loses one third its weight. If only the foot of the frog be introduced the blood globules can be seen to leave the vessels and distribute themselves under the skin. In hopes this may bring forth more real facts on the subject,

I am yours expectantly,

DEXTER.

MIGRATORY QUAILS FOR VERMONT.—The Rutland (Vt.) *Herald* of Saturday says: "Hon. Martin G. Everts received from Messina, in Sicily, yesterday, 200 migratory quails (the *Coturnix communis*), which he will set free on the hills in this town, with the hope of successfully acclimatizing these birds, which are valuable both for food and sport on this continent. These birds closely resemble our native Virginia quail in general coloration and marking, but are less brilliant in color and not quite so large. They migrate from Africa, crossing the Mediterranean to Europe in March and April, and scatter in colonies over the continent all the way North into Norway and Sweden. Some of them breed as far South as Italy. In the autumn they return to their winter quarters in Africa. They lie well to the dog wherever there is cover, and afford as good sport according to their size and value as their American congeners."

With regard to breeding the native quail in this country, the Nashville *Rural Sun* says:

"It is very strange, and a thing that we do not exactly understand, that birds in our Northern States pair off earlier, breed earlier and mature earlier than in the Southern States. Our quails here never pair off till the first of May, and hatch out from the first of June till August. Very few of our birds reach maturity by the fifteenth of September, and we have frequently found birds too small to shoot even in the first of November. In the Northern States quails are nearly all grown by the 15th of August, and none are too small to shoot by the first of September. It certainly appears to us that here the birds should breed and raise at least one month ahead of Northern birds; instead of this, however, they are fully one month later. We are not sure, however, that the Northern quail attempts to raise more than one brood a year, while our birds frequently raise two broods and sometimes as many as three broods from one pair. This may account for the difference in times of breeding."

INFATUATED HUMMING-BIRDS.—The Ottawa (Canada) *Free Press* of May 31 contains this interesting story: "Yesterday afternoon Mr. John Thompson's man (Jules Mather) gathered a large bunch of lilacs from a tree in the garden in Nepean, as he was about coming to the city to deliver milk. A couple of humming-birds hovered around the bush at the time, and these followed after the bunch which had been picked. Strange to state the little winged creatures came along with the rig to the city, at every opportunity sipping the honey from the petals of the flowers. At the Queen's Restaurant, for which the flowers were intended, the birds visited the bunch at the door of the bar entrance. The flowers were placed on the table in the dining-room, a faded bunch being substituted at the door, but after flying once around the latter the birds left it, and soon found the others again, entering the room through the open window. The boarders present were astonished at the tameness of the birds, which might have been easily caught if it had been desired."

A NEW PHEASANT.—In a letter dated "Labuan, Aug. 17," Governor Usshe says that he has had great difficulty in getting specimens of the beautiful new pheasant recently described by Mr. Sharpe as *Lobiophasis bulweri*. He has twice sent over from Labuan to the mainland of Borneo the trained collector who obtained the original specimen, but hitherto without success. As, however, the birds are plentiful about thirty-five miles inland, he hopes to be able to get some samples very shortly. Bulwer's pheasant seems, in the north-western portion of Borneo, to be confined to the Lawas River, where they are not uncommon, but on the Trusan and Brunei Rivers, which lie close to, the species is quite unknown to the natives, even by name.—*Nature.*

ARRIVALS AT CENTRAL PARK MENAGERIE FOR WEEK ENDING JUNE 24, 1877:

One monkey, *Macacus cynomolgus*, presented by Master Mario de Mendenea, N. Y. City; one red coatimundi, *Nasua narica*, presented by Mr. Alfred H. Walker, N. Y. City; one gray squirrel, *Sciurius carolinensis*, presented by Master John A Palmer, N. Y. City; one elk, *Cervus canadensis*, bred in the menagerie; one fallow deer, *Dama vulgaris*, bred in the menagerie; one horned owl, *Bubo virginianus*, presented by Mr. F. S. Webster, Troy; five pea fowl, *Pavo cristatus*, bred in the menagerie; two cygnets, *Cygnus olor*, bred in the menagerie; one alligator, *Alligator mississippiensis*, presented by Mr. F. B. Genin, N. Y. City. W. A. CONKLIN, Director.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR WEEK ENDING TUESDAY, JUNE 19, 1877:

One Virginia deer, *Cervus virginianus*, born in garden; one bald eagle, *Haliætus buccocephalus*, presented; seven prairie dogs, *Cynomys ludovicianus*, born in garden; four chequered tortoises. *Emys picta* presented; two flying squirrels *Pteromys volucella*, presented; two alligators, *Alligator Mississippiensis*, presented; three gray foxes, *Vulpes virginianus*.

Woodland, Farm and Garden.

PLANTS FOR INDOOR DECORATION.—Plants of fine foliage and stately growth are valuable at any season to tone down the glare of color and break up the uniformity and flatness which too often prevail in modern flower gardens. Valuable as they are for the above purposes, they are doubly so for forming bold groups in large conservatories, halls, etc., when other plants, even if available, are too valuable to risk in such places in the winter season. For saloons, corridors, halls, etc., they are much more effective than flowers, as they associate much better with the surroundings than any plant in bloom, unless it has ample and bold foliage in addition. Many of the most valuable plants for this purpose are best grown out of doors in the summer season, the pots being plunged in the soil and care being taken that they do not suffer from want of water. Aives and Yuccas of various kinds, Echeveria glanea, the striped and plain leaved New Zealand Flax (*Thorinium tenax*), Aralia Sieboldii and Sieboldii variegata, Aralia papyrifera, a fine stately plant, Abutilon marmoratum, more delicately mottled and superior to A. Thompsoni, Dracaena indivisa, Draco and A. australis are all useful, while for the early winter months a few plants of the dwarfer and more highly-colored Cannas will be found a great acquisition. Palms are, perhaps, the most effective of the fine foliaged plants; indeed, they are looked on as aristocrats among plants and can scarcely be misplaced, as they associate well with other things, and impart an air of grace and lightness unequaled by any other plants. Unfortunately most of these require more warmth for their growth than that afforded by an ordinary greenhouse, and the greater part are of slow growth and expensive compared with other plants. Such varieties, however, as Latania Borbonica, Arica lutescens, A. Baueri, A. Sapida, Seaforthea elegans, Phœnix reclinata, P. Dactylifera, P. Sylvestris, Chamærops humilis, C. excelsa and Corypha australis may be had at a moderate figure and will all succeed in a greenhouse temperature.

HARDY OR GHENT AZALEAS.—Notwithstanding the great interest shown in these plants at the late exhibition of the New York Horticultural Society, when the Messrs. Parsons, of Flushing, exhibited such beautiful and well-bloomed plants, very few are aware that they are true hybrids raised from our native varieties. About the year 1825 M. Mortier, a nurseryman of Ghent, conceived the idea of retarding the blooming of the early flowering varieties, which were likely to be injured by late frosts, by fecundating them with the pollen of later flowering varieties. The experiment succeeded. Not only were flowers of later flowering tendency secured, but flowers of better form, more varied color, and more agreeable fragrance. This variety soon became known as Azalea Mortierana, having been raised from various crosses between Azalea viscosa, nudiflora, pontica, and Calendulacea. Ghent azaleas are now propagated from seed, the one year seedlings being grafted and treated as Camellias are. They are planted out in leaf-mould, and after two years are fit for sale.

THUJA VERVÆNEANA.—It seems that this beautiful variety, which originated with Mr. F. Vervæne, nurseryman, Bridgeport, Conn., about ten years ago, is doing even better in the cool moist climate of England than here. The *Gardener's Chronicle* says: "The Golden Thuja occidentalis, named Vervæneana, is generally represented as having foliage of a bronzy yellow color. There can now be seen at the Royal Nurseries, Ascot, some specimens in which the color is of a bright golden, and most effective. Perhaps the moist sandy bog of the Ascot nurseries has something to do with the production of color. The larger the plants, the better character did they appear to possess."

NAMES OF PLANTS.—J. No. 1.—Selaginella serpens. No. 2.—Selaginella viticulosa. No. 3.—Selaginella Martensii variegata. No. 4.—Selaginella apus. No. 5.—Selaginella rupestris—the two latter are natives. The former found in moist cool places, the latter on dry sunny rocks.

P. H.. Santolina incana—a useful bedding plant.

—We have received several communications from eminent gentlemen on the sparrow question, which we shall be happy to print in our next issue.

CURE FOR POISON IVY.

NEW YORK, June 13, 1877.

EDITOR FOREST AND STREAM:

Now is the summer of our discontent, when poison ivy hangs in garlands to greet the thin-skinned disciples of Nimrod and Isaac Walton with its "venomous sting." Thanks to the valuable influences of the FOREST AND STREAM, summer woodcock shooting has at last been abolished. It ought to have been done years ago, then to-day birds would have been plenty. I suppose I have killed more woodcock in the last ten years than any other man of my age in New York. I have bagged as high as sixty-seven birds in one day alone, in Orange Co., near Campbell Hall. During that time I have probably suffered more from poison ivy than any other man. Three times during one summer have I been blind from its effects. I have tried every remedy without success until last summer. I was out East shooting, and, with my usual luck, I got another dose that confined me to the house. I could not walk. An old fox hunter living in the neighborhood, hearing of my sad condition, came to see me and brought me a remedy that acted like magic. In three days' time I was up and enjoying what I love better than anything else in this world, the best of all field sports—fall woodcock shooting. For the benefit of those who read the FOREST AND STREAM I give you the receipt:

Take one pint of the bark of black spotted alder; add one quart of water and boil down to one pint. Wash the poisoned parts a dozen times a day, if convenient; it will not injure you. JOHN B. AMES.

—Dr. W. Kauffman, Des Moines, Ia., a successful orchardist, as to the value of smoking apple trees with coal tar, writes as follows: "I never made it my special business to smoke apple trees, but smoking curculio out of plum trees has been my special effort and object in using coal tar, and in this I have been entirely successful; and, in passing among my apple trees to reach the plum trees, I smoked about a dozen apple trees that were loaded with fruit, and the apples from these trees were free from codling moth, while all my apple crop, with these exceptions, were terribly infested with these worms. Procure some coal tar from a gas-house; put a quart of it into a pan; to this fasten a wooden handle, so as to get four feet away from the smoke; take a shaving and a match, and you will soon have a dense smoke; with these pass under the trees, and, my word for it, no insects that you ever saw will stay in the tree five seconds to breathe such an atmosphere. The stench of this smoke will remain in the foliage and limbs of the trees for two or three days, unless washed off by rains, and, so long as it does remain, no insects will return. One or two minutes' smoking under each tree is quite sufficient. Hold the pan low enough so as not to burn the lower limbs, and carry it so as to smoke the entire tree. I will leave entomologists to tell at what period the various insects are likely to enter the trees to commence their depredations, and that is the time to commence to smoke them out."—*Prairie Farmer.*

SPLIT BAMBOO RODS.

To our customers and the public:—In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

CONROY, BISSETT & MALLESON,
—[*Adv.* Manufacturers, 65 Fulton Street, N. Y.

LESS VIGOROUS THAN THEIR FATHERS.—A New Hampshire correspondent of the Manchester *Mirror* expresses his views on the deserted farm question thus bluntly: "If farms have run down the people who occupy them are a long way ahead in the race. We have got on our farms to-day a class of people who can cipher through the algebra, play the piano, and boast of an acquaintance with the fine arts, but they can't work. They have got fine minds, but their bodies are sickly, puny and weak. To talk the matter plainly, we have bred the bone and muscle out of our families until we have got a kind of human Jerseys, fine boned, mild eyed, and nice to look at and pet, and put on exhibition, but so tender and weak that they are fit neither for our climate, our work, nor our circumstances. Our fathers worked 12 or 14 hours a day and never thought of getting tired. We are used up when we have worked four hours. Our mothers made butter and cheese, fed the pigs and chickens, did the milking, raised a dozen children, made the clothing for the family, and when a shower was coming could rake or load hay. Our wives want a maid to tend the baby and another to do the house-work, a boy to do the chores, and if we keep more than one cow, a cheese factory to prevent the milk from spoiling. It is safe to say that 10 farmer's wives to-day cannot do as much hard work as would two 50 years ago. As a farming people we are played out. If the young New Hampshire farmer who wants a wife to help him get a living instead of one to hang ribbons on and pour patent medicines into, would just go down to your city and find a good, strong, vigorous, industrious and frugal Irish or German girl, he would find his farm would pay better than it does now, and his children would be likely to be worth ten times as much as farmers as will be any of the next generation of pure bred Yankees."

OREGON COMPLIMENTS CALIFORNIA.—The Portland *Oregonian*, which may safely be set down as prejudiced, thus discourses in its issue of the 5th inst.: "They are coming from California. And one of the most suggestive sights in the world is the spectacle of a Californian, who hasn't before seen rain enough for a year to lay the dust, standing out in an Oregon rain with his hat off, and enjoying it as aquatic fowls do a summer shower. Oregon has been sneered at as the rainy country by California, but they are not sneering now. They are hunting a country where it rains enough, and prefer the verdure of Oregon to the blight and desolation of California. Persons now arriving tell us that immense numbers in California are preparing to move. As rapidly as they can they will come to our State. A great many are coming by wagons over and. A gentleman just through by the stage line informs us that in Northern California and Southern Oregon he passed a large number of parties, including families and live stock, moving north. At night their camp fires were seen continually from the stage road, and the sight is described as being like that of the early emigration across the plains. Every steamer is loaded to its full capacity by people who are seeking a country where crops never perish of drought. To them, exaggerated reports of Oregon rains are no longer a terror. Our climate, they find, is preferable to drought, deserts and starvation."

—It is well known that walnut trees sometimes attain prodigious size and great age. An Italian architect mentions having seen at St. Nicholas, in Lorraine, a single plank of the wood of the walnut, 25 feet wide, upon which the Emperor Frederick III. had given a sumptuous banquet. In the Baidar Valley, near Balaklava, in the Crimea, stands a walnut tree at least 1,000 years old. It yields annually from 80,000 to 100,000 nuts, and belongs to five Tartar families, who share its produce equally.

—Prof. Chase, of Brown University, says that Paris green is the best if not the only sure remedy for the potato bug. It does not affect the tubers, and is easily applied, mixed in the proportion of one pound to ten of flour or plaster of paris. Care must be taken in its use, not to bring it in contract with the abraded skin or the face.

—Chickens are brought to New York from distances little thought of by consumers. Two carloads were shipped last Saturday at Norfolk, Va., for this market. They had been collected in East Tennessee, and sent by way of Virginia. A man is employed to furnish them food and water.

The Kennel.

CANINE TRAITS.

THE canine, like the feline type, is familiar to all. An animal of this kind is the friend and servant of man in every part of the globe. Yet the origin of the domestic dog, *Canis familiaris*, is involved in an obscurity which may never be cleared up. Its descent from some feral race is unquestionable, in the nature of the case. The question is, whether the dog is a modification under domestication of some one feral stock, or whether various distinct canine animals, in different parts of the world, have not been separately reclaimed. This view seems most reasonable, and it is gaining ground among the best informed. In some parts we still have dogs whose lineage need be traced but one generation into the wild species of the region: witness certain Indian dogs of this continent, half dog, half coyote (*Canis latrans*). The jackal-like form of Asia, is another highly probable ancestry. Sometimes these various kinds of dogs remain as distinct as their several progenitors; but the great mass of dogs must be regarded as mongrels (in the zoological sense of the term), resulting from inter-breeding of descendants from several distinct stocks. The dog is probably a composite as well as an artificial production.

The various breeds or races of the domestic dog differ among themselves in physical characters to a degree, perhaps, unparalleled in mammals. Less obvious, if not less important, structural peculiarities are commonly made the basis, not only of specific, but of generic distinctions. But it will be observed that the differences are superficial—they are matters of size, shape and coloration chiefly; while if they affect anatomical parts, as the skull, for instance, they subsist in mere moulding, not essential. The probability is that all dogs are generally identical; that is, they have descended from *canis* alone, though several species have doubtless con-

tributed to the result. Strong evidence of this is seen in the fact that when, as not seldom occurs, dogs run wild, they do not revert to any one particular stock, but to several different stocks, according, it would seem, to the facts of ancestry in each individual case. Sometimes when dogs run wild under peculiar isolated conditions, they acquire new characters.

It is obviously impossible to give a diagnosis of the dog; nothing short of descriptions of various races would characterize the animal. Take the matter of size alone. Full-grown dogs less than six inches long are recorded; other dogs cope with stags and bulls. The Linnæan definition, *canis cauda sinistrorsum recurvata*, was a shrewd and searching generalization, for the tendency to a curly tail is well nigh universal, though it may be completely arrested. Color is, of course, wholly indeterminate. Form is only less so. Compare the turnspit, bulldog and greyhound. Pelage ranges from *nil* to a woolly fleece. There is a wide range of osteological difference; the long, low, narrow skulls of some dogs contrast with those of others which are apish in shortness and bulge of the cranial part.

Nevertheless, dogs of all breeds share some traits, in varying degree of development—traits which need only be recalled as well known things often overlooked. Dogs attach themselves to persons, as cats do to places. They are strongly affected by music. They undoubtedly dream. They turn around when about to lie down (a supposed relic of a wolfish habit of so doing to press down herbage circularly and make a soft bed). They trot sideways, but walk or run straight. They prefer to lead rather than follow their master. They like to eat alone, and bury the remains of a feast, often returning to the board. They eat meat, and various forms of starch, but rarely herbs or fruit; they are nauseated by grass, vomit without exertion, and often return to eat the *ejecta*. Gestation endures about two months; parturition is plural* the pups are born weak and blind.

Dogs howl to no purpose at night (obviously retaining a habit of the night-prowling wolf.) They snarl and growl in anger, yelp in hunger, pain or fright, bark in pleasure, in the chase, in various excitement. They menace before attack, with show of teeth and bristling hair. They droop the tail and ears in fear, raise them in confidence or expectation, and wag the tail in delight. Some hunt by scent and others by sight, and spring upon prey at short range, after prowling approach,† or drag it down in open chase. They do not sweat, but are cooled by evaporation of saliva from a lolling tongue. They drink with noisy lapping. They endure abuse without loss of affection, and rarely resent injuries. They are impatient of strange advances, especially in sorded guise. They are trained to perform every service a brute can render to man; their intelligence may be developed to something only less than human, and their predacious instincts may be stimulated to the highest known pitch of blind combativeness. They are, finally, subject to disease, believed original with them, incurable when fully developed, inoculable through the saliva, and constituting one of the most formidable maladies to which the human race is exposed.

Among the dogs of this country are nearly all the usual breeds of civilized races, and several more or less peculiar ones. The Esquimaux dog is the well-known indispensable beast of burthen in northern sections, to the white man as well as to the aborigines. The Newfoundland dog, of noted swimming powers, is a near relative. The Hare Indian dog is a peculiar rarety, described by Richardson and Audubon. Most of the Indian dogs of the West are mixtures, immediate or nearly so; with the wolves, their frequent copulation, not only with the coyote, but with the large wolf as well, is a simple matter of fact, notwithstanding their enduring enmity under ordinary circumstances. The "hairless" dog of New Mexico and southward is a curious variety, in extreme cases of which the body is only covered with sparse fine hairs. The animal is essentially a mongrel of kind known as the "fice."

DR. ELLIOTT COUES, U. S. A.

—THE dog pound at Sixteenth street and East River, was located by John Avery, city surveyor, last week, and the building is progressing rapidly.

TORONTO BENCH SHOW.—A bench show of dogs and exhibition of birds is to be held at the Adelaide Street Rink, Toronto, Canada, July 4th and 5th. The enterprise is under the management of the mayor and an excellent committee, and promises to be a success. Information may be obtained of Alderman Piper, Toronto, Can.

—L. F. Whitman, of Detroit, Mich., has sold to R. M. Boyd, of Racine, Wis., one of his Mell-Rob Roy whelps; also, one to J. H. Canniff. Mr. Whitman has purchased of Mr. Boyd the orange and white setter bitch, Fannie; also, from Mr. Canniff a Maud-Carlowitz whelp.

L. F. WHITMAN.

—Mr. R. H. Gillespie, of Stamford, Conn., claims the name of Silver for a silver strain setter pup out of owner's Cora, by Smith's Jeff. Also, the names Pride of Stamford and King of Connecticut, for his silver strain setter out of Bess by Jeff.

* The pups appear successively after short intervals, during which the mother rests; each is usually expelled by a single contraction, with head or breech presentation, without rupture of the sac; but if this be broken, the placenta soon follows. Taking this in her mouth, the mother swallows it and the cord with continual acts of deglutition, till her muzzle reaches the pup's navel; she then chews off the cord with the molar teeth, the resulting laceration obviating hemorrhage. She is nourished for a day or two, during which period she usually takes no food, by digestion of the placenta and the rest of the secundines, as shown by the completely stercoraceous condition of the first stools after parturition.

† The motionless crouch of the setter, the "stand" of the setter and pointer, are an artificial prolongation of the natural momentary action just before seizure of prey.

THE OPERATION OF SPAYING OR OVARIATOMY.

EDITOR FOREST AND STREAM:

The desire of "Medico" to obtain information that will enable him to perform the operation of "spaying" is doubtless shared in by very many of the readers of your valuable journal.

Let me describe it so that any intelligent sportsman can perform it by taking ordinary pains and care in the manipulation.

First, the pup should fast for several hours before the operation, and be from about four to six weeks old.

The only instruments needed are a scalpel or sharp knife, a pair of scissors, some threads of surgeon's silk, a soft sponge, and some ether to render the animal insensible to pain during the operation, which should be performed in a warm room as nearly the temperature of the animal as possible, as the exposure of the bowels to the cold atmosphere renders the liability of inflammation (peritonitis) following more probable.

The little patient is now placed on a small table, and with the aid of an assistant the ether may be administered by pouring a couple of teaspoonfuls on a folded napkin and holding it over the nose in much the same manner as though the patient were a human being. A few minutes will suffice to effect unconsciousness.

The animal will now be placed upon its back, and an incision be made along the little groove in the middle of the belly (*Linea alba*) from the navel, extending backward an inch and a half to two inches toward the crotch. There will be no bleeding worth speaking of, as no blood-vessels cross the middle line of the abdomen.

The operator will, after cutting into the abdomen, place the animal's head pointing toward his chest for convenience. The first object seen after opening carefully into the abdominal cavity will be the bladder, which will easily be recognized, and a little gentle pressure upon it will expel the fluid from it through the natural channel, and enable the operator to more readily search for the womb. A few folds of the intestines may now be drawn out to one side to give more room to work. The womb must now be sought for immediately beneath the bladder which will be found to be a very small, tortuous and cord-like organ, lying transversely and crescentically beneath the bladder, and to the inexperienced operator looks like part of the intestine. When the womb is found, draw it up gently and follow its course transversely to its extremity at one side of the abdomen, and there will be found a little hardish nodular body, about the size of a flattened garden pea, resting like a little knob on the lateral extremity of the womb as it were. This is one of the ovaries, and is one of the two similar organs to be removed in "spaying." Now put a silk thread around its pedical, or base, tie tightly, and cut the thread close to the knot, and then remove the ovary with the scissors close to the ligature. Now follow back the tortuous womb till the opposite side is reached, when the other ovary will be found, which is to be removed also in the manner just described. The opening in the abdomen is now to be sewed up with silk, carrying the stitches completely through the lips of the wound on each side, and tying them upon the surface of the abdomen at intervals of about half an inch. After this support and coaptate the spaces between the stitches with adhesive plaster, cut into strips quarter inch wide and three or four inches long, and applied warm.

The little patient will now show symptoms of prostration, and the operator will in all probability conclude that "the dog is dead," or at least about to die, but don't be alarmed. Give her a teaspoonful or two of equal parts whisky and water, and wrap her up in a blanket, and place her near the fire, when she will go to sleep, and the next day be ready to fight one of her brothers for the possession of a bone, which her starved condition will make her regard as a very desirable thing just now. The mother will attend to keeping the wound clean, but it may be inspected daily by the operator, to see that the plasters have not been licked off by the assiduous attentions of the mother. The wound heals rapidly, and at such points as it seems to be united the sutures or stitches can be cut and drawn out, drawing on them toward the wound so as not to tear it apart, first, however, taking the precaution to replace any loose adhesive straps, so as to give the wound and abdomen such support as will prevent protrusion (*hernia*) of the intestines occurring.

The incision in the middle line of the abdomen is the best, because here no muscles are divided, and consequently no liability to interfere with the future free and perfect locomotion of the animal. With your permission I will relate some recollections of my first experience in spaying, with some of the attending difficulties of getting reliable information and instruction how to proceed.

The advent of a fine litter of pups in my kennel from "Jess," a finely bred setter bitch and a splendid field performer, made me desirous of having the gyps spayed, at least a brace of them, for my own use.

I inquired of my sportsmen friends for a competent operator, without success, but was at last referred to a gentlemen of color by birth, who was by assumption a physician, and by natural faculty a blower on a brass horn, and by trade a whitewasher, and by common occupation a drunkard. The sign that adorned the second story of the tenement in which he lived bore the antipathetic announcement in similar characters to the following:

DOCTOR GLUCKESON
BRASS BAND
and
White Washing
Carpets Shue to order.

Calling upon the doctor, I found he and his wife had just gotten through a little argument in which the doctor was slightly worsted to the extent of getting his shirt torn nearly off his back and other injuries, among which was an eye that promised to be a little "off color" before many hours, the normal color of this "general practitioner's" skin bearing a strong resemblance to a russet apple kept late in the spring, with the skin bloated by decay; the skin in the doctor's case being bloated by blowing with a brass horn, a whitewash brush and a blue bottle alternately at irregular hours, or possibly he was bloated blowing dust off carpets in a professional capacity.

The doctor responded to my greeting with a respectful salutation. He is a very Gnesterfield or D'Orsay under ordinary circumstances, but was now a little wind-broken at losing a straight heat in a domestic contest, and consequently appeared to disadvantage.

I asked him if he practiced much nowadays, to which he answered he did a little "now and den for de cullud folks." With rather a knowing smile I said to him, "Doctor, you've been abusing the old woman, haven't you?"

At this his doughy, bloated and obtuse features relaxed into a broad grin as he turned his face for a moment upon the retreating form of the wife of his bosom as she disappeared down a basement in the back yard, and with a wink at me with both his bleared eyes, he chuckled and said, "De ole 'oman's gellus ob me."

"How's that, doctor? you are regarded as a very correct man, as far as I know," I said to him, assuringly. To which he replied:

"Oh! Ise krect man, suah. But I had de brass ban' out las' night playing for a culiud ball, an' de ban' got drunk an' I had to carry de ban' home; an' tuk me good while too. It did fur a fac'. An' dat rowdy, Joe Harbison, got to hollerin' in de street, an' we all got arrested an' tuk down to de cage 'bout daylight, an' had to 'pear fo' de Mayor dis mo'nin'; an' I jis git home, an' de ole 'oman gellus ob me an' kick up a row."

"That's the cause of the little misunderstanding you've just had with Mrs. Gluckison, then, is it?" I asked.

"Yas! Dat wench misunstan' me all de time," said he, filling up with injured emotion.

Coming to the object of my visit I said, "Doctor, I have been referred to you to get a couple of puppies spayed. Have you ever done it?"

"Yas, boss; I git Rube to do it fur you, suah, soon as he comes back," said he.

"Where's Rube now?" I asked, not being very particular as to who Rube was, presuming he was the doctor's surgical assistant or principal operator, and possibly his son.

"I dunno where dat nigger dun gone to. Some un say he gone down de riber on a coal boat, and some un say dey seed him up 'bout Uniontown. But when he come I fetch him down," he said, assuringly.

I asked him if he knew where the cuts are made in the operation. He said he did, but continued: "Ye see de old man handed de secret down to de boy, 'cos he didn't like me; but Rube can make de cut suah ebery time. I'll fetch him down."

"When did Rube go away?" I asked.

He answered: "Las' Fall dat nigger bin' doin' bad fo' some time, and had to leave de town."

I was now disgusted, and about resolved to take the pups in a bag and throw them off one of the bridges into the river, as I could get no information as to how to proceed; when a thought struck me—"I'll make the operation of ovariatomy on them as though they were human beings, and I'll invite some of my professional friends to be present." I accordingly sat down and wrote a half dozen notes to as many physicians, worded as follows:

DEAR DOCTOR—Will be pleased to have you present on Tuesday next at 10 o'clock A. M., to assist in two cases of ovariatomy.
Very respectfully

I had determined to operate on four pups, but if I stated four cases of ovariatomy in the note my friends would smell a —pup, and not come at all; but two cases, though extraordinary, were yet plausible, and, like "tolled ducks" the doctors would come and see out of curiosity what was making the stir.

I had everything ready, and when the morning arrived, so did my friends. One by one the doctors' gigs came up and hitched to every post and hydrant in the neighborhood.

"Come in, doctor; glad to see you. Take a drink." "No, no; don't drink before an operation. Got any segars?—No! —well, give me a drink, then. Tell me about your cases." "Oh, wait till the rest come. I don't want to tell the history of these cases over a half a dozen times."

In the general conversation that took place much evasion was needed on my part, and some straightforward lying, too, until all got together, when, at a proper signal, a small staud was carried into the office and placed before a window. In a moment after a pup was brought in and placed on it, and when I invited the most successful and experienced ovariatomist in the company to administer the anasthetic to the patient, the truth flashed on all, and much laughter and merriment followed, and many good-natured threats were indulged in against the perpetrator of the deception. This was kept up during the operation on four successive pups, each of which my guests declared would die as a penalty for my deception; but all are living to-day and full grown, fine animals—and so are the doctors.

SOUTH FORK.

A DOG'S SAGACITY AND TRAGIC DEATH.—"D. W. D.," Washinton correspondent, sends the following clipping from the *Daily Critic*, with the remark: "I send this article that you may not only have another of the many—very many—instances of the 'sagacity' of the noble dog, but that you may learn that superstition still holds sway in the minds of many persons who are credited with possessing more sense."

Yesterday morning, between the hours of 2 and 3 o'clock, as Officer Heinline was walking his beat along E street, between Ninth and Tenth Northwest, he stumbled upon a prostrate man, nicely dressed, wearing a gold watch and chain, and near him was a handsome silk umbrella. The man was unconscious, and laid in the broad glare of a gas lamp. Standing over the man was a large black dog, who growled and snarled ferociously at the officer as he approached, and bit him severely on the leg. Several attempts to drive the animal away were made, but without avail, and the animal flew at the officer in a rage each time he drew near the fallen man. Finally, as a last resort, the officer called the man in a loud tone, which aroused him, and he arose, while the dog jumped about with delight and barked joyfully. The gentleman stated that he had fallen in a vertigo and could not say how long he had lain a prey to thieves. He expressed great surprise at the action of the dog, and declared that it was not his, nor had he ever seen it before. The dog, officer and stranger went to the station, where after some difficulty the dog was secured, and yesterday afternoon, fearing that hydrophobia might result from the dog's bite, he was shot, and thus rewarded for his faithful watch over a man in a helpless condition.

—Mr. John E. Develin's imported red Irish setter bitch, Moya, whelped, at the kennel of Mr. David G. Hartt, Northport, L. I., on June 20, with twelve puppies—six dogs and six gyps. Their sire is the imported red Irish setter dog Elcho, belonging to Dr. Jarvis, of New Hampshire. At the late bench show in this city, Moya was awarded the first special prize offered for brood bitches of her strain.

VISITS.—Some subscribers think it indelicate to publish "visits," so that we hope to be excused from doing so in future. In medical cases, where necessity requires, no seeming prudishness will prevent our discharging our duty to the afflicted.

MEETING OF THE NATIONAL KENNEL CLUB, AT SYRACUSE.—The annual meeting of the National Kennel Club was held at the Vanderbilt House, on Tuesday evening, and the general rules for Bench Shows and Field Trials throughout the country were revised and greatly improved. The following officers were elected for the ensuing year: President, E. H. Lathrop, Springfield, Mass.; First Vice-President, Theodore Morford, Newton, N.J.; Second Vice-President, P. H. Bryson, Memphis, Tenn.; Secretary, C. H. Turner, St. Louis; Treasurer, Luther Adams, Boston. Executive Committee—Luther Adams, Boston; L. H. Smith, Strathroy, Canada; C. H. Raymond, New York; W. A. Wheatley, Memphis, Tenn.; William Jarvis, Claremont, N. H.

Mr. Arnold Burges offered his resignation as a member of the Publication Committee. Accepted, and Mr. Theo. Morford elected in his place.

Mr. Frank P. Kavanagh, of the Carleton Club, London, England, was elected an honorary member.

A vote of thanks was tendered to the retiring officers, and the convention adjourned.

It was voted that the National Kennel Club indorses the Iowa field trial, and, as a club, will use its influence to make it a success.

THE DOGS OF MARGERUM.

MANSFIELD, Pa., June 19, 1877.

EDITOR FOREST AND STREAM:

Yesterday I made a flying visit to Washington, Penn. While there I called on Mr. J. Shan Margerum, owner of the setter Nellie, who took first prize at the Western Pennsylvania Poultry and Dog Bench Show, held at Pittsburg last winter. Also special for best bitch, with not less than four of her progeny by her side. She is very handsome; black and white, ticked, staunch and reliable in the field. Her dam was Nettie, owned by Commodore D. Ammon, U. S. N.; granddam, Pink, imported and owned by the Boston Shooting Club; sire, Trap, owned by Gen. Beal; granddsire, Don, imported and owned by Dr. Handy, of Annapolis. Nellie has thrown three litters to blue Belton (Field Trial), imported and owned by Mr. J. W. Knox, of Pittsburgh, Penn. The third and present litter consists of seven dogs and one bitch pup, one week old. They are beauties; six of them have the tri-colored head like their sire. I never saw a handsomer litter, and with their dam made a picture that any sportsman would enjoy. I understand that Mr. Margerum intends having their photos taken; will send you a copy. The pups are all engaged; none for sale. Mr. Margerum is quite a taxidermist; has a number of specimens round his room. Among them I noticed an Albino blue jay. It was perfectly white, excepting a slight tinge on the edge of primaries and tail coverts; Albino robin and a quail that was a light fawn color. He says there is a white quail that he hopes to be able to get this fall. Among his specimens I noticed a very fine snowy owl, white heron, summer or wood duck, pin-tailed duck, black hawk, and a very fine eagle that measured eight feet from tip to tip of wings. All were shot by himself. The ride from Pittsburgh to Washington is a p casant one—P. C. & S. and L. R. R. to Mansfield, then C. V. R. R. to Washington. The latter might well be called "the road of bridges," as in twenty-two miles there are twenty-two bridges over Chartier's Creek, along and over which the road runs. Mr. Robt. Gates, the conductor of the Washington accommodation train, is an earnest sportsmen, and contributed materially to the pleasures of the trip. L.

TO MR. BURGES—ON POINTERS.

LOUISIANA, June 14, 1877.

EDITOR FOREST AND STREAM:

I have read many articles in the old AMERICAN SPORTSMAN, the ROD & GUN, and in your paper, by Mr. Burges and others, stating plainly, or insinuating, that the pointer is much inferior to the setter. Now, Mr. Editor, permit me to say that the *pointer* is nearly universally preferred by Southern sportsmen. He is staunchier, steadier and more reliable than the setter, because he is not such a wild harum-scarum brute as sometimes even the best of setters will be. We like a dog that goes over his ground thoroughly. We like the pointer because he does not get full of burrs and "beggar-lice," which abound in our country, and which often disable a setter, causing them such pain and inconvenience that I have seen them stop to pull out of their "feathery, heathery" tail, burrs, when they ought to have been attending to their business. The pointer, on the contrary, will hunt when a setter would be used up from heat and want of water. The statements about pointers refusing to retrieve out of water, and refusing to face thorns and cat-briars, are, as far as our Southern country is concerned, miserable bosh.

In conclusion, Mr. Burges, you should have limited the title of your book on dogs to the North, or else you should have given the credit and attention to the South, that is due to it, not only from its vast extent of territory and large variety of game, but on account also of its having been for many, many years (and being yet) the natural home of sportsmen, and everything pertaining to gentlemanly field sports.

SOUTH.

THE STATE BENCH SHOW AT SYRACUSE.

[From the Syracuse Courier.]

Tuesday morning (June 19) at 10 o'clock, the bench show of dogs, under the auspices of the New York State Association for the protection of fish and game, was opened to the public. The attendance was far in advance of the most sanguine expectations. In the evening fully one thousand persons visited the exhibition in the armory, many of our most prominent citizens being present, taking great interest in the exhibition. It was noticeable that a majority of the visitors were ladies. The dogs were comparatively quiet and behaved themselves very well. The fish showed to fine advantage, as the aquariums were illuminated. At 9 o'clock the president of the association, Governor Alvord, officers of the association and distinguished guests took seats on the raised platform, and the large audience gathered around it. President Smith introduced Governor Alvord, who stated that in consequence as it would be difficult to hear his voice, he would not make much of a speech. He desired to say that if the community would adopt in all business relations the names of the dogs on exhibition, it would be very much to the advantage of one and all. We have the pointer to point you the right way, we have the retriever which should teach you to retrieve your past errors. We have the hound, which should stimulate you to hound down all fraud and corruption. He was rejoiced to be present at this exhibition, which was an honor to the city of Syracuse. He was glad to find an increasing interest in sporting matters. We inherited the proclivities to fish and hunt from our mother country, and the manly pursuits would tend to stimulate and develop the intellectual acuities of every man. He urged the necessity of enforcing the game laws, and declared that the State of New York should reserve the territory in the North Woods for the preservation and protection of game and fish. Every man is better for a little relaxation from business. No man could live without relaxation, and there is no better place to obtain health and vigor than in the woods or on the islands in the St. Lawrence, where the speaker had been for the past two weeks fishing and hunting. Governor Alvord concluded by welcoming the distinguished strangers from abroad to Syracuse, and assured them that they would meet with a cordial hospitality from our citizens. Mr. Ferdinand Senn, of New York City, exhibits some very rare and beautiful specimens of Skye terriers, black-and tan terriers, and a King Charles spaniel which is a veritable beauty. The exhibition of pet dogs is a very superior one, and it may be safely said that no more valuable or beautiful lot of dogs has ever been seen by our citizens. Some rare and curious dogs are exhibited by Mr. Horace K. White of this city. They are English pugs, and as fine specimens as are ever seen in this country. In the sporting class the display is a splendid one. Good judges pronounced the collection to be as fine a one as was ever gathered together. At the head of the list in value stands William M. Tileston's Limerick, a champion Irish setter, valued at $500, and Mr. William N. Callender's Rory O'Moore, valued at $2,500.

DIVISION NO. 1.

Class 1.—Champion English Setter Dogs.—For previous winners of a first prize.—1. Lucius Moses, Marcellus, N. Y., Buff, red and white ticked—5 years. By Sam out of Lady Buff. Winner of first prize at Watertown, also of the champion gold medal for best setter in the show. (Not for competition.)

The dog show was quite a success, but a number of the dogs entered did not put in an appearance.

Asa L. Sherwood, of Skaneateles, was awarded the silver whistle given by Francis O. DeLuze, for the best native English setter in the show. Mr. Sherwood's collection was a great lot, and we quite think can come to the front at any show. Mr. Sherwood made the finest individual exhibition, and was justly entitled to the full credit he received. The exhibition of sportsman's goods in the building was very fine as far as it went. Thomson & Son, of 301 Broadway, N. Y., made a very fine display of leather goods, gun cases, dog collars, etc., which were generally admired, and the junior member of the firm was delighted with the expressions and cordialities received from the numerous sportsmen present. The Parker Bros., manufacturers of the celebrated Parker breech-loading shot gun, had their Centennial case, containing about thirty fine specimens, and was the center of attraction in that line, and the two representatives present had their time fully occupied in showing them up. This gun has long been a State favorite, and most of the prize winners for several years have acknowledged the good shooting qualities of the Parker. The President's badge, the most valuable shot for at this convention, was won by Robt. Newell, of the Forester Club, of Buffalo, with a Parker gun. The Nichols & Lefever gun manufacturers made an original display by showing all the parts of their gun in process of workmanship, also, the several different modes of browning barrels, etc. The case attracted considerable attention, and was a curiosity seldom seen. The Remington Co. was represented by Mr. Comstock, who had three fine guns which were much admired. The exhibition ceased on Friday evening, having given general satisfaction.

MICHIGAN.—*Detroit*, June 21st.,—J. N. Dodge's Blue Belton field trial setter bitch Rose, the property of Mr. J. N. Dodge, of this city, whelped four brace on the 18th; three brace are black, white and tan, marked nearly like the dam; the other brace are lemon and white, like the sire, L. H. Smith's champion Leicester. Mr. Dodge has procured an English setter bitch of Mr. J. Goodenough for foster mother to Rose's puppies.

The State Medal Club held a shoot for the medal yesterday. Mr. J. V. D. Eldridge won, after a close contest with Mr. George Avery, an amateur. WARWICK.

[NOTE.—Our correspondent is cautioned against using the above *nom de plume*, again, as it is claimed by a prominent writer of many years, standing.—ED.]

KENNEL REGISTER.—The publishers of the Chicago *Field* and the FOREST AND STREAM have turned over the Kennel Register to L. H. Smith, Esq., of Strathoy, Canada, under instructions from the National Kennel Club. Mr. Smith is chairman of the club's committee.

Sea and River Fishing.

For list of Trout Flies in season for June, see issue of May 31.

TROUT FLIES IN SEASON FOR JULY.

Little Egg, No. 12.—Body and feet of orange and yellow, mohair and hare's ear mixed; wings, bright hyaline, slightly mottled; setæ, same as wings.

Lightning Bug, No. 10.—Body of equal parts, of dark-brown, and black mixed, tipped with yellow; feet, of feathers from the English grouse; wings, double, the inner wing black, the outer wing a yellow brown.

General Hooker, No. 9.—Body made of bright yellow and green, ringed alternately; feet, red hackle; wings, of the tail feathers of the ruffed grouse.

Little Claret, No 11.—Body and feet, dark claret mohair, slightly tinged with blue; wings, of the bittern or brown hen; setæ, dark brown.

Claret Fly, No. 9.—Body, dark claret; feet, black; wings, of the brown hen.

Fetid Green, No. 10.—Body, feet and wings, a pale green.

FISH IN MARKET.—Spanish mackerel are now very plenty. The salmon catch is falling off. Our quotations for the week are as follows: Striped bass, 15 to 20 cents per pound; bluefish, 10 to 12 cents; salmon, green, 20 cents; mackerel, 10 to 18 cents each; shad, Connecticut River, 50 cents; white perch, 15 cents per pound; Spanish mackerel, 20 cents; green turtle, 15 cents; terrapin, $12 per dozen; halibut, 15 cents; haddock, 8 cents; king-fish, 25 cents; codfish, 8 cents; blackfish, 10 to 15 cents; herrings, 5 cents; flounders, 8 cents; porgies, 10 cents; sea bass, 15 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 18 cents; soft clams, 30 to 60 cents per 100; pickerel, 15 cents; Long Island trout, $1 25; Canada do., 50 cents; hard shell crabs, $3 50 per 100; soft crabs, $2 per dozen; weakfish, 12 cents; frog legs, 40 cents per pound.

—An effort is being made to establish a steamboat line between Oswego and Alexandria Bay, making close connections at the former place with the morning and evening Syracuse trains.

—The proceeds of the New Foundland seal fisheries for the past season have been estimated at $1,500,000.

—A. W. Craven, Esq., the distinguished engineer, left on Friday last for a few weeks salmon fishing on the Restigouche River.

CONNECTICUT.—*Hartford*, June 20.—The law preventing the taking of shad in the Connecticut River goes into effect June 25th (not on the 20th). The shad, this season, have been above the average size, and numbers have been caught weighing seven pounds. The largest, we believe, taken this season, weighed one ounce less than nine pounds. Now come blue fish, salmon, Spanish mackerel, bonitos, and we see English turbot and soles are in the New York market.

A very fine Connecticut River salmon, weighing fifteen pounds, was taken in one of the shad nets at Saybrook last night, and was brought to this city and placed on exhibition to the delight of all anglers. There is no doubt that this is a real Connecticut River salmon. It shows a considerable difference in color from the markings of the Penobscot and Canada salmon, which have been so abundant in market of late.

Excellent bass fishing has been had the past month at Enfield Falls, where fish from fifteen to twenty-five pounds each have been taken.

A mammoth striped bass was caught off Middletown last evening in a net. It weighed over eighty pounds—the biggest Connecticut River bass we have heard of. These splendid table fish have sometimes been caught with hook and line, near this city, of a weight of about 70 pounds. T. S. S.
